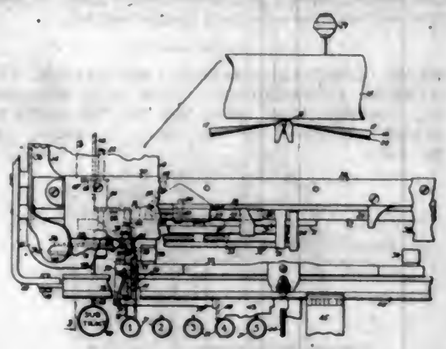
1,693,751. SHUTTER-CONTROL MECHANISM FOR MUSICAL INSTRUMENTS. JOHN HAYS HAMMOND, Jr., Gloucester, Mass. Filed Nov. 12, 1920, Serial No. 423,550. Renewed Apr. 15, 1927. 7 Claims. (Cl. 84—347.)

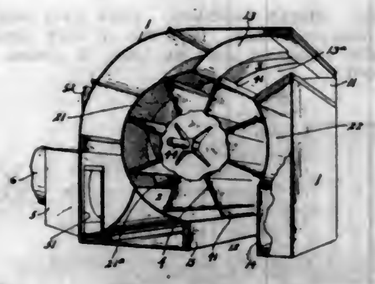
7. In a musical instrument, a plurality of shutters arranged for simultaneous movement to control the passage of sound supplied by said instrument, an operating device, a plurality of position indicators actuated wholly by electrical energy and controlled by said device, a rotatable member operated by one of said position indicators, a plurality of contacts carried by said member, actuating means for opening said shutters controlled by one of said contacts, actuating means for closing said shutters controlled by any of said contacts, and means including a bellows mechanism controlled by said position indicators for selecting one or the other of said actuating means according as said shutters are required to be opened or closed.



---

1,693,752. ORGAN CONTROL. JOHN HAYS HAMMOND, Jr., Gloucester, Mass. Filed Nov. 7, 1924, Serial No. 748,310. Renewed Apr. 20, 1928. 5 Claims. (Cl. 84—347.)

1. In a musical instrument, the combination with a sound producing mechanism and means for controlling the sound produced thereby, of a manually operable control device, switching mechanism operated by said device, other switching mechanism interconnecting said first named switching mechanism and said sound control device, and a sequentially operable controller for initially rendering certain portions of the sound producing mechanism effective and for subsequently rendering other portions of the sound producing mechanism effective according to the predetermined adjustment of the manually operable control device.

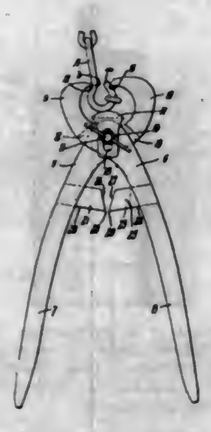


1,693,753. COMPUTING MACHINE. FREDERICK A. HART, New Britain, Conn., assignor to Remington Accounting Machine Corporation, New York, N. Y., a Corporation of New York. Filed Jan. 6, 1926. Serial No. 79,613. 3 Claims. (Cl. 235—59.)

2. In a typewriting mechanism including a carriage and computing mechanism having an actuator provided with a reversing device for setting the said actuator for subtraction, the combination of a subtract key, said key connected to operate said reversing device, a latch lever for said reversing device swinging in a vertical plane, a second lever swinging in a horizontal plane, and a wiper on the typewriter carriage for deflecting said second lever, said second lever acting when so deflected to release said latch and to allow the mechanism to be restored to condition for addition.

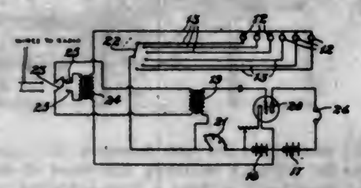
---

1,693,754. COTTON SEPARATOR. NELSON B. HENRY, Atlanta, Ga. Filed Sept. 27, 1927. Serial No. 222,363. 4 Claims. (Cl. 19—75.)



1. A cotton separator, comprising, in combination, an outer casing, having an air-cotton inlet opening, and an air outlet opening and a cotton outlet opening; means to create a continuous suction air current through the casing; an inner casing having perforate and imperforate sectors, the perforate sectors being concentric with a paddle wheel valve, and having an air-cotton inlet opening and a cotton outet opening; that paddle wheel valve, within the inner casting, the sealing strips of the paddles sweeping the perforate sectors; a by-pass for the air-cotton current leading by several of the paddles; means to actuate the paddle wheel valve positively.

---



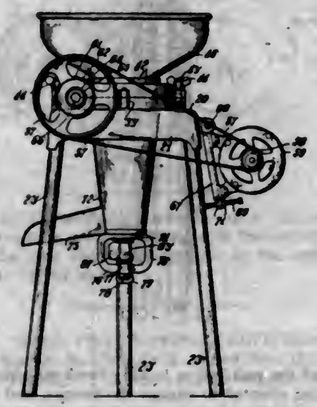
1,693,755. TIRE-CHAIN TOOL. JOHN P. HOTZ, Boston, Mass., assignor of one-half to Manton A. Wood, Boston, Mass. Filed Nov. 1, 1926. Serial No. 145,422. 1 Claim. (Cl. 81—15.)

In a tool of the character described a pair of levers pivoted together intermediate the ends thereof, each of said levers embodying therein a handle and a jaw, said jaw having a curved gripping edge, a stop mounted upon the pivot for said levers and projecting between said jaws, means to clamp said stop upon said pivot, an arm projecting laterally from each of said handles, and a wedge upon each of said arms adapted to cooperate with each other to apply pressure in opposite directions to an article inserted therebetween.

---

1,693,756. FOX RANCH. LEONARD ARTHUR JORDAN. New Glasgow, Nova Scotia, Canada. Filed Oct. 19, 1925. Serial No. 63,424. 1 Claim. (Cl. 179—1.)

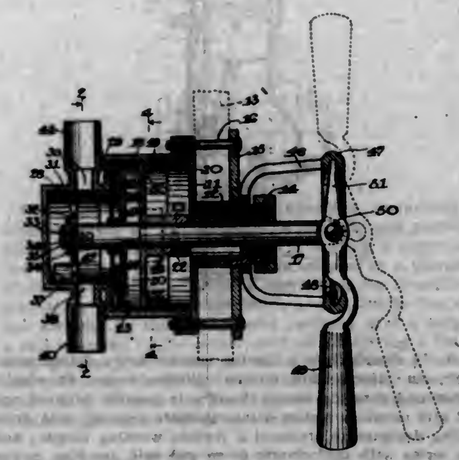
The combination with an animal pen or cage, of means for reproducing and transmitting sound made by the animals therein, whereby the knowledge of conditions within the pen is obtainable without visiting the pen, and comprising a microphone, a radio circuit, a double throw switch whereby the low voltage and resistance of the microphonic circuit is substituted for the higher voltage and resistance of the radio circuit.



---

1,693,757. MACHINE FOR EXPRESSING JUICE FROM FRUIT, CHOPPING MEAT, ETC. ALEXANDER F. KAPTULLER, Chicago, Ill. Filed Dec. 8, 1926. Serial No. 153,248. 18 Claims. (Cl. 100—48.)

1. A machine of the type described, comprising in combination a frame, a feed screw revolubly mounted in vertical position thereon and having convolutions extending inwardly substantially to the axis of the screw, housing means surrounding the screw providing a compression chamber between the convolutions of the screw substantially from end to end thereof, and means arranged about the periphery of the screw above said housing and rigidly connected with the upper end portion of the screw for



driving the screw and having a feed opening therethrough extending substantially from the axis of the screw to the outer edge of the convolution through which opening unrestricted access is provided at all times to the upper end portion of the compression chamber as said screw is rotated.

---

1,693,758. COMBINATION MIXING VALVE. VINCENT D. HENNESSEY, Milwaukee, Wis. Filed July 27, 1925, Serial No. 46,333. Renewed Apr. 2, 1928. 9 Claims. (Cl 277—11.)

4. In a mixing valve, the combination of a valve casing having inlet and discharge ports, a rotatable valve member disposed within said casing for controlling the admission of fluid from said inlet ports in variable proportions, a second valve member rotatably disposed within said casing and having an opening adapted to selectively register with said discharge ports, and a common actuating member secured to said valve members for effecting their rotation and axial movement, said second valve member being axially movable to a position in which said discharge opening is out of registration with said discharge ports.

---

1,693,759. PRODUCTION OF ARTIFICIAL YARNS OR THREADS. GUILLAUME LARDY, Page de Roussillon, France, assignor to Societe pour la Fabrication de la Soie "Rhodiaseta," Paris, France. Filed Apr. 6, 1926, Serial No. 100,177, and in France Apr. 28, 1925. 4 Claims. (Cl. 18—54.)

1. A process consisting in imparting to filaments and threads obtained by the dry spinning of cellulose derivatives a fugitive and temporary coloration for the purpose of differentiating textile fibres having different features, said coloration being applied on the moving threads in an operation combined with the production of said threads.

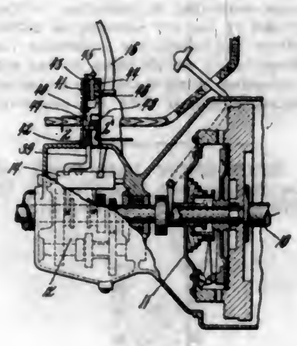
---

1,693,760. READY-BUILT LAMP-POST. HAROLD M. LLOYD, Los Angeles, Calif. Filed Dec. 11, 1926. Serial No. 154,073. 3 Claims. (Cl. 240—84.)

1. In a ready-built lamp-post, the combination of a base, a column supported on the base, a cap on the upper end of the column, tie-bolts extending through the column and connecting the base and the cap to the ends of the column, a base-plate, tie-bolts extending down through the interior of the base and securing the same to the base-plate, said base-plate having external flanges projecting outwardly beyond the side wall of the base with openings to receive foundation bolts.

---

1,693,761. MEAT-CUTTING BOARD. DOMENIC MACRIPO, Hazleton, Pa. Filed May 23, 1927. Serial No. 193,665. 1 Claim. (Cl. 146—215.)

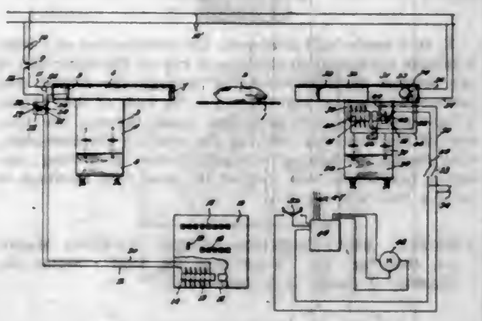


A device of the class described comprising a board, a plurality of pins carried thereby, a cover hingedly connected to the board for confining the pins and protecting the cutting surface of the board when folded thereon, said cover serving as a tray to receive slices when the board is in its operative position.

---

1,693,762. LOCKING DEVICE FOR AUTOMOBILES. EDGAR J. MARTEL, Laconia, N. H. Filed Oct. 26, 1926. Serial No. 144,264. 4 Claims. (Cl. 70—127.)

1. Locking mechanism for an automobile having shifter rods, a self-starter switch and an ignition circuit, compris-



ing means for locking the shifter rods in any of their positions, means for locking the self-starter switch open, a normally closed switch in the ignition circuit, and a lock-con-

trolled element actuable to simultaneously move both of said locking means to locking position and open said ignition switch.

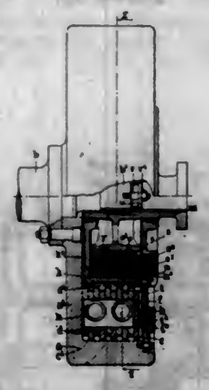
---

1,693,763. REGISTERING APPARATUS. CLAUDE WORTH MARTIN, Gold Hill, Oreg. Filed Sept. 30, 1926, Serial No. 138,802. Renewed July 13, 1928. 1 Claim. (Cl. 192—116.5.)

In apparatus of the class described, means for effecting movement of objects including object-moving means driven by an electric motor, a supply circuit for the motor, an electric light bulb in the motor supply circuit for directing a beam of light across the path of the moving objects to be intercepted thereby at the time of their passage, and an electrically operated switch in circuit with the light bulb and motor, and constituting means whereby the supply of current to the motor will be interrupted in the event of burning out of the filament of the light bulb.

---

1,693,764. GRIP CAGE GRAB FOR DEEP-WELL PUMPS. ALBERT BRYAN MCCAIN, Reward, Calif. Filed Jan. 24, 1928. Serial No. 249,031. 4 Claims. (Cl. 294—110.)



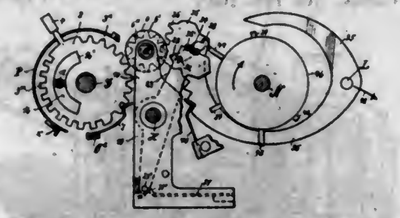
1. A grip cage grab consisting of a hollow casing open at one end, a pull rod removably suspended within the casing, said pull rod being provided with a protruding head, gripping prongs having shoulders resting on the protrud-

ing head of the pull rod, a locking block slidable upon the pull rod and adapted to engage the prongs, and means for raising the locking block to release the gripping prongs.

---

1,693,765. ELASTIC DRIVE. CHARLES ALGERNON PARSONS and STANLEY SMITH COOK, Newcastle-upon-Tyne, England; said Cook assignor to said Parsons. Filed Mar. 24, 1927, Serial No. 177,967, and in Great Britain May 6, 1926. 5 Claims. (Cl. 64—96.)

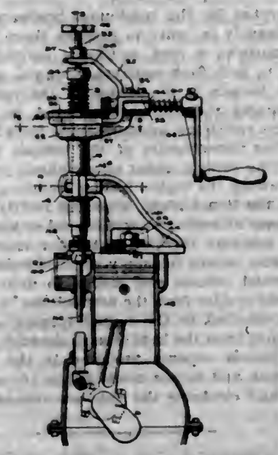
1. In combination, a driving member and a driven member; an intermediate element therebetween; an elastic drive and damping means therefor in parallel between one of said members and said intermediate element, said drive being designed to transmit a certain working torque; and in series with said elastic drive and said damping means and in power-transmitting relation between said intermediate element and the other of said members a friction coupling capable of slipping an unlimited amount in response to the torques than said certain working torque.



---

1,693,766. CALCULATING MACHINE. ALBERT SCHUBOTH, Brunswick, Germany, assignor to Firma Hannoversche Kassen-Gesellschaft m. b. H., Peine, Hanover, Deutschland, Germany. Filed Feb. 7, 1925, Serial No. 7,638, and in Germany Feb. 11, 1924. Renewed Oct. 16, 1928. 4 Claims. (Cl. 235—137.)

1. In a calculating machine, a tens transfer including a counting disc, a control lever adapted to be displaced by the



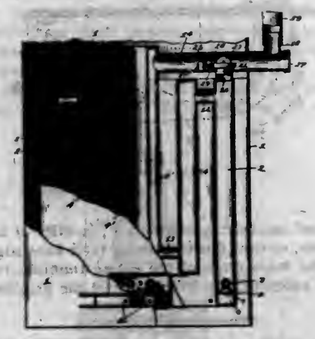
counting disc on exceeding the tens transfer shift limit, a rotatable member, drive pins carried by said member, an oscillating lever pivotally connected with the control lever and moved thereby into the paths of the pins, said pins

acting to tilt the oscillating lever in one or the other direction, and transfer means coacting with the oscillating lever to effect the tens transfer movement of the counting disc of the next higher value.

---

1,693,767. TOOL FOR CUTTING VALVE SEATS. SYLVESTER SMITH, Reedley, Calif. Filed Nov. 15, 1926. Serial No. 148,522. 1 Claim. (Cl. 90—12.5.)

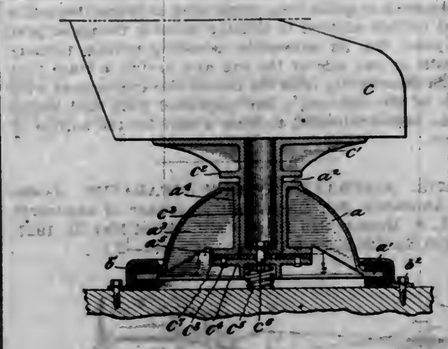
In a device of the character described comprising a bracket having an arm extending therefrom and provided with a bearing, a ball mounted in the bearing, a sleeve carried by the ball and adapted to be oscillated in a plurality of different positions, a shank carried by the sleeve and provided with a threaded passage, a pilot rod having one end threaded in the passage and provided with a socket, a ball mounted in the socket, said shank having a transverse slot, a cutter in the slot and provided with a socket, said ball being forced into the socket and cutter when the pilot rod is screwed into the position so that the cutter is retained against movement in the shank.



---

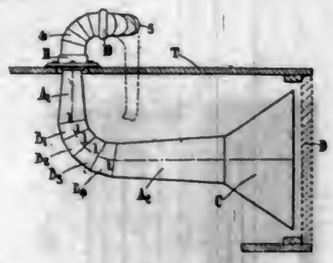
1,693,768. SCREW-THREAD TAP. HERMANN STEINACK, Berlin, Germany. Filed Apr. 16, 1923, Serial No. 632,481, and in Germany Apr. 24, 1922. 3 Claims. (Cl. 10—141.)

1. A screw tap having a thread core comprising a finishing part preceded by a roughening part, the axis of which latter part deviating from the main axis of the tap, and cutting teeth provided on said thread core.



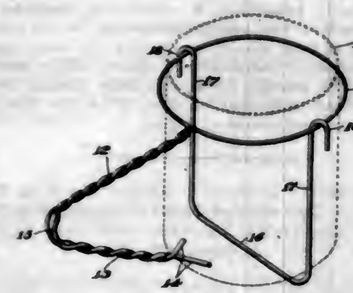
1,693,769. AUTOMATIC FLUE CONTROL FOR FURNACES. GEORGE A. TUCK, San Francisco, Calif. Filed Jan. 10, 1927. Serial No. 160,107. 16 Claims. (Cl. 126—116.)

2. A furnace comprising a combustion chamber and flue; a chimney; a vent passage connecting the flue and the chimney; a by-pass directly connecting the vent passage and the combustion chamber; and means entirely enclosed within the vent passage for automatically closing the by-pass when the temperature of gases within the vent passage reaches a predetermined degree.



---

1,693,770. SEAT. RAYMOND C. WILSON, New York, N. Y., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Sept. 27, 1926. Serial No. 137,896. 2 Claims. (Cl. 155—97.)

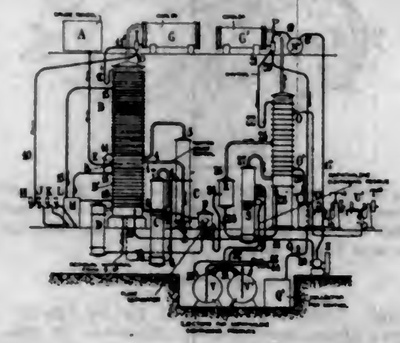


1. In a swivel seat, a base, a seat frame, means to mount the frame in the base rotatably, means to receive the thrust of the seat when the latter is occupied, means independent of the last named means to exert a force upwardly against the frame to resist the weight of the seat, means to receive the thrust of the frame due to the force of said last named means, and friction means disposed between the last named thrust receiving means whereby the seat will be restrained from swivelling movements.

1,693,771. SOUND AMPLIFIER. THOMAS YOUNG, Enfield, England. Filed Dec. 24, 1925, Serial No. 77,538, and in Great Britain Dec. 30, 1924. 3 Claims. (Cl. 181—27.)

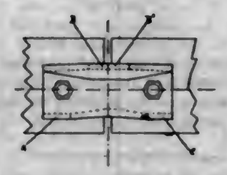
1. A sound amplifier comprising a plurality of laminated, wood, hollow, conical frusta, having their base edges joined together, the wood grain of the entire amplifier running in a direction substantially lengthwise of the amplifier.

1,693,772. PAINT-CAN HOLDER. ARTHUR G. ALLEN, Cambridge, Mass. Filed Jan. 23, 1928. Serial No. 248,628. 1 Claim. (Cl. 16—114.)



A detachable paint can holder constructed to embrace and support a paint can, comprising a frame having a looped portion adapted to slidably embrace the upper part of a paint can, an outwardly extending portion forming a handle at one side of the can and having a brace that extends downwardly from the handle into engagement with a side of the can, and a bar suspended from said looped portion and constructed to form a seat for the bottom of the can.

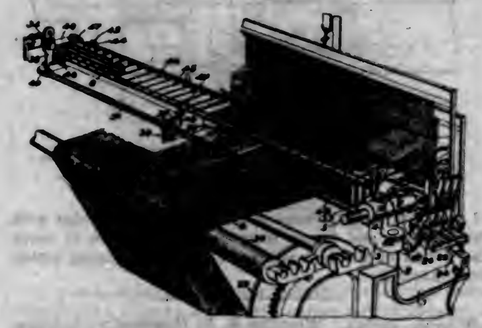
1,693,773. AIRCRAFT PONTOON APPARATUS. JAMES B. ANDERSON, San Diego, Calif., assignor of one-fourth to L. S. Murray, San Diego, Calif. Filed May 31, 1927. Serial No. 195,222. 5 Claims. (Cl. 244—2.)



1. In a float of the class described, an air distributing means within the float, a plurality of depressions in the outer bottom float surface, and air outlet passages communicating with said air distributing means and terminating within said depressions.

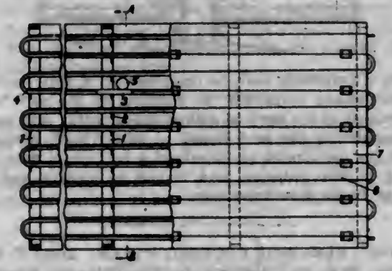
1,693,774. APPARATUS FOR THE CONTINUOUS PRELIMINARY TREATMENT OF CRUDE BENZOLS. EMILE AUGUSTIN BARBET, Paris, France. Filed Dec. 1, 1925, Serial No. 72,573, and in France Dec. 5, 1924. 2 Claims. (Cl. 196—106.)

1. Apparatus for the continuous preliminary treatment of crude benzols in order to prepare them for final rectifying, comprising a first rectifying column, a vaporizer connected to said first rectifying column, means for supplying the benzols to be treated to the vaporizer, means for introducing the vapours produced in the vaporizer into the first rectifying column, means for withdrawing the lower boiling constituents of the benzols from the said first rectifying column under atmospheric pressure, means for withdrawing the higher boiling fractions from the first column in the liquid state, a second rectifying column, a vacuum pump connected to said second column to maintain a reduced pressure therein, a chamber connected to said second column, means to supply vapours from said chamber to said second column and means to deliver the higher boiling liquid residue from the first column to said chamber, a heater connected to the second column, means for delivering liquid from the base of said chamber to the heater, means to deliver vapours produced in the heater to the second column and means connected to the second column to collect and condense the vapours arising therein.



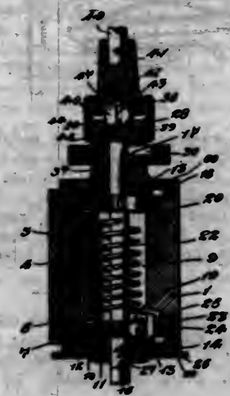
1,693,775. FISHPLATE. JEAN GABRIEL GEORGES COULLIE and JEAN LOUIS CADIS, Bordeaux, France. Filed July 8, 1927, Serial No. 204,380, and in France July 9, 1926. 1 Claim. (Cl. 238—243.)

A rail joint comprising two abutting rails, two similar fish plates consisting each of an inverted V-shaped vertical member placed on either side of the rails, said fish plates having no contact with the web of the rails and bearing only on the sloped inner faces of the top flanges, through very small bearing surfaces extending on either side of the joint, and on the upper faces of the lower flanges through two other very small surfaces provided at their lower outer ends and one bolt only adapted to secure said fish plates to each rail and disposed substantially towards the middle of the sloping line connecting the upper bearing surface with the corresponding lower bearing surface.



1,693,776. WARP STOP MECHANISM FOR LOOMS. HARRY A. DAVIS, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Feb. 9, 1928. Serial No. 253,025. 9 Claims. (Cl. 139—351.)

1. In a warp stop mechanism for looms, the combination of a series of drop wires normally supported by the warp threads during weaving, a transversely movable toothed detector, a series of fixed stop bars extending transversely between the drop wires above the toothed detector and separating the drop wires into a plurality of groups transversely of the loom, and means for effecting loom stoppage when any drop wire of a group is moved by the toothed detector into engagement with and is stopped in its transverse movement by a fixed stop bar on the occurrence of a warp fault.

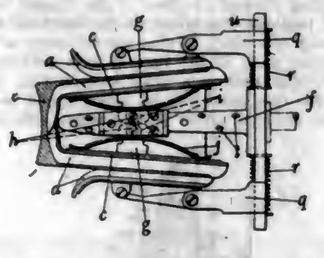


1,693,777. STRUCTURE FOR DRYING WOOD. OLOF ENGELBREKTSON, Bogen, Sweden. Filed Mar. 8, 1928, Serial No. 260,188, and in Sweden Apr. 5, 1927. 1 Claim. (Cl. 34—26.)

A structure for drying wood, comprising, in combination a long frame work having vertical standards in pairs, cross bars connecting the standards, carrier beams arranged lengthwise over one another, with a pipe coil adapted to carry a circulating current of heating medium, the said pipe coil being arranged in the longitudinal vertical middle plane of the frame in a zig-zag manner, the parts of the said pipe coil running lengthwise in the frame being arranged approximately in the same plane as the carrier beams and means for closing the long sides of the frame, substantially and for the purpose as set forth.

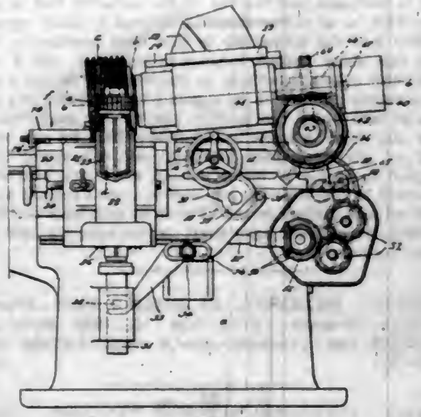
1,693,778. GRINDING TOOL. LOUIS ENGMAN, Moline, Ill. Filed Sept. 22, 1924, Serial No. 739,143. Renewed Sept. 10, 1928. 1 Claim. (Cl. 51—206.)

A tool for grinding cylinders comprising a tubular body having a central bore and spaced grooves in its periphery, said body having radial openings connecting said grooves and said bore, holders for grinding elements slidable radially in said grooves and having lugs extending through said radial openings into said bore, end members covering the opposite ends of said tubular body and having portions retaining said holders against longitudinal movement in said grooves, one of said end members having an axial hub extension outside of said tubular body, said end members having alined central bores, said hub having an arcuate slot extending from the bore of the associated end member through the outer wall of the hub, a rotary camshaft extending through the bore of the tubular body and having end portions journalled in the bores of said end members, said cam shaft having spaced cams in contact with the inner ends of the lugs of said holders, a coil spring encircling said cam shaft and having one end secured to the cam shaft and its opposite end secured to said tubular body, a radial pin extending through said



slot in said hub and secured to the adjacent end of said cam shaft, a set screw threaded through a radial opening in said hub and adjustable to and from position to lock said cam shaft against turning in said hub, and a ring adjustable circumferentially on the hub and having a pair of shoulders adapted to be engaged by the outer end portion of said radial pin to limit the turning movement of said cam shaft in opposite directions about its axis when said set screw has been loosened, said coil spring being adapted to be placed under tension when said cam shaft is turned in the direction required to permit inward movement of said holders in the grooves of said body and then tending to turn said cam shaft in the opposite direction about its axis.

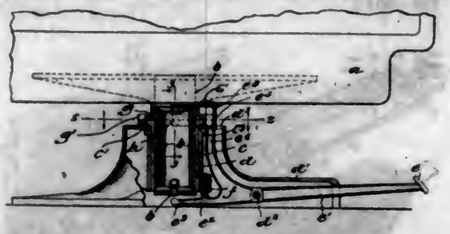
1,693,779. SWIMMING BLADDER. FRITZ FRANKE, Berlin, Germany. Filed Sept. 13, 1926, Serial No. 135,235, and in Germany June 6, 1925. 1 Claim. (Cl. 9—20.)



In combination with a bathing dress, swimming jacket or the like, a pocket provided on the inner surface of the breast side or chest side of the respective garment, and a swimming bladder arranged in said pocket, the size of the pocket and of the bladder being such that this latter covers the body portion extending from the chest, or the breast nipples, to the navel, or the "solar plexus," and the shape of the said bladder corresponding to the anatomic structure of the body and having the greater capacity of the bladder adjacent the breast, substantially as described.

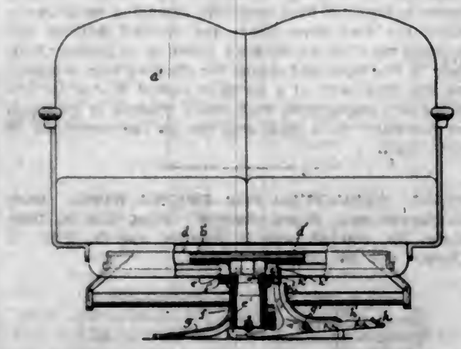
1,693,780. MEANS FOR WASHING, DRYING, AND POLISHING TUMBLERS, CUPS, AND LIKE ARTICLES. ALFRED GRIFFITHS, Rock Ferry, England, assignor to Kleenglas Limited, London, England, a British Company. Filed Feb. 2, 1928, Serial No. 251,439, and in Great Britain Oct. 19, 1927. 5 Claims. (Cl. 15—101.)

4. Means for washing, drying and polishing tumblers, cups and like articles comprising, in combination a hollow perforated stem, two plates secured to said stem at opposite sides, means allowing the plates to have a rolling movement about their securing means, a squeegee secured to each plate and two pivotally mounted squeegee carrying plates opposed to the squeegees before referred to, as set forth.



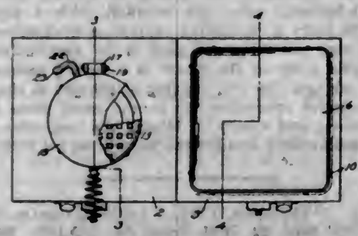
1,693,781. MACHINE FOR GRINDING GEARS. BENGT M. W. HANSON, Hartford, Conn.; Einar A. Hanson executor of said Bengt M. W. Hanson, deceased. Filed Nov. 16, 1923. Serial No. 675,034. 28 Claims. (Cl. 51—52.)

1. In a machine for grinding toothed gears, an abrasive screw having a thread of uniform outside and root diameters and corresponding in pitch to the circular pitch of the gear to be ground and uniformly corresponding in normal cross section to a rack tooth adapted to properly mesh with the teeth of the gear to be ground, means for rotatably supporting the toothed gear to be operated upon, and means for driving said abrasive screw and said supporting means, said abrasive screw being mounted for angular adjustment about a line normal to its axis whereby the convolutions on the abrasive screw where they engage the gear will be in proper relation to the teeth of the gear.



1,693,782. SEAT. WILLIAM E. B. HASSELKUS, Jamaica, N. Y., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed June 4, 1926. Serial No. 113,649. 3 Claims. (Cl. 155—96.)

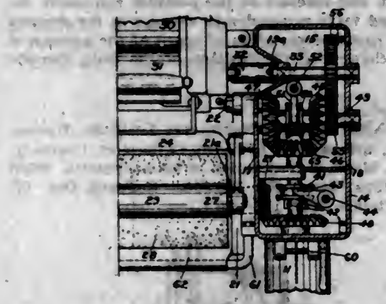
3. A revoluble seat including a vertical spindle, a vertical pedestal formed with a socket to receive the spindle, a flange carried with the spindle formed with diametrically disposed recesses, a flange carried with the pedestal cooperating with the first flange to carry the weight of the seat and formed with a recess to register with one



of said first named recesses, latching means carried with the pedestal, and means to separate the flanges to carry the weight of the seat and to release the latching means simultaneously.

1,693,783. SEAT. WILLIAM E. B. HASSELKUS, Jamaica, N. Y., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Aug. 17, 1926. Serial No. 129,720. 7 Claims. (Cl. 155—96.)

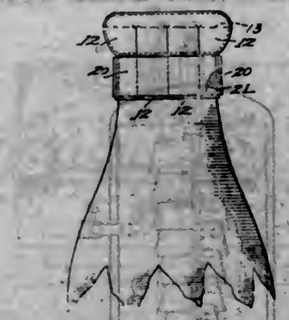
1. In a reversible seat, in combination, a seat frame, a pedestal, means to permit the rotation of the seat frame with respect to the vertical axis of the pedestal, said means also permitting the seat frame to be elevated, means to permit the seat frame to tilt about a horizontal axis with respect to the pedestal, and means to elevate and tilt the seat frame simultaneously.



1,693,784. ELECTRIC COOKING STOVE. JOHN C. HOLLANDS, Erie, Pa., assignor to The Griswold Manufacturing Company, Erie, Pa., a Corporation of Pennsylvania. Filed Nov. 21, 1925. Serial No. 70,445. 3 Claims. (Cl. 53—10.)

1. In an electric cooking stove, the combination of an annular frame plate; a cover plate covering the frame having an upstanding integral flange with an integral closure plate within the flange forming an element receiving receptacle and protector; an electric element in the receptacle, and a cooking plate covering the receptacle and in heating relation with the element.

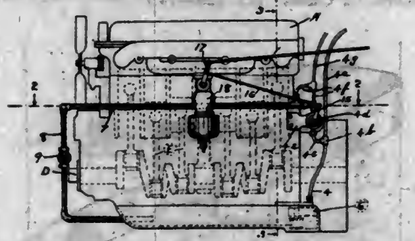
1,693,785. WASHING MACHINE. CHESTER C. HOWE, New Kensington, Pa., assignor, by mesne assignments, to Frank R. Alter, Parnassus, Pa. Filed Mar. 7, 1923. Serial No. 623,378. 5 Claims. (Cl. 74—7.)



1. A supporting and operating device for laundry units, comprising a support, a rotatable casing carried thereon, a horizontal arm carried by the casing, gearing inside the casing, a horizontal shaft operated through the gearing below the arm, a second horizontal shaft above the arm and laterally off-set with respect to the first shaft but parallel thereto.

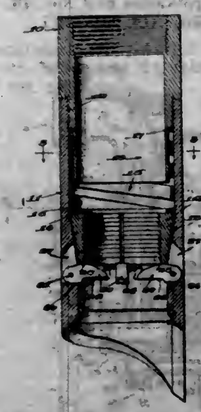
1,693,786. PROCESS FOR THE CRYSTALLIZATION OF SOLID SUBSTANCES IN A COARSE GRANULAR FORM FROM SOLUTIONS. ISAK ISAACHSEN, Oslo, Norway, assignor to Aktieselskapet Krystal, Oslo, Norway. Filed Sept. 10, 1925, Serial No. 55,002, and in Norway Sept. 17, 1924. 1 Claim. (Cl. 23—48.)

The method of crystallizing out solid substances from supersaturated solutions thereof wherein the solution and a suspension of granules of the substances circulate cyclically which comprises circulating the solution and suspension as a stream of relatively small cross sectional area whereby the granules are normally positively carried along by the circulating stream, regulating the number of granules before they have materially increased in size, and removing granules from the circulating stream at designated places therein.



1,693,787. MILK-BOTTLE CAP. JOHN EMANUEL JOHNSON and CHARLES H. OSLUND, Worcester, Mass., assignors to The O. & J. Machine Company, Worcester, Mass., a Corporation of Massachusetts. Filed May 1, 1925. Serial No. 27,284. 2 Claims. (Cl. 215—38.)

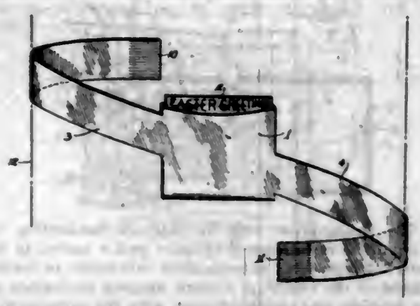
1. As an article of manufacture, a paper blank for a bottle seal of circular shape, having an unbroken circular center, and tongues radiating from said center and entirely surrounding it, said tongues having their edges converging slightly for about half their length and substantially parallel to the rest of it, so that when applied to a bottle the edges of the tongues will practically come into contact throughout the length of the tongues.



1,693,788. LUBRICATING MECHANISM. ROY E. LANGMACK, Minneapolis, Minn. Filed July 5, 1927. Serial No. 203,519. 3 Claims. (Cl. 123—196.)

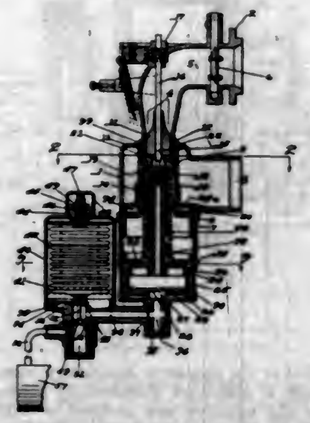
1. The combination with an internal combustion engine having a carbureter, a cylinder and a piston in the cylinder, of means for adjusting the carbureter to control the speed of the engine, a conduit adapted to contain oil under pressure and communicating with the cylinder at a point where it will conduct a lubricant to the upper peripheral surface of the piston, a valve in the conduit, means adjustable simultaneously with the carbureter adjusting means for opening the conduit valve upon a predetermined adjustment of the carbureter, and means for regulating the valve adjusting means whereby the valve may be caused to open at any selected predetermined speed of the engine as determined by the carbureter adjusting means.

1,693,789. COMBINATION TOOL FOR WELL-DRILLING OPERATIONS. GEORGE F. LE BUS, Electra, Tex. Filed July 17, 1924. Serial No. 726,601. 5 Claims. (Cl. 81—189.)



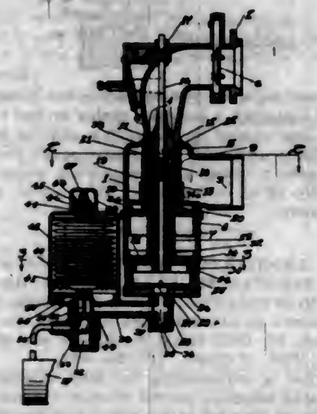
4. In a tool of the character described, a rotatable hollow tool body, a segmental diametrically expansible and contractible slip mounted and enclosed in said body, a plurality of cutting tools removably seated in recesses formed in said body below the said slip and having non-cutting portions engaging the lower edges of the slip segments, and spring means operating through said segments normally to position and maintain said tools in cutting position.

1,693,790. COMPOUND FUEL. PIERRE HENRI LEVÊQUE, Paris, France, assignor to Societe de Recherches et de Perfectionnements Industriels, Puteaux, Seine, France, a French Company. Filed Oct. 4, 1927, Serial No. 223,997, and in Germany Oct. 11, 1926. Renewed Oct. 12, 1928. 2 Claims. (Cl. 44—1.)



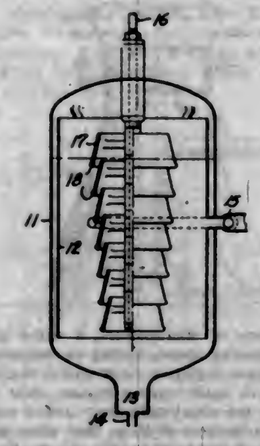
1. A process for forming a compound fuel consisting in oil purifying coal, incorporating pulverized close burning coal to the mixture of oil and coal obtained, pressing and finally distilling the product.

1,693,791. BAND ENVELOPE. LOUIS A. LIEBS, Woodhaven, N. Y., assignor to L. A. Liebs Company, Inc., New York, N. Y. Filed Nov. 17, 1927. Serial No. 233,966. 1 Claim. (Cl. 229—74.)



An envelope formed from a single piece of material, comprising a main body portion having upper and lower sections adapted to be brought into folded relationship, laterally extending tongue elements from the upper section for holding the lower section in interlocked relationship, and band members extending at any desired angle from the side edges of the upper section for the purpose of adjustment to an article.

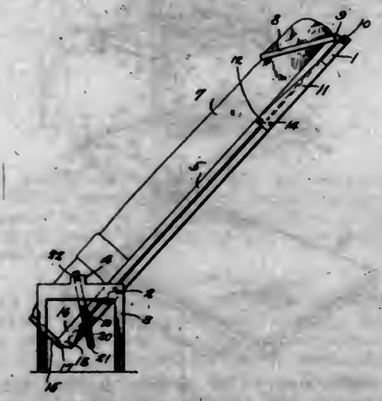
1,693,792. CARBURETOR. NATHANIEL LOMBARD, Worcester, Mass., assignor to Lombard Carbureter Company, Worcester, Mass., a Corporation of Massachusetts. Original application filed July 11, 1924, Serial No. 725,500. Divided and this application filed Nov. 16, 1925. Serial No. 69,422. 4 Claims. (Cl. 261—72.)



1. In a carburetor of the type that lifts liquid fuel from a source below the level of the fuel nozzle, a Venturi passage, a fuel entrance port opening into said Venturi passage at approximately the point of greatest speed of flow of air, thus creating a suction on the fuel which is greater than the vacuum created by the associated engine on the carburetor side of the throttle valve, a fuel line, including suitable connections, connecting said port to the fuel supply, a valve in said fuel line, a pressure responsive device to operate said valve, the said pressure responsive device being actuated and controlled by the suction created in the aforesaid fuel entrance port opening into the said venturi, whereby the valve controlled by the device moves to admit more or less fuel responsive to the changing engine suction and the magnification thereof caused by the entrance port opening into the said venturi, a member in said venturi, and air pressure means for moving said member in relation to the walls of said venturi, said air pressure means being operated by the suction created by the associated engine, whereby to vary the cross sectional area of said venturi where said fuel port opens thereinto, thus preventing excessive action and reaction of the pressure responsive device controlled valve responsive to changes in the demand for fuel by reason of variation of speed of the associated engine and changes in the position of the main throttle valve.

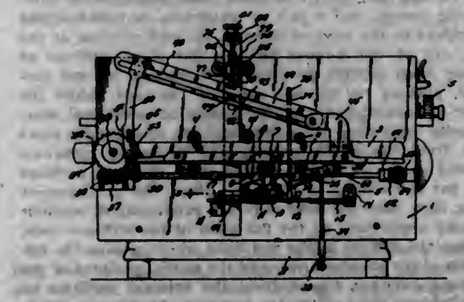
1,693,793. CARBURETOR. NATHANIEL LOMBARD, Worcester, Mass., assignor to Lombard Carbureter Company, Worcester, Mass., a Corporation of Massachusetts. Filed July 11, 1924, Serial No. 725,500. Renewed Dec. 17, 1927. 4 Claims. (Cl. 158—36.1.)

1. In a carburetor, a supply chamber for liquid fuel, a valve for controlling the admission of fuel to said chamber, a flat spring in a plane substantially perpendicular to the movement of said valve for holding said valve in its closed position and for substantially preventing sidewise vibration of said valve, and an expansible diaphragm located within said chamber, said diaphragm being provided with a seat adapted to engage a portion of said valve upon downward movement of the diaphragm, thereby also substantially preventing sidewise movement of said diaphragm when the seat and valve are in engagement.

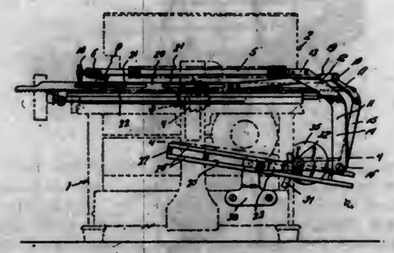


1,693,794. ELECTRODE. HOWARD W. MATHESON and JULIAN C. SMITH, Montreal, Quebec, Canada. Filed Aug. 23, 1924, Serial No. 733,721. 11 Claims. (Cl. 219—40.)

9. An electrode for water resistance steam generators for use within a complementary member comprising a hollow inverted frusto-conical electrode body constituting an upwardly enlarging steam conduit within a tubular discharge zone, and means for directing steam from the discharge zone into the conduit.



1,693,795. FOLDING BED. FRANK R. MOORE, Grand Junction, Colo. Filed Nov. 15, 1927. Serial No. 233,468. 3 Claims. (Cl. 5—146.)



1. In a device of the class described, a support, a main frame pivoted to the support, an auxiliary frame having means for supporting a bedding, an end member, means for pivotally connecting the end member with the main frame, means for pivotally connecting the end member with the auxiliary frame, the end member being tiltable to constitute a bedding grip, the auxiliary frame being movable longitudinally of the main frame to cause the end member to grip the bedding, a bell crank lever fulcrumed on the main frame and pivoted to the auxiliary frame, and a radius arm mounted to swing on the support, the bell crank lever having limited sliding connection with the radius arm, whereby the radius arm will tilt the lever, move the auxiliary frame longitudinally of the main frame, and move the end member out of bedding-gripping position when the main and auxiliary frames have been swung downwardly to a predetermined point.

1,693,796. SPACE-GRADUATING MECHANISM FOR TYPEWRITERS AND THE LIKE. KENNETH C. O'BRYAN and JAMES WILLIAM O'BRYAN, Washington, D. C. Filed Oct. 14, 1925. Serial No. 62,448. 14 Claims. (Cl. 197—84.)

4. In a typewriter having a carriage, normally operated in one direction, and escapement mechanism controlling movement of the carriage, a carrier mounted independently of and movable with the carriage and connected for direct movement with the escapement mechanism, and space graduating means providing an adjustable connection between the carrier and carriage and carried by the former for controlling the movement of the carriage in a predetermined ratio with respect to the escapement.

1,693,797. MEANS FOR GRADUATING CHARACTER SPACING IN A TYPEWRITER. KENNETH C. O'BRYAN and JAMES W. O'BRYAN, Washington, D. C. Filed Apr. 15, 1926. Serial No. 102,209. 3 Claims. (Cl. 197—84.)

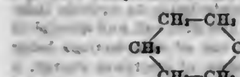
1. In a line spacing graduating attachment for typewriters comprising in combination, a typewriter frame having its carriage operatively mounted thereon and an escapement mechanism operable to control the movement of the carriage, movable means mounted on the carriage forming a single direct connection between the same and the escapement mechanism for transmitting motion of said mechanism to the carriage, a control member pivotally mounted on the frame and connected with the movable means, adapted to vary the ratio of movement between the carriage and escapement mechanism either to increase or decrease the same, adjustable means to vary the position of the control member and a position indicator for said control member operable through the adjustable means.

1,693,798. AMUSEMENT DEVICE. JOHN J. SCHMID, Louisville, Ky. Filed Sept. 21, 1925. Serial No. 57,567. 4 Claims. (Cl. 104—149.)

1. In a device of the class described the combination of an endless rail and a second rail comprising sections electrically insulated from the first rail and from one another, a source of electrical energy controllable to provide independent electrical circuits with the first rail and several of the sections of the second rail, one of said sections being free of connection with the source of electrical energy, a vehicle having wheels of electricity conducting material insulated from one another and adapted to contact with the rails, and an electric motor carried by the vehicle and having electrical connection with the wheels.

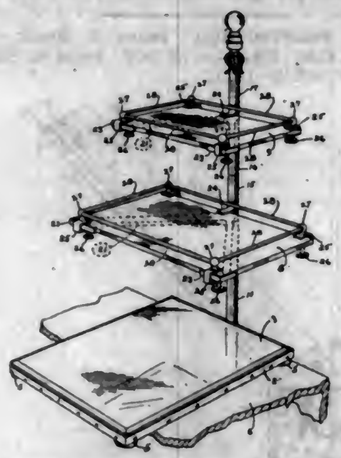
**1,693,799. COMBINED CORSET AND BRASSIÈRE.** LILLIAN E. SCOFIELD, New York, N. Y. Filed Nov. 24, 1925. Serial No. 71,252. 6 Claims. (Cl. 2—30.)

3. An undergarment comprising an anterior cloth member adapted to fit against the stomach of the wearer, diagonal side cloth members attached to each side of the anterior member and extending upwardly and rearwardly therefrom, diagonal elastic bands extending downwardly and rearwardly from said side members, diagonal hip cloth members extending downwardly and rearwardly from said elastic bands, and garters extending downwardly and diagonally from the said hip members, an elastic band connecting the hip members across the back below the waist, diagonal upper elastic members above the waist line, a cloth shoulder member uniting the upper elastic members, a brassière attached to the top of the anterior member, and shoulder straps connecting the top of the brassière to the shoulder member.



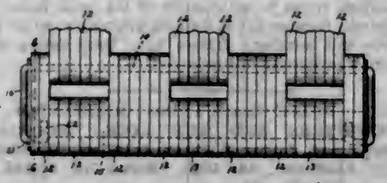
**1,693,800. ANNEALING PROCESS.** JOHN B. TITUS, Middletown, Ohio, assignor to The American Rolling Mill Company, Middletown, Ohio, a Corporation of Ohio. Filed May 1, 1923. Serial No. 635,985. 3 Claims. (Cl. 148—4.)

1. In a metal heat treating process those steps which consist in rolling a body of metal which, when rolled to the gauge required by a given order, will have a length which is in excess of the ordered length by an amount sufficient to allow for terminal irregularities necessarily incident to the rolling process, then uniting the individual sheets end for end utilizing the said excess, so as to leave between each union a body of metal of the length required by the said given order, passing the continuous band so provided through a heating chamber, and finally cutting away the zones of union, leaving individual pieces of the said required length.



**1,693,801. CYCLOHEXYL-SUBSTITUTED ALIPHATIC ACIDS.** ROGER ADAMS and GLEN SEXTON HIERS, Urbana, Ill., assignors to Abbott Laboratories, North Chicago, Ill., a Corporation of Illinois. Filed July 24, 1926. Serial No. 124,775. 4 Claims. (Cl. 260—112.)

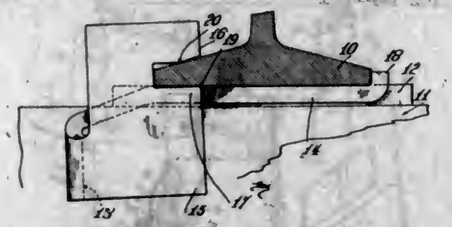
1. New compounds of the formula—



in which Y represents hydrogen, a halogen, or hydroxyl, $e$ represents 3 or more, and Z represents hydrogen, alkyl or a metallic element.

**1,693,802. DISPLAY STAND.** GEORGE S. BAILEY, San Francisco, Calif., assignor to James M. Bailey, San Francisco, Calif. Filed Sept. 20, 1926. Serial No. 136,449. 2 Claims. (Cl. 211—137.)

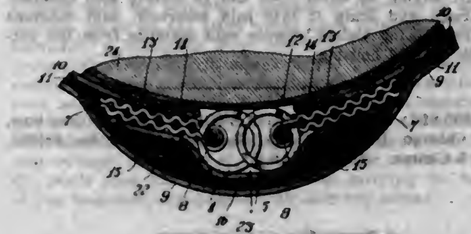
1. A display stand of the character described comprising a horizontal base, a vertical post carried at one side thereof, a plurality of vertically spaced shelves supported on the post overhanging said base and independently revolvable around said post, said post being formed of a plurality of inner and outer telescopic tubular sections being so spaced that the inner and outer joints of the telescopic sections do not coincide and bracket arms adapted to carry said shelves attached to certain outer telescopic sections.



**1,693,803. LINK MAT.** WILLIAM T. BELL, Concord, N. H. Filed Jan. 19, 1925. Serial No. 3,295. 3 Claims. (Cl. 15—239.)

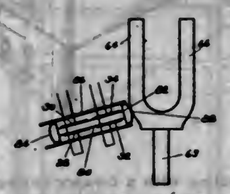
1. A link mat which includes links arranged in overlapping groups, and a pair of transverse tie-rods inserted in orifices in the rows of links at the end portions of the mat, one of the tie-rods being a flat sided stiffener of oblong cross section, provided with slots in its end portions, opening on the flat sides of the rods, while the other rod constitutes a pintle portion of cylindrical wire, hingedly connecting other rows of links, and angular arms bent from the pintle portion and including terminals parallel with and secured in said slots, said end portions and flat sides being in the same plane, the arrangement being such that the said rods are interengaged, without forming projections on the flat sides of the stiffener rods, so that the orifices in the end links which receive the terminals of the angular arms, and the slotted portions of the stiffener rod, are spaced from the external surfaces of said links by wear-sustaining portions of maximum thickness, and free from liability to be worn through from their external surfaces.

**1,693,804. RAIL ANCHOR.** ROLANDUS A. BLAIR, Fort Wayne, Ind. Filed Dec. 9, 1927. Serial No. 238,818. 23 Claims. (Cl. 238—330.)

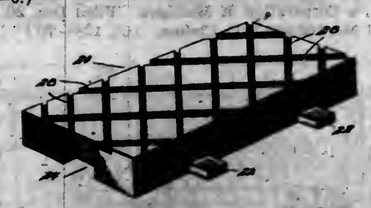


21. A rail anchor comprising in combination a sheet metal plate, two jaw members formed integrally with said plate and turned at an angle with respect thereto into spaced relation to each other converging toward the plate, notches in the edges of said members providing jaws for engaging the top and bottom faces of the flange of the rail,

and a resilient arm connected with said plate and provided with an upturned portion at its free end adapted by engagement with the edge of the flange at the opposite side of the rail to hold said jaws in tight gripping engagement with the rail.

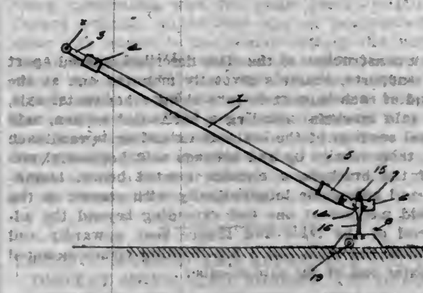


**1,693,805. FASTENER-COVERING METHOD AND MEANS.** CHARLES E. BRADLEY and GEORGE L. VAN DINTER, Mishawaka, Ind., assignors to Mishawaka Rubber and Woolen Manufacturing Company, Mishawaka, Ind., a Corporation of Indiana. Filed June 12, 1925. Serial No. 36,587. 28 Claims. (Cl. 24—205.)



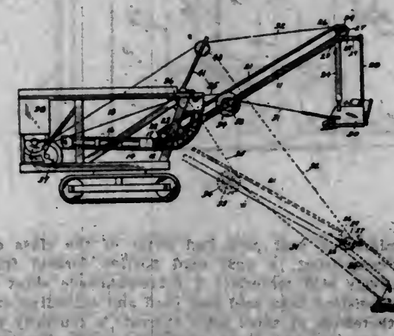
1. The combination with a pair of separable parts and a fastening device for connecting same, of a member consisting of elastic material slitted to form separable portions which operate simultaneously with the fastening of said device, so as to cover the latter.

**1,693,806. ELECTROMECHANICAL SYSTEM.** WALTER G. CADY, Middletown, Conn., assignor to Radio Corporation of America, a Corporation of Delaware. Filed Feb. 28, 1925. Serial No. 12,463. 34 Claims. (Cl. 181—0.5.)



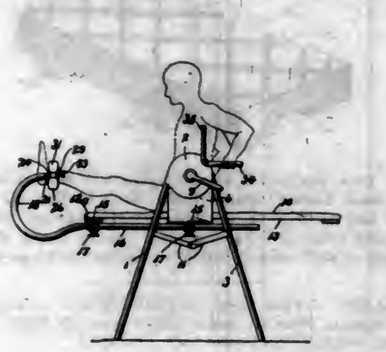
34. A vibrating system having, in combination, a tuning fork and two electro-mechanical vibrators so constructed and arranged that the tuning fork shall vibrate when one of the electro-mechanical vibrators vibrates and so that the other electro-mechanical vibrator shall vibrate when the tuning fork vibrates, the said one electro-mechanical vibrator being adapted to vibrate mechanically when stimulated electrically and the said other electro-mechanical vibrator being adapted to respond electrically when vibrated mechanically, means for electrically stimulating the said one electro-mechanical vibrator, and means controlled by the said other electro-mechanical vibrator for controlling the stimulating means.

**1,693,807. ROAD.** LUKE H. CALLAN, Bristol, R. I. Filed Feb. 26, 1925. Serial No. 11,823. 13 Claims. (Cl. 94—6.)



8. As a new article of manufacture, a hard rubber paving block having comparatively weak projections on one side and recesses on the opposite side thereof, said projections being of a substantially greater length than the length of said recesses but of a substantially lesser width.

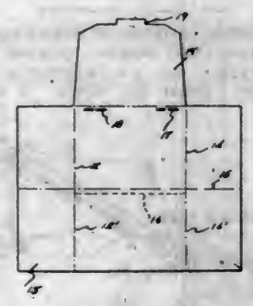
**1,693,808. LAWN-EDGING IMPLEMENT.** FREDERIC N. CATUDAL, Newton, Iowa. Filed Apr. 19, 1927. Serial No. 184,938. 2 Claims. (Cl. 97—227.)



1. In a structure of the class described, a shaft, a handgrip fastened to the upper end thereof, a socket fastened to the lower end of the shaft, and equipped with a notched shank, an excavating and trimming shoe, and an attaching device therefor connected thereto and adjustably and slidably mounted upon said shank and provided with a set screw for selective reception in said notches.

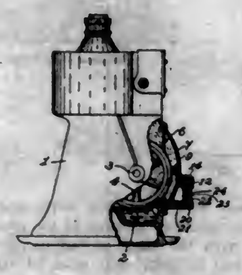
**1,693,809. POWER SHOVEL OR EXCAVATOR.** BIRD C. CLUTTER, Akron, Ohio, assignor, by mesne assignments, to Clutter-Wagner, Inc., a Corporation of Ohio. Filed Jan. 4, 1926. Serial No. 79,069. 5 Claims. (Cl. 214—138.)

1. The combination with an excavator apparatus having a scoop-crowding rack extending forwardly on the frame thereof and a shaft having a gear meshed with said rack, of an excavator attachment pivoted on said shaft and a clevis adapted to be clamped over said gear and onto said rack, said clevis having teeth adapted to mesh with said gear and other teeth adapted to mesh with said rack to secure said shaft in any desired position on said rack.



1,693,810. NEUROPATHIC HEALTH TABLE. MELVILLE DANIELS and A. J. WOOD, Grand Rapids, Mich., assignors to Daniels Health Table Company, Grand Rapids, Mich., a Corporation of Michigan. Filed Dec. 20, 1926. Serial No. 156,023. 11 Claims. (Cl. 128—70.)

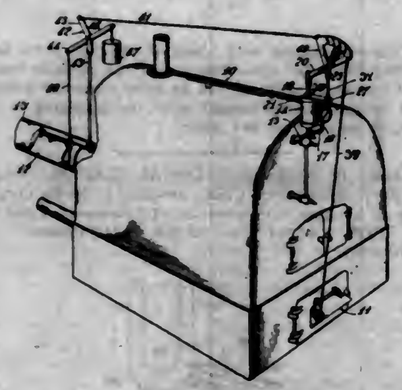
1. In a construction of the class described, spaced apart vertical supports, brackets pivotally mounted one at the upper end of each support to turn about a horizontal axis, each of said brackets including a horizontal section, said horizontal sections of the brackets extending toward each other, a table carried by and between said horizontal sections of the brackets, a member located below, lengthwise of and adjustable longitudinally with respect to the table, said member at one end extending beyond the adjacent end of the table and thence bent upwardly and back toward the table and a legs holding clamp mounted at the outer end of the said member.



---

1,693,811. COMBINATION POST CARD AND LETTER. EDMUND DZIUK, Detroit, Mich. Filed Dec. 26, 1925. Serial No. 77,798. 1 Claim. (Cl. 229—92.8.)

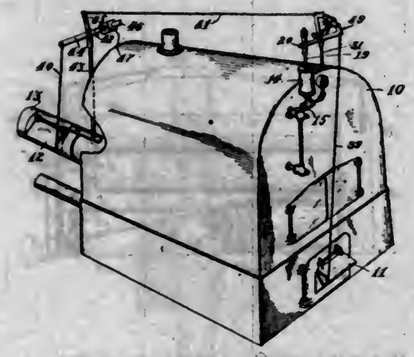
A combination post card and letter of the class described, comprising: a post card portion formed from comparatively stiff material; a correspondence sheet of larger dimensions than said post card and extending outwardly therefrom at three sides thereof; a centrally positioned flap on said sheet extending outwardly from said card at the remaining side thereof; means for securing said sheet to said card, said sheet being foldable upon itself to a less width than the width of said card, and said flap being foldable over said folded sheet; and a tongue on said flap adapted to be secured to one edge of said card for securing said flap in folded over relation to retain said sheet in folded condition.



1,693,812. OILING INDICATOR. JAMES MCCOSH EDWARDS, Waterloo, Iowa, assignor to Iowa Dairy Separator Company, Waterloo, Iowa. Filed Mar. 8, 1926, Serial No. 93,197. Renewed Apr. 30, 1928. 4 Claims. (Cl. 184—13.)

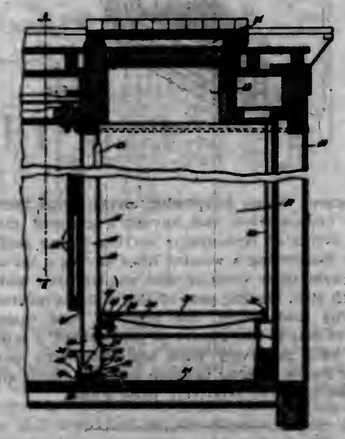
1. In combination, a housing having a wall cavity and an open top liquid reservoir, a rotatable wheel in said housing adapted to engage liquid in said reservoir and discharge it into said wall cavity, a valve-controlled conduit for delivering liquid from said cavity outwardly and downwardly in a coherent vertical stream, and a conduit having an outer open end to receive said coherent stream and drain it into said reservoir, said coherent stream being visible between said conduits from the outside of said housing.

---



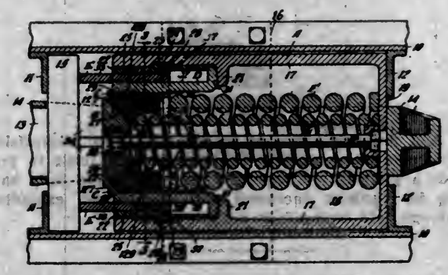
1,693,813. DRAFT REGULATOR. BARNEY GOODMAN, Chicago, Ill. Filed Feb. 13, 1926. Serial No. 88,032. 5 Claims. (Cl. 236—16.)

1. In combination with a furnace having a draft and a damper door, a cylinder communicating with a variable pressure source, a piston mounted for reciprocation therein, a piston rod thereon, said piston being arranged to move in response to a pressure change, an adjustable support adjacent said cylinder, a lever pivotally mounted on said support and operatively associated with said piston rod, a calibrated element mounted on said support adjacent the said lever and rotatable about the same axis as said lever and relative thereto, means carried by said lever at one end thereof for detachably and adjustably connecting it to the said calibrated means, and mechanism for operatively connecting said calibrated means with said doors whereby a pressure change will effect a different setting of said doors.



1,693,814. DRAFT REGULATOR. BARNEY GOODMAN, Chicago, Ill. Filed Dec. 7, 1927. Serial No. 238,853. 7 Claims. (Cl. 236—16.)

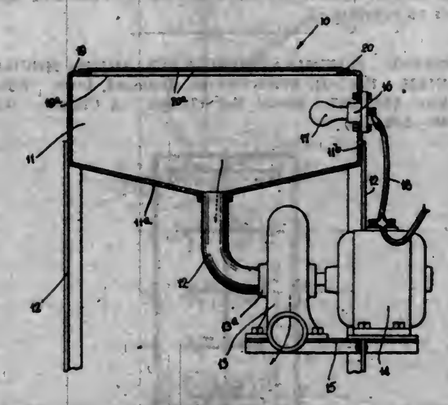
1. In a device of the class described, the combination with a fire draft closure and a flue damper closure, of pressure operated means, a pivotally mounted regulator having ratchet teeth, a pivotally mounted transmitting lever operatively connecting said pressure operated means and said regulating means, flexible means connecting the closures with the regulator arranged so that one of said closures closes as the other opens upon rotation of said regulator, a balancing lever pivotally mounted on the transmitting means, trip means in the path of the balancing lever, two pawls, one mounted on the transmitting lever and the other on the balancing lever, both engaging said ratchet teeth whereby upon fluctuation of the pressure applied to the pressure operated means a step by step advance movement is imparted to the regulator by the pawls upon the transmitting lever carrying the balancing lever into engagement with said trip means.



---

1,693,815. REFRIGERATOR CAR. GEORGE A. HULL, Chicago, Ill., assignor to Equipment Specialties Co., Chicago, Ill., a Corporation of Illinois. Filed Mar. 14, 1927. Serial No. 175,401. 11 Claims. (Cl. 62—19.)

1. In a refrigerator car, a ventilating wall comprising a plurality of channelled metal sections having a plurality of spaced parallel slits in their webs with substantially all of the metal strips between said slits bent at right angles to said web to form a ventilating grille.



1,693,816. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed Nov. 4, 1927. Serial No. 230,942. 6 Claims. (Cl. 213—22.)

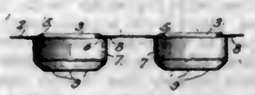
1. In a friction shock absorbing mechanism, the combination with a column element having longitudinally disposed friction surfaces; of a wedge block; friction shoes, cooperating with the wedge block; relatively stationary friction plates held against longitudinal movement with respect to the column element and having frictional engagement with the shoes; movable friction elements interposed between the friction surfaces of the column element and the stationary plates, said movable elements having their outer ends normally projected beyond the wedge to receive the actuating force during the first part of the compression stroke; and separate spring resistance means respectively opposing inward movement of the shoes and movable friction elements.

---

1,693,817. METHOD AND APPARATUS FOR MAKING DISPLAY SIGNS, LAMP SHADES, AND OTHER LIKE ARTICLES. WILLIAM E. PRICE, White Plains, N. Y. Filed Apr. 30, 1926. Serial No. 105,664. 18 Claims. (Cl. 40—133.)

1. The art of making a sign or like article consisting in superimposing a flexible sheet of material on one side of a perforated plate, and applying sufficient suction to the other side of said plate to cause portions of said material over plate perforations to be drawn therethrough whereby raised protuberances are formed.

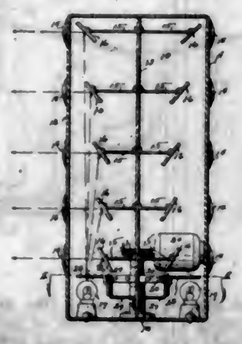
12. An apparatus of the character described comprising a box having an opening on which a perforated plate and flexible strip to be assembled is adapted to be mounted, said plate and strip forming a closure for said opening, and suction means for reducing the air pressure inside said box, whereby portions of the strip are projected through said perforated plate.



1,693,818. DETONATING FIREWORK. HANS REIHLEN, Karlsruhe, Baden, Germany, assignor to Milton M. Adler, Newark, N. J. Filed Sept. 21, 1927. Serial No. 220,897. 7 Claims. (Cl. 102—20.)

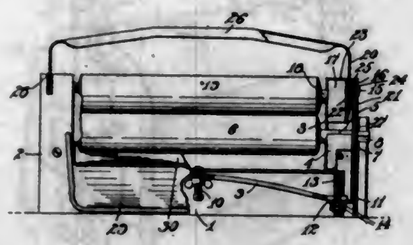
1. A firework device of the kind described, comprising a tubular casing folded transversely upon itself to provide a plurality of connected sections, and a body having its surfaces encrusted with gun-powder extending through said casing from section to section.

---



1,693,819. CONTAINER. HENRY J. SCHAFFER, Brooklyn, N. Y., assignor to Jacob Schaffer, Brooklyn, N. Y. Filed Jan. 14, 1925. Serial No. 2,264. 10 Claims. (Cl. 220—94.)

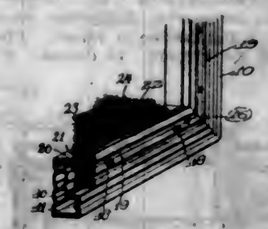
1. A container, having sheet metal walls with spaced apertures therein, said apertures each being larger in diameter than the diameter of any of a person's fingers, with the spacing between the apertures such as to permit of the insertion into the apertures of the fingers of one's hand to enable one to lift the apertured wall, the portion of the wall bordering each aperture being raised upwardly slightly and rolled inwardly and backwardly to provide a bead defining each aperture, and individual sheet metal cups, each of greater diameter than the diameter of any of a person's fingers, flanged at their open edges and secured against the inner face of the apertured wall over an aperture.



---

1,693,820. ILLUMINATED-SIGN FLASHING MECHANISM. PAUL H. SCHNORMEIER, Hubbard, Iowa. Filed Mar. 18, 1927. Serial No. 176,561. 3 Claims. (Cl. 40—133.)

1. In a device of the class described, a housing having openings in its side, a lamp in said housing, reflector plates in said housing for reflecting light from said lamp through said openings, an endless belt rotatably mounted in said housing, blinds secured to said endless belt and capable of passing between the lamp and reflector plates when the belt is rotated, guide members in said housing in engagement with said blinds, and a prime mover in operative engagement with said belt.



1,693,821. WRINGER. SIMON E. SCHRODER, Newton, Ind. Filed Feb. 28, 1927. Serial No. 171,491. 4 Claims. (Cl. 68—32.)

1. In a clothes wringer in combination, a frame, a lower roll mounted therein, an upper roll mounted therein and movable relatively to the lower roll, pivot members connected to the upper roll, pressure applying means mounted in said frame below said lower roll, connector members connected to said pressure applying means and having engaging lugs, and swingable members pivotally mounted on said pivot members and having engaging lugs arranged to engage the lugs on said connector members when the swingable members are swung into vertical alignment with the shafts of the wringer rolls.

---

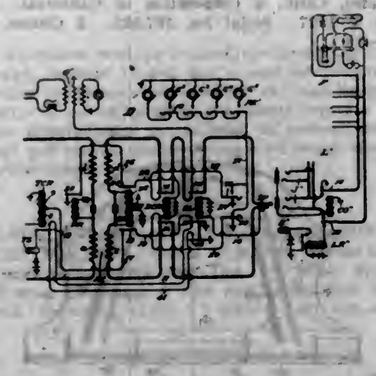
1,693,822. SCREEN. CHARLES A. SHOGREN, Chicago, Ill., assignor, by mesne assignments, to Art Metal Screen and Weather Strip Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 18, 1926. Serial No. 81,893. 5 Claims. (Cl. 156—14.)

1. A screen frame comprising metal strips bent to rectangular cross-section and having a grooved rabbet, removable strips of rectangular section fitting said rabbet, and each comprising a wooden filler having a metal casing bent to cover three sides of said wooden filler and part of the fourth side, leaving part of the wood uncovered on the side facing said rabbet, the edges of said casing being adapted to seat in the groove of said rabbet, a wire screen between said relatively fixed and removable parts, and fastening means passing through said removable strips and said screen into the relatively fixed frame.

---

1,693,823. DRILL CHUCK. WILLIAM SHORB, Minneapolis, Minn. Filed Sept. 11, 1924. Serial No. 737,066. 7 Claims. (Cl. 279—14.)

1. A drill chuck comprising a substantially cylindrical body member, a revoluble cylinder having an eccentrically located drill socket disposed longitudinally of said cylinder, means by which said cylinder may be turned, and stop means on said body engageable by said first mentioned means to limit the movement of said cylinder, whereby



said cylinder will be disposed in position to hold a drill substantially in axial alignment with said body member when said stop means is engaged.

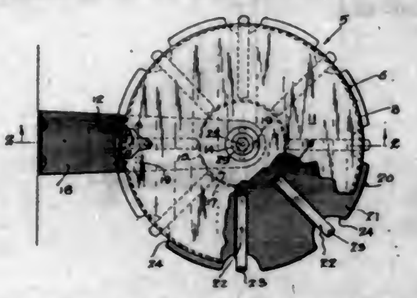
---

1,693,824. TELEPHONE SYSTEM. MICHAEL B. STAZAK, Chicago, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed May 10, 1926. Serial No. 107,928. 10 Claims. (Cl. 179—41.)

2. In a telephone system, an operator's cord circuit, a plug ended trunk circuit at another operator's position, connection means for said cord and trunk for connecting said cord to said trunk, a telephone line, said plug ended trunk adapted to be connected to said line, ringing current means for said trunk set by the trunk operator but not connected to said line, means for said cord circuit actuated by said operator of said cord circuit to operate means in said trunk to connect said ringing current means set by said trunk operator to the called line, and means in said trunk circuit controlled over said telephone line for discontinuing the application of ringing current to the called line.

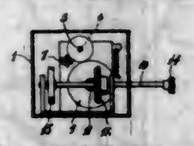
1,693,825. RESISTANCE UNIT. ERWIN R. STOEKLE, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Mar. 26, 1925. Serial No. 18,389. 5 Claims. (Cl. 201—63.)

2. A resistance unit comprising a winding of predetermined resistance, the coils of said winding being embedded in a resistance material consisting of substantially equal parts of a metallic substance and an enamel composed of red lead, zinc oxide, raw kaolin and boric acid.



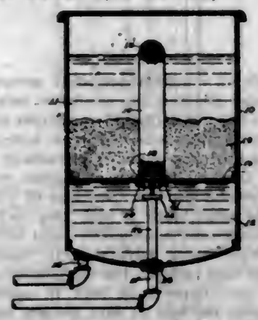
---

1,693,826. NECKWEAR HOLDER. LOUIS STOLTENBERG, Oakland, Calif. Filed Sept. 6, 1927. Serial No. 217,591. 2 Claims. (Cl. 211—89.)



1. An article of the class described, comprising a wire-supporting-frame adapted for revoluble mounting upon a suitable object and consisting of an upright member having a necktie holder rigidly mounted at its lower end and embodying a ring having a plurality of radially disposed supporting arms forming holders, said arms consisting of a single looped strand the inner sections of which are "spot welded" to the upper face of said ring and having their outer looped ends bent downwardly, and spring clips consisting of single wires having their inner ends "spot welded" to said ring between the extremities of said looped holders and their outer ends bent in opposition to the downwardly bent sections of said holders and adapted to coact therewith in holding articles securely in place upon said holders.

1,693,827. COMBINATION COLLAR BOX AND NECK WEAR HOLDER. LOUIS STOLTENBERG, Oakland, Calif. Filed Sept. 6, 1927. Serial No. 217,502. 2 Claims. (Cl. 211—89.)

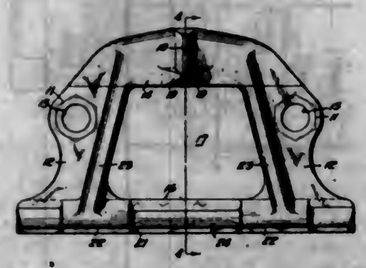


1. An article of the class described, comprising a rigid support adapted for mounting upon any suitable object, a centrally disposed spindle carried by said support and having a head formed at its lower end, a revoluble member mounted upon said spindle and consisting of a metal disc, a plurality of radially arranged spring clips formed in said disc and terminating slightly below the edge thereof and having their extremities lying in a plane substantially paralleling that of the under face of the disc, and said disc having notches formed in its edge at points adjacent to said clip extremities to provide access to said clips for the purpose of releasing articles retained thereby.

1,693,828. AUTOMOBILE SERVICE INDICATOR. JOHN PERCY STEVENS, Long Beach, and GEORGE A. C. BAILEY, Los Angeles, Calif.; said Bailey assignor to Louise Parenteau, Los Angeles, Calif. Filed June 18, 1927. Serial No. 199,647. 4 Claims. (Cl. 40—68.)

1. An automobile service indicator comprising a casing, a face plate on the casing, a plurality of numbered discs journaled in the casing, a friction wheel, a friction drive wheel, a shaft journaled in the casing, a balance wheel on the shaft, and gear means connecting said shaft and said friction drive wheel whereby said numbered discs are rotated, said numbered discs being visible under a legend on said face plate.

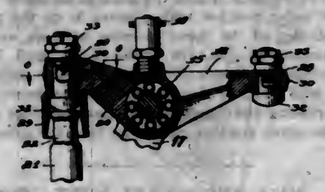
1,693,829. BRINE TANK FOR WATER SOFTENERS. ORLAND RUSSELL SWEENEY, Ames, Iowa, assignor to Ward-Love Pump Corporation, Rockford, Ill., a Corporation of Illinois. Filed Sept. 9, 1926. Serial No. 134,342. 31 Claims. (Cl. 210—24.)



1. In a water softener installation, the combination with a water softener tank, of a brine tank having a top salt compartment and a bottom brine compartment normally in communication, a pipe leading from the latter compartment thereof, a drain outlet at a predetermined level near the level of the top of said salt compartment, and means normally serving to control communication between the softener and brine tanks, said means being adapted for opening communication between said pipe and said drain outlet to lower the level of water in said brine tank to the predetermined level of said outlet for the purpose described.

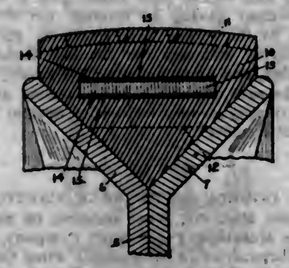
1,693,830. BOTTLE CAP. JOSEPH TRISKA, Omaha, Nebr. Filed May 3, 1928. Serial No. 274,834. 4 Claims. (Cl. 215—87.)

1. In a bottle-cap of the class described, a metal plate having downwardly extending side-flanges adapted to straddle the bead of a bottle-neck, and having at one end a tongue adapted to extend beneath said bead, a key-shaft mounted rotatably and extending transversely between said side-flanges at the end opposite said tongue and having a bowed intermediate portion adapted to engage the neck-bead, and means for retaining the key-shaft in adjusted positions.

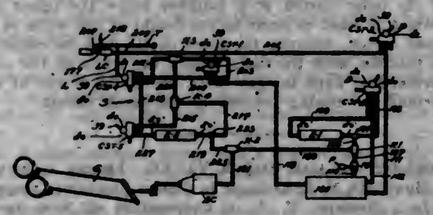


1,693,831. ICE GROUSER SHOE. WILLIAM TURNBULL, Peoria, Ill., assignor to Caterpillar Tractor Co., San Leandro, Calif., a Corporation of California. Filed June 8, 1927. Serial No. 197,328. 3 Claims. (Cl. 305—10.)

3. An ice grouser shoe comprising a pair of pads, each of said pads having an aperture therein, a pair of transverse bars joining said pads and enclosing therewith a central opening, a reinforcing web on each of said pads connecting said bars, a longitudinal flange on one of said bars, supporting shoulders for said flange, a transverse flange on the other of said bars, and enlargements on said flange adjacent said webs.



1,693,832. INTERNAL-COMBUSTION ENGINE. JESSE G. VINCENT, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Apr. 18, 1922. Serial No. 553,054. 11 Claims. (Cl. 123—90.)

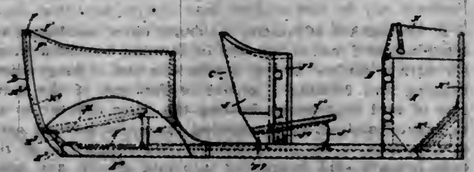


2. In an engine, a cylinder having a plurality of ports therein, valves arranged to normally close said ports, a rocker lever arranged to simultaneously open and close said valves having a plurality of spaced parallel valve-engaging arms normal thereto and an operating arm arranged centrally of the valve-engaging arms and extending in the opposite direction.

1,693,833. BAND FOR USE WITH TRACTORS OR THE LIKE. GEORGE I. WORLEY, Akron, Ohio. Filed Sept. 24, 1925. Serial No. 58,306. 5 Claims. (Cl. 305—10.)

2. An endless band for tractors, the band being composed of tough, resilient rubber, and a cord reinforcement embedded in the rubber at the center of the band comprising a plurality of cotton cords placed closely together and arranged longitudinally of the band to prevent elongation thereof and breaker strips arranged on either side of the said reinforcement.

1,693,834. BRAKE AND DOOR CONTROL FOR AUTOMOTIVE BUSSES. RUFUS W. BAILEY, Kansas City, Mo. Original application filed Dec. 15, 1924, Serial No. 755,901. Divided and this application filed July 24, 1925. Serial No. 45,771. 7 Claims. (Cl. 303—6.1.)

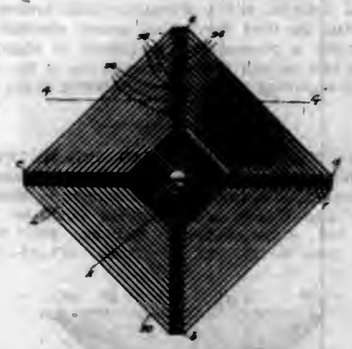


3. The pneumatic control for vehicles comprising means under a driver's control, means under a conductor's control, means under a street collector's control, means under passengers' control adapted to open an exit, said exit being adapted to be re-closed only when all of said means are reset for closing, means for dispensing with the conductor's control and the street collector's control, without changing the structure of the system or the effectiveness under the remaining controls, and a pneumatic brake system interlocked with the door controlling means, operable to be set whenever a passenger is positioned to alight from the coach and the exit is open, irrespective of the driver's intentions regarding the setting or releasing of the vehicle brakes.

1,693,835. FASTENER COVERING AND METHOD OF MAKING SAME. CHARLES E. BRADLEY and GEORGE L. VAN DINTER, Mishawaka, Ind., assignors to Mishawaka Rubber and Woolen Manufacturing Company, Mishawaka, Ind., a Corporation of Indiana. Filed Sept. 3, 1927. Serial No. 217,522. 18 Claims. (Cl. 24—205.)

1. The combination of separable parts and a fastening device for connecting same, said parts being provided with extended edge portions adapted to be brought together in edgewise abutting relation in the operation of said fastener so as to cover the latter, said extended edge portions being formed of material crowded into a space of less width than the width of said material in its normal relaxed condition, to afford extra fullness along and transverse to the line of separation and thereby effect a snug abutting of the edges when the parts are fastened together.

1,693,836. VEHICLE BODY. PAUL E. BRENEMAN, Detroit, Mich., assignor to C. R. Wilson Body Company, Detroit, Mich., a Corporation of Michigan. Filed May 21, 1920. Serial No. 383,299. 21 Claims. (Cl. 296—28.)

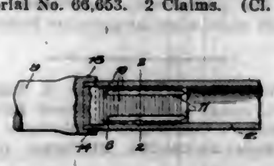


1. In a vehicle body, a base unit comprising a pair of side sill members having their outer edges conforming to the contour of the body and their inner edges parallel to the longitudinal axis of the body, cross members connecting said sills and forming supports for super-sections of the body, and depressed flanges on the portions of said sills between said cross members for supporting the floor boards.

20. In a vehicle body, the combination with a panel having a depressed portion constituting a wheel housing, an inwardly extending flange constituting the top rail, and a brace secured to the inner face of the depressed portion and having a portion engaging the inwardly extending flange aforesaid.

1,693,837. COIL. HIRAM D. CURRIER, Chicago, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 25, 1924. Serial No. 745,750. 8 Claims. (Cl. 175—359.)

1. A coil of the character described comprising spaced convolutions of wire wound in spaced layers, a core



provided with diametrically opposite angular faces, strips superimposed upon said diametrically opposite angular faces of said core to form arms for supporting said convolutions, certain of said strips having longitudinal orifices for supporting taps from said convolutions of wire,

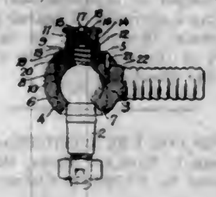
slots in both faces of said superimposed strips in matched relation forming means for maintaining said convolutions in spaced relation, said convolutions producing a binding effect to make said superimposed strips which form said arms self-sustaining.

---

1,693,838. METHOD OF MAKING SHAFTS, CONNECTING RODS, AND THE LIKE. FRITZ FAUDI, Dusseldorf-Oberkassel, Germany. Original application filed Mar. 10, 1924, Serial No. 698,054, and in Germany July 4, 1922. Divided and this application filed Nov. 3, 1925. Serial No. 66,653. 2 Claims. (Cl. 29—148.)

1. The method of jointing a tubular outer member to an inner member, which consists in forming an inner member with a surface having depressions and a flange overhanging and forming a groove beyond one of the margins of said depressions, heating the outer member so as to expand and soften it, passing the outer member over said surface of the inner member and fitting one of its ends beneath said flange and into said groove, and compressing and forcing the material of the heat softened outer member into the depressions of the inner member, and the flange of said inner member over the end of the outer member fitted in said groove.

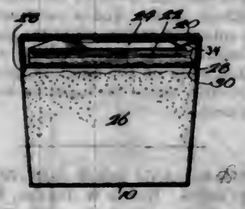
---



1,693,839. METHOD OF JOINTING TUBULAR MEMBERS. FRITZ FAUDI, Dusseldorf-Oberkassel, Germany. Original applications filed Mar. 10, 1924, Serial No. 698,054, and Nov. 3, 1925, Serial No. 66,653, and in Germany July 4, 1922. Divided and this application filed Dec. 20, 1926. Serial No. 156,040. 4 Claims. (Cl. 29—148.)

1. The method of jointing an outer tubular member to an inner member, which consists in forming the inner member with two portions of different diameters, the one of lesser diameter having surface depressions and being of a cross-section slightly larger than the inner cross-section of the tubular outer member and the one of greater diameter having an annular flange surrounding and forming a groove between it and the portion of lesser diameter, fitting the outer member with a press fit on the portion of lesser diameter of the inner member with an end portion thereof projecting beneath said flange and into said groove, pressing portions of the wall of the outer member into the said surface depressions of the inner member, and compressing the flange of the inner member about the edge of the outer member extending into the groove.

---

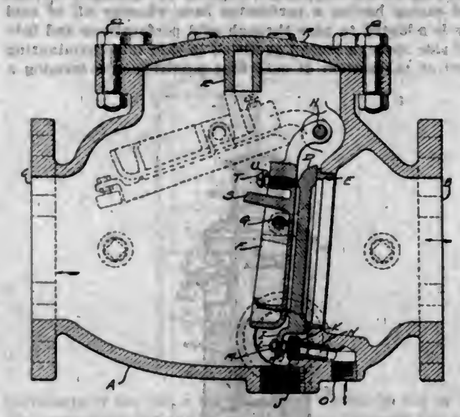


1,693,840. BALL AND SOCKET JOINT. FRITZ FAUDI, Dusseldorf-Oberkassel, Germany. Filed Apr. 14, 1927, Serial No. 183,676, and in Germany Nov. 15, 1926. 5 Claims. (Cl. 287—90.)

1. A ball and socket joint comprising a ball member, a socket member having an internal flat shoulder at a right angle to the socket wall, relatively stationary and movable bearing members for the ball member in said socket member, and a cap engaging the socket member and enclosing the said movable bearing member and clamping the said stationary member in position against the shoulder in the socket member.

---

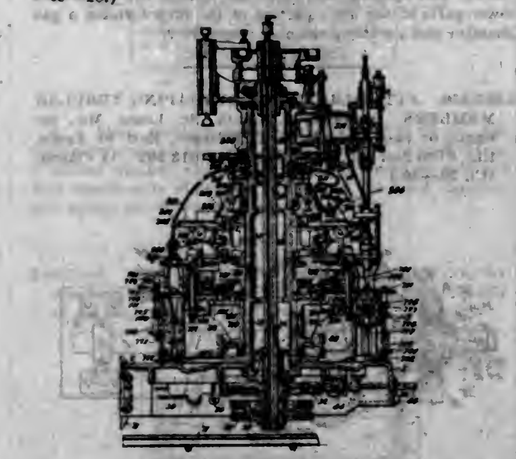
1,693,841. DOUBLE-RECEPTACLE CARTON. GEORGE S. GAYLORD, Menasha, Wis., assignor, by mesne assignments, to Marathon Paper Mills Company, Rothschild, Wis., a Corporation of Wisconsin. Filed Oct. 10, 1925. Serial No. 61,856. 6 Claims. (Cl. 206—47.)



5. In combination, a pair of open top cartons of flexible material, each including a bottom and four walls, one of said cartons being of less depth than the other and insertable therein, ledges embossed inwardly in the walls of the outer carton at a distance below the upper edge thereof at least as great as the height of the walls of the inner carton, whereby the inner carton may be supported in position with its walls within the walls of the outer carton, and flaps integral with the walls of one of said cartons for closing the top of the inner carton.

---

1,693,842. ALARM CHECK VALVE. LESTER A. GRIMES, Montclair, N. J., assignor to Grimes Sprinkler Company, Inc., Newark, N. J., a Corporation of New Jersey. Filed July 17, 1925. Serial No. 44,221. 1 Claim. (Cl. 277—20.)



In an alarm check valve, a casing, a lever pivoted therein, a main valve, a connection between said lever and said valve at a point intermediate the pivot of the former and the center of the latter, and an auxiliary valve comprising an adjustable stem carried by said main valve and

yielding means supported by said stem, said auxiliary valve in operation having initially a delayed opening movement with respect to said main valve and thereafter a movement in unison therewith.

---

1,693,843. GLASS-BLOWING MACHINE. MAX JAEGER, Long Island City, N. Y., assignor to Anchor Cap & Closure Corporation, Long Island City, N. Y., a Corporation of New York. Original application filed Apr. 17, 1922, Serial No. 553,900. Divided and this application filed Aug. 6, 1924. Serial No. 730,389. 31 Claims. (Cl. 49—18.)

5. In a machine of the class described, a wind chest comprising a pair of relatively movable walls, and a spring pressed gasket for minimizing leakage between said walls, the various elements of said spring pressed gasket being separate from said walls.

14. In a glass machine, a rack, a spring biasing said rack in one position, a cam adapted to move said rack in opposition to said spring, a pinion engaged by said rack, an arm attached to said pinion, and a blow-head carried by said arm.

28. A glass machine comprising a continuously rotating mold table, a plurality of split molds on said mold table, a blow-head for each of said molds, a solid ring mold movable with respect to said blow-head and a split ring mold for each of said molds, said blow-heads being operable to blow air through said solid ring molds, and a cam for moving said solid ring mold vertically.

1,693,844. LOCK FOR IGNITION AND LIGHTING SWITCHES. WILLIAM KAISLING, Chicago, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed May 24, 1920. Serial No. 383,667. 24 Claims. (Cl. 70—46.)

1. A device including a face plate, a cylinder lock having a barrel portion and a case, a projection extending from one end of said barrel portion, said projection constructed to be received in an orifice formed in the face plate, a supporting plate provided with a recess, and a pin extending from the case of the cylinder lock into the said supporting plate for preventing rotation of said cylinder lock, said recess forming a bearing for one end of said cylinder lock.

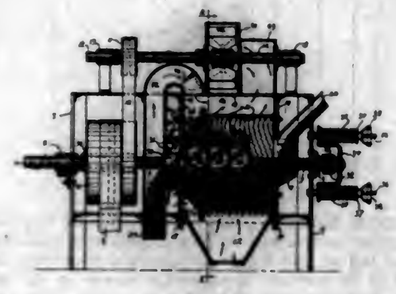
---

1,693,845. REMOVABLE DENTAL BRIDGEWORK. EDWARD KELLNER and WALTER M. GOLDWYN, New York, N. Y. Filed Aug. 16, 1927. Serial No. 213,258. 5 Claims. (Cl. 32—12.)

1. An attachment for supporting and retaining removable dental bridgework in position comprising detachable interlocking members, one of said members being triangular shape and forming a flat-sided socket acutely tapered lengthwise and of rectangular cross-section, said member being adapted to be embedded in an abutting natural tooth with the widest and deepest end of the member positioned in the crown of the tooth and the pointed thin end extending toward the tooth cervix to avoid excessive mutilation of the tooth structure and to eliminate possible ill effects to sensitive parts of the tooth.

---

1,693,846. ATTACHMENT OF FACE PLATES. FRANK J. KRISTOFEK, St. Paul, Minn., assignor to Brown & Bigelow, St. Paul, Minn., a Corporation of Minnesota. Filed July 13, 1925. Serial No. 43,281. 4 Claims. (Cl. 30—10.)

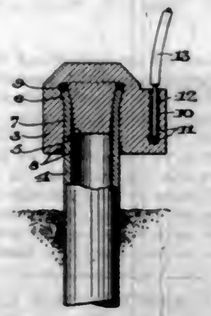


1. Face plate attaching means for articles of cutlery including bevelled edge side plates, metal face plates adapted to cover said side plates, and inwardly turned side walls adapted to engage said bevelled edges to provide a recess to the blade to permit easy withdrawal of the same.

---

1,693,847. MACHINE FOR DECORTICATING, SCOURING, AND POLISHING CEREALS. WORTHY LEE, Council Bluffs, Iowa. Filed July 27, 1927. Serial No. 208,827. 5 Claims. (Cl. 83—30.)

1. In a machine of the class described, the combination with a horizontal main shaft, and a casing disposed con-

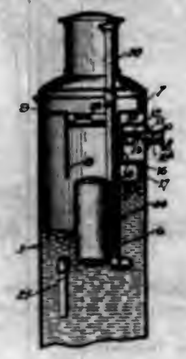


centrically about the same and comprising a perforate cylindrical portion and a conical end-portion; of agitating and feeding devices secured upon said shaft within said casing, each of said devices comprising a central drum

and a plurality of undulating wings extending outwardly from said drum and having a generally helical direction about the same, the outer edges of said wings being substantially equidistant from the adjacent inner surfaces of the casing.

---

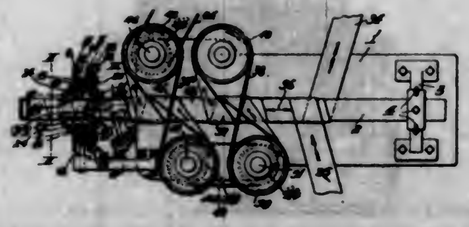
1,693,848. CAP FOR GROUND MEMBERS. WILLIAM D. KYLE, Milwaukee, Wis., assignor to Line Material Company, South Milwaukee, Wis., a Corporation of Wisconsin. Filed Oct. 23, 1922. Serial No. 596,531. 6 Claims. (Cl. 173—31.)



5. A grounding device comprising a ground-rod, a cap having a downwardly-opening recess into which the upper end of said rod is received, means within said recess entering the upper end of said ground-rod to wedgingly flare the upper end portions of said rod as the cap is driven thereon, a deformable metal insert interposed between the upper end of said recess and said rod and compressed by the driving operation into firm contact with said cap and rod to insure good electrical connection therebetween, and means for connecting a ground wire to said cap.

---

1,693,849. OIL AND GAS SEPARATOR. DAVID G. LORRAINE, Los Angeles, Calif. Original application filed Nov. 6, 1922, Serial No. 599,420. Divided and this application filed Sept. 29, 1924. Serial No. 740,610. 8 Claims. (Cl. 183—2.7.)



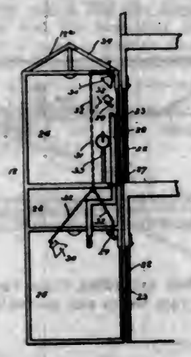
6. A device of the character described comprising a tank having a vertical partition terminating short of the bottom of said tank and forming a space at the side of the tank closed to the main portion thereof at the top of said partition and open to said main portion of the tank below said partition, a flow inlet in said side space, a casing enclosing said flow inlet and spaced from said partition, said casing having a perforated base whereby all of said flow is adapted to pass through said perforations and into said side space, a second partition in said tank terminating short of the bottom of said first partition and forming a

space at the opposite side of the tank closed to the main portion thereof at the top of said partition and open to the main portion of the tank below said partition, and a conduit connecting the partitions in the tank at the top thereof and opening into said side spaces, the upper and lower parts of the main portion of the tank forming a gas chamber and a settling chamber respectively.

---

1,693,850. ATTACHMENT FOR RESHAPING TUBULAR MEMBERS. CHARLES J. LOUIS, St. Louis, Mo., assignor of two-thirds to N. T. Erlinger, East St. Louis, Ill. Filed Jan. 20, 1923. Serial No. 613,962. 11 Claims. (Cl. 93—80.)

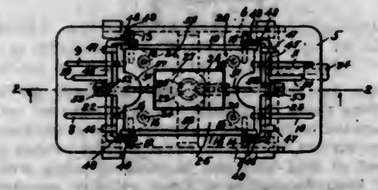
1. A tube making device comprising a mandrel, a swaging tool loosely secured to one end of said mandrel, said tool at its end which is adjacent said mandrel being smaller in diameter than said mandrel.



---

1,693,851. ELEVATOR SYSTEM. HOBART MASON, Westfield, N. J. Filed Aug. 24, 1926. Serial No. 131,151. 15 Claims. (Cl. 187—16.)

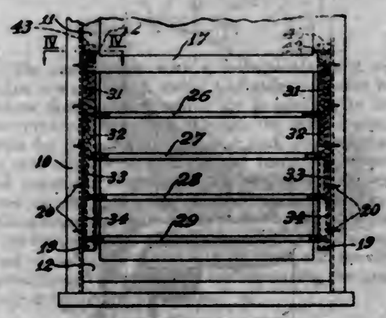
5. In an elevator system for a building having many stories, the combination of an elevator shaft serving a large number of said stories, a car in said shaft having an upper passenger compartment and a lower passenger compartment, said large number of stories being arranged



in groups with each group having floor-portions adjacent the shaft spaced vertically a distance equal to the vertical distance between the floors of the upper and lower com-

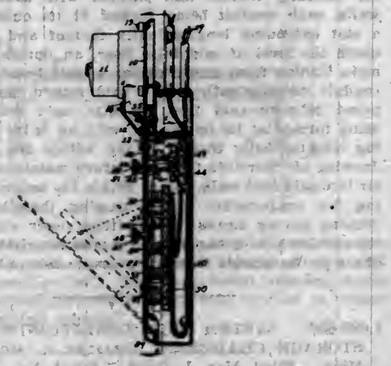
partments of the car, a single control station in one of the car compartments, and a signal means between the two compartments.

---



1,693,852. CONCRETE-MOLDING MACHINE. THOMAS MCQUAIN, Ocean Park, Calif. Filed Aug. 9, 1927. Serial No. 211,807. 5 Claims. (Cl. 25—41.)

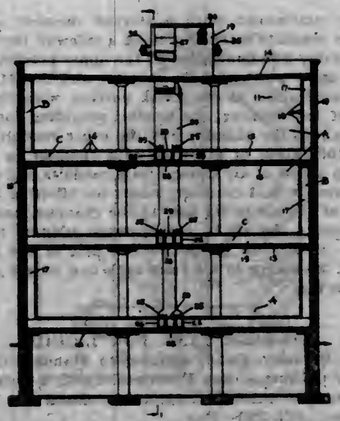
4. A block molding machine comprising a frame, side wall members and end wall members hinged to said frame, a bottom member, slidable partitions mounted on said end wall members to slide into and out of the mold chamber, and means for sliding said partitions.



---

1,693,853. WINDOW GUARD. ARTHUR T. MCWANE, Birmingham, Ala. Filed Sept. 8, 1927. Serial No. 217,364. 11 Claims. (Cl. 20—71.)

1. In a window guard adapted to be opened and closed, a plurality of unconnected bars, individual runners for each of the bars, guide means for the runners, and means cooperating with the runners and the guide means for holding the bars in spaced relation when the guard is in closed position.

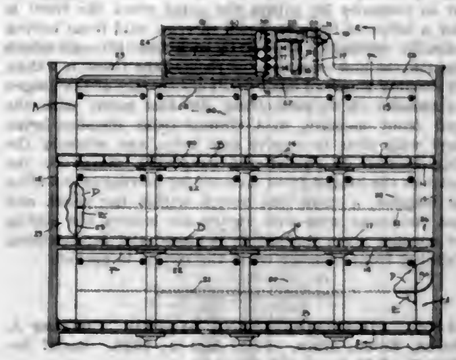


1,693,854. ELECTRIC FUSE PANEL. ADAIR W. MINOTT, Ames, Iowa, assignor of one-half to G. C. Merritt, Des Moines, Iowa. Filed June 3, 1926. Serial No. 113,567. 2 Claims. (Cl. 200—50.)

1. In an electric fuse panel, the combination of a panel body portion, a panel front hinged to the body portion to swing outwardly at its top, a fuse panel supported by said front to normally lie within the panel when the front is closed, a series of fuses mounted thereon, said front having a series of openings adjacent to each fuse through which access may be had to remove or replace the fuses, a sliding front member mounted upon the inner surface of the hinged front member, bolts connecting the fuse panel with the hinged front member, said sliding front member being formed with slots to receive said bolts, and whereby the sliding member is guided and supported, means on the exterior of the hinged front member for moving said sliding front member, a main line switch within the panel, and means connected with said switch for locking the sliding front member when the switch is closed and for releasing the sliding front member when the switch is opened.

---

1,693,855. AIR-CONDITIONING SYSTEM. CHARLES A. MOORE, Edina, Minn. Filed May 1, 1926. Serial No. 106,145. 6 Claims. (Cl. 98—54.)

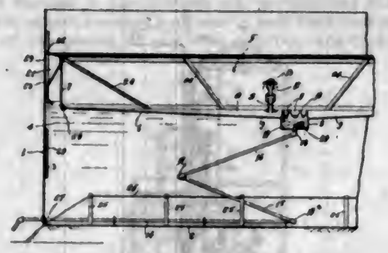


1. In combination with a structure forming a provision chamber, a false perforate floor and false perforate sidewalls for said chamber, the same forming intercommuni-

cating passageways at the bottom and sides of the chamber, a housing surmounting said structure, an air feed main depending from said housing into said chamber, a pair of spaced feed conduits branching off from said feed main and extending in parallelism along the main floor of the chamber medially thereof and parallel with said false sidewalls, each conduit being formed at its outer side with a slot extending longitudinally thereof and opening beneath the level of said false floor, an upright air return main leading from said chamber to said housing, a return conduit communicating with said return main and disposed between said feed conduits, said return conduit being formed at its upper side with an entry slot extending longitudinally thereof, a fan within the housing for drawing air thereinto from the return main and for forcing air into said feed main, means within the housing for reducing the temperature of air passing therethrough, said housing having means for admitting outer air thereto on the suction side of the fan and means to permit the escape of air to the outside from the pressure side of the fan.

---

1,693,856. SYSTEM FOR CONDITIONING AIR IN STORAGE CHAMBERS. CHARLES A. MOORE, Edina, Minn. Filed May 1, 1926. Serial No. 106,144. 4 Claims. (Cl. 98—54.)



4. The combination with a storage chamber of upper and lower conduits extending along a sidewall thereof, the former having communication at the upper portion thereof with the upper portion of the chamber and the latter having communication at its lower portion with the lower portion of the chamber, one conduit providing for the ingress of air to the chamber and the other conduit providing for the egress of air from said chamber, a fan for setting up a flow of air through said conduits and circulating the same in said chamber, means for affecting the temperature of the air in its flow to the chamber, and means for freshening the air in such passage adapted to admit outer air to the flow on the suction side of the fan and permit of the escape of air from such flow on the pressure side of the fan.

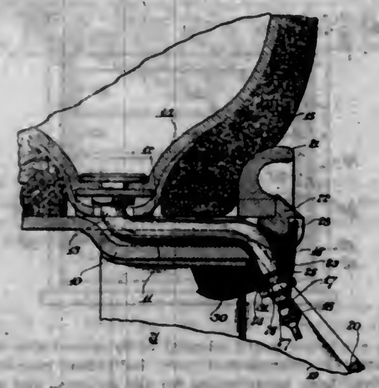
---

1,693,857. STORAGE TANK FOR LIQUIDS. STUART MOSER, Berkeley, Calif., assignor to Standard Oil Company of California, San Francisco, Calif., a Corporation of Delaware. Filed Dec. 11, 1926. Serial No. 154,200. 7 Claims. (Cl. 220—26.)

1. In a storage tank for liquids, the combination of a tank, a floating roof supported on the liquid in the tank, having a deck with a flange extending upwardly around the edge of the deck, said deck having a depressed point with a sump located at the depressed point and having a plurality of channels formed in the deck operating to drain water to the sump and prevent an accumulation of water from tilting the roof sufficiently to submerge the flange,

and an annular apron extending from the flange to the tank wall, excluding rain water and preventing evaporation of the liquid.

---

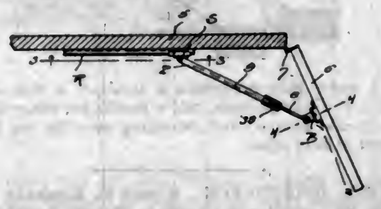


1,693,858. PUMP BASE. DON D. MYERS, Toledo, Ohio, assignor to Monroe Auto Equipment Mfg. Co., Monroe, Mich., a Corporation of Michigan. Filed July 26, 1926. Serial No. 124,924. 1 Claim. (Cl. 230—238.)

A pump base including an extended tread portion, a hollow boss rising from said base, a cup-shaped cylinder head mounted in said boss and possessing a depression in the upper surface thereof, an outlet passage located at the outer end of said boss and in communication with the cylinder head depression, a pump cylinder eccentrically mounted in said boss, the lower portion of said cylinder having a flared end so as to be positioned in said boss, said cylinder head and boss serving as locking means to retain said pump cylinder, and retaining means integral with the base to position the cylinder head within said boss.

---

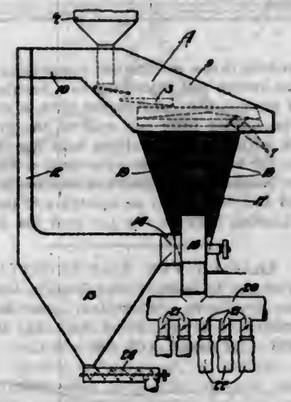
1,693,859. COVER FOR TIRE-VALVE APERTURES. EMIL A. NELSON, Roseville, Mich., assignor to Budd Wheel Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 6, 1926. Serial No. 100,014. 1 Claim. (Cl. 152—12.)



The combination with a vehicle wheel including a wheel rim or felly having a gutter, a transversely extending

depression in the rim terminating in a transverse slot in the gutter, a valve stem seated in the depression and projecting therefrom below the gutter, a locking ring in the gutter, a sealing water surrounding the stem and packed with a substance which fills the irregular interstices between the stem and the angularly related surface walls which surround it, and a washer clamping means on the stem.

---

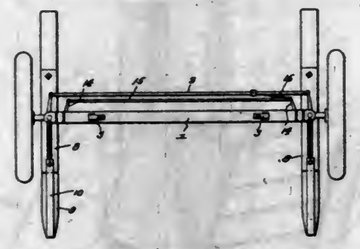


1,693,860. DOORCHECK. CARL P. OLSON, Battle Lake, Minn. Filed Mar. 3, 1928. Serial No. 258,791. 4 Claims. (Cl. 16—85.)

1. A hinged structure check mechanism of the class described comprising a pair of slidably connected members, means urging the members in extended relation to each other, means for connecting one of said members to a hinged structure, and slidable means for connecting the other member to a fixed structure, said slidable means comprising a releasable mechanism for preventing movement thereof.

---

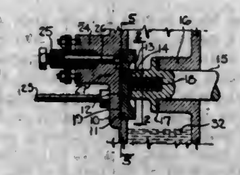
1,693,861. APPARATUS FOR CLEANING COAL. EDWARD O'TOOLE, Gary, W. Va. Filed Sept. 27, 1927. Serial No. 222,308. 4 Claims. (Cl. 209—502.)



1. The combination with a coal cleaning and sizing apparatus comprising, a sizing and cleaning table having a pervious deck through which air is adapted to be forced under pressure upwardly through the coal, a plurality of outlets for the sized and cleaned coal, of a hood arranged over said table, a suction conduit leading from said hood to an expansion chamber, a fan having its inlet port connected to said expansion chamber, an air chest connected to the lower side of said sizing and cleaning table and to the the discharge port of said fan, and a manifold member connected to the lower end of said air chest and provided with a plurality of valved outlets for regulating the pressure of the air delivered to said table.

---

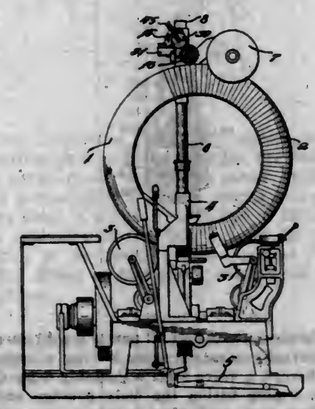
1,693,862. SLED ATTACHMENT FOR MOTOR VEHICLES. AUGUST OTTO, Sauk Center, Minn. Filed Oct. 7, 1927. Serial No. 224,655. 2 Claims. (Cl. 280—8.)



1. In a sled attachment for motor vehicles in association with the conventional steering mechanism and axle parts, a cross bar adapted to be connected to the usual axle, runner members, said runners being provided with a transverse pin projection from said runners, construction on said pin adapted to be associated with complementary construction

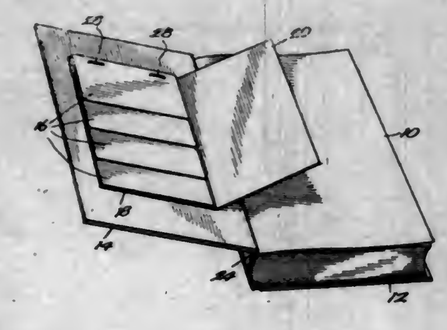
on the cross bar whereby the runners may be pivotally associated to the cross bar, and means associated with said pin in connection with the conventional steering mechanism for simultaneously steering said runners in unison with the vehicle wheels.

---



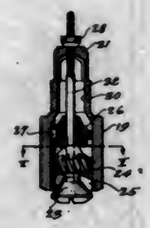
1,693,863. ROTARY EXPANSION VALVE. THOMAS I. POTTER, Portland, Oreg. Filed Nov. 10, 1926. Serial No. 147,535. 7 Claims. (Cl. 62—127.)

1. An expansion valve having a pair of relatively movable contacting members, one of said members having a measuring pocket and inlet and outlet ports formed therein; and a second member having a pair of transfer pockets therein each of which registers only with its respective inlet or outlet port and both of which transfer pockets can register with said measuring pocket.



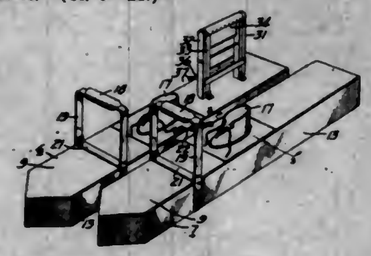
---

1,693,864. PRINTING ATTACHMENT FOR WRAPPING MACHINES. PAUL PIERCE, Chicago, Ill. Filed Apr. 30, 1927. Serial No. 187,770. 9 Claims. (Cl. 101—38.)



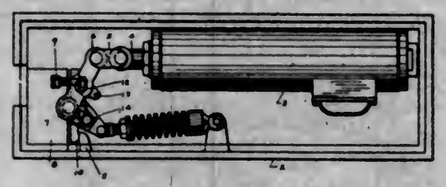
1. The combination with a tire wrapping machine, of means mounted thereon for printing desired indicia on the wrapping of a tire wrapped thereby, an ink applying roller resiliently contacting said means, and a second inking roller resiliently contacted by said first ink applying means.

1,693,865. BOOK. ELMER E. PRICE, Chicago, Ill., assignor to Eugene Dietzgen Company, Chicago, Ill., a Corporation of Delaware. Filed Mar. 12, 1927. Serial No. 174,798. 4 Claims. (Cl. 281—16.)



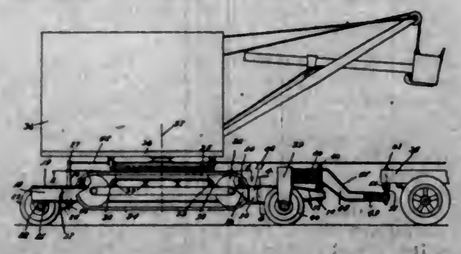
1. A compound book having a main body of leaves and a front and back cover, supplemental leaves fastened to the inside of the main front cover, and a supplemental cover for the supplemental leaves hinged adjacent the inner edge of the main front cover and at the right edge of the front suplemental leaves along a line parallel and adjacent to the hinge of the main front cover, thereby positioning the rear cover of the inner book so as to be properly closed by the engagement therewith of the leaves of the main body in response to the closing of the main body of leaves.

1,693,866. NOZZLE FOR OIL BURNERS. CHARLES L. RAYFIELD, Chicago, Ill., assignor to Rayfield Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed July 20, 1925. Serial No. 44,642. 8 Claims. (Cl. 299—120.)



1. A mechanical atomizing oil nozzle for oil burners comprising a centrally passaged body having a bridge at the inner end thereof, a valve stem adjustably depending from said bridge, a plug fitting the body passage and carried by said valves tem, said plug having a plurality of inclined passages therein, an inverted conical valve forming a continuation of said plug and valve stem said conical valve coacting with the body passage to form a valve and its seat, and a second plug similar to said first plug freely journalled on said valve stem adjacent said first plug.

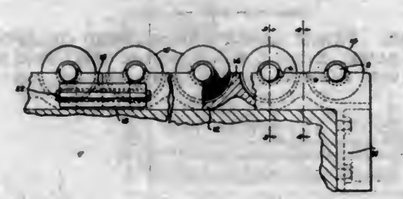
1,693,867. WATER SHOE. PAUL REINWALD, San Francisco, Calif. Filed June 20, 1927. Serial No. 200,025. 2 Claims. (Cl. 9—21.)



2. A water shoe comprising a pontoon, a shoe secured to the top of said pontoon, and a handle-bar secured to the sides of said pontoon and extending over the top thereof forward of said shoe.

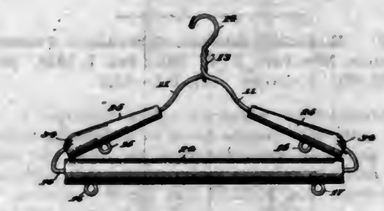
1,693,868. GROUND BOX. ROBERT M. ROBINSON, Louisville, Ky., assignor to Cheatham Electric Switching Device Co., Incorporated, Louisville, Ky., a Corporation of Kentucky. Original application filed Dec. 22, 1923, Serial No. 682,235. Divided and this application filed June 8, 1925. Serial No. 35,766. 2 Claims. (Cl. 308—74.)

1. In a switch throw mechanism comprising a lever connected to the switch and fulcrumed in a bushing carried by an integral ground box constructed with a grooved block and a lug projecting from one wall of the ground box, a grooved jaw with one end abutting said lug and the other end formed for the reception of a bolt, a bushing interposed in the grooves of said jaw and said block between the ends of said jaw and a bolt so located and disposed as to clamp the bushing between the jaw and the block.



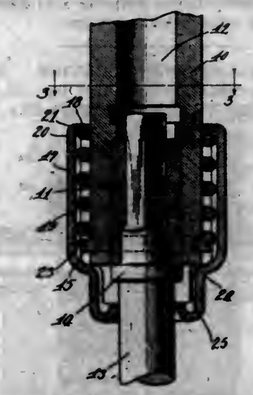
1,693,869. TRAILER FOR SELF-PROPELLED VEHICLES. GEORGE T. RONK, Cedar Rapids, Iowa, assignor to Speeder Machinery Corporation, Cedar Rapids, Iowa, a Corporation of Iowa. Filed Aug. 22, 1927. Serial No. 214,667. 7 Claims. (Cl. 280—33.1.)

1. A trailer comprising a platform having a rigid tongue at one end and supporting wheels at its opposite end, a second trailer member for supporting the forward end of said tongue, said second trailer being provided with a rigid tongue, means for supporting the forward end of the last said tongue, the forward end of the first said tongue being supported by the second said tongue, and means for adjustably connecting the first said tongue with the second said tongue.



1,693,870. ROLLER RAIL FOR HEAT-TREATING FURNACES. JOSEPH SAMMON, Kearny, N. J., assignor to Driver-Harris Company, Harrison, N. J., a Corporation of New Jersey. Filed Feb. 8, 1928. Serial No. 252,930. 4 Claims. (Cl. 214—18.)

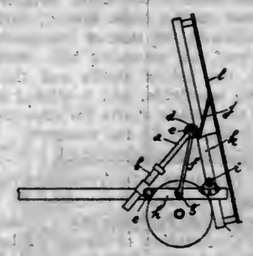
1. A roller rail for heat treating furnaces consisting of two side members having at their upper edges alining bearing recesses and portions integral with said side members connecting said side members together at points adjacent to their lower edges and beneath said bearing recesses and at points spaced away from said lower edges and between said recesses, and rollers in said recesses.



1,693,871. GARMENT HANGER. SAMUEL A. SCHNEIDER, Washington, D. C. Filed Apr. 3, 1928. Serial No. 267,032. 10 Claims. (Cl. 223—61.)

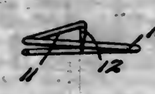
5. The combination with a garment hanger having bowed sections for the support of a coat and a horizontal trouser or skirt support, of hollow conical shape-retaining members surrounding said bowed sections with the bases of said conical members lowermost, a hollow cylindrical shield surrounding said horizontal support, downwardly extending loops integral with said horizontal support and inwardly extending loops integral with said bowed sections, and slits or openings in said conical members and shield for the reception of said inwardly and downwardly extending loops respectively to thereby prevent movement of said conical members and shield relative to the hanger.

1,693,872. TOOL-RETAINING DEVICE. ERNEST H. SHAFF, Grand Haven, Mich., assignor to William H. Keller, Inc., Grand Haven, Mich., a Corporation of Michigan. Filed May 11, 1925. Serial No. 29,644. 5 Claims. (Cl. 121—82.)



1. A tool retaining device for pneumatic hammers and the like comprising, in combination with the hammer and the tool, an annular rib at the forward end of the hammer, a flange on the rivet set or tool adjacent the end of the hammer, a U-shaped retaining member forward of said tool flange embracing the tool and adapted to engage with the flange, supporting strips for said retaining member on opposite sides of the hammer, said strips having a portion thereof abutting the end of the hammer and another portion thereof lying alongside the barrel of the hammer, flat arcuate-edged flanges on said strips extending inwardly toward the hammer, and a coiled spring compressed between said flanges and the rib of the hammer within the side strips.

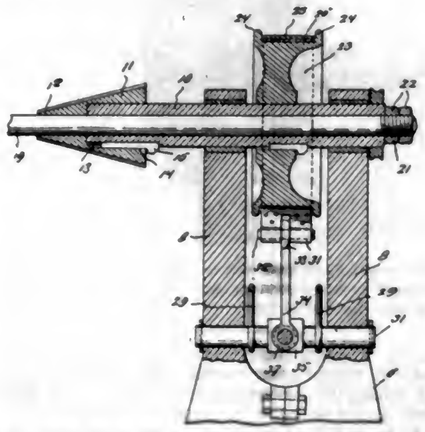
1,693,873. WATER-SOFTENING SILICATE AND PROCESS OF PRODUCING SAME. ELI WALTER SHAWEN and ALBERT C. ARNETT, Dayton, Ohio. Filed Feb. 9, 1925. Serial No. 7,887. 6 Claims. (Cl. 23—111.)



4. As an article of manufacture, water softening filter material comprising pieces of material of porous vitreous character in which sodium bicarbonate has been incorporated prior to heat treatment thereof, the resulting material being subjected while hot to a treatment of sodium chloride.

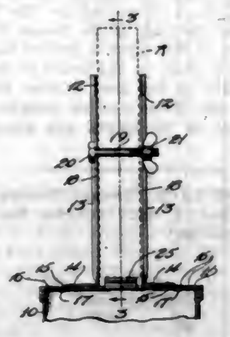
1,693,874. TIPPING DEVICE FOR WAGONS. CHARLES ROBERT SIROT, Aubervilliers, France. Filed Apr. 5, 1927, Serial No. 181,098, and in France May 22, 1926. 2 Claims. (Cl. 298—19.)

2. Control mechanism for tilting wagons which comprises a lifting jack, a pivot fixed on the frame of the vehicle, a pivot at the end of the piston of the jack, a roller on a portion of this pivot, a jointed link on another part of the pivot, a pivot on the frame of the vehicle for the other extremity of the link, a pivot for the wagon connecting it to the frame and an integral sliding surface for the frame of the wagon and placed in contact with the roller.



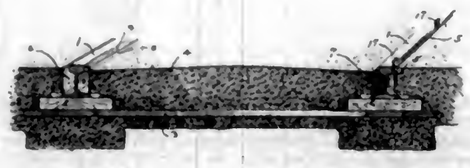
1,963,875. THUMB TACK. TOMBAY TANAKA, Paso Robles, Calif. Filed Jan. 8, 1927. Serial No. 159,858. 2 Claims. (Cl. 85—16.)

1. A thumb tack comprising a strip of metal bent into the form of a geometrical figure and having a portion



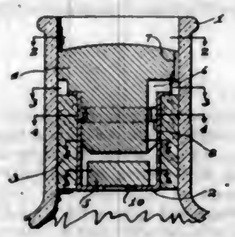
projecting inwardly and upwardly at an angle to the plane of the figure to a point substantially in the axis of said figure and extending downwardly from said point and having a sharp extremity in the plane of said figure, said inwardly extending portion being resilient.

1,693,876. CABLE-SPOOLING DEVICE. EDWARD N. UNRUH, Jr., Corsicana, Tex. Filed Dec. 23, 1926. Serial No. 156,722. 1 Claim. (Cl. 242—68.)



In a cable spool machine of the class described, a pair of spaced standards, horizontally aligned hollow shafts journaled at their outer ends within the respective standards at the upper ends thereof, a pair of opposed spool supporting cones, the outer larger end of each cone being provided with an enlarged socket to receive the inner end of the respective hollow shaft, the adjacent faces of the inner end of each hollow shaft and the socket of the respective cone being provided with co-operating channels, a key insertable in said channels to positively lock the cones on the inner ends of the shaft, longitudinally extending ribs formed on the outer face of each cone for forcible engagement with the bore of the spool at the respective ends thereof, an elongated bolt entering longitudinally through the hollow shafts and the cones for interconnecting the standards, and a driving member arranged on one of the hollow shafts for effecting the rotation of the spool supported on the cones.

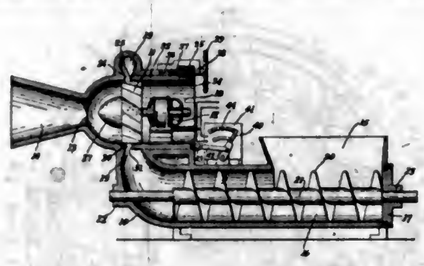
1,693,877. ROLL HOLDER FOR GUMMED-TAPE SERVING MACHINES. WILLIAM A. UTTZ, Sr., St. Louis, Mo., assignor to Perfection Package Sealer Company, Inc., Dallas, Tex., a Corporation of Texas. Filed Nov. 25, 1927. Serial No. 235,672. 6 Claims. (Cl. 242—55.2.)



1. In a gummed tape dispensing machine, a supporting plate having a series of slots spaced laterally from each other on opposite sides of the center line of said plate, a pair of roll supporting standards each having a foot provided with a toe passing through a selected slot in a respective series and provided with a terminal portion engaging beneath said plate, and means to draw the upper parts of said standards together and thereby hold them normally against removal from said slots.

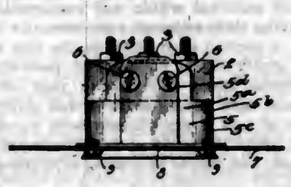
1,693,878. TRACK LINER AND METHOD OF APPLYING SAME. RALPH J. WELLS, Dayton, Ohio. Filed June 27, 1927. Serial No. 201,640. 18 Claims. (Cl. 238—9.)

3. The herein described method of railway track construction including positioning a form member in spaced relation with a railway rail to form a linear crevice adjacent to the rail flange communicating with an enlarged chamber beneath the rail head and contiguous to the web of the rail, depositing road bed material beside said form and filling the chamber with plastic material deposited through said crevice.

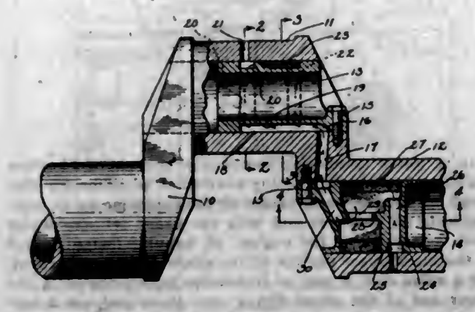


1,693,879. NONREFILLABLE BOTTLE. FREDERICK WESTPHAL, New York, N. Y. Filed Feb. 7, 1928. Serial No. 252,453. 2 Claims. (Cl. 215—22.)

1. In a device of the class described, the combination of a bottle neck, a resilient sleeve inserted in said bottle neck, a cup supported by said sleeve, a plug in said cup, means for holding the plug in place, said means consisting of a set of three indentations formed in the wall of the cup and adapted to co-act with a slot formed in the neck of the plug for locking the said cup and plug together, a valve resting in the bottom of the said cup above an opening therein, a series of vertical slots in the neck of said plug and a series of flattened portions in the crown of said plug, said valve when the bottle is tilted adapted to admit liquid through said hole in the bottom of the cup and thence to the vertical slots and said flattened portions, and thence to the neck opening of the bottle, said valve when the bottle is in its upright position adapted to prevent any liquid from entering the bottle.

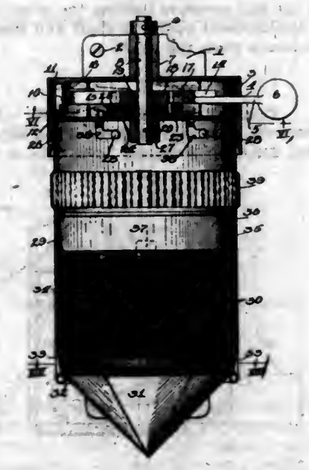


1,693,880. METHOD AND APPARATUS FOR BURNING FUEL. EARL P. WETMORE, Concord, Mich., assignor to The Anolicoal Burner Co., Toledo, Ohio, a Corporation of Delaware. Filed Oct. 23, 1924, Serial No. 745,311. Renewed Mar. 17, 1928. 19 Claims. (Cl. 110—104.)



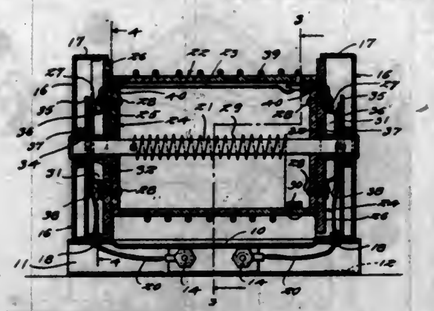
1. A method of burning plastic fuels which comprises generating a current of air, feeding a thin annular sheet of plastic fuel radially inwardly into said air current, and shearing particles from the inner edge of said fuel and dispersing them into said air current.

1,693,881. ELECTRIC TERMINAL CONSTRUCTION. HENRY A. ZIOLA, Toledo, Ohio, assignor to The Swartzbaugh Manufacturing Company, Toldo, Ohio, a Corporation. Filed May 20, 1926. Serial No. 110,497. 8 Claims. (Cl. 173—338.)



1. A terminal socket including complemental socket sections adapted to be fitted against each other from opposite directions, an insulating block, fastening members connecting the socket sections together and also engaging the insulating block; and terminal pins carried by the insulating block.

1,693,882. CRANK-SHAFT OIL PLUG. GLENN D. ANGLE, Detroit, Mich., assignor to Detroit Aircraft Engine Corporation, Detroit, Mich., a Corporation of Michigan. Filed June 2, 1925. Serial No. 34,407. 8 Claims. (Cl. 184—7.)

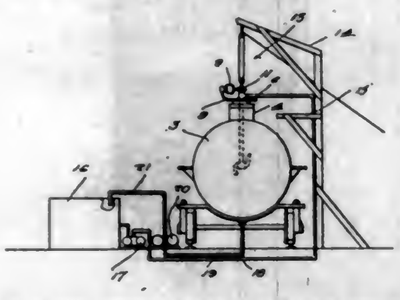


1. In combination, a shaft, a bearing surface, a bearing for said surface, a removable plug adapted to be inserted in said shaft adjacent said bearing surface, a passage in said plug for carrying lubricant to said bearing and bearing surface, and a chamber in said plug for retaining the foreign matter in said lubricant.

1,693,883. DISPENSER AND METHOD OF USE. CESARE BARBIERI, New York, N. Y., assignor to The Vortex Mfg. Co., a Corporation of Illinois. Filed July 12, 1926. Serial No. 121,849. 10 Claims. (Cl. 312—44.)

1. A dispenser comprising an apertured mounting plate, a housing secured thereto, a cover closing the lower end of said housing and rotatable with respect thereto, a sundae dish container removably engaged in said cover and adapted to carry a stack of nested sundae dishes, and a lever operated mechanism in said housing adapted to be operated to cause the cover, the container and the stack of dishes therein to be rotated as a unit, with respect to a sundae dish holder held in engagement with the lowermost dish in said container.

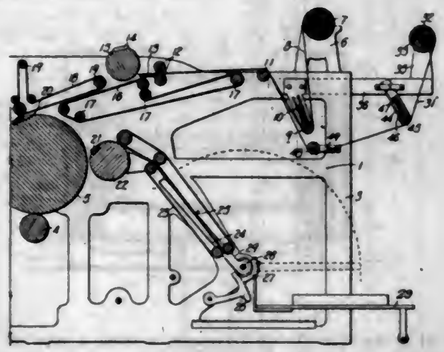
1,693,884. REEL FOR CONDUCTING CORDS. CHARLES BLESSMAN, Jr., Toledo, Ohio, assignor to The Reel Novelty Mfg. Co., Toledo, Ohio, a Corporation of Ohio. Filed Mar. 11, 1926. Serial No. 94,029. 1 Claim. (Cl. 173—367.)



In a reel for conducting cords, a base, a pair of end members arising therefrom, a stationary shaft supported by the end members, a hollow drum rotatable upon the shaft intermediate the end members, a spring connecting the shaft and drum and tending to constantly urge the drum in one direction, a circular contact element carried by each end of the drum and spaced from the shaft, a cord wound upon the drum and including conducting wires respectively connected to the contact elements at the ends of the drum, contact elements surrounding the shaft at the ends of the drum in confronting relation to the contact elements of the drum, insulating plates likewise surrounding the shaft and arranged outwardly of the last

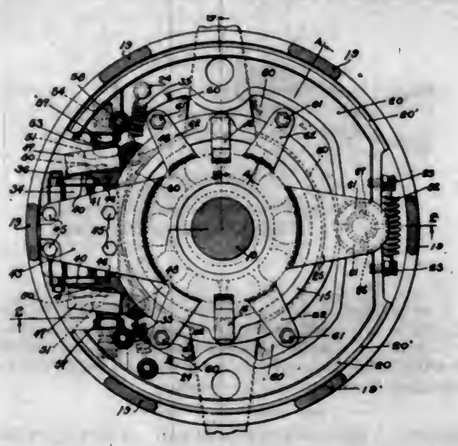
named contact elements, springs extending between the end members and the insulating plates and constantly urging the last named contact elements into engagement with the contact elements of the drum and sleeves surrounding the ends of the shaft between the ends of the drum and the end members holding the drum against longitudinal displacement upon the shaft and insulating said contact elements from the shaft.

---



1,693,885. TANK-CLEANING DEVICE. ARTHUR B. BUTTERWORTH, Port Arthur, Tex. Filed Sept. 15, 1927. Serial No. 219,684. 3 Claims. (Cl. 141—1.)

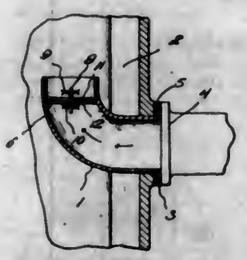
1. In a tank cleaning device of the class described, a cap adapted to fit upon a filler neck on said tank, said cap having a central opening whose peripheral edge portion is beveled to provide a seat, a tank cleaning and fluid circulating nozzle, a mounting for said nozzle, said mounting have a vertical hole through which a portion of said nozzle passes, said mounting including a semi-spherical base resting rockably upon said seat, and means for rotating said nozzle, said means being supported from the mounting.



---

1,693,886. METHOD OF SLIP-SHEETING AND MEANS FOR PRACTICING THE SAME. HERSCHEL CATON, Kansas City, and EUGENE CATON, Rosedale, Kans., and LLOYD C. HOWARD, Kansas City, Mo., assignors to Caton Printing Company, Kansas City, Mo., a Corporation of Missouri. Filed Oct. 21, 1927. Serial No. 227,707. 9 Claims. (Cl. 101—417.)

1. In combination with a roll-feed printing press, means for conducting the web of the print roll to the press, means for severing sheets from the print web, and means for delivering the severed and printed sheets, a slip-sheet handling device comprising a support for a roll of slip-sheet paper, and means for delivering the web of said slip-sheet roll to said print web conducting means for severance of sheets from the slip-sheet web by print sheet severing means and carriage of slip sheets through the press and delivery therefrom with said print web sheets by said print web sheet delivering means.



1,693,887. VEHICLE BRAKE MECHANISM. NIELS A. CHRISTENSEN, Milwaukee, Wis. Filed Apr. 3, 1924. Serial No. 703,952. 11 Claims. (Cl. 188—152.)

1. In brake mechanism of the class described, the combination with a revoluble brake drum, of a support, a pair of brake shoes mounted within and engageable with said drum and having their adjacent ends pivotally mounted on said support, a pivoted lever adjacent the free end of each shoe and in direct thrust engagement therewith, a fluid-pressure-operated motor including a pair of oppositely moving pistons, each having a thrust-rod directly engageable with one of said levers whereby both levers and shoes are moved to apply the brake upon the outward movement of said pistons, and means to release said shoes from said drum.

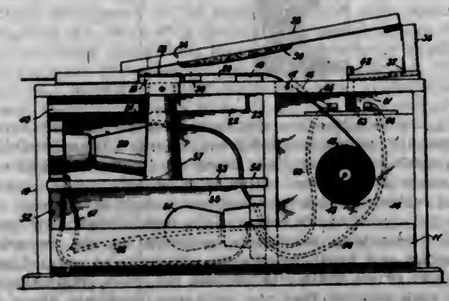
---

1,693,888. CHECK VALVE FOR WATER-CIRCULATING SYSTEMS. NOLAN I. CLARK, Beggs, Okla. Filed Dec. 15, 1924. Serial No. 756,069. 1 Claim. (Cl. 123—170.)

In a water circulation device for internal combustion engines a curved elbow fitting adapted to be removably disposed within the water jacket of the engine so as to communicate at its lower end with the usual cylinder water inlet connection of the engine, an annular flange formed in the inner upper portion of the elbow fitting and providing a valve seat, a pair of transverse bars mounted in the upper end of the elbow fitting, one above and one below the flange, said bars being provided with registering openings in the central portion thereof, a flat valve seatable on the flange, a vertical stem extending through the flat valve, the ends of the stem being slidable through the openings in the guide bars, said flat valve being provided with a drain opening, and a pivoted closure for the drain opening.

1,693,889. GOLF-BAG SUPPORT. TALBERT M. DICK, Des Moines, Iowa. Filed June 27, 1927. Serial No. 201,748. 8 Claims. (Cl. 150—1.5.)

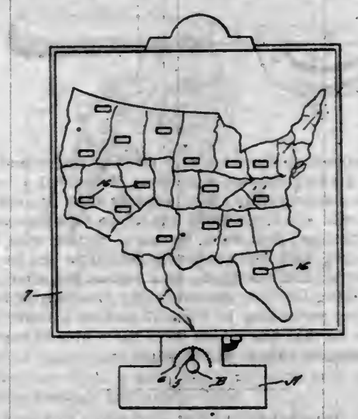
1. In a device of the class described, two arms, each designed to have one of their ends pivoted to a golf bag, and a handle member rigidly secured to said arms against relative movement thereto for placing the same in operative and inoperative positions.



---

1,693,890. ULTRAFILTER MEMBRANE. JACQUES DUCLAUX, Paris, France. Filed Aug. 30, 1923, Serial No. 660,180, and in France Sept. 11, 1922. 1 Claim. (Cl. 210—203.)

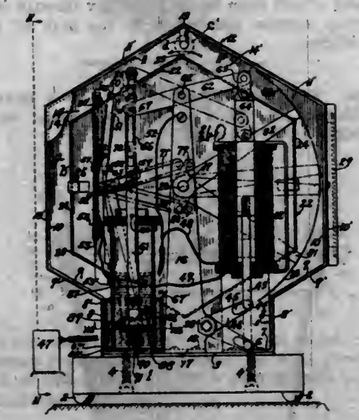
The method of making a cellulose acetate filter, which comprises immersing a nonmetallic cloth in cellulose acetate dissolved in acetic acid until the yarns are impregnated and the interstices of the weave are filled, then coagulating the acetate by water and washing out the surplus water with a liquid miscible with water and the substance to be treated by the filter.



---

1,693,891. PHOTOGRAPHIC PRINTER. VINCENT J. DUNKER, Ste. Genevieve, Mo. Filed May 8, 1926. Serial No. 107,617. 5 Claims. (Cl. 95—75.)

1. A photographic printer comprising, in combination, means to guide a strip of negatives, an intermittently illuminated source of white light below said guiding means, a continuously operating white light in a separate compartment below said guiding means, means to supply ruby light from the continuously illuminated source to permit of adjustment of a desired negative and means to convey white light from said continuously acting source to permit of inspection of the succeeding negative on the strip.

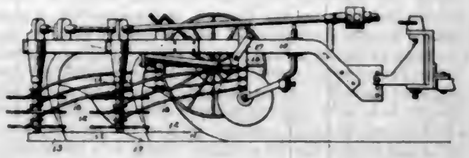


1,693,892. STATION INDICATOR FOR RADIO SETS. NICHOLAS PAUL FUCHS, Jr., Akron, Ohio. Filed July 22, 1927. Serial No. 207,733. 1 Claim. (Cl. 40—132.)

In an indicating means for a display board, wherein the board is formed with a plurality of openings, travelling members arranged behind said openings and constructed of translucent material, the said travelling members having suitable readable matter thereon, in combination, a radio station selector dial provided with a contact arm, an electric lamp arranged behind each of said travelling members, the rays from each lamp being visible through the travelling member disposed in front thereof, a plurality of contacts adapted to be selectively engaged by the contact arm, of the selector dial, the said contact arm and the respective contact being engageable for closing a circuit to a certain lamp for illuminating the reading matter on the travelling member concerning a particular station in correspondence to the tuned position of the radio dial.

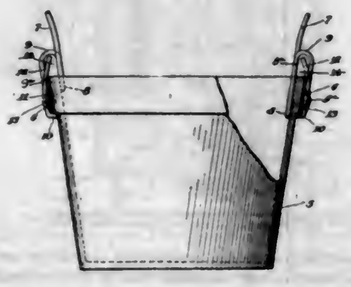
---

1,693,893. AUTOMATIC INTERMITTENT-EXHIBITING DEVICE. JAY GAGE, Los Angeles, Calif., assignor, by direct and mesne assignments, to Electro-Tel-It Manufacturing Company. Filed May 16, 1923. Serial No. 639,841. 6 Claims. (Cl. 40—55.)



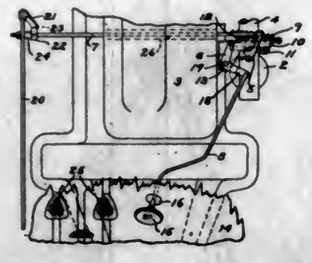
1. An exhibiting device comprising a carrier for advertisements; electrically operated means for intermittently operating the carrier to successively expose to view advertisements on the carrier; an electrical switch connected to said operating means; dash pot means connected to operate said switch; a piston rod in said dash pot and an elongate slotted link and pins on said piston rod, said link and pins cooperating to form lost motion means for timing the periods of the operation of said switch by the dash pot.

1,693,894. CAN OPENER. HERMAN GARRISON, Chicago, Ill. Filed Apr. 30, 1928. Serial No. 273,816. 1 Claim. (Cl. 30—3.)



A can opener in the form of a lever of the second class, having a guiding fulcrum formed at the end of a handled stock, and a downwardly offset uppercut knife secured by its shank to said stock, its blade extending forward past the guiding fulcrum; said knife having a cutting edge on its lower margin, and being laterally curved in the direction of its length; and the blade, in a region posterior to the fulcrum, being laterally curved in the direction of its vertical width, presenting in vertical section a curve which is concave on that side which faces the center of curvature of the directional curve of the knife.

1,693,895. COMBINED PLOW AND SOIL PULVERIZER. GUY HERRING HALL, Jackson Heights, N. Y. Filed Aug. 8, 1927. Serial No. 211,473. 4 Claims. (Cl. 97—34.)



1. In combination with a plow and a soil pulverizer formed with blades arranged to strike upon the soil while it is in position elevated by the plow, and thereby throw it laterally away from the plow, of a clod holding device supported in spaced relation to the pulverizer blades and shaped to permit the soil elevated by the plow to pass through the space between it and the pulverizer blades and to permit the pulverized soil to be thrown laterally through it, said clod holding device being also shaped to prevent large clods of soil from moving laterally through it and to temporarily support such clods in the path of the pulverizer blades.

1,693,896. FLOWERPOT HOLDER. HANS PETER HANSON, Chicago, Ill. Filed Apr. 1, 1926. Serial No. 99,067. 13 Claims. (Cl. 215—100.)

1. In a device of the character described, a demountable pot handle consisting of a single piece of resilient wire formed to straddle the flanged rim of a pot, there being means for locking itself to the said pot flange, and means to automatically vertically adjust its locking mechanism to variant pot flanges.

1,693,897. ACCELERATOR. ROBERT M. HENDERSON, West Allis, Wis., assignor to The Fulton Company, West Allis, Wis., a Corporation of Wisconsin. Filed Mar. 7, 1924. Serial No. 697,436. 8 Claims. (Cl. 74—39.)

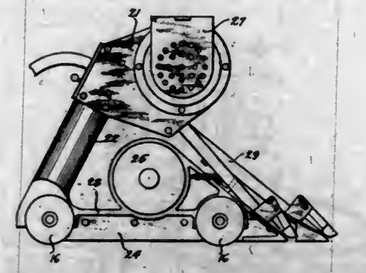
1. In combination with an engine having a plurality of cylinders and a fuel control located at one side thereof, a hand operable rod located at the opposite side of said cylinders, a transverse rod connected to said fuel control and crossing said engine between said cylinders, a one-way lost motion connection between said rods, a foot operable rod located on the fuel control side of said cylinders, a bell crank lever having one arm connected to said foot operable rod, means for positively arresting and limiting the movement of said lever in one direction, and a flexible direct connection between the other arm of said lever and said transverse rod.

1,693,898. AMPLIFICATION SYSTEM. LAWRENCE C. F. HOBLE, Newark, N. J., assignor to Federal Telephone Manufacturing Corporation, Buffalo, N. Y., a Corporation of New York. Filed Jan. 24, 1923. Serial No. 614,608. 6 Claims. (Cl. 179—171.)

1. An amplification system comprising in combination a plurality of electron tubes each having a heated cathode, an anode and a grid, input circuits including said grid and cathode of each tube, output circuits including said anode and cathode of each tube, and coupling means between the output circuit of one tube and the input circuit of another tube comprising conductors connected in the respective circuits and fixed immediately adjacent and parallel side by side to one another throughout the entire length thereof in such manner that the reactance gradients along all portions of the two conductors are substantially equal.

1,693,899. GRID LEAK. LAWRENCE C. F. HOBLE, Newark, N. J., assignor, by mesne assignments, to Federal Telephone Manufacturing Corporation, Buffalo, N. Y., a Corporation of New York. Filed Apr. 19, 1923. Serial No. 633,241. 4 Claims. (Cl. 201—63.)

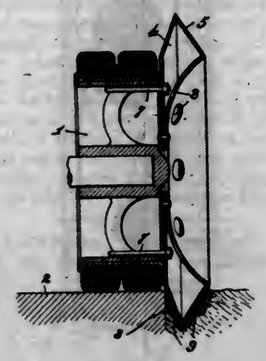
1. A grid leak comprising a cylindrical casing, a pair of resilient caps longitudinally slidable over the ends of said casing, each of said caps having a central conical portion protruding outwardly from the casing, a resistance element comprising an insulated rod having conductive material on the surface thereof, metallic foil wrappings upon said material at each end of said rod, conical metallic cap members engaging the metallic foil wrappings, said last mentioned cap members conforming in shape to the interior contour of the first mentioned caps whereby said rod may be centrally positioned within said casing, and the conductive material thereon maintained in spaced relation to the interior walls of said casing.



1,693,900. DIRIGIBLE HEADLIGHT. WALTER R. HOBB, New Ulm, Minn. Filed June 5, 1925. Serial No. 35,209. 1 Claim. (Cl. 240—62.)

In headlight adjusting mechanism of the class described, the combination with the steering column and steering post mounted therein, of a rotatable headlight support, a segmental rack supported for arcuate movement, operative connection between said rack and said headlight support for effecting rotation of the headlight support upon arcuate movement of the segmental rack, a worm pinion mounted upon the steering post and meshing with the rack, means for clutching the pinion with the post for rotation therewith comprising a sleeve slidably mounted upon the post, the pinion having sockets therein, clutch teeth carried by the sleeve and engageable in said sockets in one position of shifting adjustment of the sleeve upon the post, means connecting the sleeve with the post for rotation therewith and for sliding adjustment thereon, a guide block fixedly mounted upon the under side of the column adjacent the upper end thereof, the said block having a longitudinal passage therethrough parallel to the column, a rod slidably fitted at its upper portion through the passage in the said block and guided thereby for sliding movement beneath the column, a yoke at the lower end of the rod embracing the said sleeve and connecting the sleeve for movement with the rod, a bracket upon the column above the said block, an actuating hand lever pivoted at its upper end to the bracket and having a portion extending about the column and beneath the same, the upper end of the said rod being pivotally connected with the said portion of the hand lever, and means carried by the block and adjustable to coact with the said rod to hold the rod in positions of sliding adjustment in the block.

1,693,901. WASHER-SETTER SPOUT. EDWARD HUTCHINS, Milwaukee, Wis. Filed Apr. 2, 1926. Serial No. 99,218. 5 Claims. (Cl. 18—1.)

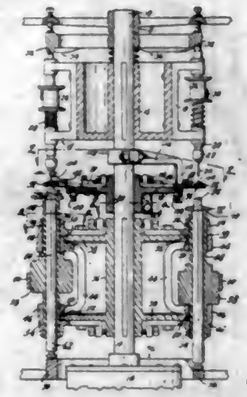


1. In a machine of the class described, washer feeding mechanism, washer chutes fed thereby having a narrow rail defining one side of the chute, and washer placing mechanism associated with said chutes comprising shoulders at the end of said chutes, side springs having bearings on the foremost washer in contact with said shoulders, and guiding means positioned beneath said chute adapted to lift and drop the chute over a mold pin with said mold pin projecting through the washer hole.

1,693,902. PROCESS FOR PRODUCING LITHOPONE FAST TO LIGHT. GUSTAV JANTSCH, Bonn-on-the-Rhine, and PAUL WOLSKI, Wiesdorf-on-the-Rhine, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort, Germany. Filed Nov. 8, 1924, Serial No. 747,671, and in Germany Nov. 30, 1923. 2 Claims. (Cl. 134—78.)

1. Lithopone which is fast to light containing a cobalt salt in quantity corresponding to from 0.02% to 0.5% by weight of cobalt metal calculated upon the zinc content of the lithopone.

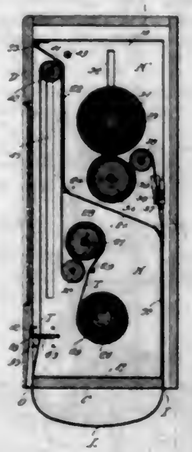
1,693,903. METHOD AND APPARATUS FOR MAKING ROAD EDGINGS. VERNON O. JOHNSTON, Lincoln, Ill. Filed Aug. 10, 1927. Serial No. 212,001. 3 Claims. (Cl. 94—2.)



1. The method of forming road edgings which consists in compressing the ground adjacent the road shoulder to form a ditch and filling said ditch with suitable material, substantially as described.

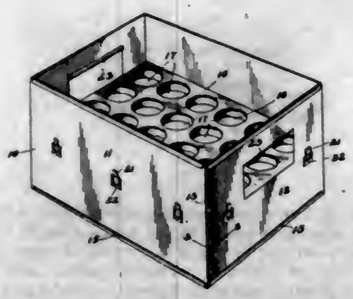
1,693,904. CHUCK-POSITIONING DEVICE AND DRILL GUIDE FOR DRILLING MACHINES. HARRY H. KNOTT, Washington, Iowa. Filed Jan. 6, 1927. Serial No. 159,880. 8 Claims. (Cl. 79—12.)

1. In combination with a drilling machine having a reciprocably mounted chuck and a reciprocably mounted drill, a positioning and guide device therefor comprising a resilient positioning bar rigidly secured at one end and



having an opening in the other end thereof, one end of said chuck being adapted to engage in said opening and move the free end of said positioning bar along substantially the axis line of the chuck when it is moved to one of its positions whereby the chuck is securely held in drilling posi-

tion by said positioning bar and due to the resiliency thereof, a guide plate adjacent said opening and an opening in said plate adapted to guide said drill when it is moved to one of its positions for drilling work held in the chuck.



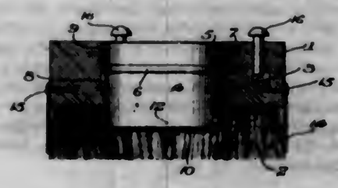
---

1,693,905. TOWELING CABINET. JOSEPH D. LEVEILLE, Westfield, Mass. Filed Nov. 21, 1927. Serial No. 234,747. 22 Claims. (Cl. 312—38.)

1. In a toweling cabinet having a clean toweling magazine; a toweling-engaging member, means mounting said member whereby it is movable in one direction under the influence of a pull on the toweling permitting withdrawal of a clean length of such toweling from the cabinet, means for preventing travel of the toweling from the magazine when said member moves in said one direction, means for releasing said travel-preventing means and means for preventing retrograde movement of the withdrawn length of toweling, whereby return of said member to normal position after use of the toweling serves to withdraw a clean length of the toweling from the magazine into a portion of the cabinet preparatory to subsequent withdrawal for use, and means for effecting said return of said member to normal position.

1,693,906. SHEET-METAL CRATE. CARL L. LIPPINCOTT, Newark, Ohio. Filed Oct. 19, 1925. Serial No. 63,268. 2 Claims. (Cl. 220—21.)

1. As a new article of manufacture, a sheet metal bottle case including parallel side and end walls, a horizontally disposed bottle receiving tray arranged horizontally within said case, and tongues projecting from the edges of said tray and arranged to pass through openings provided in said side walls, each of said tongues including minor and major sections, adapted to be bent in opposite directions.

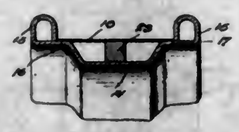


---

1,693,907. MANUFACTURE OF CROTONALDEHYDE FROM ACETALDEHYDE AND ALDOL. EMIL LOSCHER, Basel, Switzerland, assignor to The Company Elektrizitätswerk Lonza, Gampel and Basel, Switzerland. Filed Apr. 25, 1927, Serial No. 186,591, and in Switzerland May 4, 1926. 1 Claim. (Cl. 260—138.)

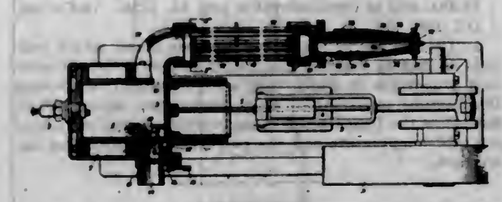
A process for the manufacture of crotonaldehyde from acetaldehyde and aldol, consisting in combining acetaldehyde in an atmosphere of nitrogen with only such a quantity of a diluted aqueous solution of a caustic alkali as to not cause any precipitation on subsequent neutralization, then adding a mineral acid to the reaction product to obtain a reaction mixture containing aldol, acetaldehyde and a little salt, and finally distilling fractionally this reaction mixture without previous purification or separation within a circulating atmosphere of nitrogen.

---



1,693,908. WAX DISTRIBUTOR FOR FLOOR-POLISHING MACHINES. THOMAS A. MARSHALL, Hagerstown, Md., assignor, by direct and mesne assignments, of one-half to The Floorola Corporation, Baltimore, Md., a Corporation of Delaware, and one-half to Ernest J. Newcomer, Baltimore, Md. Filed June 13, 1925. Serial No. 36,886. 9 Claims. (Cl. 91—39.)

7. An attachment for a floor polishing brush comprising a wax container having a rounded lower edge provided with discharge openings in the rounded portion thereof, the contents being discharged through said openings only, in a downwardly and outwardly direction.

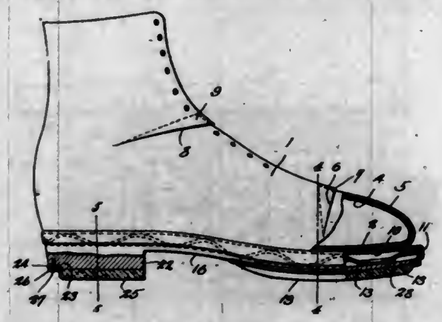


1,693,909. RIM FOR PNEUMATIC TIRES. ANDRÉ JULES MICHELIN, Paris, France, assignor to Michelin et Cie., Clermont-Ferrand, France, a Corporation of France. Filed Oct. 20, 1927, Serial No. 227,575, and in France Nov. 27, 1926. 1 Claim. (Cl. 152—20.)

A deep rim structure for wheels using pneumatic tires, comprising an annular trough shaped band provided with lateral flanges, a central deep groove located between and parallel to said flanges, and annular cylindrical shoulders at each side of said groove and between it and said flanges, with an annular metal strip having its edges resting on and supported on said shoulders and forming a cylindrical bridge for said groove throughout the major portion of its length circumferentially, said bridge having a smooth cylindrical outer face, a portion of said strip at the ends of said bridge being pressed down into said groove, with means interposed between the bridge portion of said strip and the bottom of said groove for bracing said strip against compression inwards when the wheel, with an inflated tire thereon, is in use on the road.

---

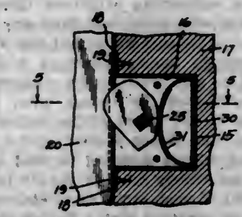
1,693,910. METHOD OF AND APPARATUS FOR GENERATING THERMODYNAMIC ENERGY. HENRY RICHARDSON and ANTON HOLM, Passaic, N. J.; said Holm assignor to said Richardson. Filed May 3, 1921, Serial No. 466,439. Renewed Nov. 14, 1927. 3 Claims. (Cl. 60—32.)



1. In combination with an internal combustion engine embodying fuel admission and exhaust ports, a tubular member connected to the exhaust port for the discharge of the exhaust gases from the engine therethrough and having escape means to allow the gases while above atmospheric pressure to escape from said member to the atmosphere but relieving the remaining products of combustion in said member at or below atmospheric pressure of back pressure from the atmosphere, thereby causing the exhaust gases discharged into said member to create a vacuum therein which will induct a fuel into the engine through the fuel admission port, and means for controlling the operation of said escape means and thus governing the degree of vacuum acting on the fuel admission port.

---

1,693,911. SHOE. JAKOB SCHMEER, Washington, D. C. Filed June 19, 1928. Serial No. 286,562. 7 Claims. (Cl. 36—1.)



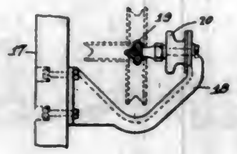
1. A shoe including an upper formed in a single piece of metal having an insole integral therewith, said upper being slit longitudinally from the top toward the toe and being slit transversely adjacent the toe and at the upper portion of the instep, said transverse slits providing lapping aprons for sliding contact during flexion of the shoe upper, a middle sole extending throughout the length of the insole and including upper and lower telescopically connected plates providing a space therebetween and cooperating to simulate the middle sole of a leather shoe, a heel extension carried by the lower plate of the middle sole, there being a marginal groove in the bottom portion of the heel extension and a marginal groove in the side and toe portions of the lower plate, an outer sole, a heel lift, sepa-

rate means for clamping the outer sole and the heel lift to the grooved portions of the plate and heel block respectively, and an undulating spring interposed between the members of the middle sole and extending throughout the length and width of the space therebetween.

---

1,693,912. LATCH. WALTER E. WORTHEN, West Hollywood, Calif. Filed July 6, 1926. Serial No. 120,824. 7 Claims. (Cl. 292—204.)

1. A latch comprising a keeper having a slot therein inclined with respect to the vertical, a rotary bolt having its periphery formed to provide a beveled and rounded portion, another rounded portion spaced from the first portion, and two straight portions to form a corner, a spring engaging the second rounded portion of the bolt to normally urge the bolt into engagement with the keeper, and a shaft by which the bolt is rotated in one direction to move the bolt out of engagement with the keeper and in another direction to move the bolt into engagement with one wall of the cam slot for the purpose described.

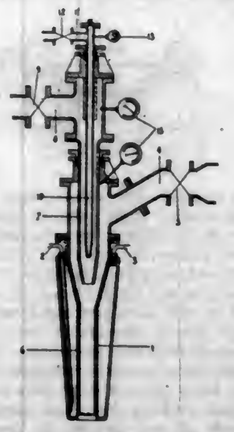


---

1,693,913. FASTENER. VINCENT VOGEL, Chicago, Ill. Filed Nov. 25, 1927. Serial No. 235,599. 2 Claims. (Cl. 24—56.)

1. In a device of the class described and in combination, an elongated body part, yieldable curved wings extending from opposite sides of the body at one end, apposed loops at the other end, and an elastic strip having its ends extended through the loop and secured to the body, and its intermediate portion forming a loop for engagement with a supporting element.

1,693,914. TRANSMISSION OF POWER TO VEHICLES. ARCH UPSHAW AVERA, Florence, Ala. Original application filed July 13, 1922, Serial No. 574,724. Divided and this application filed May 24, 1923. Serial No. 641,102. 6 Claims. (Cl. 191—34.)



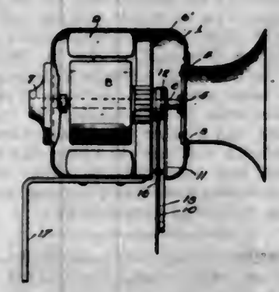
1. The combination of an electrically driven vehicle adapted to travel on a fixed way, a stationary power supply line extending along one side of said way and including a trolley wire, a supporting structure therefor on the opposite side of the wire from said fixed way, and means for connecting the said structure to that side of the trolley wire which is next to the fixed way, a trolley element adapted to travel on said trolley wire, comprising a rigid frame on the outside of the trolley wire, an arm extending therefrom to the inside of the trolley wire so as to clear the supporting means thereof, and a plurality of grooved contacting wheels mounted on said arm adapted to engage the same trolley wire in planes lying at such angles with respect to each other as to embrace the same and be held thereby, together with a flexible cable mechanically connected with said frame and electrically connected with said trolley wheels and having its free end extending to the vehicle and mechanically and electrically connected thereto, so as to trail the trolley frame and trolley wheels along the trolley wire as the vehicle progresses along said fixed way.

1,693,915. CARRYING OUT CATALYTIC OXIDATIONS IN THE GASEOUS OR VAPOR STATE. JOHANNES BRODE and ADOLF JOHANNSEN, Ludwigshafen-on-the-Rhine, Germany, assignors to Grasselli Dyestuff Corporation, New York, N. Y., a Corporation of Delaware. Filed Apr. 25, 1927, Serial No. 186,565, and in Germany June 14, 1926. 6 Claims. (Cl. 260—122.)

1. In the catalytic oxidation of organic compounds, the step of bringing the gaseous mixture having undergone the reaction, prior to the separation of the reaction products and at a temperature at which no deposition of the desired reaction product occurs, into contact with a solid substance not altering its shape at the temperature of use and not giving rise to further conversion and contamination of the desired reaction product, and capable of removing impurities from the reaction mixture.

1,693,916. APPARATUS FOR THE MANUFACTURE OF PIG IRON. GASTON DE BETHUNE, Brussels, Belgium. Filed July 15, 1925, Serial No. 43,854, and in Belgium Mar. 5, 1925. 2 Claims. (Cl. 266—28.)

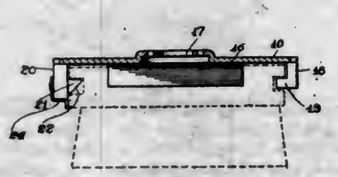
1. Apparatus for the introduction into furnaces of comminuted material, comprising a tuyère including two cylindrical portions of different diameters having an intermediate tapering portion, a channel delivering the material to the cylindrical portion of greater diameter, an injector delivering heated air to the interior of said tuyère below said channel, a second injector disposed coaxially on the interior of the first and delivering unheated air



under pressure, the second cylindrical portion delivering material to the interior of the furnace having relatively great length and relatively small cross section and including means for cooling the walls thereof.

1,693,917. PROCESS FOR THE MANUFACTURE OF LINOLEUM COVERING MATERIAL. ALFRED EISENSTEIN, Schreckenstein, near Aussig-on-the-Elbe, Czechoslovakia, assignor of one-half to Georg Schicht A.-G., Aussig-on-the-Elbe. Filed Mar. 13, 1925, Serial No. 15,381, and in Czechoslovakia Jan. 16, 1925. 14 Claims. (Cl. 106—7.)

1. The process of producing linoleum mass, which consists in mixing together the liquid and solid constituents in a proportion in which they are pulverulent, subjecting the mixture to oxidation at a temperature above 70° C. but below the temperature of carbonization, and maintaining said temperature and the pulverulent condition of the mixture.

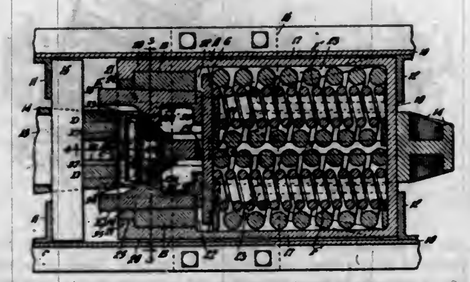


1,693,918. DIRECTION INDICATOR. HENRY E. ELROD, Santa Monica, Calif. Filed June 10, 1926. Serial No. 115,085. 4 Claims. (Cl. 177—324.)

1. A signalling device for automobiles comprising a shaft, means under the control of the driven for rotating said shaft in either direction at will, a normally vertical pointer loosely mounted on said shaft, an impositive connection between said shaft and said pointer, and stops to stop the pointer in a horizontal position in either direction, said impositive connection comprising means for producing an audible signal upon continued rotation of said shaft when the pointer is stopped in either horizontal position.

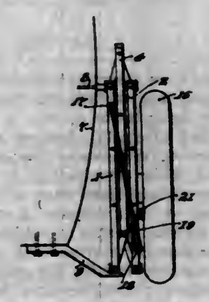
1,693,919. BRUSH HOLDER FOR FLOOR POLISHERS. LYLE N. GILLIS, Rose Crest, Va., assignor, by direct and mesne assignments, of one-half to The Floorola Corporation, Baltimore, Md., a Corporation of Delaware, and one-half to Ernest J. Newcomer, Baltimore, Md. Filed Feb. 12, 1924. Serial No. 692,299. 6 Claims. (Cl. 15—146.)

1. A rotatable brush holder for floor polishers consisting of a plate having a depending lug at one end provided with an inturned extremity, a latch housing depending from the plate at the other end wherein is mounted a latch having a bevel ended spring pressed bolt projecting toward the lug, and a thumb piece for drawing said latch backward against the spring.



1,693,920. ADJUSTABLE CASTER. WILLIAM C. HARTMANN, Cleveland, Ohio. Filed Dec. 1, 1927. Serial No. 237,019. 3 Claims. (Cl. 16—19.)

1. In a caster, a vertical caster-carried shank having opposed flat sides at its upper portion, a nut threaded on the lower portion of said shank, and a tube resting on said nut and having a flat-sided slot in its upper end through which the flat-sided upper portion of said shank passes slidably but non-rotatably, the side portions of the tube under the ends of said slot having inwardly bowed spring tongues, said shank being provided with downwardly facing shoulders to contact with said tongues and prevent accidental disconnection of tube and shank.

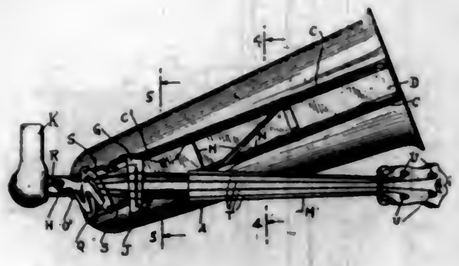


1,693,921. FRICTION SHOCK-ABSORBING MECHANISM. STACY B. HASELTINE, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago Ill., a Corporation of Delaware. Filed Sept. 2, 1927. Serial No. 217,233. 9 Claims. (Cl. 213—32.)

1. In a friction shock absorbing mechanism, the combination with a casing provided with opposed side walls and top and bottom walls; of a spring resistance within the casing; a pair of detachable liners mounted on the side walls of the casing; means for preventing relative longitudinal movement of said liners and casing, said liners being held against vertical displacement; a pair of friction shoes cooperating with the liners; a central friction post; a pair of wedge blocks on opposite sides of the post and relatively movable thereto, said wedge blocks having wedging engagement with the shoes, said wedge blocks,

shoes and liners being provided with interengaging means for holding all of said parts centered on the side walls of the casing and uniformly spaced from the remaining walls respectively.

1,693,922. LUGGAGE CARRIER FOR AUTOMOBILES. WILLIAM GORDON HERD, Drumheller, Alberta, Canada. Filed Apr. 4, 1927, Serial No. 180,921, and in Canada Dec. 14, 1926. 2 Claims. (Cl. 224—29.)



1. The combination in an automobile luggage carrier of a box shaped receptacle comprising one side in fixed relation to the automobile, a side in adjustable relation to the fixed side, pivoted links mounted on the said fixed and adjustable sides their other ends meeting in pivotal mountings on a mid-strap and combining with the mid-strap to form ends and bottom of the receptacle when open, a rim secured to the moving side adapted to carry an automobile tire.

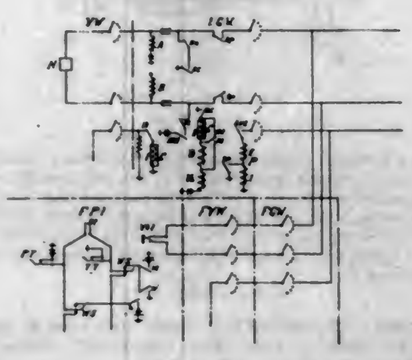
1,693,923. COATING FOR MOLDS. ARTHUR J. HESS, Detroit, Mich., assignor to Earl Holley, Detroit, Mich. Filed Dec. 11, 1926. Serial No. 154,808. 2 Claims. (Cl. 22—189.)

1. A wash for protecting metal molds, comprising a mixture of a suspension of graphite and silica in kerosene mixed with a dilute solution of sodium silicate in water.

1,693,924. MUSICAL INSTRUMENT. JOHAN EMIL HILLEBRANDT, West Brighton, N. Y. Filed June 30, 1925. Serial No. 40,504. 8 Claims. (Cl. 84—296.)

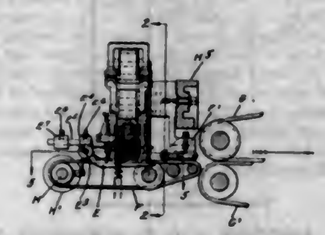
1. A resonator for stringed musical instruments and the like comprising an outer wall and an inner tapering spaced wall, said outer and inner walls being split and the adjacent edges joined together along one side throughout the entire length and a center strip connecting said joined walls forming a support.

1,693,925. LIGHTING FIXTURE AND THE LIKE. DONALD HOLT, Chicago, Ill. Filed May 23, 1927. Serial No. 193,554. 5 Claims. (Cl. 240—73.)



1. A device of the class described comprising in combination a pedestal member a vertical pin extending through and pivoted within the same to turn on a vertical axis, a clip surrounding and pivotally mounted upon the upper portion of said pin above the pedestal member, a pair of telescoping cup-shaped disks constituting a pedestal joint, the central portions of said disks being relatively close together as compared to their annular portions more distantly removed, a circular washer of rubber or the like located between said annular portions and concentric with the disks and in engagement with the inside faces of the disks, a central hollow pivotal member joining together the central portions of the disks and drawing them towards each other to thereby bring the disks into frictional engagement with the rubber block aforesaid, a rigid connection between one of said disks and the clip aforesaid, a clip secured to the other of said disks, a hollow extension arm secured to said clip, and a suitable conductor extending through the hollow pivotal joint connection and through the hollow tubular extension, substantially as described.

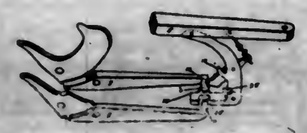
1,693,926. PROTECTION OF ANIMAL FIBERS AGAINST THE EFFECTS OF ALKALINE OR ACID MEDIUMS. RONALD SMITH HORSFALL and LESLIE GORDON LAWRIE, Blackley, Manchester, England, assignors to British Dyestuffs Corporation Limited, Blackley, Manchester, England. Filed Oct. 31, 1927, Serial No. 230,177, and in Great Britain Nov. 16, 1926. 6 Claims. (Cl. 8—12.)



1. The improvement in processes for the treatment of wool, silk, fur and other animal fibrous material in liquid media consisting in the addition to the said media of a soluble condensation product of an urea with formaldehyde.

1,693,927. TELEPHONE SYSTEM. WALTER KROLL, Berlin, Germany, assignor to Siemens & Halske Aktiengesellschaft Wernerwerk, Siemensstadt, near Berlin, Germany. Filed July 31, 1926, Serial No. 126,252, and in Germany Aug. 15, 1925. 8 Claims. (Cl. 179—27.)

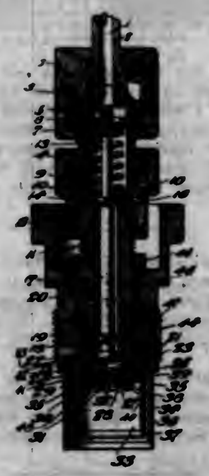
1. In a telephone system, a combination toll and local rotary connector for use by an operator or local subscribers, a group of private branch exchange lines, non-numerical switches having access to said lines, means for operating said connector to select one of said non-numerical switches, and means responsive to said selection for operating said non-numerical switch to connect with one of said lines.



1,693,928. MACHINE FOR FEEDING BLANKS. HAROLD S. LABOMBARDE, Nashua, N. H. Filed June 15, 1923, Serial No. 645,663. Renewed Feb. 28, 1928. 19 Claims. (Cl. 271—18.)

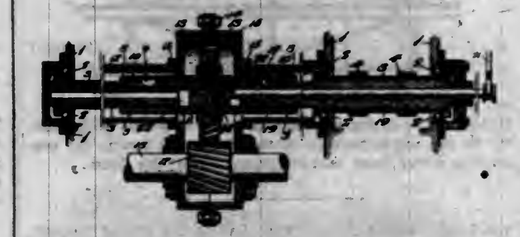
1. A machine of the character described comprising means for feeding blanks successively in the direction of one axis of the blanks to form a pile; and means for feeding the blanks successively from the pile in the direction of the transverse axis of the blanks.

1,693,929. SINGLE-TRIGGER MECHANISM FOR DOUBLE-BARREL FIREARMS. CHARLES W. LINDSAY, Houston, Tex. Filed July 18, 1927. Serial No. 206,583. 4 Claims. (Cl. 42—42.)



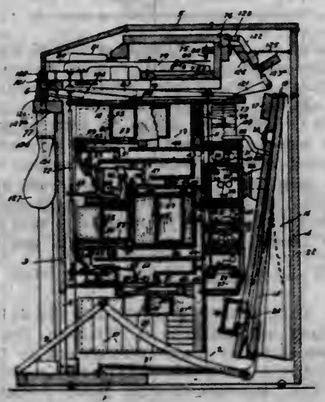
4. A single trigger mechanism for double barrel firearms, in combination with hammer sears and a common sear actuating means, a carrier-bar and controller-spring each pivoted in the top tang and mutually adjusted in weight and tension whereby premature firing of the second barrel is avoided, substantially as described.

1,693,930. METHOD OF IMPREGNATING WOOD WITH SUBSTANCES TOXIC TO ANIMAL AND BACTERIAL LIFE AND FUNGUS GROWTHS. CHARLES B. LIPMAN and AARON GORDON, Berkeley, Calif., assignors to Regents of the University of California, Berkeley, Calif., a Corporation. Filed Sept. 9, 1926. Serial No. 134,572. 6 Claims. (Cl. 99—12.)



1. A method of protecting wood with a substance toxic to animal and bacterial life and fungus growth, which consists in injecting into living tree a toxic substance capable of distribution by the sap flow of the tree and permitting the toxic substance to be distributed throughout the entire cellular and fibrous structure of the tree by the actual sap circulation of the tree and then treating said structure to reduce and fix the toxic substance within the cellular and fibrous structure of the tree.

1,693,931. BURNER AND VALVULAR CONTROL THEREFOR. EDWARD L. LOWE, Palo Alto, Calif., assignor to J. W. Clune Co., Los Angeles, Calif., a Corporation of California. Filed Nov. 30, 1926. Serial No. 151,636. 20 Claims. (Cl. 123—33.)

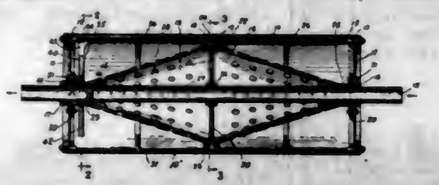


1. In a device of the character stated, the combination of a burner, a fuel passage leading thereto, an upwardly seating valve in said passage, a valve stem for said valve, means for holding said valve to its seat, and heads on said valve stem having inclined grooves therein whereby the passage of fuel to said burner past said heads tends to rotate said valve and its stem.

1,693,932. TIME CONTROL OF FUEL INJECTION FOR INTERNAL-COMBUSTION ENGINES. EDWARD L. LOWE, Palo Alto, Calif., assignor to J. W. Clune Co., Los Angeles, Calif., a Corporation of California. Filed Nov. 30, 1926. Serial No. 151,638. 6 Claims. (Cl. 123—139.)

1. In a timing control of the character stated, a hollow cam shaft, a cam mounted upon said shaft, a sleeve movable longitudinally of said cam shaft, a spiral gear fixed thereto, a constantly operating shaft actuated from the engine shaft, a spiral gear thereon for meshing with said first mentioned spiral gear, and a pull rod extending within said hollow shaft for moving said first mentioned spiral gear with respect to said second gear for changing the timing of said cam shaft.

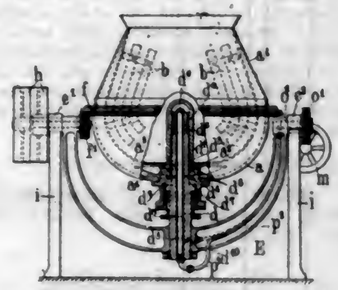
1,693,933. ORGAN. STANISLAV MICHNIEVITCH, Los Angeles, Calif. Filed June 21, 1926. Serial No. 117,589. 37 Claims. (Cl. 84—351.)



35. An organ comprising sound producing vibrators providing a plurality of organ stops, strikers for the respective vibrators adapted to impart greater vibration to the vibrators which produce notes of standard pitch than to the corresponding vibrators for the auxiliary organ stops, a wind box, valvular controls between the wind box and the respective vibrators, means for actuating the respective strikers and opening the respective valvular controls by corresponding respective keys, and means for varying opening of the respective valvular controls in accordance with the pressure upon the corresponding keys.

1,693,934. WATER EVACUATOR FOR DRIER DRUMS. WILLIAM H. MILLSPAUGH, Sandusky, Ohio, assignor to The Paper & Textile Machinery Co., Sandusky, Ohio, a Corporation of Ohio. Filed Jan. 19, 1922. Serial No. 530,484. 11 Claims. (Cl. 34—4.)

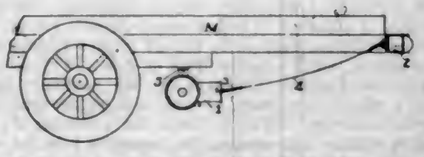
1. In combination, a rotary drum, an evacuator carried thereby and comprising a nonrotating conduit hav-



ing an inlet opening or mouth curved with reference to the axis of the drum and in a direction opposite to the ro-

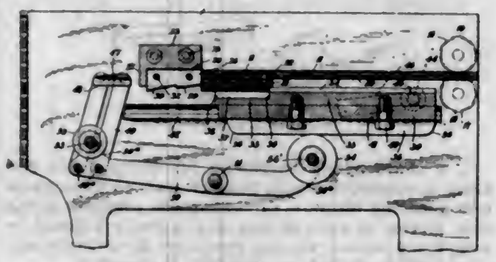
tation of the drum, said mouth being disposed in proximity to the upper portion of the drum and means for conducting water from said evacuator out of the drum.

---



1,693,935. ROTARY MIXER. LAFAYETTE HENRY NELLES, London, England. Filed Feb. 25, 1928, Serial No. 256,988, and in Great Britain Nov. 16, 1926. 2 Claims. (Cl. 259—82.)

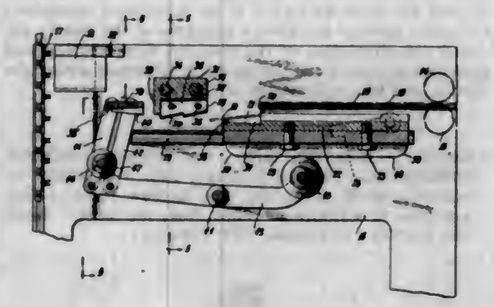
1. A mixing machine comprising a pair of spacedly arranged frame members, a yoke rotatably mounted in said frame members, a mixing drum rotatably mounted in said yoke and adapted to rotate about its vertical axis, stirring means in said drum, means for rotating said drum, means for rotating said yoke, a jacket disposed in said drum, conduit means in said yoke connecting with said jacket for supplying a medium to said drum, and a discharge conduit in said yoke for discharging said medium whereby said medium may be supplied to said drum and discharged therefrom during the rotation and tilting of said drum.



---

1,693,936. TAIL LIGHT AND DANGER SIGNAL. SIMON D. PADDACK and CHARLES G. WILFORD, Los Angeles, Calif., assignors, by mesne assignments, to George D. Johnson, Los Angeles, Calif. Filed Nov. 3, 1923, Serial No. 672,524. Renewed Dec. 10, 1926. 7 Claims. (Cl. 240—8.18.)

1. A combined tail light and danger signal comprising a stationary casing, a reeled extension electric conducting wire mounted in the casing, an extension casing detachably connected to the stationary casing, a lamp carried in the extension casing and connected to said reeled wire, said extension casing adapted to be disconnected from the stationary casing and said reeled wire adapted to pay-out to admit the positioning of the extension casing at a point remote from the stationary casing, and a reeled attaching cord carried in the extension casing adapted to engage a support for maintaining the extension casing at a desired point.



1,693,937. MACHINE FOR CUTTING MATCH SPLINTS, SAMUEL E. RAHE, Richmond Hill, N. Y. Filed Jan. 9, 1926. Serial No. 80,250. 25 Claims. (Cl. 144—54.)

1. A match splint machine having a cutter with thin fixed blades of different depths and inclined edges one behind the other, and spaced laterally the width of a match splint apart, and a pusher plate movable opposite the blade edges for feeding sheet stock across the cutter whereby the blades cut progressively through the stock.

---

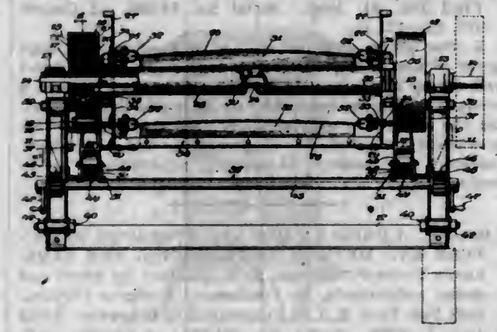
1,693,938. MACHINE FOR MAKING MATCH CARDS. SAMUEL E. RAHE, Richmond Hill, N. Y. Filed Feb. 9, 1926. Serial No. 87,042. 11 Claims. (Cl. 144—51.)

1. A machine for making match cards comprising a stock feed having an inclined stock holder with splint grooves therein, a series of thin spaced blades disposed so as to engage and cut edgewise through the stock for a part of its width thereby forming splints, and a member behind the blades grooved to mesh with the grooves in the holder and arranged to press upon the cut stock in the holder.

---

1,693,939. IMPREGNATING SOLUTION. LAWRENCE V. REDMAN, Caldwell, N. J., and HAROLD C. CHEETHAM, Chicago, Ill., assignors to Bakelite Corporation, New York, N. Y., a Corporation of Delaware. Filed Apr. 24, 1923, Serial No. 634,386. Renewed Feb. 23, 1928. 2 Claims. (Cl. 134—26.)

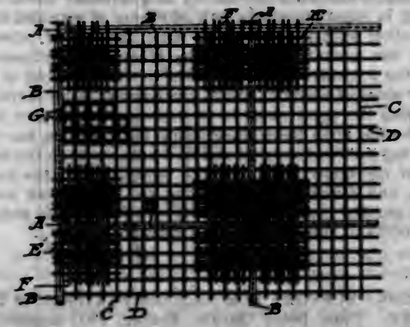
1. An impregnating solution comprising a potentially reactive phenolic resin capable of setting free ammonia during its transformation to the infusible state, and furfural in proportion at least sufficient to combine with the liberated ammonia.



---

1,693,940. SCREENING APPARATUS. SAMUEL DAVIS ROBINS, Woodmere, N. Y., assignor to Robins Conveying Belt Company, Passaic, N. J., a Corporation of New Jersey. Filed Apr. 12, 1927. Serial No. 183,049. 12 Claims. (Cl. 209—326.)

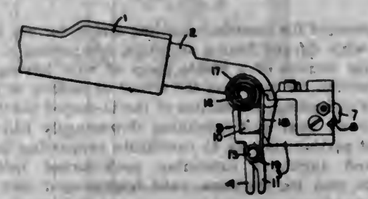
1. A screening apparatus comprising a screen frame, a drive shaft substantially co-incident with the center of



gravity of the said frame, stationary bearings for said shaft, connections between said shaft and frame whereby the frame is positively gyrated in circular paths lying in planes at right angles to the drive shaft, and resilient

equalizing means simultaneously acting in the same direction upon said frame beyond the respective sides of the shaft and operative to maintain the said frame constantly in correct screening position while permitting its positive gyration.

---



1,693,941. BUILDING CONSTRUCTION. KARL R. SCHUSTER, Hopatcong, N. J. Continuation of application Serial No. 854,571, filed Aug. 1, 1914. This application filed Dec. 9, 1921. Serial No. 521,269. 10 Claims. (Cl. 72—15.)

7. A steel-and-concrete structure embodying columns, tie beams extending between said columns, flat slabs, negative reinforcing rods in the areas surrounding said columns, and rods in the slabs co-operating with the tie beams and imposing substantially all the floor loads on said tie beams, said tie beams being connected to said columns, whereby the punching shear of the columns on said slabs is resisted.

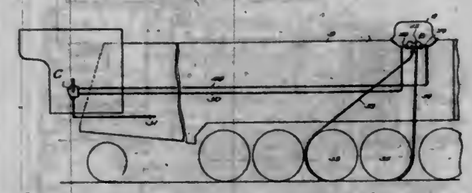
---

1,693,942. SPRING FOR THREAD-CUTTING LOOM TEMPLES. WALLACE I. STIMPSON, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Mar. 7, 1928. Serial No. 259,657. 6 Claims. (Cl. 139—303.)

1. A one-piece wire spring for operating the cutter member of a thread cutting loom temple comprising a co-

axial helical cylindrical coil and flat open spiral, the helical coil being adapted to fit snugly the usual stud on the temple head and terminating at its inner end in a tangential shoulder-engaging arm and merging at its outer end into the center coil of the spiral with the peripheral coil of the spiral terminating in a tangential arm adapted to engage at its free end the usual movable cutter member.

---

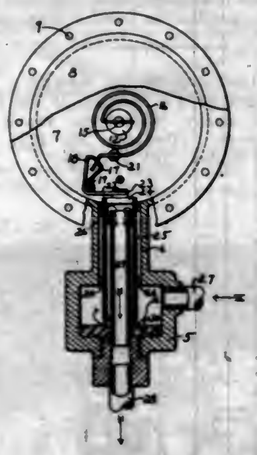


1,693,943. FLUID-PRESSURE BRAKE. THOMAS H. THOMAS, Edgewood, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Apr. 11, 1927. Serial No. 182,745. 10 Claims. (Cl. 303—59.)

7. In a fluid pressure brake, the combination with a brake cylinder, of a brake controlling valve device comprising valve means for controlling the supply of fluid under pressure to the brake cylinder, a movable abutment operated upon an increase in fluid pressure, for operating said valve means, a valve for controlling connection through which fluid under pressure is supplied to said movable abutment, a movable abutment subject to the pressure of fluid supplied to the first abutment for operating said valve, and a spring for opposing the fluid pressure on said second abutment.

---

1,693,944. TRACK-SANDING APPARATUS. HARRY VISSERING, Kenilworth, and GUILFORD S. TURNER, Berwyn, Ill., assignors to Harry Vissering and Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 15, 1925. Serial No. 2,501. 12 Claims. (Cl. 291—5.)

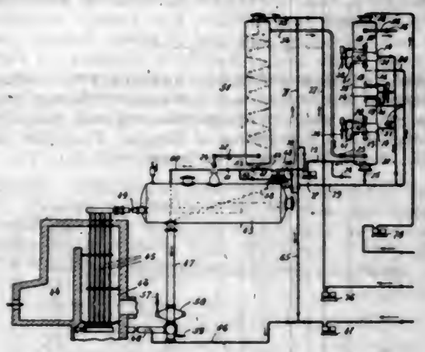


1. In sanding apparatus, the combination of a casing having an inlet in one side thereof for delivering sand transversely into the casing, a chamber for receiving the sand, an outlet chamber, and a longitudinally extending trap-conduit between said chambers, an air jet disposed in the receiving chamber to force sand through the conduit into the outlet chamber, an air jet disposed in said outlet chamber to impel sand therefrom, and a connection for delivering air under pressure to said jets.

---

1,693,945. VALVE. GEORGE R. WILDERN, Detroit, Mich. Filed Jan. 28, 1927. Serial No. 164,265. 8 Claims. (Cl. 236—50.)

1. In a device of the class described, an inlet pipe and an outlet pipe, a common chamber into which said pipes

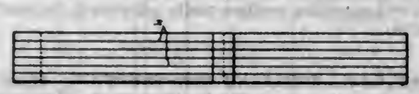


lead, a relatively heavy fluid held in said chamber subject to and movable as a body by pressure from fluid entering the intake and surrounding one of said pipes, a tube enclosing said latter pipe having a closed end extending

beyond the end of said pipe and movable to bring its other end into and out of said heavy fluid to make and break connection between said pipes and temperature responsive means for moving the tube.

---

1,693,946. OPERATION OF PRESSURE STILLS. JOHN E. BELL, Brooklyn, N. Y., assignor to Sinclair Refining Company, Chicago, Ill., a Corporation of Maine. Filed July 26, 1924. Serial No. 728,307. 13 Claims. (Cl. 196—48.)

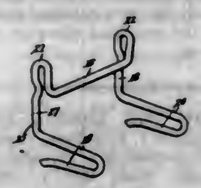


4. The improvement in the operation of pressure stills for cracking hydrocarbon oils and distillates, which comprises subjecting the vapors from the still to a refluxing operation in a zone separate from the vaporizing zone in direct contact with fresh charging stock to the still, returning the reflux and unvaporized charging stock introduced into the refluxing operation to that portion of the still stock which is to be immediately subjected to high temperature, passing the vapors from the refluxing operation successively through a series of separate vapor condensing chambers maintained at progressively lower temperature, passing fresh charging stock to the still in indirect heat interchanging relation with the vapors in the condensing chambers, refluxing a part of the condensate from chambers of lower temperature to chambers of higher temperature, and introducing preheated charging stock from the condensing chambers directly to the pressure still.

1,693,947. METHOD OF PRODUCTION OF SODIUM BI-SULPHATE. JOHN N. CAROTHERS and CHARLES F. BOOTH, Anniston, Ala., assignors to Federal Phosphorus Company, Birmingham, Ala., a Corporation of Alabama. Filed Dec. 31, 1925. Serial No. 78,696. 2 Claims. (Cl. 23—121.)

1. The herein described method of production of high grade sodium bi-sulphate, which consists in adding water and strong sulphuric acid to crude niter cake to yield a product containing approximately 85% bi-sulphate, heating the mixture to approximately 150° C., cooling to approximately atmospheric temperatures, and then disintegrating the resultant bi-sulphate, substantially as described.

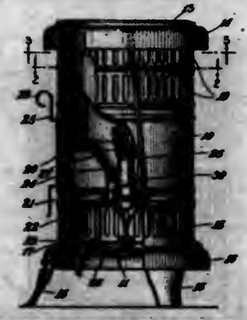
---



1,693,948. UMBRELLA RIB AND SPREADER STRUCTURE AND METHOD OF PRODUCING THE SAME. FRANK FABBRIN, Tallman, N. Y., assignor, by direct and mesne assignments, to Continental Products Corporation, New York, N. Y., a Corporation of Delaware. Filed June 7, 1926. Serial No. 114,325. 4 Claims. (Cl. 135—20.)

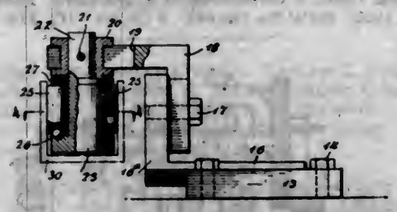
1. The herein described method of producing a set of hingedly connected umbrella rib and spreader units, consisting in superimposing a pair of sheets of material upon each other with the end of one sheet disposed at substantially the medial portion of the other sheet, adhesively securing a transverse flexible strip to the inner end of the upper sheet of material and to the lower sheet of material, swinging the upper sheet in an opposite direction to bend the flexible strip upon itself after the adhesive has set, applying a second strip of material adhesively to the inner end of the upper sheet and the upper face of the lower sheet, and simultaneously cutting the sheets and strips along parallel lines longitudinally of the sheets to provide a plurality of connected rib and spreader units.

---



1,693,949. SUPPORT FOR NAILING STRIPS AND THE LIKE. FRED ISAAC GRIMM, Beaver, Pa., assignor to Jones & Laughlin Steel Corporation, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Apr. 12, 1926. Serial No. 101,367. 3 Claims. (Cl. 72—101.)

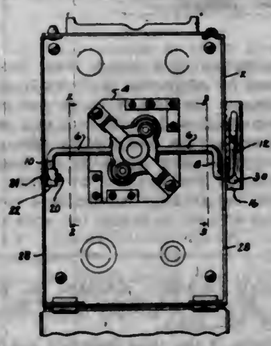
1. A support for screeds or nailing strips, for use in connection with flanged beams or joists, comprising a chair-like device formed of a single piece of wire having a U-shaped portion for receiving the screed or nailing strip, the upwardly extending extremities of the U-shaped portion being reversely bent and extending downwardly below the U-shaped portion thereby to constitute supporting leg portions, and angularly extending hook-shaped feet connected to said leg portions, said hook-shaped feet being adapted to engage over and be supported by a flange of the beam or joist to position said U-shaped portion above the beam flange.



1,693,950. PORTABLE ELECTRIC HEATER. GEORGE D. HAUSER, Utica, N. Y., assignor to Utica Products, Inc., Utica, N. Y., a Corporation of New York. Filed July 1, 1926. Serial No. 119,820. 4 Claims. (Cl. 126—90.)

1. A heater comprising a body having top, bottom and lateral walls, a tubular shell extending from the top wall and forming with the lateral wall a chamber having its lower end open, a heating element at the lower end of said shell and an upwardly directed tapered reflector surrounding said heating element, said top wall having apertures through which said shell communicates directly with the atmosphere.

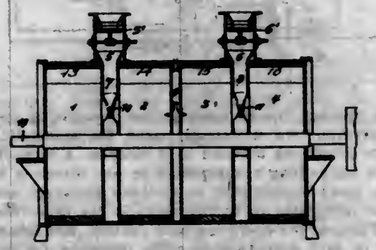
---



1,693,951. ATTACHMENT FOR BENDING MACHINES. RAYMOND L. HERMAN, New York, and GUSTAV F. SCHMIDT, Roslyn, N. Y. Filed Oct. 28, 1927. Serial No. 229,348. 4 Claims. (Cl. 153—54.)

2. A device adapted to be used in combination with a bending machine of the roll type, said device including a carrier having a pair of spaced recesses, rolling members rotatably supported in said recesses and means to secure said carrier to said machine with the axes of said rolling members located in the same plane as the axis of one of the rolls of said bending machine.

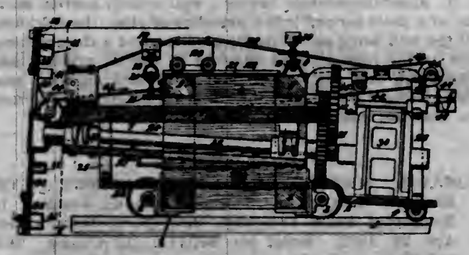
---



1,693,952. SAFETY SWITCH. ERNEST G. JOHANSSON, Boston, Mass., assignor, by mesne assignments, to The Palmer Electric & Manufacturing Co., Waltham, Mass., a Corporation of Massachusetts. Filed May 14, 1926. Serial No. 109,030. 3 Claims. (Cl. 200—168.)

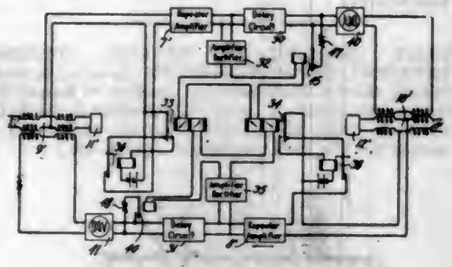
1. In a safety switch, the combination of a casing having two opposing side walls, one of said side walls having an aperture, a bracket secured to the inside of the other wall and having a perforated portion spaced away therefrom, a crank having a bearing portion in said aperture and an inwardly turned end in line with the axis of said bearing portion and passing through the perforation in said bracket the wall adjacent to said bracket engaging a portion of said crank and holding said turned end within the perforation of said bracket.

---



1,693,953. MACHINE FOR HUSKING, PODDING, BRUSHING, OR TREATING GRAIN. LEOPOLD KASPAR, Olmutz, Mahren, Czechoslovakia, assignor to Kasper Getreideschälmaschine G. m. b. H., Offenbach-on-the-Main, Germany. Filed Nov. 5, 1925, Serial No. 66,986, and in Austria Nov. 20, 1924. 6 Claims. (Cl. 83—30.)

1. A machine for treating grain comprising a plurality of treating chambers, arranged in pairs, charging conduits extending between the two chambers of each pair, the chambers of each pair having charging openings in fixed connection with the cooperating conduit, valves in said conduits for controlling the communication between the latter and its connected chambers, means for automatically operating said valves at predetermined time intervals, valves for controlling the charging operation both as to time and volume of the charge, and means for automatically operating said last named valves.



---

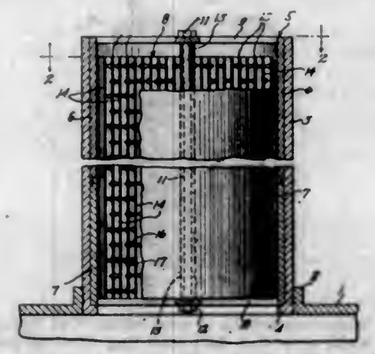
1,693,954. TUNNELING MACHINE. HOWARD E. MARSH, Lompoc, Calif. Filed Oct. 7, 1924. Serial No. 742,122. 3 Claims. (Cl. 262—2.)

1. A tunneling mechanism including wheeled main and secondary carriages, the latter in rear of the former and provided with a frame longitudinally movable through and guidably mounted within the former to extend beyond the same, a rotatable face cutter and cut material elevating member at the free end of the frame, means mounted on the secondary carriage for rotating the cutter, a material conveyer on the secondary carriage extending rearwardly from the member for receiving cut and elevated material therefrom, means for operating the conveyer, means for releasably retaining the main carriage in position within a tunnel, and means for advancing the secondary carriage relatively to the main carriage and for retaining the secondary carriage in its adjusted position.

1,693,955. ELECTRIC-CURRENT TRANSMISSION. ROBERT C. MATHES, Wyoming, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 22, 1923. Serial No. 658,667. 17 Claims. (Cl. 179—170.)

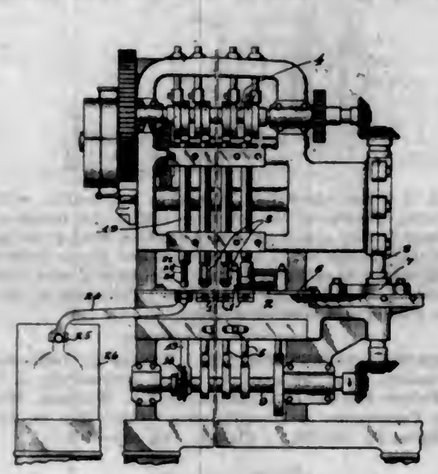
5. A two-way transmission system comprising two two-wire circuits, two unilateral paths for transmitting in opposite directions between said circuits, a movable contact for controlling transmission in one direction in said system, means comprising an electron discharge amplifier rectifier responsive to transmission in the other direction in said system for operating said contact, and means connected in said path in said other direction for delaying transmission between two points close together in said path until said contact has operated.

1,693,956. MULTIPLE-PLY SANITARY METAL CAN. ARLINGTON MOORE, New York, N. Y., assignor to Moore Inventions Corporation, Worcester, Mass., a Corporation of Massachusetts. Filed Apr. 15, 1922, Serial No. 553,211. Renewed Apr. 19, 1928. 8 Claims. (Cl. 220—66.)



1. A metal container having a wall or body portion made up of a sheet formed into a plurality of plies, the thickness of the wall being substantially uniform, and a closure member having edge portions adjacent to and in intimate contact with end portions of said wall, said adjacent portions being turned over, interlocked and pressed together to seal the container.

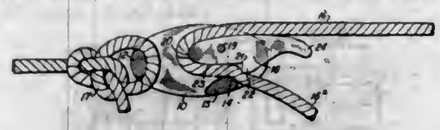
1,693,957. METHOD OF MAKING BATTERY NUTS. ERASTUS G. OAKLEY, Southport, Conn., assignor to Bridgeport Brass Company, Bridgeport, Conn. Filed Apr. 28, 1922. Serial No. 557,111. 11 Claims. (Cl. 10—86.)



5. The method of making battery nuts or the like, which comprises heading and drilling through a given length of stock, beveling the unheaded end thereof and flaring out this end so that the beveled face assumes a position substantially parallel to the axis of the drilled bore.

1,693,958. BREATHER COVER FOR TANKS. JOHN S. PATTEN, Madison, N. J. Filed Sept. 2, 1926. Serial No. 133,095. 6 Claims. (Cl. 220—88.)

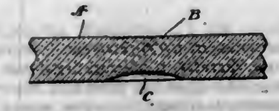
1. In a flame arresting breather cover for tanks, in combination, a core, a burred imperforate metallic sheet wrapped in volute spiral form thereon, and an imperforate sleeve surrounding and snugly fitting the outermost turn of said sheet.



1,693,959. AUTOMATIC-MACHINE WORK TRANSFERRER. GUNNARD P. PETERSON, Naugatuck, Conn., assignor to The Risdon Manufacturing Company, Naugatuck, Conn., a Corporation of Connecticut. Filed Aug. 7, 1922. Serial No. 580,085. 9 Claims. (Cl. 113—113.)

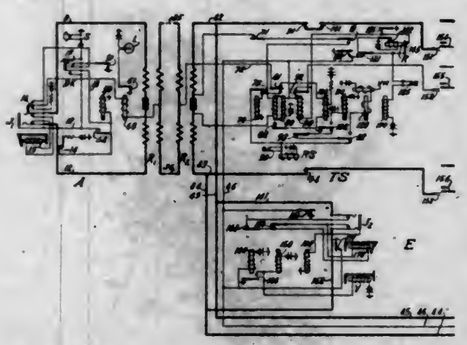
1. The combination of a punch press having a main carrier organized for advancing the work from a die to an exchange station, a transfer work carrier mounted and operated to move back and forth from said exchange station to a delivery station and holding means comprising double plunger mechanism operative to hold the work during its exchange from carrier to carrier and during its release from the transfer carrier, said mechanism including plungers adapted to engage the work pieces.

1,693,960. LINE CLAMP. CHARLES E. RAMER, New York, N. Y. Filed Dec. 1, 1927. Serial No. 236,957. 4 Claims. (Cl. 24—133.)



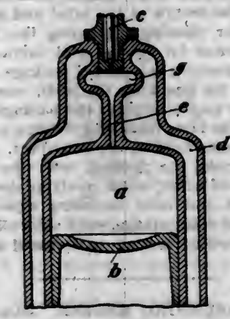
1. A line clamp of the class described comprising similarly formed and oppositely disposed side walls with a chamber therebetween, a pawl lock member pivotally supported within and between the side walls of said clamp and having a projecting prong-like part adapted to cooperate with a fixed member bridging the walls of said

clamp to crimp and secure one end portion of a line against displacement from said clamp, the inner end of said lock member having a rounded nose portion, around which said end of the line is looped and by means of which said prong is moved into operative position.

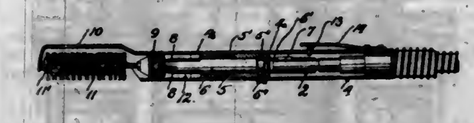


1,693,961. HÆMACYTOMETER COUNTING CHAMBER. OSKAR RISCH, Jena, Germany, assignor to Clay-Adams Co., Inc., New York, N. Y., a Corporation of New York. Filed Aug. 5, 1926. Serial No. 127,461. 3 Claims. (Cl. 88—40.)

1. A hæmacytometer slide or counting chamber provided with ruling on one side and with a visibility-increasing formation on the opposite side.



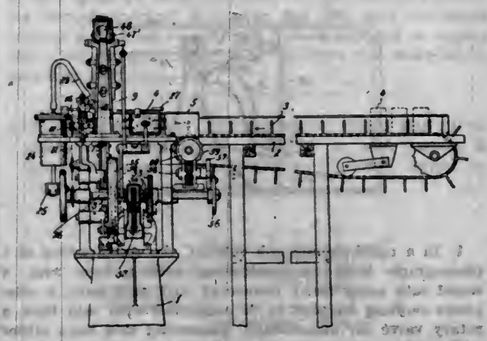
1,693,962. TELEPHONE SYSTEM. LEONARD L. RUGGLES, Wheaton, Ill., assignor to Reserve Holding Company, Kansas City, Mo., a Corporation of Delaware. Filed Mar. 17, 1927. Serial No. 175,953. 15 Claims. (Cl. 179—27.)



3. In a telephone system a trunk line, a condenser bridged across the talking conductors at one end thereof, a signal connected across the trunk to be operated thereover, and means effective upon the termination of a call over the trunk to momentarily provide a discharge path for the condenser exclusive of the signal, thereby preventing the signal from being operated by the condenser discharge.

1,693,963. HIGH-PRESSURE CRUDE-OIL MOTOR. ERNST SCHAEREN, Bern, Switzerland, assignor, by mesne assignments, to Busch-Sulzer Bros.-Diesel Engine Co., St. Louis, Mo. Filed Dec. 22, 1923, Serial No. 682,166, and in Switzerland Dec. 30, 1922. 1 Claim. (Cl. 123—33.)

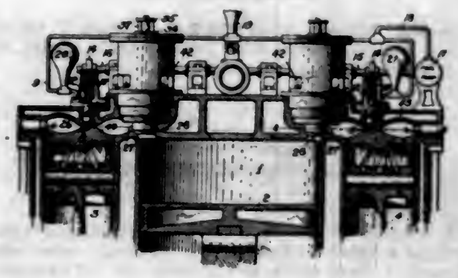
In a solid-injection internal combustion engine, the combination with the engine cylinder, of an auxiliary combustion chamber of a width considerably in excess of its length, means for injecting the fuel into said chamber in the direction of its length, a passage, of a length considerably in excess of its width and of substantially uniform cross-section, connecting the chamber with the engine cylinder, and cooling means effective on said chamber and passage throughout their length.



1,693,964. ROTARY TOOTHBRUSH. EDWARD F. SMITH, Los Angeles, Calif. Filed June 1, 1927. Serial No. 195,651. 3 Claims. (Cl. 15—23.)

1. In a device of the character described, a housing forming a handle and provided at one end thereof with a guard, a shaft within said housing and rotatable relatively thereto, a bearing within said housing, a stem extending through said bearing and removably conjoined at one end with said shaft and at the other end provided with a chuck, means engaging said stem to prevent disengagement thereof with said shaft, a brush journaled at one end in said guard and having its other end secured in said chuck, said housing having openings through which access may be had to said chuck for manipulating same and means to operate said shaft.

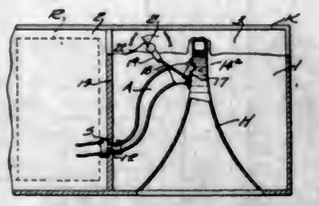
1,693,965. STAMP-AFFIXING MACHINE. JOHN DAVID SMITH and CHARLES RAYMOND PHILLIPS, Richmond, Va. Filed Feb. 7, 1927. Serial No. 166,279. 18 Claims. (Cl. 216—55.)



1. In a package labeling machine, the combination of a package mover, feeding mechanism for advancing the packages successively into labeling position opposite the

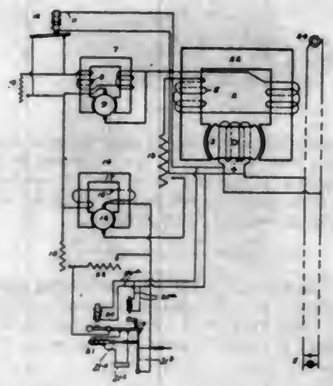
package mover, a label magazine, a label carrier for removing the labels from said magazine and carrying them one at a time to the package at the labeling position, said carrier having a pair of arms spaced from one another by approximately the length of the label and gripping means on said arms for yieldingly gripping the label near the ends thereof, means for moving said carrier to bring the label thereon opposite a face of the package at the labeling position, means for gumming the label, means for actuating the package mover to push the package between said arms and force the label from said yielding gripping means, said gripping means holding the label taut, and said package mover carrying the package with the label thereon beyond said spaced arms, and a receiving device for receiving the package and label including means for holding the label against the package, said device being mounted in stationary position beyond said spaced arms.

---



1,693,966. OIL-BURNING ENGINE. ELMER A. SPERRY, Brooklyn, N. Y., assignor to Sperry Development Company, Dover Green, Del., a Corporation of Delaware. Filed Sept. 26, 1919. Serial No. 326,654. 15 Claims. (Cl. 123—32.)

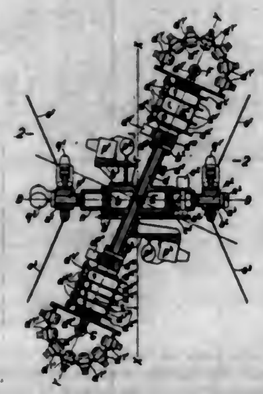
1. In a combustion engine, the combination with the combustion cylinder, of a clearance space at the end of the same having an hour-glass or dumb-bell section the lobes of which have a longer and a shorter axis and with its longer axis at a substantial angle to the axis of the cylinder and means for extruding fuel in the form of a jet directly along the axis of said section.



---

1,693,967. COMBINED RADIO AND PHONOGRAPH CABINET. ADOLPH A. THOMAS, New York, N. Y. Filed Feb. 5, 1924. Serial No. 690,697. 25 Claims. (Cl. 179—100.1.)

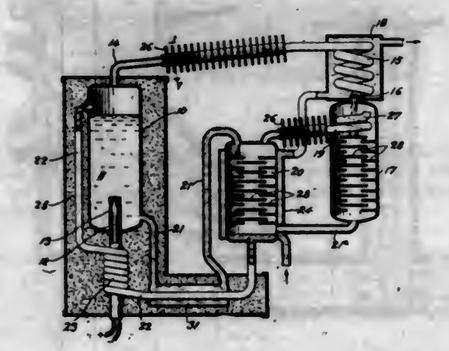
1. In a radio-phonograph cabinet, the combination of a phonograph horn communicating with a tone arm, a sound tube acoustically connected with said horn, a telephone receiver adapted to be connected with said tube, a rotary valve for acoustically connecting said horn either with said tone arm or with said tube as a common sound amplifier for both, a vertically mounted rod for operating said valve, and a finger piece at the top of said cabinet for actuating said rod.



1,693,968. SYSTEM FOR EXCITATION OF SYNCHRONOUS-TYPE ELECTRIC MACHINES. PERCY H. THOMAS, Upper Montclair, N. J. Filed July 26, 1924. Serial No. 728,449. 21 Claims. (Cl. 171—119.)

1. The combination of a synchronous type electric generator, an exciter therefor, a voltage regulator, controlled by said generator and operating upon said exciter to maintain a predetermined voltage, a series wound generator connected in series with said exciter, a shunt for the field of said series wound generator and a circuit opening device in said shunt.

---



1,693,969. DEVICE FOR PROJECTING STARS. WALTER VILLIGER and WALTHER BAUERSFELD, Jena, Germany, assignors to Carl Zeiss (a Firm), Jena, Germany. Filed Dec. 3, 1925, Serial No. 73,019, and in Germany Dec. 11, 1924. 13 Claims. (Cl. 88—24.)

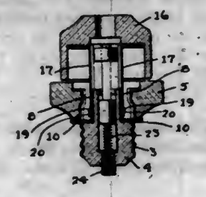
1. Device for projecting the fixed stars, containing a carrying appliance, a plurality of projection apparatus, each of which comprises an optical system and an image of a part of the fixed stars, which optical systems and images are so disposed that the projected images adjoin each other corresponding to the natural aspect, two hollow bodies, one group of the said projection apparatus being disposed at one and the other group being disposed at the other of these two hollow bodies, each hollow body containing a source of light common to all projection apparatus appertaining to this body, the said two hollow bodies being rigidly connected together and rotatably supported on the said carrying appliance, and means for rotating the said two hollow bodies.

1,693,970. REFRIGERATING APPARATUS. BALTZAR CARL VON PLATEN and CARL GEORG MUNTERS, Stockholm, Sweden, assignors to Electrolux Servel Corporation, New York, N. Y., a Corporation of Delaware. Filed June 22, 1926, Serial No. 117,701, and in Sweden July 13, 1925. 25 Claims. Cl. 62—119.)

1. Refrigerating apparatus of the constant pressure absorption type comprising a generator containing a cooling agent dissolved in absorption liquid, a condenser, an evaporator, an absorber, a conduit extending upwardly from said generator to said condenser, and means for providing radiating surface for limiting the maximum pressure to which the apparatus can rise and for condensing vapor of absorption liquid in said conduit comprising a series of air cooling fins surrounding said conduit.

---

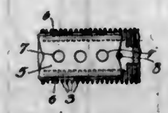
1,693,971. BORING MACHINE. STEFAN WAGNER, Los Angeles, Calif. Filed May 25, 1926. Serial No. 111,484. 1 Claim. (Cl. 144—110.)



A boring machine comprising a casing, a sleeve journaled in said casing, a centrally disposed shaft journaled in said sleeve, provided with a gear, a plurality of irregularly spaced spindles journaled in said sleeve surrounding said centrally disposed shaft provided with gears meshing with the gear on said centrally disposed shaft, worm teeth on the periphery of said sleeve, a worm journaled in said casing adapted to engage with said worm teeth, and means for rotating said worm.

---

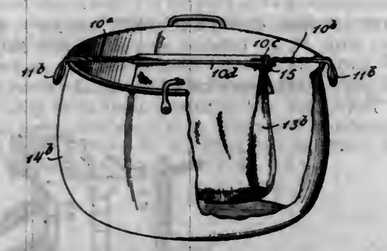
1,693,972. ATTACHMENT PLUG. FRANK L. AIME, Spokane, Wash. Filed Dec. 9, 1921. Serial No. 521,110. 8 Claims. (Cl. 173—359.)



1. In an electrical attachment plug, the combination of a base and a cap adapted to be assembled, an electrical contact carried by said base, an electrical contact carried by said cap and adapted to initially engage said base contact as said base and said cap are brought together, and means in said base under which said cap

contact may be moved while still maintained in engagement with said base contact to prevent the abnormal withdrawal of said cap without deforming some part of the complete plug.

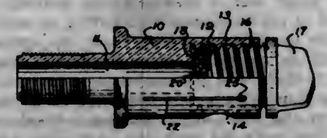
---



1,693,973. COMBINED COMB AND RAZOR. MAURICE ALLAND, Atlantic City, N. J. Filed Aug. 23, 1927. Serial No. 214,843. 3 Claims. (Cl. 30—12.)

1. A toilet article, comprising a hollow tubular comb, a razor blade positioned within said comb with its cutting edges exposed between the teeth of the comb, and a pin extending transversely thru said comb and movable longitudinally of the comb, to eject said blade.

---

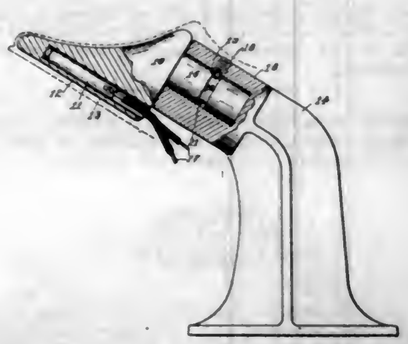


1,693,974. ATTACHMENT FOR COOKING UTENSILS. ANNA E. BIENSTOCK, Newark, N. J. Filed May 20, 1927. Serial No. 192,845. 2 Claims. (Cl. 53—1.)

1. A suspending device of the kind described, comprising parallel clamping members connected at one end, one of said members being continued in the form of suspending devices arranged to engage and rest upon the upper edge of a cooking utensil, and a hook adapted to engage the other clamping member to maintain the same in its operative position.

---

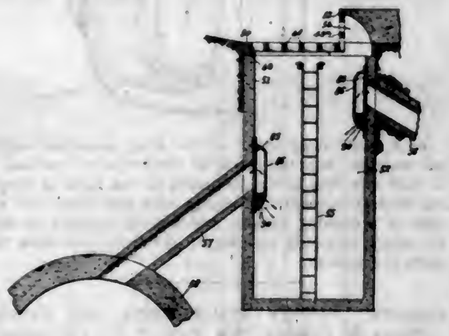
1,693,975. SAFETY ATTACHMENT FOR FAUCETS. HENRY G. CORDLEY, New York, N. Y., and GEORGE R. LONG, Waterbury, Conn. Filed Apr. 6, 1927. Serial No. 181,483. 4 Claims. (Cl. 251—152.)



1. In a loss-preventing device for use with the screw threaded plug member of a faucet structure, a spring detent member mounted on the external surface of the bar-

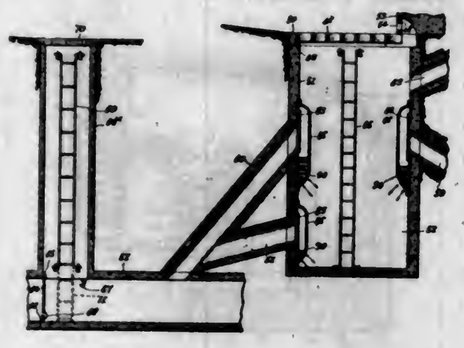
rel, the wall of the barrel being provided with an opening therethrough in the threaded section thereof, said spring detent member extending through the opening into the interior of the barrel and engaging a thread of the plug member, and the screw threaded plug member being provided with a recess in its threaded portion whereby in a certain position of the plug within the opening the recess will be engaged by the detent to prevent further rotation of the plug member.

---



1,693,976. MECHANISM FOR MAKING TURN SHOES. MILTON L. DODGE, Newburyport, Mass. Filed Aug. 19, 1924. Serial No. 732,925. 6 Claims. (Cl. 12—133.)

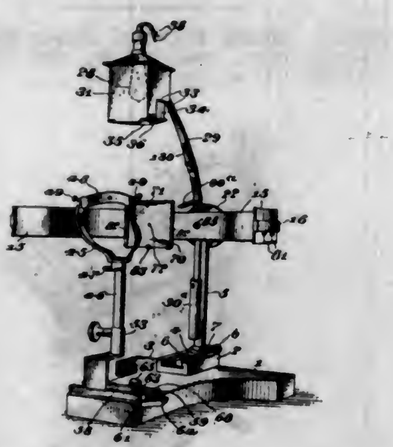
1. A form for use in making shoes comprising a head shaped like the toe portion of a last and being recessed on its lower face between its edges to define a marginal rib, and means for carrying said head with capability of turning about an axis extending from heel to toe of a shoe on said form.



---

1,693,977. SEWER CONSTRUCTION. GEORGE F. EGAN, Jersey City, N. J. Original application filed July 31, 1925, Serial No. 47,281. Divided and this application filed Apr. 9, 1926. Serial No. 100,988. 2 Claims. (Cl. 192—6.)

1. A sewer construction comprising a catch basin having an open upper end, a curb overlying partially the open upper end of the basin, said curb having an under-cut portion above the basin, a frame about the opening of the basin, and an open-work cover removably and pivotally mounted in said frame and comprising a substantially horizontal portion lying across the exposed portion of the opening of the basin and a shorter vertical portion extending flush with the curb line, said short vertical portion adapted to swing in said under-cut portion of the curb, the pivot point of the cover lying in the same plane with the horizontal portion of said cover.



1,693,978. SEWER CONSTRUCTION. GEORGE F. EGAN, Jersey City, N. J. Original application filed July 31, 1925, Serial No. 47,281. Divided and this application filed Apr. 9, 1926. Serial No. 100,990. 3 Claims. (Cl. 182—3.)

1. A sewer construction comprising a basin having an outlet opening, a perforated inner door secured over said opening, and an outer door secured in spaced relation about the inner door and comprising an imperforate upper portion and a perforated lower portion.

---

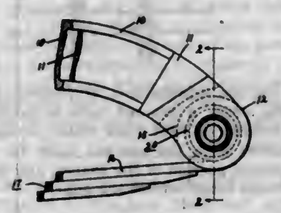
1,693,979. PERIMETER. CLARENCE ERROL FERREE and GERTRUDE RAND FERREE, Bryn Mawr, Pa. Filed Dec. 20, 1922. Serial No. 608,870. 23 Claims. (Cl. 88—20.)

1. A perimeter comprising a perimeter arm of arc shape, a light source located laterally of the plane of the arc of said arm, and means for supporting said light source in relatively fixed relation to said arm and in position to illuminate to the same degree all corresponding points in the observation surface thereof.

18. A perimeter comprising a fixation object, a lens interposed between said object and the eye of a patent which is being examined, and a perimeter arm having means thereon for examination of the eye while it is held on the said fixation object.

---

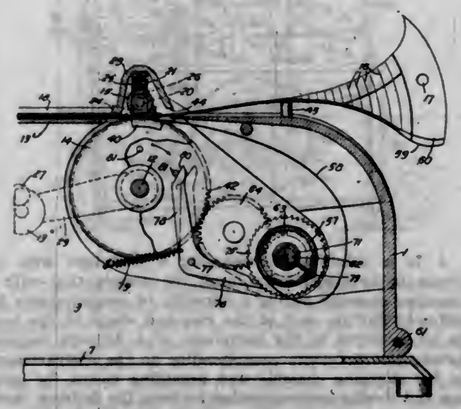
1,693,980. SHOW CASE. CLARENCE W. GALE, Beatrice, Nebr. Filed Apr. 2, 1927. Serial No. 180,491. 2 Claims. (Cl. 312—119.)



1. The combination in a show case having permanently closed ends and an open front, of a series of more than two relatively narrow vertically disposed merchandise receiving and displaying sections therein, each of said sections provided with vertically spaced horisontal shelves, and means

whereby each of said sections may be shifted lengthwise the interior of said case, the combined length of any two of said sections being substantially equal to the interior length of said case.

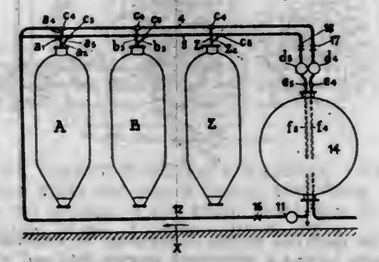
---



1,693,981. OSCILLATING JOINT. HARVEY D. GEYER, Dayton, Ohio, assignor to The Inland Manufacturing Company, Dayton, Ohio, a Corporation of Delaware. Filed Oct. 16, 1926. Serial No. 142,117. 7 Claims. (Cl. 267—54.)

1. In combination with the spring and frame of a vehicle, a shackle comprising: an eye member rigid with the spring, a shackle bolt through said eye and rigid with said frame, and a flexible rubber bushing arranged between said eye and bolt, said rubber bushing comprising a plurality of rubber members arranged side by side upon said bolt and confined in place under an initial compression.

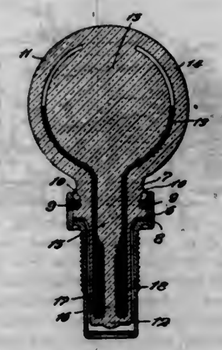
---



1,693,982. AUTOGRAPHIC REGISTER. LOUIS F. HAGEMANN, Niagara Falls, N. Y., assignor to American Sales Book Company, Limited, Toronto, Ontario, Canada, a Corporation of Ontario, Canada. Filed Dec. 8, 1920. Serial No. 429,069. 41 Claims. (Cl. 282—16.)

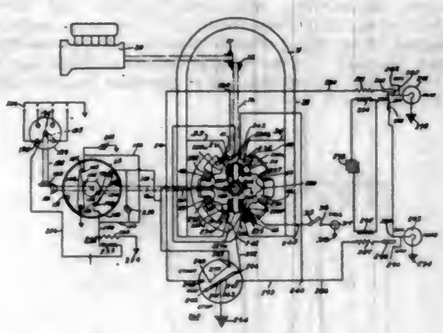
2. A device of the character described comprising, in combination, means for feeding a plurality of webs, and for bringing the same into alignment, a web take-up device, means for driving the take-up device from the feed, including a spring adapted to exert resilient tension upon the web, and locking mechanism automatically operated for locking at intervals said take-up device against take-up action during feeding operation of said feeding means.

---



1,693,983. APPARATUS FOR BOILING CELLULOSE. CARL HANGLEITER, Mannheim-Waldhof, and ADOLF SCHNEIDER, Kelheim-on-the-Danube, Germany, assignors to the Firm: Zellstoffabrik Waldhof, Mannheim-Waldhof, Germany, a Corporation of Germany. Filed Aug. 10, 1925, Serial No. 49,488, and in Germany Aug. 26, 1924. 2 Claims. (Cl. 92—7.)

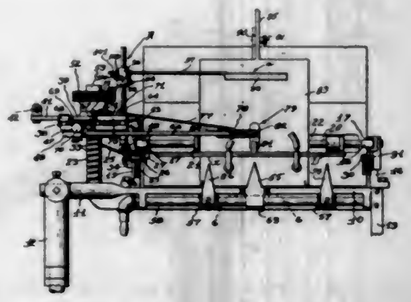
1. In a system for completely and rapidly relieving the pressure in cellulose boilers and regenerating the waste heat and vapors, a boiler, an immediate connection between the waste gas-pipes and the liquor-pipes such that an injector is formed by which the hot waste gases are drawn out of the boiler without cooling them, a pump for passing the fresh liquor under pressure through the said injector, a closed storage-receptacle from which the liquor is taken by the pump and into which it is fed back after having passed the injector, and a check-valve between said injector and storage-receptacle.



---

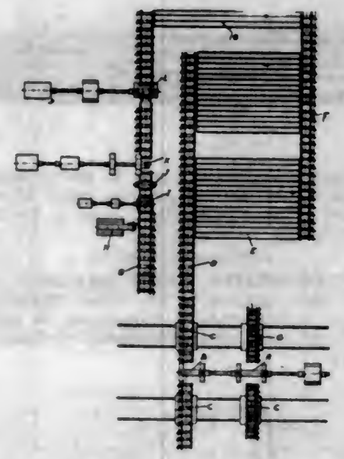
1,693,984. SPHERICAL HEAT INDICATOR FOR AUTOMOTIVE INTERNAL-COMBUSTION ENGINES. HENRY C. HEBIG, Hoffmans, N. J., assignor to Harrison Hurlbert Boyce, Jericho, N. Y. Filed Apr. 29, 1927. Serial No. 187,433. 5 Claims. (Cl. 116—114.)

1. In a device for indicating the heat condition within a radiator, a unitary transparent casing formed with an indicating liquid chamber, and a core substantially the size of the casing extending across said chamber and fixed to said casing at each end, the intermediate space being substantially filled with a colored heat reacting liquid.



1,693,985. LIGHTING AND IGNITION SYSTEM. JOHN H. HUNT, Detroit, Mich., assignor to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Original application filed Oct. 25, 1924, Serial No. 745,942. Divided and this application filed Mar. 21, 1927. Serial No. 177,020. 3 Claims. (Cl. 123—148.)

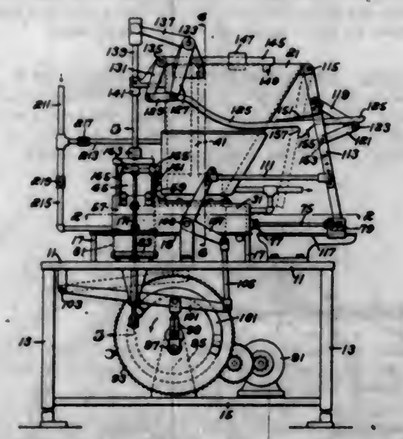
1. An electrical system comprising, in combination, a generator having a permanent magnet field and windings for generating ignition current; an ignition transformer coil; a circuit paralleling the transformer coil and including a circuit breaker; a circuit including a circuit-breaker connecting the generator windings with said coil and paralleling circuit; and engine operated means for controlling the circuit breakers in order that, at a certain time, both breakers be in circuit closing position, that the first breaker will while the second breaker remains closed, and that the second breaker will open after the first breaker has opened, for the purpose specified.



---

1,693,986. FEEDING MAGAZINE FOR PRINTING PRESSES. ABEL KLUGE and ENEVAL KLUGE, St. Paul, Minn., assignors, by mesne assignments, to Brandtjen & Kluge, Incorporated, St. Paul, Minn., a Corporation of Minnesota. Filed Nov. 11, 1920, Serial No. 423,447. Renewed Dec. 11, 1925. 28 Claims. (Cl. 271—62.)

1. The combination with a sheet feeding element adapted to receive and take sheets from a given receiving position, of a support for a pack of sheets, a plate for advancing the pack on said support, mechanism for moving the plate and tripping means, operative during the intervals between the taking of sheets from the support, said tripping means being actuated by the pack for interrupting the action of said mechanism.

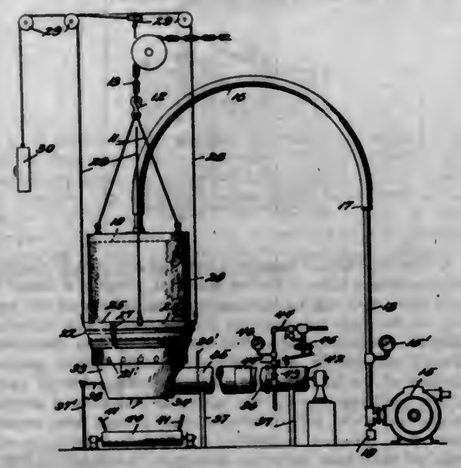


1,693,987. METHOD OF AND APPARATUS FOR THE MANUFACTURE OF STRUCTURAL SHAPES. CARL W. A. KOELKEBECK, Pittsburgh, Pa. Filed July 9, 1925. Serial No. 42,414. 9 Claims. (Cl. 29—33.)

1. A mill for the manufacture of structural shapes, including rolling units, a run-out table arranged to receive the finished product of said units while the same is hot, a punch associated with the run-out table for removing a part of the central portion of the shapes, and finishing rolls along the run-out table beyond the punch.

---

1,693,988. ICE-CREAM-PACKAGING MACHINE. FREDERICK X. KUHN, Waltham, Mass., assignor to Kuhn Ice Cream Machinery Co., Boston, Mass., a Corporation of Massachusetts. Filed Dec. 10, 1926. Serial No. 153,847. 18 Claims. (Cl. 226—100.)



1. In a machine for charging a container with ice cream in hardened body form, the combination with a charging chamber having a plurality of compartments for different flavors, each of the size and shape of the body to be delivered to the container, of a delivery chamber having compartments corresponding to the compartments in the charging chamber and providing means for opening and closing communication between the delivery chamber and charging chamber, a supply chamber having compartments communicating with the compartments of the delivery chamber, means comprising pushing devices for forcing the cream from the supply chamber to the delivery chamber, means also comprising pushing devices for forcing the cream from the delivery chamber to the charging chamber, means for opening and closing the mouth of the charging chamber, means for forcing the formed bodies of ice cream in the charging chamber from the latter into the container, the same comprising an expressing device movable in the charging chamber to expel the formed bodies of ice cream, means for progressively hardening the ice cream as it advances through said several chambers, and means for maintaining the walls of said chambers clear of the accumulations of hardened ice cream, the same comprising scraping devices associated with said pushing and expressing means.

3. In a machine for charging a container with ice cream in a relatively stiff, form-retaining condition, the combination with a charging chamber of the size and shape of the body to be delivered to the container, of means for delivering the ice cream into said chamber to form the same therein, means for cutting off the delivery, an expressing device movable in the charging chamber to expel the formed body of ice cream into the container and means for lowering the temperature of the ice cream in the machine to cause the same to leave the machine in a relatively stiff condition.

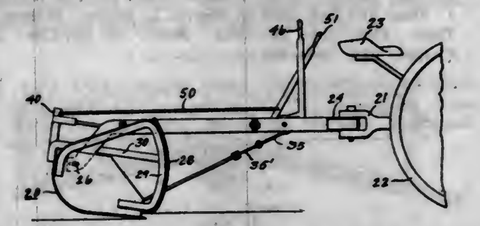
11. In a machine for charging a container with ice cream in a relatively stiff and hardened form, the combination with a source of supply, of means for delivering to the container successive charges of ice cream from said source, means for maintaining a relatively low temperature about the ice cream while in the machine, and pusher devices to advance the ice cream having means for clearing the walls of the accumulations of hardened ice cream.

---

1,693,989. METHOD OF AND APPARATUS FOR TREATING TOBACCO. WILLIAM MILLIGAN and WILEY E. PALMER, Richmond, Va., assignors to The Imperial Tobacco Co., of Great Britain and Ireland, a Corporation of Great Britain and Ireland. Filed July 25, 1925. Serial No. 46,056. 20 Claims. (Cl. 131—60.)

1. The method of treating a prized mass of tobacco in the closely packed condition it is received from the usual hogshead, which consists in subjecting the closely packed mass for a suitable period to the action of a conditioning agent under positive draft through the mass, whereby the mass is ordered to permit free handling without breakage.

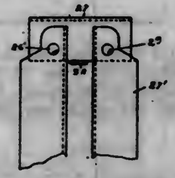
7. An apparatus of the class described comprising means for enclosing a closely packed mass of tobacco in the condition it is received from the usual hogshead, and a common means for supporting said mass and for passing a conditioning agent therethrough under positive draft.



1,693,990. EYEBROW PENCIL. ELLEN D. PAYNE, Brooklyn, N. Y. Filed Feb. 28, 1928. Serial No. 257,668. 1 Claim. (Cl. 132—79.)

A device of the class described including an eyebrow pencil pointed at one end, a sleeve secured to the other end and projecting therebeyond, and brush bristles gripped by the sleeve, said sleeve constituting a bridle.

---



1,693,991. EARTH-WORKING APPARATUS. WILLIAM ALBERT PERRY and GEORGE DANIEL TOY, Sidney, Ohio; said Toy assignor to said Perry. Filed Mar. 20, 1925. Serial No. 16,946. 9 Claims. (Cl. 37—140.)

1. An earth working machine having an earth scraper, draft means pivotally connected with said earth scraper, a flexible means connected with said scraper at opposite sides of the pivotal connection, and means cooperating with said flexible means to control the operation of said scraper.

---

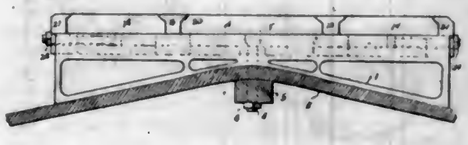
1,693,992. HINGE. UNO G. PETERSON, Salt Lake City, Utah. Filed Mar. 5, 1925. Serial No. 13,096. 2 Claims. (Cl. 16—163.)

1. A hinge of the character described comprising a body member and two section members, each of said section members fitting over said body member in such a manner that said body member will rest under the under face of said section members when extended, an inner plate secured to each inner side of said body member, means on said inner plates for receiving the ends of said section members when extended all substantially as set forth.

---

1,693,993. CUFF LINK. VICTOR B. ROGERS, Buffalo, N. Y. Filed Oct. 9, 1926. Serial No. 140,489. 1 Claim. (Cl. 24—102.)

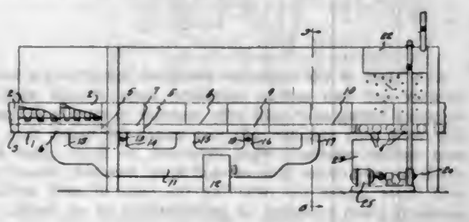
A cuff link comprising a pair of heads each composed of a back section and a face section secured at its edges



to said back section, said back section being formed to provide a relatively large rearwardly extending tubular housing the rear end of which is open to the interior of the head and the outer end of which is provided with an inwardly turned retaining flange, a plurality of tubular telescopic sections arranged between said housings and adapted to be completely housed therein and the outer section having outwardly extending flanges engaging the inturned flanges of said housing, said sections and hous-

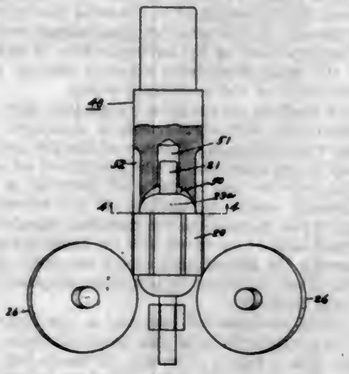
ings being freely rotatable relative to each other, a straight bar loosely arranged in each of said heads and extending transversely across the opening formed by said housing, said bar extending along the greatest dimensional line of said head and substantially from one side to the opposite side thereof, and a spring housed within said housings and telescopic sections and having loops at its opposite ends each of said loops embracing the corresponding bar.

---



1,693,994. RUNNING-BOARD SADDLE. BENJAMIN F. ROWLEY, Jackson, Tenn., assignor of one-third to Walter J. Allen and one-third to Travis L. Bishop, Jackson, Tenn. Filed June 29, 1927. Serial No. 202,329. 2 Claims. (Cl. 105—457.)

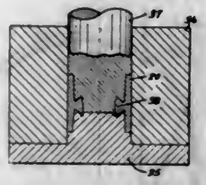
1. Means for securing running boards comprising a body conforming to a car roof and adapted to be secured thereto and provided in its upper portion with channels opening through its ends and extending inwardly therefrom and terminating short of the center thereof, jaws slidably seated in said channels and provided with transverse heads resting upon the top surface of the body, and securing devices anchored in the body adjacent the respective outer ends thereof and engaging with the outer jaws whereby to clamp all the jaws and the running boards firmly together.



---

1,693,995. BOTTLE COOLER. HENRY B. WILLIAMS, Detroit, Mich., assignor to John W. Ladd Co., Detroit, Mich., a Corporation of Michigan. Filed Sept. 2, 1925. Serial No. 54,104. 9 Claims. (Cl. 62—1.)

5. In a machine for cooling heated articles formed of fragile material, means providing a bath of moisture laden air, means providing a bath of moisture absorbing air, and means for submitting the articles to the said baths in succession whereby rapid evaporation on the surface of the articles and consequent cooling thereof is produced.



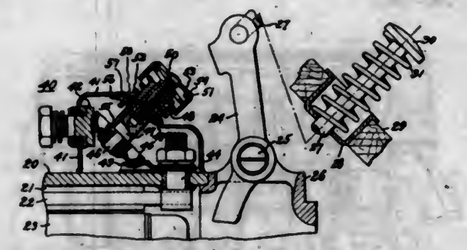
1,693,996. ARMATURE-INSULATION-CUTTING MACHINE. RUSSELL W. BAKER, Anderson, Ind., assignor, by mesne assignments, to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Mar. 15, 1926, Serial No. 94,991. Renewed Sept. 15, 1927. 7 Claims. (Cl. 164—60.)

4. An armature core insulation cutting machine comprising, in combination, means for guiding the core, means for moving the core endwise through the guide and means entering the core slots and cooperating with the core teeth simultaneously to cut the insulation at adjacent edges of side by side core teeth.

---

1,693,997. METHOD OF MAKING COMMUTATORS. JOHN J. CARTER, Lansing, Mich., assignor, by mesne assignments, to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Filed May 21, 1925. Serial No. 31,959. 2 Claims. (Cl. 29—155.5.)

1. The method of making a commutator which consists in providing a tube of ductile material, forming a flange in said tube, dove-tail in cross-section, by deforming the portion of the tube adjacent the inner periphery by applying pressure longitudinally of the tube and against both ends toward the center, slotting the tube through a greater portion of its length so as to provide segments of equal width, held together by the unslotted ring-shaped portion at one end of the tube, placing a shaft in said tube, coaxial therewith, pressing insulating, binding material into said tube so that said material surrounds the shaft and fills the space within said tube and its slots, then cutting off the ring-shaped, unslotted end of the tube.



---

1,693,998. ELECTRIC SWITCH. WILLIAM A. CHRYST, Dayton, Ohio, assignor to The Dayton Engineering Laboratories Company, Dayton, Ohio, a Corporation of Ohio. Filed Mar. 25, 1926, Serial No. 97,274. Renewed May 19, 1928. 14 Claims. (Cl. 200—159.)

1. A switch comprising, in combination, stationary and movable contacts, a slidable rod supporting the movable contact, a switch operating member having screw threaded

engagement with said rod, a spring for maintaining said movable contact out of engagement with the stationary contacts, and means including said spring and provisions

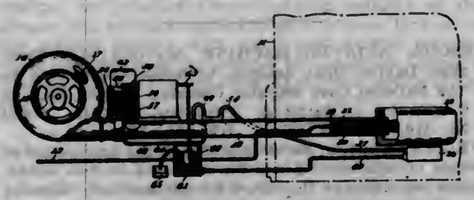
carried by the switch operating member for yieldingly maintaining said member in adjusted position relative to the rod.

---

1,693,999. PROCESS FOR FILLING BOILERS FOR CELLULOSE WITH SULPHITE SOLUTION. HANS CLEMM, Mannheim-Waldhof, Germany, assignor to Zellstoffabrik Waldhof, Mannheim-Waldhof, Germany, a Corporation of Germany. Filed Jan. 12, 1921, Serial No. 436,851, and in Germany Sept. 4, 1920. 4 Claims. (Cl. 92—7.)

1. An improved process for filling cellulose boilers consisting in forcing heated sulphite liquor by means of a pressure pump into a closed boiler, said liquid being of such a concentration that it can be used immediately for the digesting operation.

---



1,694,000. BOILER STAND. CHARLES F. COLE, Huntington, W. Va. Filed Apr. 9, 1923. Serial No. 630,694. 3 Claims. (Cl. 248—41.)

1. A boiler stand having a series of equidistantly spaced legs, each leg comprising a vertical tubular post having its upper end longitudinally split to provide a pair of tongues, one of said tongues being bent to close the upper end of the tubular post and the other of said tongues being lapped over the closed end of the tube and projecting to one side thereof to provide a supporting arm for the lower edge of the boiler.

---

1,694,001. HEATING SYSTEM. DUNCAN DANA, Marblehead, Mass. Filed Oct. 23, 1923. Serial No. 670,287. 14 Claims. (Cl. 158—28.)

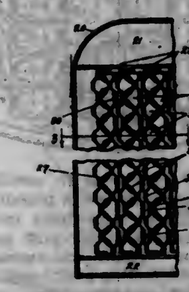
1. In a heating system comprising a furnace, a fire box for the furnace, means for supplying heating fuel to the fire box, means for supplying starting fuel for igniting the heating fuel, an air blower for projecting air and the heating fuel into the fire box, a heating coil for vaporizing the starting fuel, a spark coil for igniting the vaporized starting fluid and producing a pilot flame for automatically lighting the heating fuel, a large hole in the fire box through which the pilot flame extends, a drain box for clearing the fire box of excess liquid fuel, and a heating chamber in the drain box in which the heating and lighting coils are located for the purpose specified.

---

1,694,002. SASH OR STORE-FRONT CONSTRUCTION. ARCHIBALD H. DAVIS, Lincoln, Nebr. Filed Nov. 2, 1926. Serial No. 145,824. 13 Claims. (Cl. 20—56.4.)

1. In a sash or store front construction, the combination with a front moulding, of a flexible hinging tensioning and cushioning bearing member located back of said front moulding and anchored rearwardly of its outermost part, said bearing member being otherwise free to flex throughout its extent, and fastening means connecting said bearing member to the front moulding.

---

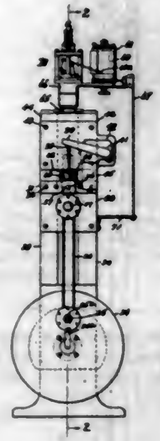


1,694,003. SASH, DOOR, OR STORE-FRONT CONSTRUCTION. ARCHIBALD H. DAVIS, Lincoln, Nebr. Filed Feb. 23, 1928. Serial No. 256,433. 10 Claims. (Cl. 20—56.4.)

1. In a sash, door, or store front construction, the combination with a rear section, of a front section whose lower part is fulcrumed on the rear section, and having its upper part adapted to bear on the pane, the intermediate part of the front section being adapted for a sliding, braking, contact with the rear section.

---

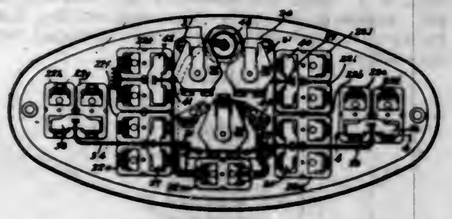
1,694,004. RADIATOR. NICHOLAS DIAMANT, Jamestown, N. Y., assignor to Jamestown Car Parts Mfg. Co., Inc., Jamestown, N. Y., a Corporation of New York. Filed Dec. 3, 1923. Serial No. 678,106. 2 Claims. (Cl. 257—128.)



2. A radiator comprising a series of corrugated wall strips, two of said wall strips being spaced apart to form

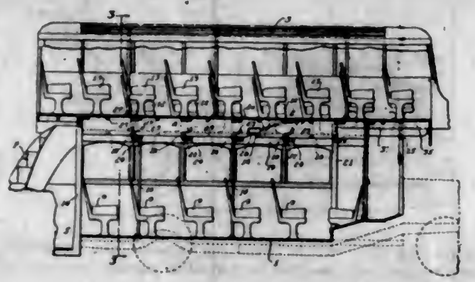
a water passage therebetween, a series of corrugated metal division plates of single thickness so arranged between adjacent walls of said water passage that the summits of the corrugations of said division plates cooperate with said wall strips to form horizontal air conduits substantially diamond shaped and having protrusions therein projecting into said air conduits, said wall strips thereby providing freer passages for the water in said water conduits and increasing the turbulence of the air passing through said air conduits.

---



1,694,005. MACHINE FOR TESTING SHOCK ABSORBERS. GEORGE W. ELSEY, Anderson, Ind., assignor, by mesne assignments, to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Filed May 28, 1926. Serial No. 112,264. 9 Claims. (Cl. 73—51.)

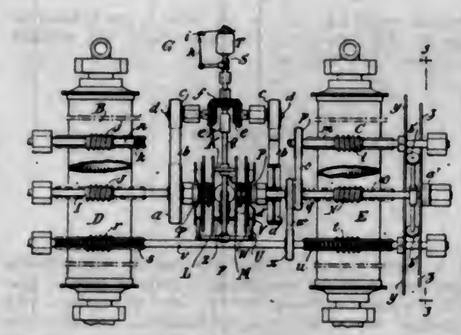
1. Apparatus for testing shock absorbers comprising, in combination, a pair of relatively movable members, one member being adapted to support the shock absorber and the other adapted to be attached to the operating part of the shock absorber, means for producing movement of one of the members relative to the other, and means for indicating and recording the force transmitted between the members by the shock absorber throughout the operation of the shock absorber.



---

1,694,006. INSTRUMENT PANEL. JOHN T. FITZSIMMONS, Dayton, Ohio, assignor, by mesne assignments, to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Dec. 11, 1925. Serial No. 74,738. 4 Claims. (Cl. 175—369.)

4. A control panel comprising in combination, a supporting plate apertured to receive a plurality of electrical switches; circuit breakers insulatingly mounted on said supporting plate; a substantially stiff conducting wire secured to each circuit breaker and extending therefrom but spaced from the supporting plate; and connector clips supported on the said conducting wires, each clip being held in proper alignment with a respective aperture in the supporting plate.



1,694,007. DOUBLE-DECK PASSENGER VEHICLE. MICHAEL J. FORRESTER, Astoria, N. Y., assignor to Fifth Avenue Coach Company, a Corporation of New York. Filed Sept. 11, 1925. Serial No. 55,659. 3 Claims. (Cl. 296—28.)

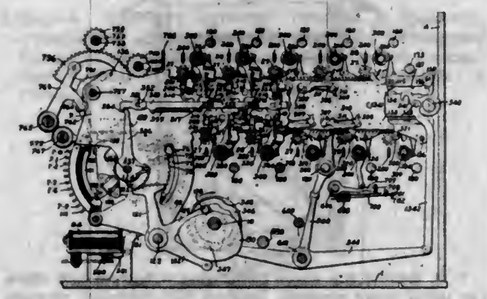
1. In a bus, the combination of a lower deck, a driver's seat at the front of the same, and an upper deck formed of two sections disposed at different levels and extending longitudinally respectively on opposite sides of a vertical plane, the forward portion of the lower section of said upper deck extending over the driver's seat and being disposed at a higher level than its rear portion to give added headroom to the driver.

---

1,694,008. DRIVE AND DRIVEN DEVICE. GEORGE HOLT FRASER, Brooklyn, N. Y. Filed Sept. 12, 1924. Serial No. 737,412. 17 Claims. (Cl. 74—26.)

1. In combination, a driven part revolving about an axis and having a side traction face, a shaft sustaining an axial stress and axially sustained by and revolved by said part, a driving part revolving about an axis angular to said axis and having an edge traction face in tractional engagement with said side face for driving it, and means controlled by said first member for varying the position of said second member radially of said first member.

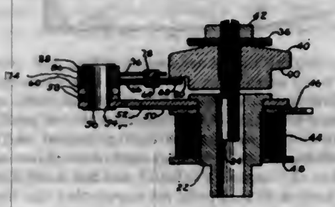
---



1,694,009. AUDITING MACHINE. MAXIMILIAN M. GOLDBERG, Dayton, Ohio, assignor, by mesne assignments, to The National Cash Register Company, Dayton, Ohio, a Corporation of Maryland. Filed Aug. 11, 1919. Serial No. 316,528. 248 Claims. (Cl. 235—58.)

1. In a machine of the class described, the combination of groups of totalizers, means for feeding a control record, means controlled by the record for automatically selecting a plurality of totalizers one from each of any two or more groups, and means for actuating the selected totalizers.

104. In a machine of the class described, the combination of a plurality of totalizers arranged in order, means for selecting the totalizers one by one to be cleared, means for

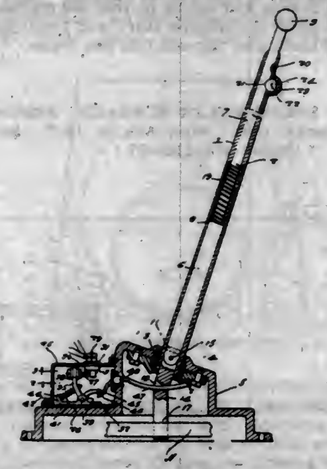


restoring the selected totalizers to zero, punching mechanism controlled by the restoring means for producing in a record sheet perforations corresponding to the data on the

totalizers, and punching mechanism for producing in the record perforations corresponding to the order of the totalizers.

---

1,694,010. SIGNALING DEVICE. HOWARD W. HENRY, Bloomfield, N. J., assignor, by mesne assignments, to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Mar. 13, 1924. Serial No. 698,908. 6 Claims. (Cl. 177—7.)



1. In apparatus of the character described, a horn having a diaphragm, an electro-magnet mounted adjacent to the diaphragm, a contact interrupter, an armature having a sloping cam face arranged to strike said interrupter, means for transmitting movement of said armature to the diaphragm, and means for rotatably adjusting the armature to vary the point of contact of said sloping cam face with said interrupter, substantially as described.

6. An apparatus of the character described, a horn having a diaphragm, an electro-magnet mounted adjacent the diaphragm; a circuit interrupter including a movable contact member; a plunger adapted to strike the diaphragm; an armature screw-threadedly engaging on the plunger and having a surface lying in a plane inclined to the movable contact with which said surface engages, the screw threads on the plunger and armature sloping a substantially lesser degree than the inclined surface of the armature.

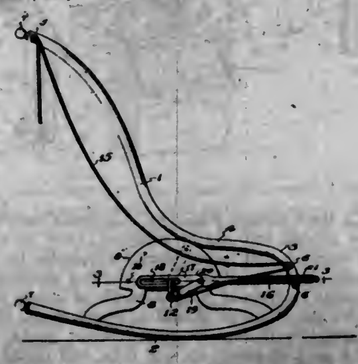
---

1,694,011. GEAR-SHIFTING-LEVER LOCK AND IGNITION-SWITCH-ACTUATING MECHANISM. JOHN LESTER HOSFORD, Boonville, Mo. Filed Mar. 24, 1927. Serial No. 178,045. 7 Claims. (Cl. 70—127.)

1. In combination, a sliding gear shifting lever, a sleeve through which the lever is slidable, the lower end of the lever being adapted for engagement with the shifting mechanism of the vehicle transmission, a normally closed ignition control switch, means operable by the lever when the latter is moved to a non-shifting position for simultaneously opening said switch, additional means for securing the lever in a shifting or non-shifting position, and

means for permanently locking the gear shifting lever in a non-shifting position, when the aforementioned securing means is broken.

---

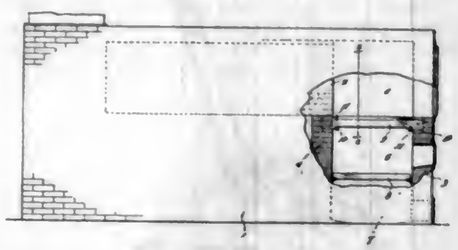


1,694,012. BURNER HEAD FOR OIL-BURNER PLANTS. CHARLES W. JOHNSON, Seattle, Wash. Filed Dec. 15, 1927. Serial No. 240,254. 3 Claims. (Cl. 158—2.)

1. In an oil burning furnace, a hemispherical shield swingingly mounted in the furnace wall, the margin of the shield projecting inward to the inside face of the furnace wall, an oil burner extending through the shield at the center thereof and swinging therewith, whereby the shield with the burner may be swung into a plurality of different angular positions with relation to the inside wall of the furnace.

---

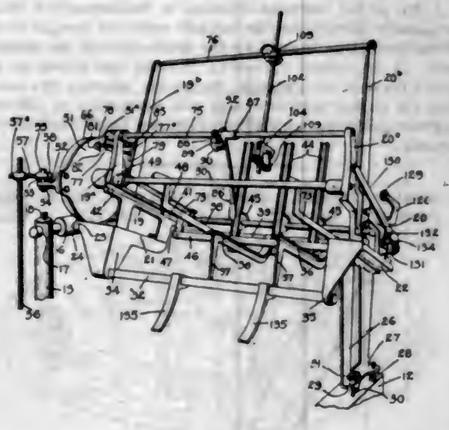
1,694,013. CHAIR. CARL S. JOHNSON, Butte, Mont. Filed May 13, 1927. Serial No. 191,172. 1 Claim. (Cl. 155—69.)



A chair comprising side members including arm rests and feet, braces extending between the respective arm

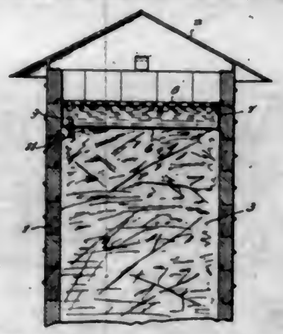
rests and feet, a cranked shaft mounted in said braces, a seat and back member disposed between the sides, a foot rest frame slidably supported by and between the front portion of the sides and having its rear end portion slotted to engage around the cranked shaft, and links connecting the cranked shaft with the said foot rest frame.

---



1,694,014. STEAM-BOILER FURNACE. RUDOLPH KIMMICK, Ramah, Colo. Filed Aug. 3, 1927. Serial No. 210,346. 1 Claim. (Cl. 110—97.)

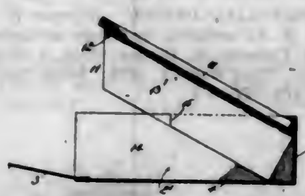
The combination with a boiler furnace including a combustion chamber and fire box disposed forwardly of the boiler, of a heat absorber and equalizer arranged intermediate the fire box and combustion chamber below the boiler consisting of a plurality of spaced metal bars extending between the front and rear walls of the furnace and having their top sides oppositely beveled, and metal plates set in the front and rear walls of the furnace and receiving the ends of the bars which are fastened thereto.



---

1,694,015. STOCK-FEEDING MAGAZINE FOR PRINTING PRESSES. ABEL KLUGE and ENEVAL KLUGE, St. Paul, Minn., assignors to Brandtjen and Kluge, Inc., St. Paul, Minn., a Corporation of Minnesota. Filed Dec. 17, 1925. Serial No. 75,961. 34 Claims. (Cl. 271—62.)

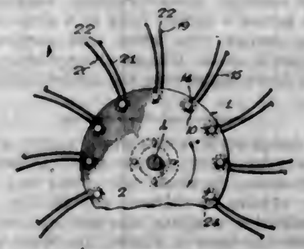
1. In a stock feeding magazine, side frame members, tie-members joining said frame members, rails mounted on said tie members and independently adjustable thereon between said frame members, said rails being adapted to support various irregularly shaped packs of sheets on edge, side guides also mounted on said tie members and independently adjustable thereon to suit different packs, a back-rest for a pack of sheets on said rails, and means for advancing said back-rest.



1,694,016. SILO SEALER. ALOIS J. KREBSBACH, St. Cloud, Minn. Filed Dec. 15, 1927. Serial No. 240,300. 5 Claims. (Cl. 20—14.)

1. A flexible silo cover comprising a bottom and sides, the latter being rendered buoyant for automatic erection by the rise of the level of the water as it is supplied to the cover.

---

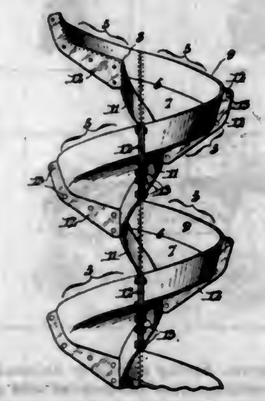


1,694,017. COMBINED SHIPPING AND DISPLAY BOX. GEORGE C. MILLER, Brookline, Mass. Filed June 19, 1924. Serial No. 721,127. 2 Claims. (Cl. 206—44.)

1. In a box of the character specified, the combination with the body of the box and cover, of a contained bridge member substantially inverted U-shaped in form, said member having a top plate occupying an elevated position within the box body spanning the cavity thereof and provided with dependent oppositely-arranged side plates extending down inside the opposite sides of the box body and resting upon the bottom of said body for supporting the top plate of the bridge member in its elevated position as aforesaid, said bridge member being movable with relation to the box body to occupy a changed position therein with the top plate thereof occupying an inclined position relatively to the box body and the side plates thereof then resting on the bottom of the box body only at their forward ends and inclining upwardly by said sides of the box body, and means whereby the bridge member may be supported in its changed position as aforesaid.

---

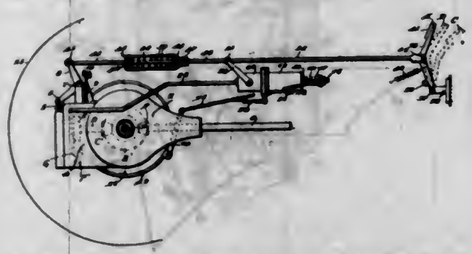
1,694,018. ROTATABLE BRUSH. RAYMOND C. MUDGE, East Boston, and ERNEST A. GALLISON, Watertown, Mass., assignors to Bay State Fishing Company, Boston, Mass., a Corporation of Maine. Filed Feb. 19, 1927. Serial No. 169,007. 18 Claims. (Cl. 17—5.)



8. A brush of the class described comprising a rotatable frame, eccentrically mounted bars substantially parallel to

the axis of rotation of said frame, spills pivotally mounted on said bars, said spills comprising resilient metal elements, independent bushings pivotally mounted on the bars, the spills being secured to the bushings, said bushing being of a width to provide spacers for the spills.

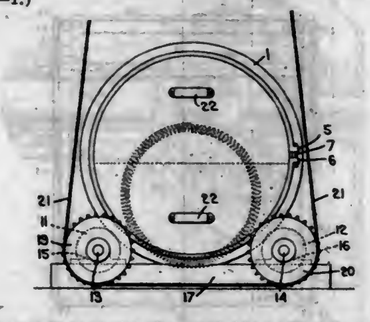
---



1,694,019. GRAVITY CHUTE. CHARLES G. PFEIFFER, Philadelphia, Pa., assignor to Specialty Engineering Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Oct. 24, 1927. Serial No. 228,290. 4 Claims. (Cl. 198—12.)

1. A spiral gravity chute embodying interchangeable angularly-troughed volute sections adapted to be secured together end for end, said sections having integrally-formed depth flanges jointly constituting a spiralised stiffening whereby the structure is rendered self-sustaining under load.

---



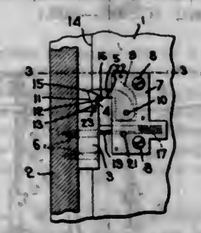
1,694,020. HYDRAULIC AND BAND BRAKE-OPERATING MEANS. WILLIAM GUNN PRICE, Yakima, Wash., assignor to McCleary Hydraulic Brake Company, a Corporation of Washington. Filed Dec. 18, 1926. Serial No. 155,725. 3 Claims. (Cl. 188—2.)

2. In combination, a motor vehicle having a hydraulic brake and a band brake, a piston for operating said band brake, a cylinder for said piston, a valve casing for said cylinder having a pressure connection with said hydraulic brake, a rotary valve in said casing adapted to occupy egress, neutral and band brake positions, said casing having an egress port leading from said pressure connection to said valve, and an ingress port leading from said pressure connection to said valve, a non-return device interposed in said ingress port, said casing having a cylinder port leading from said valve to said cylinder, and said valve having a peripheral connecting port for connecting said egress and cylinder ports when said valve is in an egress position, and registering said connection port exclusively with said cylinder port when said valve is in a neutral position, and connecting said cylinder port with said ingress port when said valve is in a band brake position, and mechanism connected with said hydraulic brake and valve for causing operation of said hydraulic and band brakes.

1,694,021. METHOD OF CLEANING FLEXIBLE FORAMINOUS SHEETS. FORREST G. PURINTON, Waterbury, Conn., assignor to The Patent Button Company, Waterbury, Conn., a Corporation of Connecticut. Filed Nov. 21, 1927. Serial No. 234,870. 4 Claims. (Cl. 141—1.)

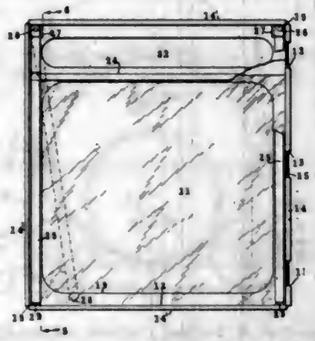
4. The method of cleaning a soluble coating from a wire screen which comprises rolling the screen longitudinally into the form of a scroll, partially immersing the scroll in a bath of liquid solvent for said coating, continuously rotating the scroll about its axis and causing the solvent to cascade upon the scroll.

---



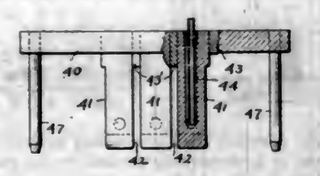
1,694,022. TRACER POINT. JOHN C. SHAW and ROBERT D. SHAW, Brooklyn, N. Y., assignors to Keller Mechanical Engineering Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Apr. 12, 1927. Serial No. 183,150. 4 Claims. (Cl. 90—62.)

1. A tracer provided with a wobbling spindle, a tracer point adapted to be detachably secured to the end of said spindle, provided with a knife edge, and means mounted on the spindle for supporting said tracer point for rotation on an axis coincident with said knife edge and with the axis of said spindle.



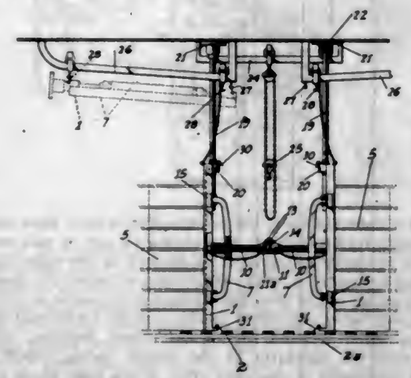
---

1,694,023. FASTENER FOR DOORS, PANELS, AND THE LIKE. HENRY SUCK, Roslindale, Mass. Filed May 29, 1928. Serial No. 281,398. 5 Claims. (Cl. 292—99.)



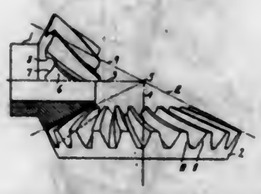
1. In a door fastener, the combination with a door element and a frame element, of a striker on one of said elements, a vertically-swinging latch pivoted to the other element and co-operating with said striker to fasten the door, a spring acting on the door when closed and tending to open it, said door being capable of having a slight additional inward movement beyond its normal closed position, and means rendered operative by the initial spring impelled opening movement of the door after it has been given its additional inward movement to clear the latch from the striker and thus release the fastener.

1,694,024. DISPLAY DEVICE. GEORGE A. TAYLOR, Bergenfield, N. J., assignor to National Biscuit Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 22, 1924. Serial No. 757,342. 21 Claims. (Cl. 220—82.)



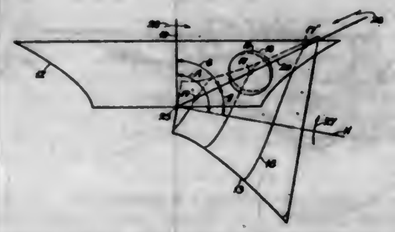
1. In a display member, in combination, a frame, a panel associated therewith, and panel-retaining means extending entirely across said panel, said means being pivotally mounted on the frame for movement in a plane parallel to the plane of said panel, and a device located on said frame beyond said panel for detachable engagement by the outer end of said retaining-means.

1,694,025. MOLD. RALPH J. WEAVER, Akron, Ohio, assignor, by mesne assignments, to National Rubber Machinery Company, Akron, Ohio, a Corporation of Ohio. Filed Mar. 3, 1926, Serial No. 91,871. Renewed Oct. 10, 1928. 1 Claim. (Cl. 18—35.)



In molds, the combination of a main body having a cavity for the article to be molded, and a plunger plate for closing one side of said cavity, said plate having an opening therein, a plurality of cores positioned in said opening and adapted to cooperate with said cavity, and a wedge for securing said cores in said opening.

1,694,026. FRUIT-CAR BRACE. HERBERT A. WHITTEMORE, Newcastle, Calif. Filed Nov. 29, 1927. Serial No. 236,455. 12 Claims. (Cl. 105—369.)

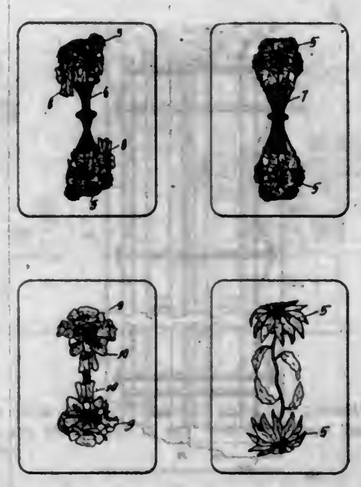


1. A box-brace structure for cars comprising rigid frames to extend transversely of a car in longitudinally spaced relation to each other and adapted to abut against the ends of stacks of boxes, independently actuated jack screws between the frames, and means for mounting the screws in operative relationship with the frames; the outer ends of the screws when in operation abutting against each other.

1,694,027. GEARING. ERNEST WILDHABER, Brooklyn, N. Y., assignor to Gleason Works, Rochester, N. Y., a Corporation of New York. Filed Mar. 25, 1924. Serial No. 701,698. 29 Claims. (Cl. 74—41.)

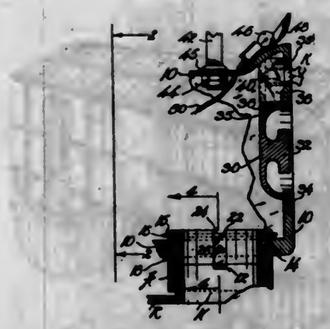
1. A pair of gears, having angularly disposed axes and having teeth extending across the faces of said gears along lines inclined to the generatrices of the respective pitch surfaces, the tooth profiles of one gear being exclusively convex circular arcs, and the mate tooth profiles of the other gear of said pair being exclusively concave circular arcs of substantially the same radius.

1,694,028. GEAR. ERNEST WILDHABER, Rochester, N. Y., assignor to Gleason Works, Rochester, N. Y., a Corporation of New York. Filed June 10, 1926. Serial No. 115,048. 23 Claims. (Cl. 74—7.)



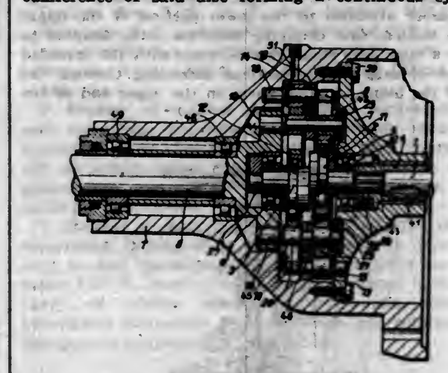
1. A pair of gears adapted to mesh with axes non-intersecting and non-parallel, each of which has teeth extending across its face along lines inclined to the generatrices of its pitch surface, the profiles of the side tooth surfaces of said gears in planes perpendicular to their respective pitch lines being single circular arcs.

1,694,029. CARD GAME. OTOTARO N. YAMAMOTO, Los Angeles, Calif. Filed Jan. 30, 1928. Serial No. 250,441. 9 Claims. (Cl. 273—152.)



1. A card game comprising cards provided with suit emblems, the emblems of the cards of different suits being different and of the same suit being of like character, and some of the suits having cards each bearing a second emblem to distinguish said cards from other cards of said suits, and one of the cards of each of the last mentioned

suits also bearing a third emblem, the second emblems being of like character and the third emblems being of like character.

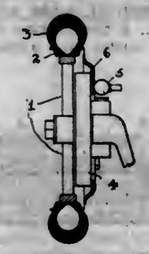


1,694,030. RADIATOR CAP FOR AUTOMOBILES. LOUIS A. BEAN, Denver, Colo. Filed Aug. 9, 1921. Serial No. 490,918. 10 Claims. (Cl. 220—24.)

9. A device of the class described embodying therein a radiator filler spout, an adapter having an opening therethrough and being telescopically interfitted with said spout, radially adjustable means accessible through the opening for securing the adapter to the spout, a cap secured to the adapter and closing the opening therein, and a theft-proof lock associated with said cap and preventing access to said adjustable means.

1,694,031. GEAR TRANSMISSION. LORENZ KONRAD BRAREN, Munich, Germany, assignor to Firm: Friedrich Deckel Präzisionsmechanik und Maschinenbau, Munich, Bavaria, Germany. Filed Nov. 30, 1926, Serial No. 151,800, and in Germany Dec. 5, 1925. 12 Claims. (Cl. 74—34.)

1. In a gear transmission a fast rotating member, a slowly rotating member, an eccentric on said fast rotating member, a disc mounted to turn on said eccentric, the circumference of said disc forming a continuous cycloidal

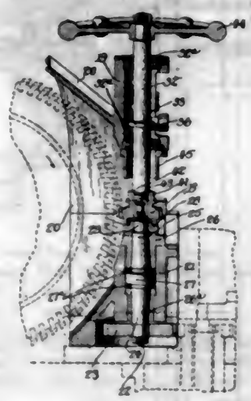


curve, members to engage with said cycloidal curve, and means for connecting said disk and said slowly rotating member.

1,694,032. MANUFACTURE OF WOOL FELTS. EMIL BERCHT and RUDOLF FUGMANN, Guben, Germany. Filed May 25, 1926, Serial No. 111,645, and in Germany June 9, 1925. 7 Claims. (Cl. 19—146.)

1. In a process for the manufacture of felts, introducing substantially straight fibres of combed wool into a blowing machine, and there subjecting said fibres to the action of a current of air for depositing them uniformly upon a receiver in the form of a felt.

1,694,033. SHIELD FOR VEHICLE BRAKES. GEORGE R. CUNNINGTON, Akron, Ohio, assignor to The Paine-Cunnington Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 10, 1925. Serial No. 74,637. 11 Claims. (Cl. 301—37.)

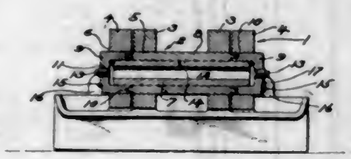


3. As an article of manufacture, a shield for use with vehicle-wheels, said shield being of rubber and of a generally circular form with a substantially planar attaching portion and an extending guard portion.

8. In a device of the character described, the combination of vehicle-wheel brake means and a shield member of rubber of generally annular shape adjacent said brake means.

1,694,034. WORKHOLDER. JOHN EDGAR, Rockford, Ill., assignor to Barber-Colman Company, Rockford, Ill., a Corporation of Illinois. Filed July 26, 1924. Serial No. 728,354. 9 Claims. (Cl. 90—1.)

1. In a spur-gear cutting machine, the combination of a work spindle comprising two axially-alined sections, bearings in which the lower spindle section is rotatably mounted and held against longitudinal movement, bearings in which the upper spindle section is rotatably and slidably mounted, a hand lever connected to the upper spindle section for sliding the latter, one of the spindle sections having a threaded end and the other section having a thread-

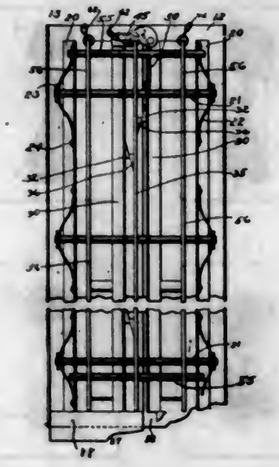


ed socket therefor, a clamping member non-rotatably fixed to the upper portion of the lower spindle section, a clamping member attached to the lower portion of the upper spindle section, said clamping members being adapted to confine a spur gear blank therebetween with the threaded portions of said spindle sections extending through the bore of the blank, a hand wheel on the upper end of the

upper spindle section for rotating said spindle section to screw the two spindle sections together and clamp the blank between said clamping members, a stripper located adjacent to the upper spindle section in position to engage the gear blank when the upper spindle section is raised by means of said lever, and means attached to the lower end of the lower spindle section for rotating the work spindle and the blank.

---

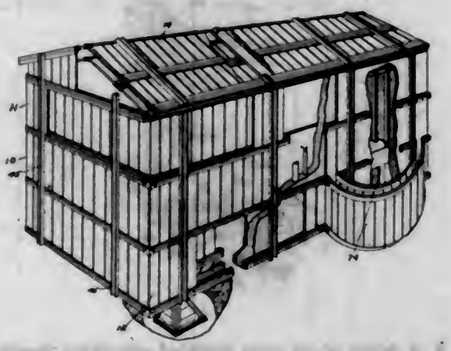
1,694,035. TRACK-LINK CONNECTION. FRED GROTTS, Peoria, Ill., assignor, by mesne assignments, to Caterpillar Tractor Co., a Corporation of California. Filed Feb. 18, 1925. Serial No. 9,955. 3 Claims. (Cl. 74—32.)



1. In combination, a pair of cooperating track links having respectively inner and outer pairs of ears for joining the links together, the inner pair of ears of one link being adapted to fit within the outer pair of ears of the other link and having registering bolt receiving openings therethrough, a cylindrical pin member within the registering openings, a space block floatingly mounted on the pin member and having its ends engaging within the openings in the inner pair of ears, and means on the ends of the pin member fitting within the holes on the outer ears and in abutting end relation with the space block.

---

1,694,036. ADJUSTABLE AND INTERCHANGEABLE FORM FOR HOLLOW WALL CONSTRUCTION. IRA J. KUEBT, Los Angeles, Calif. Filed Feb. 9, 1925. Serial No. 7,855. 7 Claims. (Cl. 25—128.)



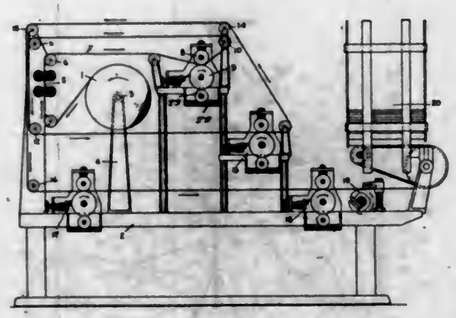
1. In a building form, a plurality of rigid wall members, each consisting of a strip of metal, each of said strips being bent to form two portions arranged at right angles to each other, means disposed within said wall members to hold said members in position, means to alter the cross

sectional area of the form in two dimensions, means to lock said form in one position and resilient means to urge certain of said walls in one direction.

---

1,694,037. CONCRETE FORM, METHOD OF MOLDING A CONCRETE WALL, AND WALL. IRA J. KUEBT, Los Angeles, Calif. Filed Aug. 26, 1924. Serial No. 734,178. 12 Claims. (Cl. 25—131.)

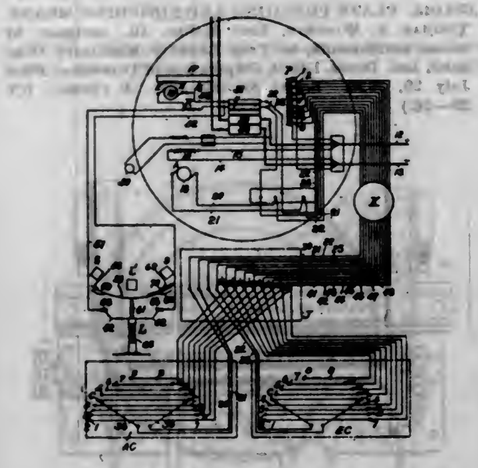
1. The method of making concrete walls, comprising pouring a section of the wall, with an upper cavity, arranging a closure to close the cavity, then pouring the next section of the wall and allowing the concrete to engage the upper closure.



---

1,694,038. PRINTING MACHINERY. WALTER EVERETT MOLINS and CYRIL BERT, London, England. Filed Jan. 10, 1928, Serial No. 245,741, and in Great Britain Jan. 6, 1927. 4 Claims. (Cl. 101—152.)

1. In a multi-color intaglio printing machine, the combination with a reel from which a web of printing material is drawn, of a series of rollers for guiding the web so arranged as to cause the web to travel in a circuitous path comprising a plurality of substantially complete circuits



about the reel, a plurality of printing units spaced along the web and disposed in separate circuits of the path thereof, whereby the web is constrained to follow a cir-

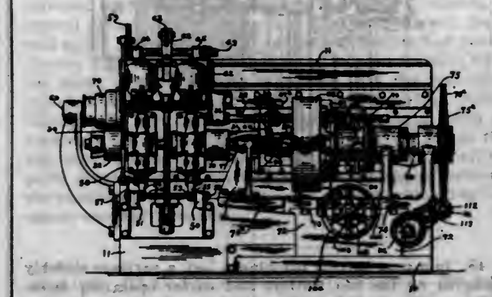
cuitous path between adjacent units for permitting the ink of one impression to dry before the next impression is made.

---

1,694,039. SAFETY STOP FOR SEARCHLIGHTS. MARTIN L. PATTERSON, Bogota, N. J., assignor to The Sperry Gyroscope Company, Brooklyn, N. Y., a Corporation of New York. Filed Apr. 24, 1922. Serial No. 556,348. 2 Claims. (Cl. 172—239.)

1. In combination with a movable device, electric means for moving said device, said means including a controller and an electric motor, a circuit for transmitting a relatively large current to said motor and a second circuit for transmitting a relatively small current to said motor, means for limiting the movement of said device, means normally rendering one of said circuits effective, means for rendering ineffective the normally effective circuit and rendering the other of said circuits effective, as the device approaches said limiting means, to vary the speed of the device, and means permitting said first means to reverse the direction of movement of said device in any position thereof without breaking the circuit between said controller and said motor.

---



1,694,040. PROCESS OF MAKING ACTIVATED CARBON. ARTHUR BENNING RAY, Bayside, ERNEST GARDNER DOYING, New York, N. Y., and JOHN J. BUTKOVSKY, Elizabeth, N. J., assignors to Carbide and Carbon Chemicals Corporation, a Corporation of New York. Filed Oct. 22, 1925. Serial No. 64,271. 13 Claims. (Cl. 252—8.)

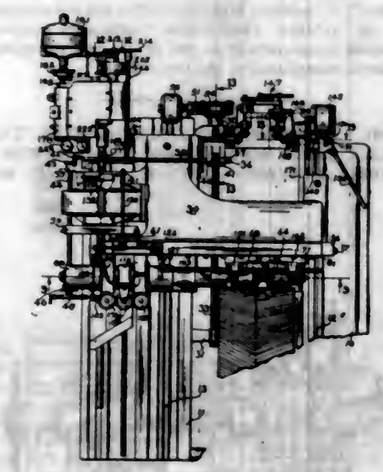
1. Process of making dense strong activated charcoal comprising impregnating nut cellulose with a dehydrating agent, heating the mixture to a temperature not materially below 350° C., leaching out the soluble components, and reheating the resulting carbon in an oxidizing atmosphere.

6. Process of making dense strong activated charcoal comprising impregnating nut cellulose with phosphoric acid, heating the mixture to a temperature not materially below 350° C., passing steam over the heated material to carry off volatile phosphorus compounds, recovering phosphorus compounds from the steam and returning the phosphorus compounds to the process.

---

1,694,041. MACHINE FOR CUTTING GEAR TEETH. WILLIAM EDWIN SYKES, Slough, England. Filed May 24, 1923. Serial No. 641,127. 23 Claims. (Cl. 90—9.)

1. In a machine of the character described, work supporting means comprising a work supporting arbor having an enlarged head thereon, a face plate having a hub surrounding the arbor and lodged against said head, means for holding the work against the face plate whereby the latter is clamped between the head and the work, a head stock comprising a rotatably mounted shaft, means for detachably securing the face plate to said shaft to support the face plate and the adjacent end of the arbor, and means for rotatably supporting the other end of the arbor.

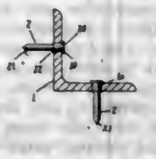


12. A gear cutting machine, comprising a frame having a bed and vertically offset guideways on said bed, a work carriage slidably mounted on said guideways, said carriage being substantially L-shaped in cross section to conform to the position of said guideways, whereby a part of said carriage surface is offset, horizontally aligned bearings mounted on the offset portions of said carriage, a work carrying shaft carried in said bearings and having a head stock mounted above the upper of said guideways, and the other of said bearings being removable to facilitate the removal of the work shaft from the carriage.

---

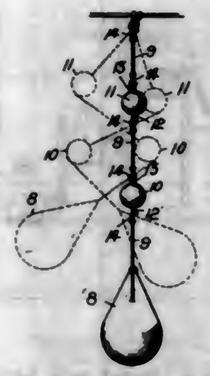
1,694,042. MACHINE FOR CUTTING GEAR TEETH. WILLIAM EDWIN SYKES, Buffalo, N. Y. Filed Dec. 28, 1923. Serial No. 683,188. 54 Claims. (Cl. 90—9.)

1. A gear cutting machine comprising a bed, means for supporting a gear blank upon a fixed axis on said bed,



a carriage mounted on said bed for movement towards and away from the blank, a cutter mounted on said carriage and adapted to be moved with said carriage to and from cutting engagement with the blank, operating means for giving said cutter a translatory movement across the face of said blank, means for moving said carriage towards said blank until the depth of the cut produced by the action of said cutter on said blank reaches a predetermined limit, said blank being stationary during the movement of said carriage, and means for rotating said blank thereafter to cut a series of teeth on the periphery thereof while maintaining a fixed relationship between the blank axis and the carriage.

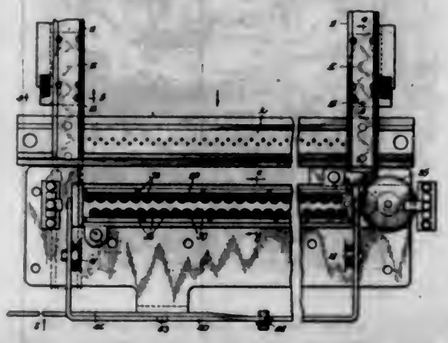
48. In a gear cutting machine, a bed, a carriage slidably mounted on the bed, cutters and cutter operating mechanism mounted on the carriage, electrical devices mounted on the bed for operating said cutter operating mechanism, controlling mechanism on said devices, controlling switches on the carriage, and means for conducting current from said switches to said controlling mechanism including a plurality of bare wires secured to the bed, contacts secured to the carriage and adapted to slide on said wires and conductors leading from said contacts to said switches.



---

1,694,043. METALLIC-FRAME CONSTRUCTION. CHARLES M. THOMSON, Westmount, Quebec, Canada. Filed Nov. 16, 1927. Serial No. 233,681. 1 Claim. (Cl. 72—115.)

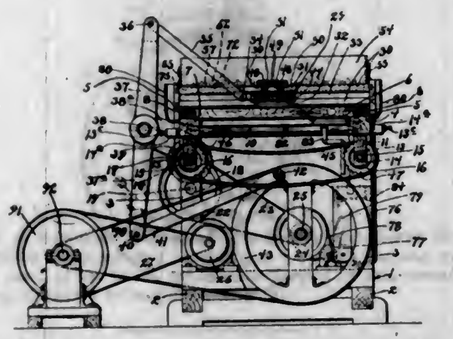
In metallic framework construction the combination of a studding of rolled stock, a series of holes bored therethrough, with a series of pointed bendable spikes secured in the holes, adapted to penetrate sheathing and the like and to retain the same by having the spike ends clinched thereon.



1,694,044. FIGHTING BAG. GEORGE B. THOMPSON, Richmond Hill, N. Y. Filed Feb. 9, 1927. Serial No. 166,871. 6 Claims. (Cl. 272—78.)

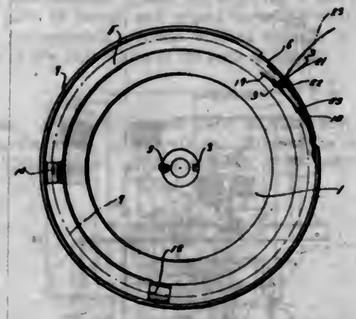
1. An exercising apparatus comprising a member adapted to be struck, means for suspending the member from an overhead support to permit free swinging movement of said member when it is struck, and weighted means carried by the suspending means and having a greater inertia than the member thereby to quicken the movement of said member under the influence of a blow.

---



1,694,045. PLATE PUNCHING AND FINISHING MEANS. THOMAS A. WAGGETT, East Moline, Ill., assignor, by mesne assignments, to Troy Laundry Machinery Company, Inc., Dover, Del., a Corporation of Delaware. Filed July 29, 1926. Serial No. 125,707. 1 Claim. (Cl. 29—26.)

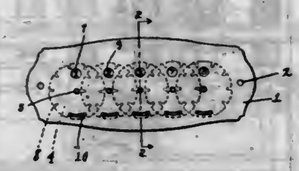
In punching and reaming mechanism, in combination, plate holding means, means for advancing said holding means with a step-by-step motion, punching means, a reamer block carrying a plurality of reamers, means for rotating said reamers, means for pivotally mounting said reamer block, means operating in synchronism with said punching means for moving said reamer block to bring said reamers into operative relationship with holes previously punched by said punching means, and means for moving said reamer block into operative position independently of said punching means.



1,694,046. PANEL POLISHING AND RUBBING MACHINE. KARL ALBERT WEBER, Los Angeles, Calif., assignor to Weber Showcase & Fixture Company, Los Angeles, Calif., a Corporation of California. Filed Mar. 5, 1925. Serial No. 13,210. 5 Claims. (Cl. 51—66.)

1. In an apparatus of the class described, the combination of a support, means for continuously moving a panel on said support in a horizontal direction, a plurality of rubbing elements in contact with the horizontal surface of the panel, means for reciprocating said rubbing elements transversely to the line of travel of said panel and means actuated by the reciprocating action of the rubbing elements for feeding a polishing material onto the panel in advance of said rubbing elements.

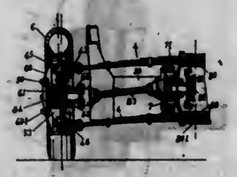
---



1,694,047. SHADE HOLDER. FREDERICK WENING, Cleveland, Ohio. Filed June 25, 1927. Serial No. 201,840. 2 Claims. (Cl. 240—128.)

1. A globe or shade holder, comprising a housing hanger member having a cylindrical skirt portion at its lower end, a pair of circumferentially spaced resilient fingers secured to the inner surface of said skirt portion for supporting engagement with a globe or shade neck, an elongated globe engaging member of resilient form arranged in opposed relation to said globe engaging fingers, said elongated member extending circumferentially of said skirt portion and having one of its end portions secured to the inner surface thereof and its other end portion free for radial movement into and out of globe engaging position, and a lever for actuating the free end portion of said elongated resilient member, said lever being fulcrumed in an opening in said skirt portion and having an arm inside the hanger member for slidable engagement with the free end portion of said elongated member, said lever also having an arm outside of said hanger member for manual operation, said inner and outer lever arms extending at substantially right angles to each other with the outer arm curved to conform to the curvature of the skirt portion of the hanger member, whereby when the inner arm is holding the free end portion of the elongated resilient member inwardly in globe engaging position, the outer lever arm hugs or lies closely alongside the outer surface of the hanger member skirt portion in an inconspicuous manner.

---

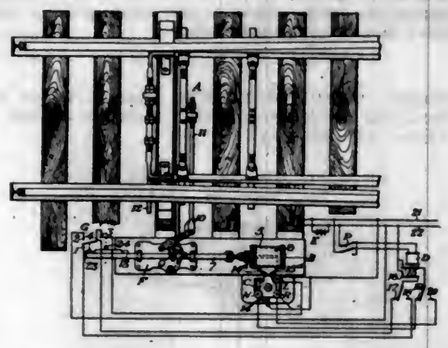


1,694,048. INDICATOR DEVICE. FRED H. WHITE, Toledo, Ohio. Filed Feb. 23, 1928. Serial No. 256,284. 1 Claim. (Cl. 40—70.)

In an indicator, a panel having a series of sight-openings, a series of closely arranged discs of flexible resilient material on said panel disposed in overlapping relation, a central raised portion on each disc extending away from said panel, means connecting said raised portion and panel, thereby yieldingly to urge said discs into engagement with the panel, said discs being associated with the respective openings and each having spaced numerals thereon visible through the sight-openings, said panel having a series of openings, one for each disc formed to receive a pin or the like, each disc having a series of spaced pin-point receiving parts disposed centrally to aline with the spaces between the numbers and being spaced apart distances equalling the spaces between numerals.

---

1,694,049. REAR-AXLE ASSEMBLY. JAMES A. WRIGHT, Montreal, Quebec, Canada. Filed Aug. 3, 1927. Serial No. 210,413. 12 Claims. (Cl. 180—73.)

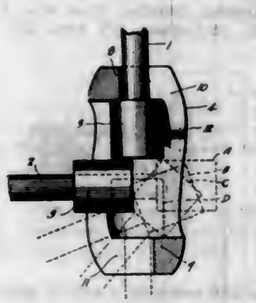


1. In a rear axle assembly, a pair of semi-elliptic springs housed centrally in seats in the top and bottom of the differential casing, the ends of the springs being mounted in spring eyes coupled to the wheel carriers in the load plane of the wheel, the upper spring eye having a spherical casing enclosing the ball head of a pin projecting upwardly from the wheel carrier, the lower spring eye having a T shaped end sleeve journalled in a forked berang projecting downwardly from the wheel carrier.

---

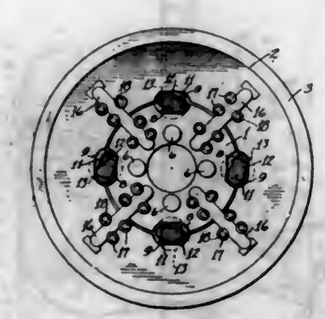
1,694,050. APPARATUS FOR THE CONTROL OF RAILWAY SWITCHES. HENRY S. YOUNG, Wilkinsburg, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Sept. 10, 1927. Serial No. 218,804. 9 Claims. (Cl. 246—258.)

7. In combination, a railway switch, an operating mechanism for said switch having normal and reverse positions



and comprising a lock magnet; a relay having normal and reverse contacts one or the other of which is closed according as the realy is supplied with current of normal or reverse relative polarity, means including a manually operable lever for supplying said relay with current of normal or reverse relative polarity, means for moving said op-

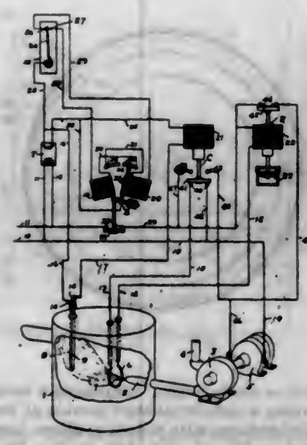
erating mechanism to its normal or its reverse position according as the normal or reverse contacts of said relay are closed and provided said lock magnet is energized, an indication contact controlled by said operating mechanism, and means for controlling said lock magnet jointly by said relay contacts and by said indication contact.



---

1,694,051. CABLE-CONNECTING MEANS. DONIS M. BARDON, Seattle, Wash. Filed Feb. 28, 1927. Serial No. 171,695. 1 Claim. (Cl. 24—123.)

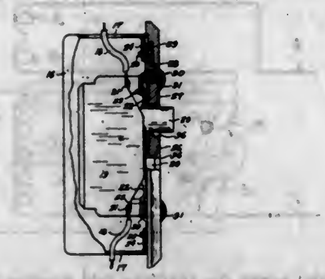
In combination, a pair of cables equipped with retaining ferrules at their ends, and a connecting link having a transverse passage in which said enlargements may be contained in end to end, interlocked relation, cable receiving slots extending into the end walls of the link from opposite sides thereof through the axial line and shoulders formed on the side walls of the link at opposite sides of the said slots to prevent lateral displacement of the retaining ferrules when seated; said ferrules being of such length that when in end to end relation neither may be removed from the link but either may be removed when its cable is swung laterally into its slots and the ferrule turned transversely to the axis of the link and then lifted clear of the retaining shoulders and withdrawn endwise.



1,694,052. BRAKE DRUM. GEORGE W. BENEDICT, Oakland, Calif., assignor, by mesne assignments, to Marion Exell, Oakland, Calif. Filed Oct. 19, 1926. Serial No. 142,546. 3 Claims. (Cl. 188—218.)

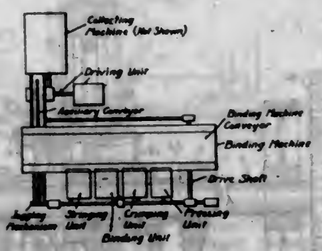
1. A brake drum comprising a master member, an active brake element, adjustable means for positioning one relative to the other and means for securing the one to the other in adjusted position.

---



1,694,053. ELECTRIC FUEL IGNITING. WILLIAM K. BOOTH, Chicago, Ill., assignor to Electroil Syndicate, an Association composed of C. P. Jaeger, L. M. Rutledge, William L. Morris, and William K. Booth. Filed Sept. 18, 1922, Serial No. 589,029. Renewed Apr. 30, 1928. 6 Claims. (Cl. 158—28.)

1. In an electrical fuel igniting system, a fuel feeding motor, an electrical igniter, a switch relay in series with the igniter operative to close a starting circuit to the motor, and electrical means for open circuiting the igniter, and the relay and closing a new running circuit to the motor.



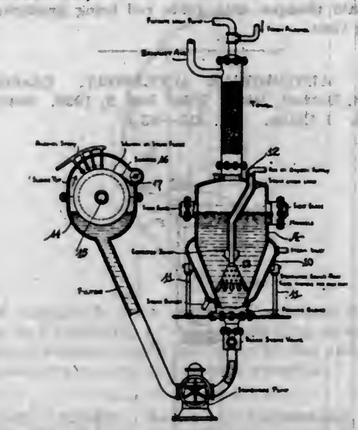
1,694,054. SWITCH OR RECEPTACLE PLATE. TONJES A. BOTH, Stratford, Conn., assignor to The Connecticut Electric Manufacturing Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Dec. 4, 1922. Serial No. 604,692. 8 Claims. (Cl. 247—23.)

2. A face plate of insulating material, and means for securing the plate to a wall having a portion exposed at the front of the plate, the exposed portion of said means being composed of insulating material.

---

1,694,055. SHEET-BINDING MACHINE. LE ROY BURDETT, Chicago, Ill., assignor to Messenger Publishing Company, Inc., Chicago, Ill., a Corporation of Illinois. Filed Jan. 10, 1927. Serial No. 160,269. 34 Claims. (Cl. 11—1.)

3. In combination, means for carrying a sheet unit in a fixed path of travel, and means including metal folding means, for applying a metal binding element to an edge portion of the unit while in its path of travel.



---

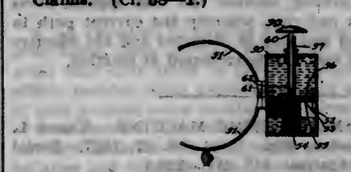
1,694,056. LOCKING PLUG FOR EXTENSION CORDS. CECIL CALKINS, Albany, Oreg. Filed June 16, 1927. Serial No. 199,334. 3 Claims. (Cl. 173—343.)

1. In a device of the class described, the combination with a plug composed of two separable members, one of said members having projecting extension ends, and the other member having connections within which the aforesaid extension ends are removably inserted, of a disk carried by the last mentioned member, said disk adapted for rotation, and means for limiting the extent of said rotation; each of said extension ends being provided with a groove spaced from the end thereof, said disk when rotated in one direction having portions entering the aforesaid grooves, and when rotated in the opposite direction having portions avoiding said grooves substantially as described.

1,694,057. PROCESS OF MAKING TRIPHENYLMETHANE DYES. ROBERT MCFARLAN COLE, Sandusky, Ohio. Filed Nov. 24, 1926. Serial No. 150,556. 20 Claims. (Cl. 260—65.)

1. The process of making triphenylmethane dyes which comprises oxidizing an aromatic amine with air in the presence of formaldehyde, a condensing agent and a catalyst.

---

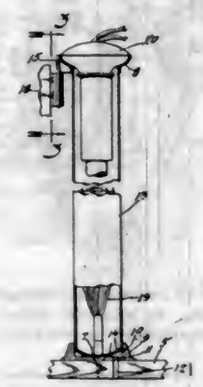


1,694,058. MECHANICAL HAND. CHESTER C. COON, Oakland, Calif. Filed Apr. 4, 1927. Serial No. 180,818. 10 Claims. (Cl. 140—118.)

1. A mechanical hand of the character described, comprising two spaced fingers forming a slot between the same, one of the fingers being curved into a hook allowing a wire to be drawn into the slot thereby when the hand is pulled downward.

---

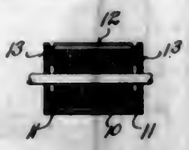
1,694,059. HOUR GLASS. LEVI P. DENNY, Berkeley, Calif. Filed Aug. 19, 1926. Serial No. 130,173. 3 Claims. (Cl. 58—1.)



1. A device of the type described, comprising a casing, means for removably securing said casing to a telephone,

a spring pressed plunger slidably disposed in said casing, a medium carried by said casing, means carried by said plunger for permitting a more rapid movement of said plunger in one direction than in the other, and a guide rod for said plunger, said guide rod being graduated for indicating time.

---

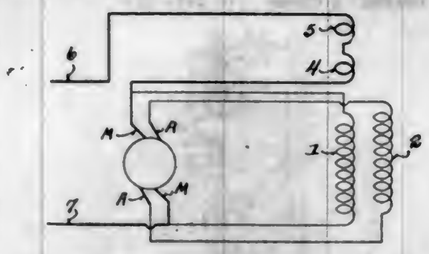


1,694,060. AUTOMOBILE ACCESSORY. CHARLES R. DUNCAN, Detroit, Mich. Filed Dec. 9, 1926. Serial No. 153,598. 1 Claim. (Cl. 211—63.)

In combination with an umbrella provided with a permanent staff and handle, a supporting case for said umbrella comprising a tubular member adapted to be supported in a generally vertical position, said member being provided with an open outwardly flared upper end, and the upper end of said handle being formed complementary to said flared end whereby to close the same and support said umbrella therefrom when said umbrella is positioned within said member.

---

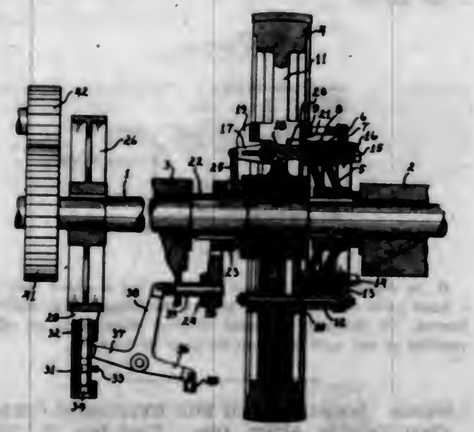
1,694,061. SELF-STARTING INDUCTION MOTOR. KLAUS L. HANSEN and WILLIAM J. OESTERLEIN, Milwaukee, Wis. Filed Aug. 13, 1926. Serial No. 128,948. 2 Claims. (Cl. 172—280.)



1. An induction motor comprising a stator and a rotor, said rotor having a squirrel cage with the conductors joined by end rings, one of the end rings having a large radial depth, said rotor having magnetic material positioned on opposite sides of said last mentioned end ring and having opposed faces lying in planes at right angles to the rotor axis and spaced apart throughout their extent, said magnetic material being relatively stationary and extending at least to the outer edge of the last mentioned ring, the magnetic flux due to current in the last mentioned end ring passing between the said opposed faces and through such end ring, whereby the current path in the last mentioned end ring is distorted and the effective resistance of such end ring is increased at starting.

---

1,694,062. DYNAMO-ELECTRIC MACHINE. KLAUS L. HANSEN, Milwaukee, Wis. Filed Oct. 27, 1927. Serial No. 229,080. 6 Claims. (Cl. 171—223.)



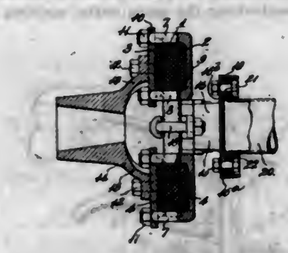
1. A dynamo-electric machine having an armature, a plurality of main brushes, a pair of auxiliary brushes, a main field winding supplied from said main brushes, an auxiliary field winding supplied from said auxiliary brushes, said machine impressing a substantially constant

potential across the auxiliary field winding for any given setting and means for simultaneously shifting both said main and auxiliary brushes.

---

1,694,063. SHAFT-CONTROL MEANS FOR DRAWING AND STAMPING PRESSES. HENRY J. HINDE, Toledo, Ohio, assignor to The Toledo Machine & Tool Company, Toledo, Ohio, a Corporation of Ohio. Filed Oct. 19, 1927. Serial No. 227,125. 1 Claim. (Cl. 192—17.)

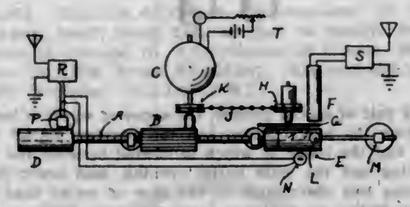
In a stamping and drawing press, a rotatable shaft, a relatively heavy member rotatable on said shaft, a clutch spider mounted on said shaft for turning movements therewith, a clutch disc rotatable with said member and movable axially relative thereto to engage and release the spider, control means on the opposite side of said member extending through said member and engaging said clutch disc, means movable along said shaft for operating said control means, a brake drum rotatable with said shaft and spaced longitudinally thereon from said clutch parts, a braking member engageable with said drum, and common means to operate said clutch operating means and braking member.



---

1,694,064. FLEXIBLE COUPLING. STEPHEN JENCICK, Chagrin Falls, Ohio. Filed Dec. 3, 1923. Serial No. 678,288. Renewed Oct. 11, 1928. 8 Claims. (Cl. 64—96.)

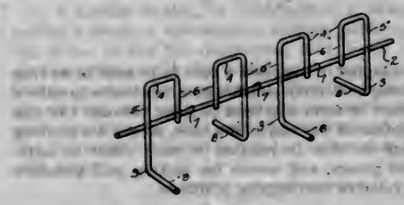
1. A flexible coupling comprising a flexible disk having a central opening, and means for connecting said disk between adjacent ends of shaft sections so as to constitute a driving connection, said connecting means comprising a



plurality of substantially U-shaped clamping bolts having one arm extending through said central opening and the other arm engaging the edge of the disk, with the middle

portion thereof engaging one side of the disk, and other clamping members connecting the ends of said U-bolts and engaging the other side of the disk.

---



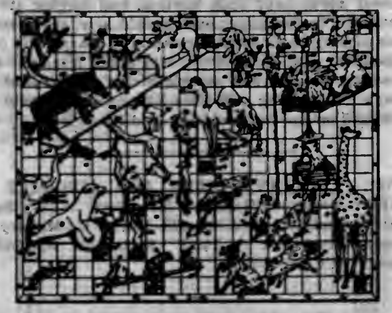
1,694,065. DUPLEX RADIO MACHINE. CHARLES FRANCIS JENKINS, Washington, D. C. Filed Nov. 19, 1924. Serial No. 750,801. 7 Claims. (Cl. 178—5.)

1. The method of electrically transmitting and receiving visual representations over a single channel, which comprises varying the electrical carrier current with two frequencies, one frequency to produce the visual representation and the other frequency to indicate the relative timing between the sending and the receiving instruments, one of the said frequencies being constant and the other a varying frequency which modulates the constant frequency.

---

1,694,066. BAR SUPPORT AND SPACER. HENRY H. LAMPERT, Chicago, Ill. Filed Apr. 6, 1928. Serial No. 267,902. 4 Claims. (Cl. 72—122.)

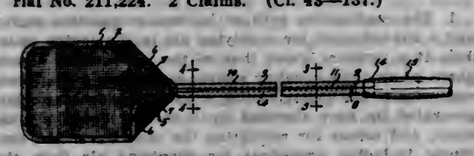
1. A device of the class described comprising a rod adapted to support a plurality of reinforcing bars, and a plurality of leg elements secured to said rod, each of said leg elements comprising an arched spacing portion and a foot portion, the arched portions of said elements being disposed in substantially the same plane and being spaced apart from one another to define seats for the reinforcing bars.



1,694,067. THERAPEUTIC LAMP. WILLIAM TURNOR LEWIS, Racine, Wis., assignor to Western Coil & Electrical Co., Racine, Wis. Filed Oct. 27, 1927. Serial No. 229,082. 9 Claims. (Cl. 174—177.)

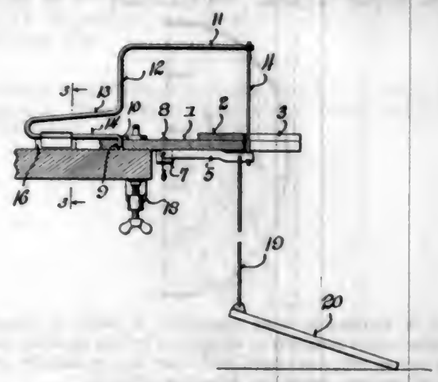
1. A therapeutic lamp comprising a source of radiant energy, and a plurality of annular reflecting members having spaced adjacent edges, said lamp having annular open spaces between successive reflecting members.

---



1,694,068. GAME. HARRY A. LIEBERMANN, Chicago, Heights, Ill. Filed May 23, 1925, Serial No. 32,383. Renewed Oct. 15, 1928. 2 Claims. (Cl. 273—134.)

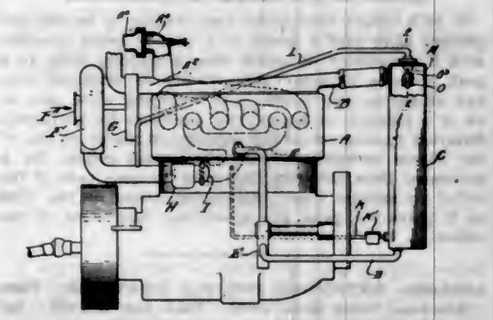
1. In a child's educational game played by moving the player's piece over a board to a goal, a board provided with a progression of spaces from a starting point to a goal, pictures of many different objects scattered over and affixed to said board, each occupying some part or all of a plurality of spaces, and directions for play, each direction naming one of the objects and placed on one of the spaces occupied by said object and calling for a movement from said direction space to some part of the object on another space, thereby impressing on the child as it plays the game the appearance and name of the object.



---

1,694,069. EXTENSION FOR FLY SWATTERS. FRED LOMBARD, Santa Rosa, Calif. Filed Aug. 6, 1927. Serial No. 211,224. 2 Claims. (Cl. 43—137.)

1. An extension fly-swatter comprising in combination a wire screen mesh portion, a resilient member formed of wire, bent upon itself to provide parallel arms, said resilient member being attached to said mesh portion, one of said parallel arms terminating abruptly and the other of said parallel arms extending laterally to abut against said first mentioned arm, a casing surrounding said parallel arms and being slidable thereon, and means extending inwardly from said casing adapted to engage said arm which extends laterally, to prevent removal of the same.

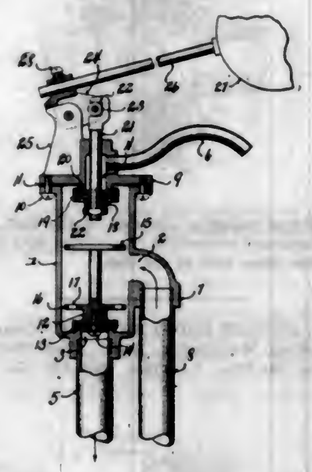


1,694,070. TOY JIG SAW. HANS C. MADSEN, Milwaukee, Wis. Filed Nov. 10, 1927. Serial No. 232,348. 2 Claims. (Cl. 143—73.)

2. A toy jig saw comprising a body portion having a work table provided with a slot, a saw extending through said slot, a lower lever positioned below said body portion and being relatively short, a resilient lever-like member positioned above said body portion and having its free end attached to the upper end of said saw, said resilient member rocking about a point materially rearwardly of the pivot point of said lower lever, said upper lever-like member having a downturned portion fitting within said body portion, a clip binding said lever-like member to said body portion, and means for operating said lower lever.

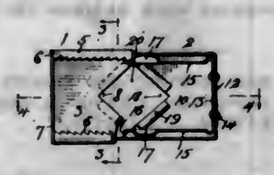
---

1,694,071. COOLING SYSTEM FOR AIRCRAFT ENGINES. HARRY C. MALLORY, New York, N. Y.; Sue R. Mallory administratrix of said Harry C. Mallory, deceased. Filed Jan. 6, 1922. Serial No. 527,503. 6 Claims. (Cl. 123—174.)



1. The combination with an internal combustion engine and a supercharger for supplying air to the engine cylinders at a pressure above that of the surrounding atmosphere, of an engine cooling system comprising a condenser connected to the engine cooling space for condensing vapor generated by heat absorbed by a cooling liquid in said space, and means for regulating the capacity of the condenser including provisions for supplying air from the supercharger to the cooling system at a pressure above that of the surrounding atmosphere.

---



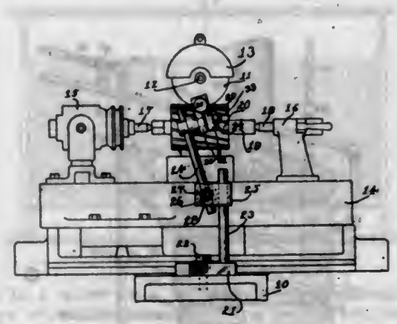
1,694,072. FLUSH VALVE. CYRUS R. MANION, Milwaukee, Wis. Filed June 29, 1927. Serial No. 202,439. 2 Claims. (Cl. 137—104.)

1. A valve for a flush tank comprising a cylindrical casing having an inlet opening intermediate its ends and having a main outlet opening at its lower end and an auxiliary outlet opening at its upper end, a supply pipe communicating with said inlet opening, a discharge pipe communicating with said main outlet opening and a bowl refill pipe communicating with said auxiliary outlet opening, a main valve controlling the main outlet opening and having a pair of spaced pistons, the upper of which is located between the inlet opening and the auxiliary outlet opening, and the lower of which is located between the inlet opening and the main outlet opening, said lower piston offering less obstruction to the flow of water than said upper piston, an auxiliary valve for said auxiliary outlet opening and a float for controlling said auxiliary valve.

---

1,694,073. HAIR-WAVING DEVICE. FRANÇOIS RENÉ MARCEL, Brooklyn, N. Y. Filed May 26, 1927. Serial No. 194,298. 12 Claims. (Cl. 132—36.1.)

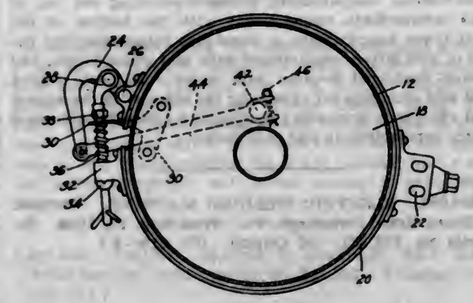
1. A clip adapted to compress a tube to be used in waving hair comprising relatively slidable and detachable members having notches to form a lateral passage through the clip for the reception of the end of the tube, means for causing said members to slide in relation to each other in adjacent, parallel planes, and means for locking said members in different relative overlapping positions.



---

1,694,074. ATTACHMENT FOR GRINDING MACHINES. JEREMIAH MARTONE, Waterbury, Conn. Filed Nov. 14, 1925. Serial No. 69,068. 1 Claim. (Cl. 51—225.)

In a work-holder for guiding a spiral milling cutter while the latter is being ground by a rotating grinder, a vertical post adapted to be held stationary upon the lower table of the machine, a lower clamping block slidable vertically upon said post and carrying an adjustable inclined arm,

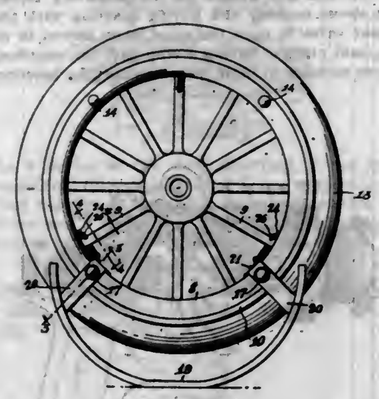


means for holding said inclined arm in adjusted position, an upper clamping block slidably and rotatably mounted on the upper part of said inclined arm, a horizontal work-

guiding finger carried by said upper clamping block, means in front of said upper block for minutely adjusting said work-guiding finger toward and away from the work.

---

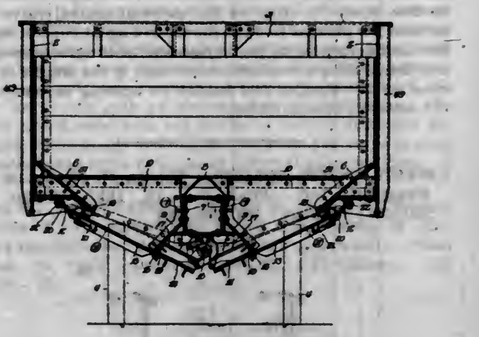
1,694,075. BRAKE CONTROL. MONTGOMERY W. MCCONKEY, South Bend, Ind., assignor to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Filed June 18, 1925. Serial No. 36,847. Renewed Apr. 20, 1928. 8 Claims. (Cl. 188—194.)



1. A vehicle having, in combination, a swivelled wheel having a drum, a contractable friction device surrounding the drum, means for contracting said device including a part swivelling with the wheel and a non-swivelling part having a point of engagement movable from a position spaced from the swivelling axis to an active position immediately adjacent that axis and so arranged that swivelling the wheel causes variation in the pressure contracting said device.

---

1,694,076. JACK FOR SELF-PROPELLING VEHICLES. MELVIN W. MCCOY, Springfield, Ill. Filed July 2, 1926. Serial No. 120,048. 3 Claims. (Cl. 254—94.)



1. In conjunction with a vehicle wheel having a detachable metal tire rim; a jack structure comprising an arcuate trough-shape tread-member; upwardly extending inclined brackets secured in the trough of said tread-member and each having a hole to receive the stud of a special bolt; flat tables at the upper ends of the respective brackets, extending across the felloe and across the metal tire rim of the wheel; special stud bolts occupying existing holes in the metal tire rim and supporting said brackets; levers pivoted on the respective tables adjacent

to spokes of the wheel; and hooks pivoted on the respective levers and adapted to engage said spokes directly to prevent rotation of the wheel in either direction.

---

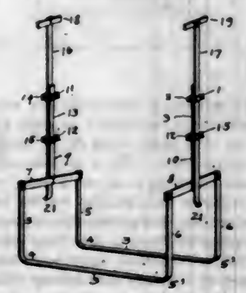
1,694,077. DUMP-CAR CONSTRUCTION. WILLIAM E. MOREY and DAVID HINDAHL, Chicago, Ill., assignors to Rodger Ballast Car Co., Chicago, Ill., a Corporation of Maine. Filed July 11, 1924. Serial No. 725,362. 37 Claims. (Cl. 105—251.)

1. A dump car having a longitudinally extending operating shaft, dump doors controlled by said shaft, a crank member carried by said shaft, said crank member having a cylindrical journal portion, sills, a loop member depending from said sills and carrying said crank member, said crank member having cranks and flanges at its two ends, the crank and flange at each end preventing endwise movement of said crank member relative to said loop when said crank member is in operative position, said crank member having dimensions at each of its ends permitting insertion of said crank member into said loop member from either side of said loop member.

---

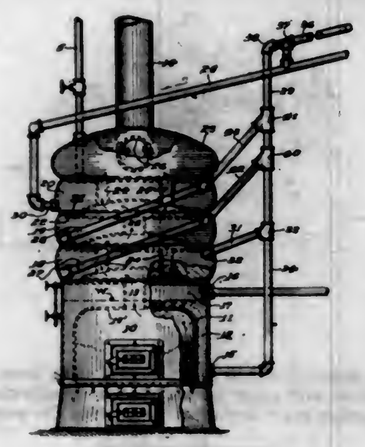
1,694,078. SPRAY GUN. GODFREY A. MUELLER, Point Place, Ohio, assignor to The Vilbiss Company, Toledo, Ohio, a Corporation of Ohio. Filed Apr. 7, 1927. Serial No. 181,660. 3 Claims. (Cl. 91—45.)

1. In a spray-gun, a body, two separate control valves one for the motive agent and the other for the material to be sprayed, said valves having opening movements in opposite directions, separate yielding closing means for the two valves acting with greater force on the material



control valve than on the other valve, a sleeve member carried by the body in spaced relation to the motive agent valve for adjustment toward and away from the same, a plunger carried and guided for reciprocatory movements by said sleeve member and having coaction with the motive agent valve to open the same when moved in one direction, said plunger having a stop part for coaction with the sleeve member to limit the valve opening movement of

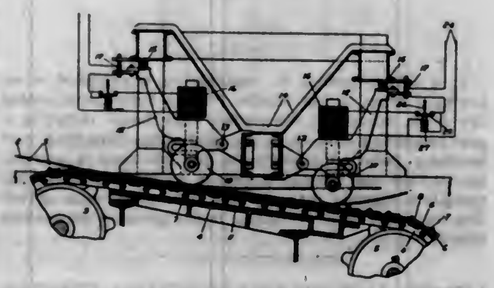
the plunger, a trigger member pivotally carried by said plunger and having a fulcrum point on the material control valve whereby, upon a movement of the trigger in one direction, it will fulcrum on the material control valve and actuate the plunger to open the motive agent control valve, the limit permitted by the adjustment of the sleeve member and then during a continued movement of the trigger to fulcrum on the plunger and impart an opening movement to the material control valve.



---

1,694,079. SACK HOLDER. WILBUR H. NICHOLAS, Indianapolis, Ind. Filed Dec. 15, 1927. Serial No. 240,137. 3 Claims. (Cl. 83—26.)

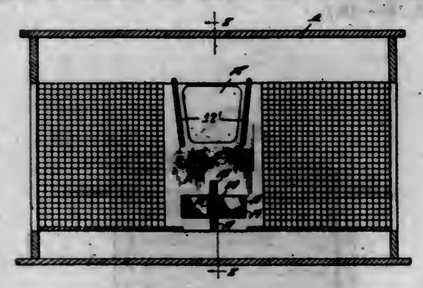
1. In a sack holder, a pair of upright spaced apart spring-bars each having top cross bars at their upper ends over which cross-bars the folded top of a sack is secured, a base comprising a pair of horizontal spring bars each having both of their ends extended upwardly, horizontal bars connecting the ends of the upward extensions, a vertical standard attached to each horizontal end bar and means for adjustably securing a respective upright spring-bar to a vertical standard.



1,694,080. HEATING SYSTEM. MICHAEL R. PLUNKETT, Philadelphia, Pa., assignor of one-half to J. Maurice Kelley, Philadelphia, Pa. Filed Mar. 19, 1927. Serial No. 176,617. 7 Claims. (Cl. 122—421.)

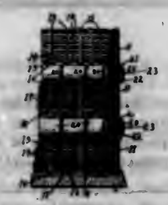
1. In a heating system, in combination, a boiler including a combustion chamber and a water jacket surrounding said chamber, a plurality of superimposed water compartments arranged adjacent said boiler, a return line for the water of condensation connected to the lower part of the upper of said compartments, a line connecting the top of said upper compartment with the bottom of an intermediate compartment, a line connecting the top of said intermediate compartment with the bottom of the next lower compartment, a stand-pipe interconnecting the top of said latter compartment with said water jacket, and means connected between said water condensate return and said standpipe for equalizing the pressure in the system and effectually preventing a siphoning action between said water compartments and said jacket.

---



1,694,081. ELECTRIC WELDING MACHINE. WILLIAM EDGAR REED, Pittsburgh, Pa. Filed Aug. 13, 1924. Serial No. 731,831. 26 Claims. (Cl. 219—4.)

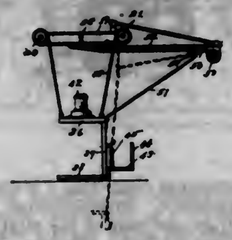
1. Electric welding apparatus comprising a rotatable electrode, a rectilinearly movable electrode cooperating therewith, means for permitting movement of one of said electrodes toward and away from the other electrode, a welding circuit, and means actuated by the last named movement of said one electrode for closing said circuit.



1,694,082. RABBIT HUTCH. WILLIAM SHEEHY, Fontana, Calif. Filed Jan. 3, 1928. Serial No. 244,252. 6 Claims. (Cl. 119—61.)

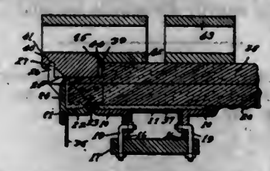
1. In a rabbit hutch, an invertible double trough, and means within the hutch including a member adapted to be slidably embraced by the trough for supporting the latter in either an active or inactive position.

---



1,694,083. CORNCRIB-WALL CONSTRUCTION. HALVER R. STRAIGHT, Adel, Iowa. Filed Mar. 9, 1925. Serial No. 14,177. 2 Claims. (Cl. 72—6.)

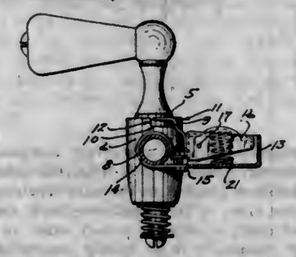
2. A wall construction for corn cribs comprising a base, a series of upright ventilated wall blocks arranged with their edges adjacent and in a common surface, a series of horizontal channel blocks having upper and lower channels, said channel blocks being placed in position on the upper edge of said wall blocks with the upper ends of said blocks entering the lower channel, and a second series of upright wall blocks resting in said upper channel.



---

1,694,084. CRANE. HALVER R. STRAIGHT, Adel, Iowa. Filed May 25, 1926. Serial No. 111,527. 6 Claims. (Cl. 212—21.)

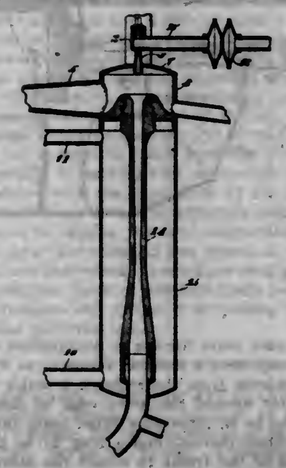
1. In a crane, a movable bridge, a trolley movably mounted on said bridge, electrically operated means for imparting movement to said bridge, electrically operated means for imparting movement to said trolley, a load supporting element depending from said trolley, a platform supported on said load supporting element, control devices carried by said platform, a cable for operatively connecting said control devices with said electrically operated means, and means connected between the ends of said cable for taking up its slack as the load supporting element is elevated and lowered.



1,694,085. KILN CAR. HALVER R. STRAIGHT, Adel, Iowa. Filed Oct. 7, 1926. Serial No. 140,100. 14 Claims. (Cl. 25—142.)

1. In a device of the class described, a car frame, a floor supported thereon, a retainer frame supported on said floor and capable of horizontal movement relative to said car frame, and a series of floor blocks carried by said floor and within said retainer frame.

---



1,694,086. VALVE LOCK. JOSEPH WASELAK, Minneapolis, Minn. Filed Sept. 10, 1927. Serial No. 218,826. 1 Claim. (Cl. 251—166.)

A lock of the kind described comprising a box-like body having an open top and an open end, said body having at its open end attaching means for securing the same to the casing of a valve provided with a stop pin working between a pair of stop shoulders on said casing, said body having a hinged cover affording a lever-acting thumb piece, said cover having a lock lug, and a spring compressed between the cover and body yieldingly holding the cover with the lock lug in the path of movement of the pin to lock the valve closed, said lock lug having a lateral extension arranged to yieldingly rest on the pin when the valve is open to permit said valve to be set in different open positions.

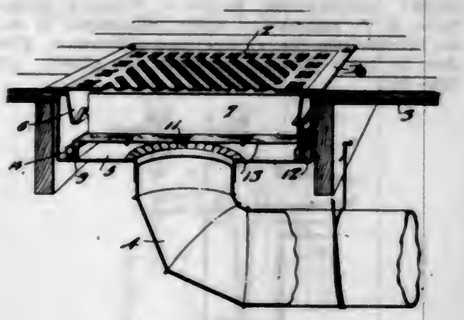
---

1,694,087. ASPIRATOR. ERNEST W. WESCOTT, Niagara Falls, N. Y., assignor, by mesne assignments, to Stator Refrigeration, Inc., a Corporation of Delaware. Filed Jan. 25, 1927. Serial No. 163,372. 10 Claims. (Cl. 230—95.)

1. In an aspirator wherein a propellent fluid at a high temperature and pressure is adapted to be materially re-

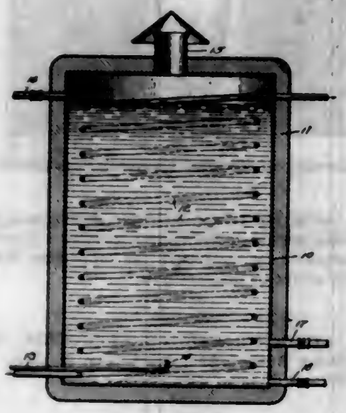
duced in both pressure and temperature when entering a mixing chamber into which a propelled fluid is drawn, a mixing chamber, a head for said mixing chamber of crowned form and of thin slightly distortable material.

---



1,694,088. STRAINER. NATALIE WOLKOWICH, Worcester, Mass. Filed Jan. 7, 1928. Serial No. 245,127. 3 Claims. (Cl. 210—149.)

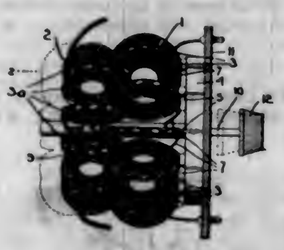
1. The combination with a strainer receptacle member having a perforated bottom, of a drip pan member adjustably and tiltably connected to the said strainer receptacle at or near one side, so that said receptacle and pan may be moved vertically relatively to each other to permit the said strainer receptacle to be widely separated from said pan and then tilted when the drippings in said pan are to be poured out.



---

1,694,089. REGISTER DUST COVER. MAURICE J. WRIGHT, Boise, Idaho. Filed June 22, 1923. Serial No. 647,073. 1 Claim. (Cl. 261—104.)

A register dust cover for use in conjunction with a hot air register comprising a skeleton frame to be fitted in the path of air passing from the register, a water trough extending entirely around the lower edge of said frame, a fabric covering to be removably fitted upon the frame to cover all portions thereof, and a ring to be fitted down over the sides of the frame to secure the fabric in place thereon and to hold the same with its edges in the water trough.

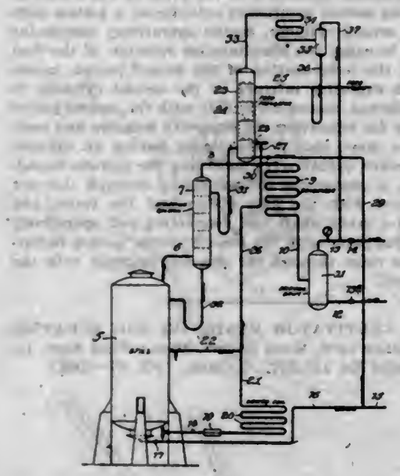


1,694,090. REMOVAL OF PETROLATUM FROM OILS. CHARLES ZWEIG, Wood River, Ill., assignor to Standard Oil Company, Whiting, Ind., a Corporation of Indiana. Filed June 21, 1926. Serial No. 117,394. 5 Claims. (Cl. 196—19.)

1. In the method of removing petrolatum from oil which contains it, by diluting and settling at a low temperature at which the wax separates, the step of agitating the diluted oil at a low temperature before settling.

---

1,694,091. SECTIONAL INDUCTION COIL. WILLIAM H. ADAMS, Kenyon, R. I. Filed Oct. 13, 1925. Serial No. 62,234. 3 Claims. (Cl. 171—119.)

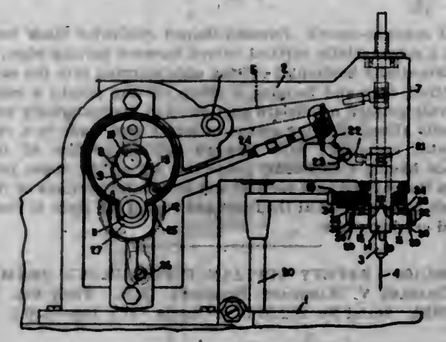


1. A radio inductance comprising a plurality of coaxial, structurally-independent, series-connected coil sections, each having a fractional part of the total inductance desired, said coil sections being arranged radially about a common center whereby a magnetic field of substantially circular shape is formed.

---

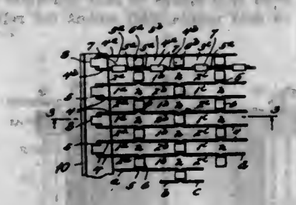
1,694,092. ART OF CONVERTING HYDROCARBON OILS. OSWALD C. BREWSTER, Casper, Wyo., assignor to Standard Oil Company, Whiting, Ind., a Corporation of Indiana. Filed June 20, 1925. Serial No. 88,513. 11 Claims. (Cl. 196—65.)

3. The method of converting hydrocarbon oils which comprises maintaining a body of oil under pressure at conversion temperature by supplying into said body of oil controlled quantities of oxygen containing gas, removing vapors evolved from the body of oil, preheating fresh oil to



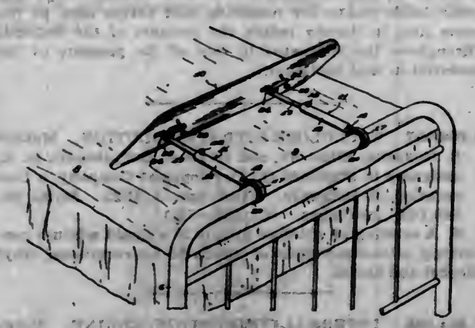
conversion temperatures, contacting the preheated fresh oil with the vapors evolved from said body of oil, and subsequently feeding it into said body of oil.

---



1,694,093. BUTTONHOLE-SEWING MACHINE. AXEL F. CARLSON, Cambridge, Mass., assignor to The Reece Button Hole Machine Company, Boston, Mass., a Corporation of Maine. Filed Dec. 18, 1926. Serial No. 155,621. 5 Claims. (Cl. 112—158.)

1. In a sewing machine, the combination with a vertically-reciprocating needle bar, of a vertically-reciprocating sleeve member through which the needle bar reciprocates and by which it is guided, said sleeve member having inclined grooves on two opposite sides, the side walls of each groove converging from the mouth toward the bottom, a guiding member having two guiding portions engaging opposite sides of the sleeve member, projections carried by said guiding portions and fitting the grooves of the sleeve member, the end of each projection being spaced from the bottom of the corresponding groove, springs acting on said projections and yieldingly holding them in operative engagement with the sleeve member, and means to reciprocate both the needle bar and the sleeve member vertically but at different speeds.

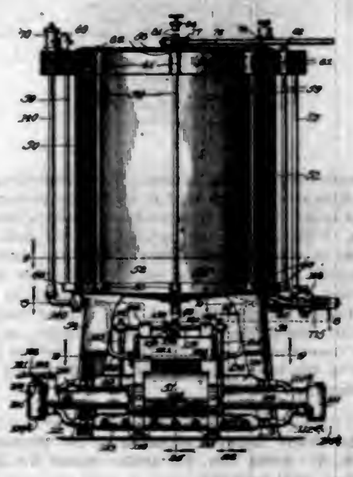


1,694,094. BED-BOTTOM FABRIC. MANSELL ALLAN DAVIS, Waukegan, Ill. Filed Sept. 20, 1927. Serial No. 220,681. 4 Claims. (Cl. 245—5.)

1. A mattress fabric for camping cots, comprising a plurality of wire strands each bent to form a continuous series of similar loops, opening alternately in opposite directions, the sides of the loops being parallel and the ends of the loops being substantially at right angles to the sides, metal clips hingedly connecting the ends of alternate loops in each strand with the ends of alternate loops in an adjacent strand, the terminals of each strand being bent backwardly, closing the end loops of the strand, and a clip hingedly connecting the backwardly bent portion of each end loop to the similar portion of an end loop in an adjacent strand.

---

1,694,095. FOOT REST. ELEANOR G. DU MOULIN, New York, N. Y. Filed Nov. 21, 1927. Serial No. 234,774. 3 Claims. (Cl. 5—327.)



1. A foot rest for a bed having an end member including a horizontally arranged bar, a pair of arms adapted to extend longitudinally over the bottom of the bed, means to pivotally connect the outer ends of the arms with the horizontal bar so that said arms may be swung outwardly from the bottom of the bed to occupy depending positions, upon the outer side of the end member of the bed, laterally extending braces carried by the arms and projecting upwardly when the arms occupy the inner generally horizontal position, a generally horizontal foot supporting member pivotally connected with the inner ends of the arms to turn upon its longitudinal axis, and adjusting elements carried by the braces to engage the foot supporting member to limit its turning movement in one direction, the arrangement being such that when the arms are swung to the outer depending position, the foot rest may freely swing from the adjusting elements and assume a depending position generally parallel with the arms.

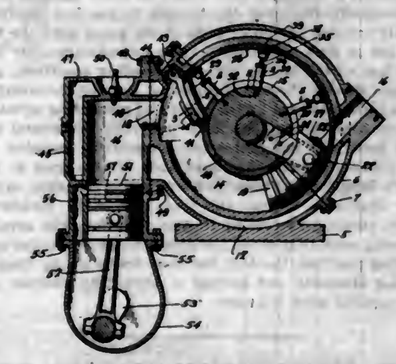
---

1,694,096. GREASE-CHARGING APPARATUS. HERMAN J. ENGBRECHT, Chicago, Ill., assignor to Standard Oil Company, Chicago, Ill., a Corporation of Indiana. Filed Dec. 2, 1925. Serial No. 72,656. 6 Claims. (Cl. 224—47.1.)

1. In apparatus of the character set forth, the combination of a container for the material, means communicating

with said container for placing the material under relatively high pressure, a conduit through which the material discharges from said means, check valves preventing flow of the material from said means to said container and from said conduit to said means, and means for relieving the

pressure at the discharge end of said conduit comprising controllable means for rendering said valves open at the same time to thereby reduce the pressure of the material throughout the apparatus to that of the pressure of the material in said container.

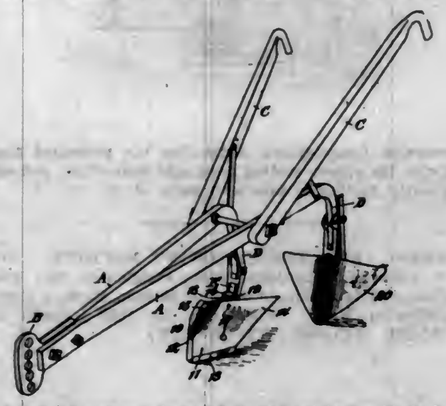


---

1,694,097. CELLULOSE-NITRATE SOLUTION. MARION B. HOPKINS, Elizabeth, and HYYM E. BUC, Roselle, N. J., assignors to Standard Oil Development Company, a Corporation of Delaware. Filed Apr. 3, 1922. Serial No. 549,189. 10 Claims. (Cl. 134—79.)

5. A solution of cellulose nitrate in a liquid mixture containing nitro-compounds of aliphatic hydrocarbons, ethyl alcohol and benzol.

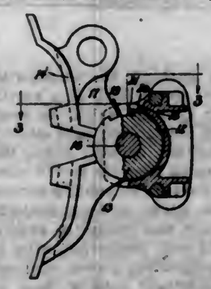
---



1,694,098. INTERNAL-COMBUSTION ENGINE. RICHARD J. LEE, Marrero, La. Filed Oct. 31, 1927. Serial No. 229,960. 2 Claims. (Cl. 123—15.)

1. In an internal combustion engine, a cylinder having an axis describing a closed curve, a longitudinally curved piston movable in the cylinder, the inner side of the cylinder being formed with an annular slot, an arcuate filler piece fixed to the piston and movable in the slot, an arcuate band segment having inwardly directed end extensions one of which is fixed to the piston and the other of which is engaged with the filler piece, a second cylinder having a port communicating with a port of the first cylinder, a flat valve in the first cylinder closable over the ports by the band segment and the second mentioned extensions, a piston movable in the second cylinder, means operatively connecting the pistons to cause the simultaneous rotation of the first piston with the reciprocation of the second piston, means to ignite an explosive mixture in the second cylinder to drive both pistons, means cooperable with the second piston and cylinder for admitting the explosive mixture and compressing the same, said first cylinder having an exhaust port, said means operatively connecting the pistons including a rotor, a connecting rod extending through the slot and connected with the first pieton and the rotor, and gearing and a crank shaft and connecting rod operatively connecting the rotor with the second piston, spokes radiating from the rotor through the slot and engaged with the band segment.

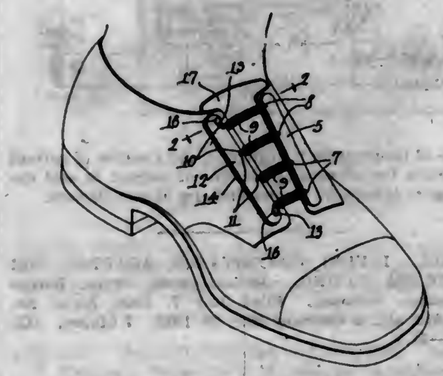
---



1,694,099. CULTIVATOR BLADE OR SOD SCRAPER. DAVE DUNLOP LOW, Mont Helena, Miss. Filed Sept. 14, 1926. Serial No. 135,877. 1 Claim. (Cl. 97—203.)

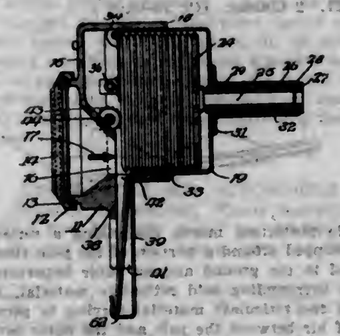
A concavo-convex, diamond-shaped cultivator blade having a substantially vertical curved forward cutting edge; a substantially horizontal cutting edge merging into the said vertical edge and forming a sharp cutting point; a rearwardly pointed moldboard portion; and approximately vertically alined securing means to secure said blade to a cultivator standard; said forward cutting portion of the blade having a forwardly projecting lip at the upper portion thereof and said vertical and horizontal portions of the blade being beveled at the front and rear of the blade to form said cutting edges.

---



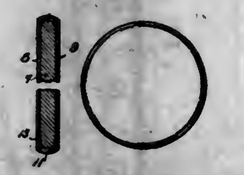
1,694,100. SAFETY APPLIANCE FOR BRAKE BEAMS. CHARLES V. MARQUART, Sandusky, Ohio. Filed Feb. 7, 1928. Serial No. 252,576. 6 Claims. (Cl. 188—230.)

6. A brake head having a hub pivotally connected to a brake beam; and a self-locking connection between the hub and beam to prevent accidental separation.



1,694,101. SHOE FASTENER. WILLIAM RANDALL MCCLURE, Chicago, Ill. Filed May 28, 1928. Serial No. 281,161. 3 Claims. (Cl. 24—73.)

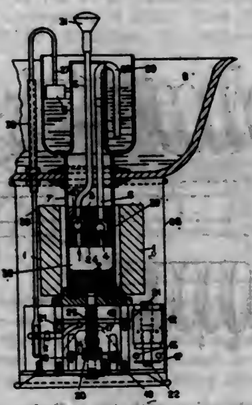
1. A shoe fastener of the class described including a bar having hooks to be positioned in the eyelets of a shoe upper, a bar having hooks positioned in the eyelets at the opposite sides of the shoe upper, coiled springs connected with the first mentioned bar, a movable bar connected with the springs, and means for detachably connecting the second mentioned bar and movable bar.



---

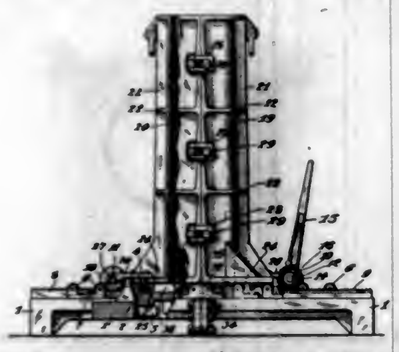
1,694,102. AUTOMOBILE LUBRICATION INDICATOR. LOGAN T. MCMENEMY, Chicago, Ill. Filed Oct. 20, 1920. Serial No. 418,146. 11 Claims. (Cl. 116—114.)

6. A device of the class described, comprising, a casing adapted to hold a series of individual and structurally independent sheets, respectively containing instructions relative to the care of an automobile at predetermined intervals, and means carried by said casing and operably driven in correspondence with the movement of the automobile for consecutively ejecting said sheets individually at predetermined intervals, and for discharging each individual sheet into a receptacle formed on the casing, where it may attract attention and be withdrawn therefrom.



1,694,103. GAME COUNTER AND PROCESS OF MAKING THE SAME. WILLIAM J. MCNALLY, Framingham, Mass., assignor to Dennison Manufacturing Company, Framingham, Mass., a Corporation of Massachusetts. Filed June 24, 1927. Serial No. 201,135. 6 Claims. (Cl. 154—2.)

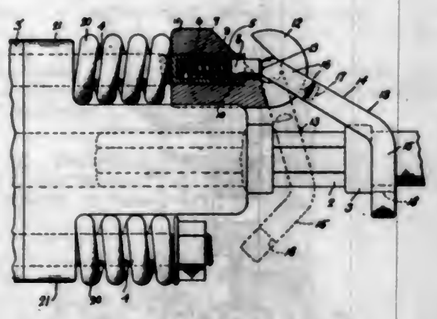
3. A game counter comprising a disc body of sheet material, a paper disc applied upon each surface of the disc body, the peripheries of the disc body and paper discs substantially registering with each other, and a rounded edge of wax-like material, said material extending over the peripheral edges of the paper discs.



---

1,694,104. PUMP FOR ATOMIZERS. REINHOLD MENSCHEL, Berlin, Germany. Filed Nov. 4, 1927, Serial No. 231,128, and in Germany Aug. 17, 1926. 3 Claims. (Cl. 103—26.)

1. In a portable atomizer for rooms and the like, in combination, a receptacle adapted to receive the liquid to be atomised, a cylinder located below this receptacle, a suction-valve arranged in the upper part of this cylinder and a pipe extending from this valve to said receptacle; a delivery valve also arranged in the upper part of the cylinder, and a delivery pipe extending from this valve upwards to above the said receptacle; a piston-forming solenoid-core in the lower part of said cylinder, a solenoid coil encompassing the cylinder on an adequate length, a change-over switch inserted into the circuit of this coil, and means for operating this switch automatically to cause to-and-fro movement of said piston-forming core.

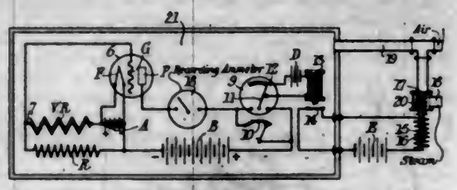


1,694,105. CORE BOX FOR INGOT MOLDS. JOHN EDMUND PERRY, Sharon, Pa., assignor to Valley Mould and Iron Corporation, Sharpsville, Pa., a Corporation of New York. Filed Apr. 2, 1927. Serial No. 180,374. 17 Claims. (Cl. 22—13.)

1. A core box for ramming core bars for ingot molds comprising a base frame, core box side members setting on said base frame and capable of being freely lifted from said base frame, said side members having rectilinear movement on said base frame, and means cooperating with said sides and said base frame to move said sides on said base frame to open and close said core box.

---

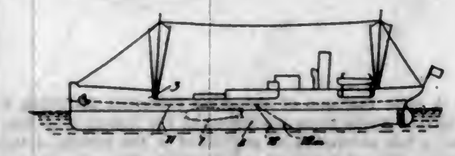
1,694,106. STEEL RETAINER FOR ROCK DRILLS. LEO L. RICHARDSON, Cleveland, Ohio, assignor to The Cleveland Rock Drill Company, Cleveland, Ohio. Filed Apr. 14, 1927. Serial No. 183,645. 5 Claims. (Cl. 121—32.)



1. The combination with the cylinder of a rock drill, of a front head therefor, a drill steel operatively connected with the front head and provided with a collar, side rods for holding the front head and cylinder together, a block upon one side of the side rods, a spring pressed plunger slidably contained in said side rod, a drill steel retainer encircling the drill steel in advance of the collar, said retainer being pivotally engaged with the block and yieldably engaged by the plunger.

---

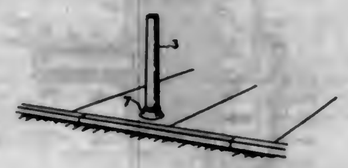
1,694,107. SYSTEM FOR DETECTING AND CONTROLLING HUMIDITY VARIATIONS. WALTER R. STARKING, Rochester, N. Y. Filed Mar. 24, 1926. Serial No. 97,149. 12 Claims. (Cl. 236—44.)



1. Means for detecting variations in the humidity of the atmosphere comprising an electrical circuit including an element, the conductivity of which is a function of the humidity of the surrounding atmosphere, the change of conductivity due to change in humidity being of a magnitude compared to which the change of conductivity due to

change of temperature is negligible, and a source of current and means for detecting variations of current in said circuit due to changes in the conductivity of said element.

---



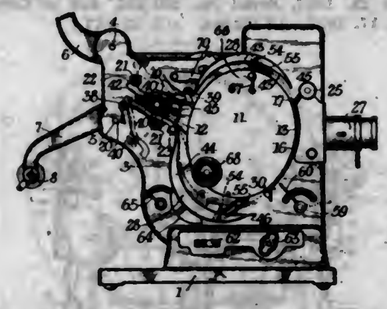
1,694,108. DIVING CONTRIVANCE ADAPTED FOR DEEP-SEA DIVING. JOHANN-GEORG STEIN, Berlin-Halensee, Germany. Filed July 7, 1926, Serial No. 121,012, and in Germany Mar. 20, 1925. 7 Claims. (Cl. 114—51.)

1. A contrivance for deep-sea diving at very great depths comprising in combination a main-vessel having in the interior a shaft open at the lower side and arranged to receive a submarine, a submarine adapted to be accommodated in the said shaft and an electric cable connecting the submarine to the main-vessel.

---

1,694,109. POLE-PROTECTING DEVICE. NICHOLAS JOHN TOCKAR, North Vancouver, British Columbia, Canada, assignor to Viggo Laursen, Vancouver, British Columbia, Canada. Filed July 11, 1927. Serial No. 204,921. 2 Claims. (Cl. 20—100.)

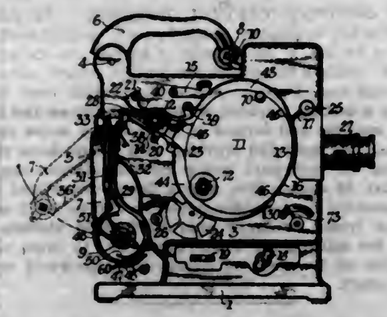
1. Pole protecting means comprising a reticulate material wrapped around a portion of the pole that is to be embedded in the ground and an outer imperforate metal covering surrounding said reticulate material, the interstices of the reticulate material serving to permit circulation of air between the pole and the outer covering.



---

1,694,110. MOTION-PICTURE PROJECTOR. HOWARD C. WELLMAN, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed June 21, 1927. Serial No. 200,455. 3 Claims. (Cl. 88—17.)

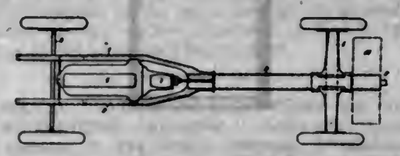
1. In a motion picture projector, means for guiding and automatically directing the lead end of a film through the projector and comprising a frame, series of guide members carried on the front of the frame and comprising a casing fixed on the frame and members outside of said casing and movable to and from said casing and forming tunnels for the purpose specified when near said casing,



and when separated leaving spaces open away from the frame, whereby film can be threaded between them in an edgewise direction, and a unitary control for moving the

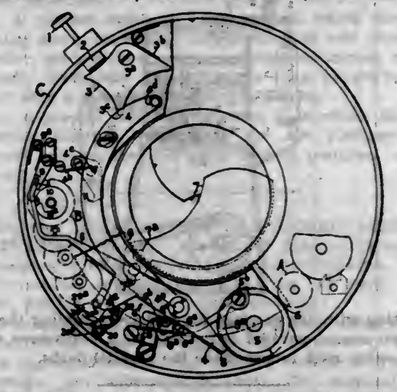
members simultaneously, said control being on the inner sides of said members whereby the open side spaces will be left clear for the edgewise insertion or removal of film.

---



1,694,111. MOTION-PICTURE PROJECTOR. HOWARD C. WELLMAN, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed June 21, 1927. Serial No. 200,456. 20 Claims. (Cl. 242—55.)

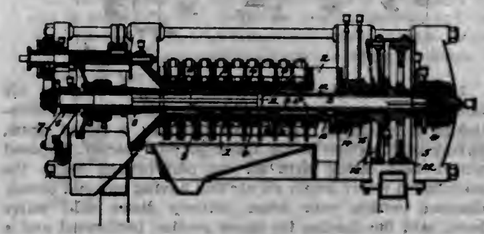
1. In a motion picture apparatus, a frame, an arm having a reel support, two film guiding arms shaped to direct film to and around said reel support, all of said arms being movably connected to the frame whereby they may be moved between positions adjacent the frame and extended positions and a force transmitting connection between at least two of said arms controlling their relative positions.



---

1,694,112. UNDERFRAME FOR AUTOMOBILE VEHICLES. OTHMAR WINDBRONR, Wiener-Neustadt, Austria. Filed Nov. 21, 1927, Serial No. 234,881, and in Austria May 29, 1926. 12 Claims. (Cl. 180—57.)

1. In a motor vehicle, the combination with front and rear axles, of a member secured to said axles comprising a twist restraining tubular member secured adjacent one of its ends to a median point on one of said axles and extending at right angles thereto, a forked member forming longitudinal beams rigidly secured to the other end of said tubular member and secured to the other of said axles, said forked member forming means to support a motor mounting for said vehicle.



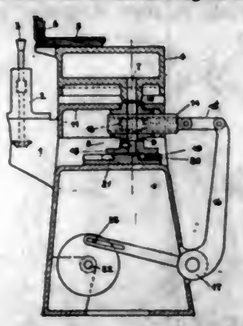
1,694,113. SHUTTER MECHANISM FOR PHOTOGRAPHIC APPARATUS. JACQUES WOLF, Basel, Switzerland. Filed Jan. 21, 1928, Serial No. 248,388, and in Switzerland Jan. 29, 1927. 7 Claims. (Cl. 95—63.)

1. In a shutter mechanism for photographic apparatus, a movable shutter, a driving spring barrel, connecting means between the driving spring barrel and the shutter, an automatically controlled locking lever for said driving spring barrel, a spring barrel delay mechanism arranged to bring said automatically controlled locking lever into locking position when being put under tension and to hold same therein, and means, controlled by said delay mechanism, for allowing said automatically controlled locking lever to release the driving spring barrel on running down of the delay mechanism.

---

1,694,114. PRESS. FREDERICK V. ANDERSON, Lakewood, Ohio, assignor to The V. D. Anderson Company, Cleveland, Ohio, a Corporation of Ohio. Filed July 14, 1926. Serial No. 122,413. 6 Claims. (Cl. 100—48.)

1. A feeding and compression element for a press of the character herein described, comprising a quill-like member having a flight thereon, one end of said member being reduced in diameter; and a sleeve mounted on and secured to said reduced portion, said sleeve being likewise formed with a flight.

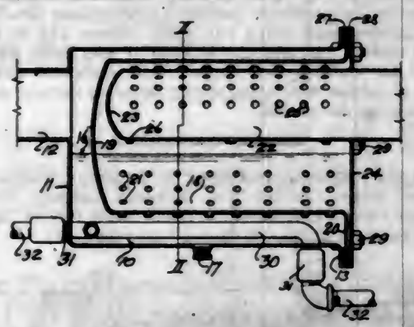


3. A shaft assembly for screw presses comprising in combination a shaft; a pair of bearings for said shaft one of which may be readily dismounted; a thrust abutment on the shaft; a quill rotatable on the shaft independently thereof; at least one pressing element removably mounted on said shaft to turn therewith in thrust engagement with said abutment; and a feeding element removably mounted on said quill and capable of withdrawal over said abutment while the quill and shaft remain assembled.

---

1,694,115. DOVETAILING, COGGING, AND INDENTING MACHINE. PAUL BÖTTCHER, Atona-Bahrenfeld, near Hamburg, Germany. Filed Jan. 21, 1927, Serial No. 162,655, and in Germany Jan. 23, 1926. 16 Claims. (Cl. 144—87.)

1. In a dovetailing machine and the like in combination, cutting means and work supporting means relatively

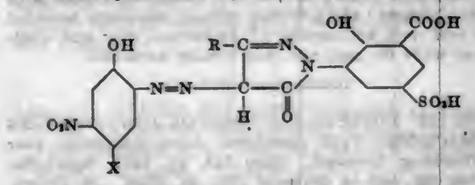


movable with relation to each other, an alternately and successively rectilinearly and oscillatingly movable supporting carriage for one of the moving means and means

coacting with the carriage for positively guiding the same in two spaced parallel paths and in a transverse curved connecting path intermediate the parallel paths.

---

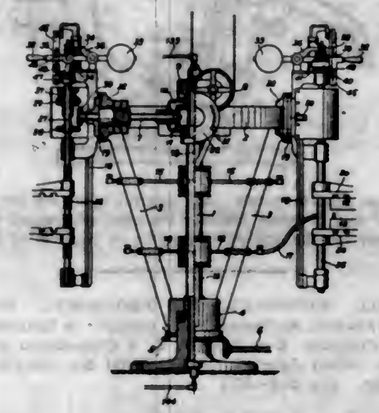
1,694,116. AIR CLEANER. FREDERICK O. CATRON, Memphis, Tenn., assignor of one-half to Nettie P. Catron, Memphis, Tenn. Filed Oct. 10, 1927. Serial No. 225,177. 4 Claims. (Cl. 183—22.)



1. In an air cleaner, a closed casing having an air inlet into the upper portion thereof, and means for establishing a maximum water level therein; a closed drum, having perforations in the lower portion thereof, disposed within said casing with all the perforations below the established water level; an air flue having one end closed, disposed within said drum entirely above said water level, said flue having its upper portion perforated and a minor number of drain perforations in the bottom thereof; and a heating coil disposed within said casing entirely beneath said water level.

---

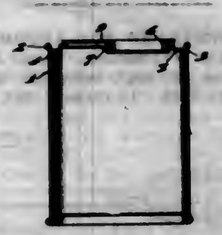
1,694,117. AZO DYESTUFFS AND PROCESS FOR PREPARING THE SAME. HEINZ EICHWEDE, Hochst-on-the-Main, Germany, assignor to Grasselli Dyestuff Corporation, New York, N. Y., a Corporation of Delaware. Filed Dec. 21, 1926, Serial No. 156,259, and in Germany Dec. 23, 1925. 7 Claims. (Cl. 260—87.)



4. As new products, azo dyestuffs of the general formula—

wherein *a* represents hydrogen or chlorine and R stands for—

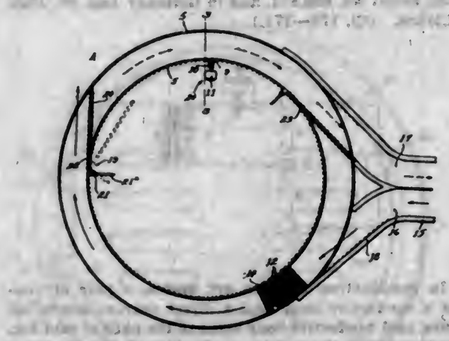
$-CH_3$, —COOH or —COO.alkyl.



1,694,118. CASTING APPARATUS. FRIEDRICH EHRMANN, Stuttgart-Feuerbach, Germany, assignor to Robert Bosch Aktiengesellschaft, Stuttgart, Germany. Filed June 25, 1927, Serial No. 201,456, and in Germany Jan. 17, 1927. 19 Claims. (Cl. 22—77.)

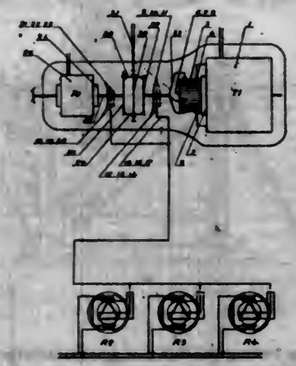
7. In a casting machine, a mold mounted on the frame of the machine and formed of two parts, a screw spindle engaging said mold and provided with a right-hand thread engaging one mold-part and a left-hand thread engaging the other, in combination with a double gear-wheel shiftably mounted on the screw-spindle, a rotary shaft on the machine frame having a gear-wheel fixed thereon and means for shifting the double gear-wheel to cause one or the other of its gears to engage the gear-wheel on the rotary shaft.

---



1,694,119. CAN. JACOB FRANK, Cincinnati, Ohio, assignor to The Frank Tea & Spice Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Nov. 5, 1927. Serial No. 231,363. 2 Claims. (Cl. 221—61.)

1. In a can, a can top provided wtih an oblong pour-out opening and a cover having a dish portion and handle portion, the dished portion providing a friction closure for said pour-out opening, and the cover individually constituting a handled measure bowl and scoop for measured quantity service of the can contents, and insertable into the can through said pour-out opening.



1,694,120. APPARATUS FOR CLEANING AND POLISHING AUTOMOBILES. BEE K. GILLESPIE, Los Angeles, Calif. Filed Aug. 23, 1927. Serial No. 214,936. 11 Claims. (Cl. 104—44.)

1. In an apparatus for use in the cleaning and polishing of automobiles, an annular revoluble horizontal platform, means to permit an automobile to be propelled upon the platform and means in the construction of the platform to permit the automobile to be delivered away from the platform from one of a number of relatively spaced apart exits.

---

1,694,121. ELECTRIC DISTANT-CONTROL DEVICE. ELIE GRANAT, Paris, France, assignor of one-half to Compagnie des Forges et Acieries de la Marine et d'Homecourt, Paris, France, a Company of France. Filed Feb. 8, 1927, Serial No. 166,801, and in France Mar. 3, 1926. 11 Claims. (Cl. 172—239.)

1. Electric control system comprising a transmitter and a receiver disposed at the same transmitting station, other receivers at a certain distance from said transmitting station, a control device adapted to shift the phase of the current sent by the transmitter into all the receivers with reference to the mains feeding the transmitter and means whereby the first mentioned receiver is adapted to keep up the phase shifting obtained.

---

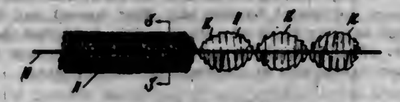
1,694,122. CATALYTIC OXIDATION OF ORGANIC COMPOUNDS. ALPHONS O. JAEGER, Pittsburgh, Pa., assignor to The Selden Company, Pittsburgh, Pa., a Corporation of Delaware. Filed Nov. 24, 1926. Serial No. 150,623. 64 Claims. (Cl. 260—108.)

51. A method of catalytically oxidizing toluol to benzaldehyde and benzoic acid in the vapor phase which comprises causing vapors of toluol admixed with oxygen-containing gases at an elevated temperature to pass over a catalyst containing a zeolite and which preferentially catalyzes the reaction, said catalyst having associated with it a non-alkaline salt of an alkali-forming metal.

1,694,123. CONTACT SULPHURIC-ACID PROCESS. ALPHONS O. JAEGER, Crafton, Pa., assignor to The Selden Company, Pittsburgh, Pa., a Corporation of Delaware. Filed Mar. 10, 1927. Serial No. 174,414. 22 Claims. (Cl. 23—175.)

1. A contact sulphuric acid process which comprises passing gases containing sulphur-dioxide and oxygen at reaction temperatures over a catalyst containing a catalytically ineffective base exchange body physically combined with a catalytically effective diluent.

22. A process according to claim 1, in which the catalytically effective components are not platinum components and the reaction gases contain platinum catalyst poisons.

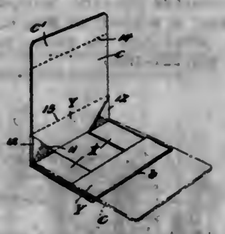


---

1,694,124. PURIFICATION OF BENZOIC ACID AND ITS DERIVATIVES. ALPHONS O. JAEGER, Crafton, Pa., assignor to The Selden Company, Pittsburgh, Pa., a Corporation of Delaware. Filed Oct. 17, 1927. Serial No. 226,820. 6 Claims. (Cl. 260—108.)

1. A method of separating benzoic acids from phthalic acids, which comprises causing the mixture to contact with vapors of organic solvents for benzoic acid at temperatures not substantially above the temperature at which the phthalic acids are transformed into the anhydrides whereby the benzoic acids are sublimed off.

---



1,694,125. DECORATIVE WREATH. WILLIAM G. JOPSON, Williamsport, Pa., assignor to C. A. Reed Company, Williamsport, Pa., a Corporation of Delaware. Filed July 12, 1927. Serial No. 205,194. 5 Claims. (Cl. 41—12.)

1. An ornamental figure comprising a semi-rigid core and a strip of sheet material twisted therearound, said strip having a series of transverse waves therein forming wavy edges, and presenting both its edges to define the surface of the figure.

---

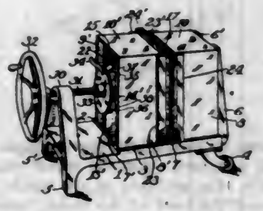
1,694,126. METHOD OF MAKING COLLAPSIBLE BOXES. FRANK M. JOSLIN, Amsterdam, N. Y. Filed Mar. 26, 1927. Serial No. 178,591. 6 Claims. (Cl. 93—49.)

1. The process of producing from a single blank a collapsible box in collapsed condition which consists in folding two opposite edge portions of the blank inwardly and downwardly over the body of the blank, folding the other two opposite edges of the blank inwardly and downwardly upon said first named folded portions, the corners of said blank between the lines of fold forming gussets which are folded down upon said first named folded portions during said second folding operations, and adhesively securing the inner portion only of each of said folded gussets to the adjacent outer surfaces of said first named folded portions.

1,694,127. PROCESS FOR THE MANUFACTURE OF CELLULOSE ETHERS. OTTO LAUCHA, Elberfeld, and EDUARD DÜRR, Elberfeld-Sonnborn, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed Oct. 31, 1927, Serial No. 230,180, and in Germany Nov. 8, 1926. 2 Claims. (Cl. 260—152.)

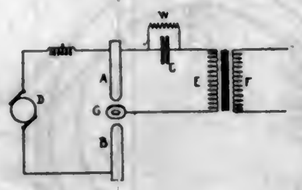
1. In the process for the manufacture of cellulose ethers, the step which comprises the removal of water during the etherification and the addition of caustic alkalies to the alkylating mixture.

1,694,128. CATTLE GUARD. FRED LOCKETT, Vancouver, British Columbia, Canada. Filed Apr. 25, 1927, Serial No. 186,495, and in Canada May 25, 1926. 2 Claims. (Cl. 39—20.)



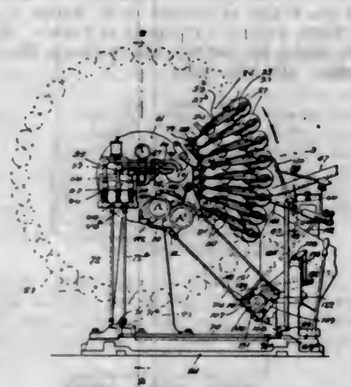
1. A cattle guard for railways comprising a frame including an end plate having an arcuate inner curve, a platform having one end in substantial contact with said curve and operatively connected at the other end to a normally horizontal barrier said first named end being adapted to move about an axis as weight is applied thereto and to effect the raising of the barrier, said axis being common to the axis of the curve of the end plate.

1,694,129. MANUFACTURE OF ARTIFICIAL LEATHER. PHILIP MAGNUS, Leichhardt, near Sydney, New South Wales, Australia. Filed Feb. 12, 1926, Serial No. 87,978, and in Australia Mar. 2, 1925. 2 Claims. (Cl. 106—3.)



1. An artificial leather consisting of cleaned scrap leather incorporated in a mixture of glue, glycerine, boiled linseed oil, carbolic oil, ammonium bichromate and calcium chloride.

1,694,130. METHOD OF AND MEANS FOR MAKING MOLDS. CHARLES MARTIN MALLORY, Chattanooga, Tenn., assignor of one-half to Earl C. Mallory, Indianapolis, Ind. Filed July 28, 1926. Serial No. 125,544. 15 Claims. (Cl. 22—198.)

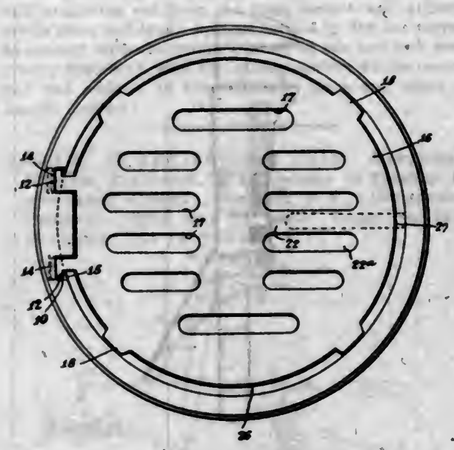


1. The method of making sand molds which consists in compactly pressing sand to opposite sides of a pattern and simultaneously discarding surplusage sand from the back of the molds.

1,694,131. ARRANGEMENT FOR USE IN TELEPHONY. EMIL MAYER, Berlin, Germany, assignor to Gesellschaft für Drahtlose Telegraphie m. b. H. Hallesches, Berlin, Germany, a Corporation of Germany. Filed July 21, 1923, Serial No. 652,871, and in Germany Aug. 30, 1922. 4 Claims. (Cl. 179—171.)

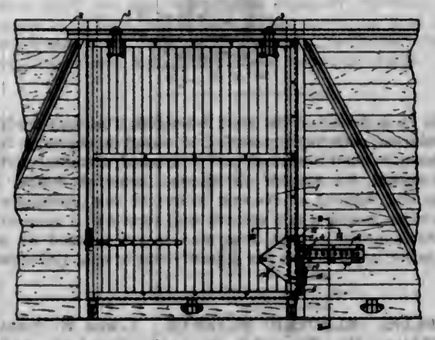
1. In combination with an arc device, a pair of electrodes a conductive body and a direct current source all in series, said conductive body being in the path of said arc, means for varying the resistance of said path in accordance with sound energy and means controlled thereby for affecting said conductive body.

1,694,132. CAN-TESTING MACHINE. CHARLES D. McDONALD, Chicago, Ill., assignor to McDonald Machine Co., Chicago, Ill., a Corporation of Illinois. Filed June 6, 1927. Serial No. 196,935. 18 Claims. (Cl. 73—51.)



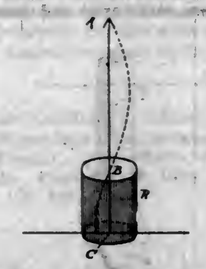
1. In a can testing machine, a pneumatically operated selector comprising a pair of balanced air gauge springs arranged to be connected respectively to a can to be tested and to an associated air balancing tank, motion transmitting means for transmitting motion from a prime mover to a can separating mechanism, and normally inactive means, operated by said air gauge springs under the influence of differential pressure therein, and forming an operative connection in said motion transmitting means.

1,694,133. MANHOLE COVER. EDWARD T. McHUGH, deceased, Holyoke, Mass., by Agnes J. McHugh, executrix, Holyoke, Mass. Filed Apr. 15, 1922. Serial No. 553,244. 4 Claims. (Cl. 94—34.)



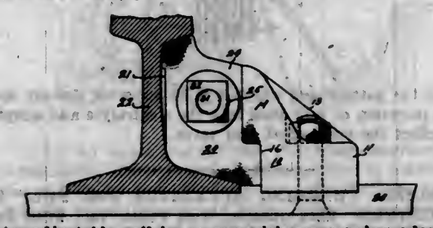
1. A manhole cover consisting of the combination with a base ring of a cover, the base ring having recesses spaced from each other on one side thereof, each of said recesses having an underlying support and an overlying stop lug of less horizontal extent than the length of the support, said base ring also having a pendant and inwardly projecting lug on the side opposite to the recesses, the cover having hinge lugs disposed in the recesses under the stop lugs thereof and supported on the said supports, the cover also having a weighted latch pivoted thereto and adapted to engage the pendant lug, the cover having a pair of

hand holes spaced apart from each other by an imperforate portion overlying said latch and normally concealing the same from view.



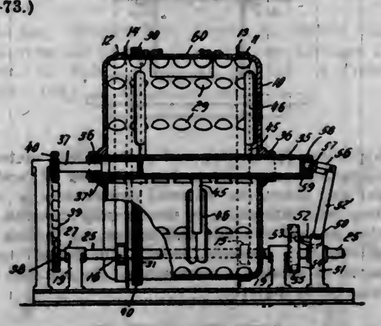
1,694,134. DOOR OPENING AND CLOSING MECHANISM. JOHN McMULLEN, Buffalo, N. Y. Filed July 2, 1925. Serial No. 41,230. 8 Claims. (Cl. 268—6.)

1. The combination with a sliding door, of a rack bar adjacent the rear of the door opening, a lever slidably pivoted upon the rear edge of said door and swingable at right angles thereto for engaging with said rack bar, said lever having a locking prong adapted for engagement with said rack bar, and means for locking said lever to said door with said prong in locking engagement with said rack bar.



1,694,135. ANTENNA FOR ELECTRIC WAVE TRANSMISSION. ALEXANDER MEISSNER, Berlin, Germany, assignor to Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany, a Corporation of Germany. Filed July 15, 1925, Serial No. 43,683, and in Germany July 25, 1924. 9 Claims. (Cl. 250—33.)

1. An antenna for electric wave transmission through space, comprising an aerial conductor, and a conductive body located adjacent only the lower portion thereof and having a height equal to substantially one-third of the



height of said aerial, said conductive body being coupled with the aerial to reinforce the energy transmitted therefrom.

1,694,136. RAIL BRACE. JAMES C. MOCK, Detroit, Mich. Filed Sept. 1, 1927. Serial No. 216,802. 1 Claim. (Cl. 238—292.)

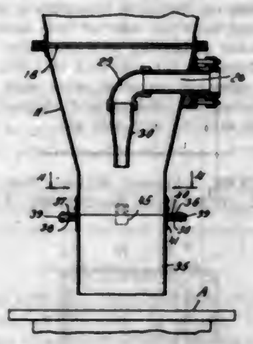
An adjustable rail brace comprising a member adapted to be secured to a tie plate and having angularly arranged parallel shoulders on its outer face with a perforated lug therebetween and near one end of said shoulders, a rail contacting member consisting of a channeled block whose outer face conforms to the side of a rail and whose edges are angularly arranged to mate with said shoulders, a slotted web closing one end of said channel, and a bolt passing through said lug and said web.

1,694,137. MIXER. ALBERT MOYER, New York, N. Y. Filed June 12, 1928. Serial No. 284,866. 7 Claims. (Cl. 83—73.)

1. A mixer comprising a rotatable receptacle, a rotatable member extending into the receptacle, stirrers mounted on said member, and means for shifting said rotatable member axially during its rotation.

1,694,138. HYDROMETER. HERMAN NEUWIRTH, Brooklyn, N. Y., assignor to Testrite Instrument Co., New York, N. Y., a Firm composed of Herman Neuwirth and Jacob Bernstein. Filed June 30, 1926. Serial No. 119,666. 9 Claims. (Cl. 265—45.)

1. A hydrometer of the class described comprising a barrel and means for drawing liquid thereinto, a stem at-

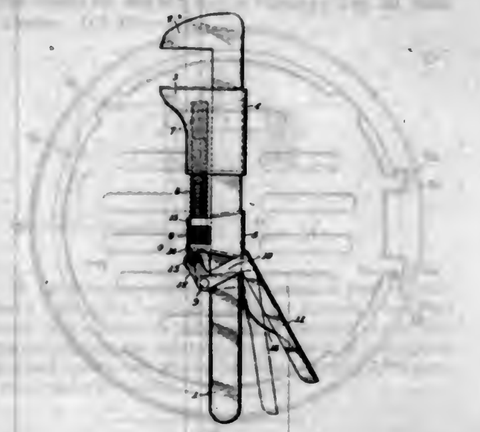


tached to one end of the barrel adapted to be inserted into the electrolyte of a battery, a valve for shutting off the flow of liquid from said barrel and means co-operating

with the battery and adapted to be operated thereby upon the insertion of said stem into the electrolyte and adapted to effect the opening of said valve.

---

1,694,139. CHARGING APPARATUS FOR PULP DIGESTERS. ELIS OLSSON, West Point, Va. Filed June 30, 1927. Serial No. 202,504. 6 Claims. (Cl. 92—7.)



1. Apparatus for feeding and packing pulp material in a pulp-digester comprising a chute adapted to receive the material and direct the material downwardly, a conduit extending into said chute, a downwardly directed nozzle connected to said conduit, and means for forcing liquor at relatively high pressure through said conduit and nozzle, thereby to accelerate movement of the material and to pack same in the digester.

---

1,694,140. WRENCH. WALTER I. O'NEILL, New York, N. Y. Filed Dec. 20, 1924. Serial No. 757,106. 1 Claim. (Cl. 81—87.)

A wrench comprising a shank having a jaw at one end and a handle at the other end, a jaw movably mounted upon the shank to cooperate with the first mentioned jaw, means for adjusting the second mentioned jaw comprising screw threads formed in the said second mentioned jaw and a screw extending parallel to the shank and engaging the said screw threads, means for moving the adjusting means and second mentioned jaw as a unit comprising a pivot provided on the shank, a lever mounted upon the pivot and having one arm extended in proximity to the handle and other arm in proximity to the adjusting means, and a roller carried by the last named arm

in position to actuate the adjusting means, the parts being arranged so that in operative position, the roller and pivot are in a line nearly parallel to the screw.

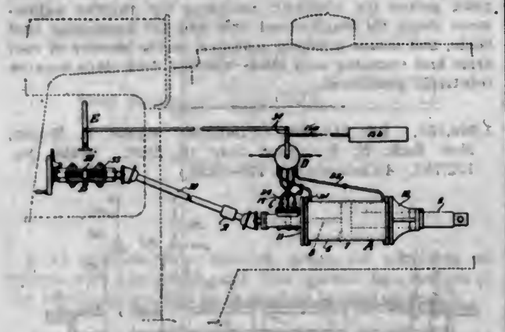
---

1,694,141. ELECTRIC RECEPTACLE. JAMES W. PHELPS, Chicago, Ill. Filed May 24, 1924, Serial No. 715,556. Renewed Feb. 3, 1927. 10 Claims. (Cl. 200—115.5.)

1. In a device of the kind described, a unitary body of insulation material presenting a socket upstanding from a base, a shell terminal and a central terminal within the socket, an electric thermostat mounted within the base and secured at one end to one of said terminals by the same means which secures said terminal, a connection plate mounted on the base, and means carried by said plate for contact with the opposite end of said thermostat.

---

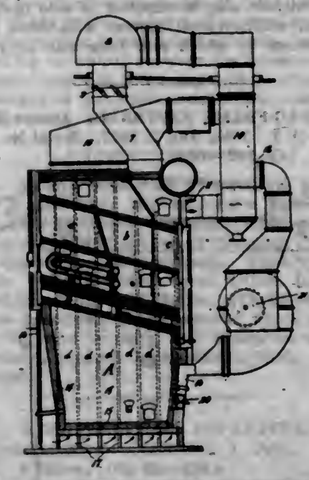
1,694,142. ELECTRIC FLASHER. JAMES W. PHELPS, Chicago, Ill. Filed Feb. 17, 1926. Serial No. 88,969. 1 Claim. (Cl. 200—115.5.)



A device of the kind described, comprising a metallic tubular shell formed into a socket at one end and a plug at the other, a flat bar of insulation material fixed within

the shell and extending centrally through the shell from the outer end of the plug to the base of the socket and presenting spaces on each side of the flat bar, bendable center contacts for the plug and socket carried by the bar and projecting out from the ends thereof, and a thermostatic make and break element carried by the bar normally in contact with the center contact at one end and permanently connected with the center contact at the opposite end and adapted to intermittently make and break said normal contact.

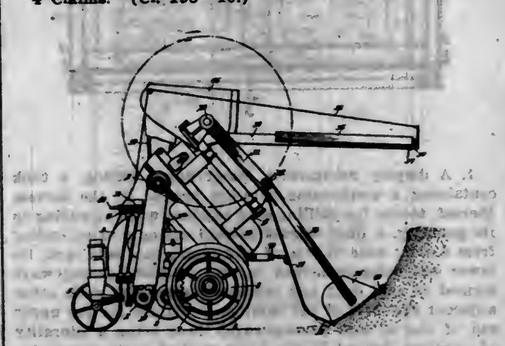
---



1,694,143. POWER REVERSE GEAR. MONTAGUE H. ROBERTS, Englewood, N. J., assignor to Franklin Railway Supply Company, New York, N. Y., a Corporation of Delaware. Filed May 23, 1925. Serial No. 32,307. 10 Claims. (Cl. 121—38.)

1. The combination with a pressure fluid operated power reverse gear having a servo-governor control valve for normally operating the gear, of a manually operated control valve for operating the gear independently of said servo-governor valve, and a common source of pressure fluid for the valves, said manually operated valve when in normal position admitting operating fluid to the servo-governor valve, and when in operating position cutting off said fluid from the servo-governor valve.

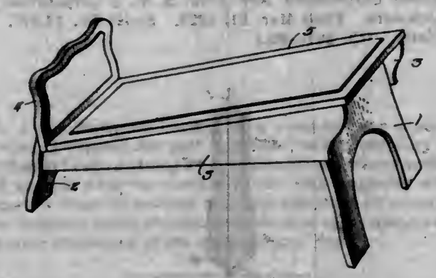
---



1,694,144. FURNACE. FAY H. ROSENCRANTS, Bushey, England, assignor to International Combustion Engineering Corporation, a Corporation of Delaware. Filed Nov. 13, 1925. Serial No. 68,783. 5 Claims. (Cl. 110—56.)

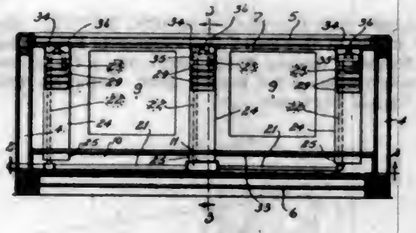
1. In combination, a boiler furnace having hollow rear, side and bottom walls, an offtake, a waste gas air heater, an air inlet in an upper part of the back wall, and breaching communicating with the upper part of the side walls together with means whereby air for combustion is caused to pass downwardly through the rear wall into the bottom wall upwardly through the side walls and through the air heater to the combustion space of the furnace.

---



1,694,145. MECHANICAL LOADING DEVICE. GEORGE F. ROYER, Wilkes-Barre, Pa., assignor to Royer Foundry & Machine Company, Wilkes-Barre, Pa., a Corporation of Pennsylvania. Filed Apr. 28, 1926. Serial No. 105,184. 4 Claims. (Cl. 198—10.)

1. In an apparatus of the character described, the combination of a truck, a shaft supported in bearings on the truck and provided with two substantially parallel radially projecting arms, a scoop pivotally supported between said arms and projecting beyond the body of the truck, a guide arm projecting beyond the truck and over the scoop, means for rotating the shaft, whereby the pivotal support of the scoop will travel in a circular path, a track member extending longitudinally of the guide arm and pivotally connected thereto adjacent the free end of the arm, said track member extending into the path of the scoop as the latter is carried upward by rotation of the shaft, and means on the scoop engaging said track and causing the scoop to travel longitudinally thereof away from the truck during a portion of the circular movement of the pivotal support for the scoop.

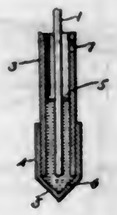


---

1,694,146. FOOTSTOOL AND LEG REST. DENNIS S. SATTLER and FREDERICK H. MCCUEN, Chicago, Ill. Filed Jan. 16, 1928. Serial No. 247,161. 3 Claims. (Cl. 155—169.)

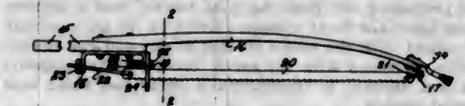
1. A foot stool and leg rest comprising a pair of leg members of unequal height inclined upwardly toward each other; a pair of side rails connecting the upper portions of the two leg members, the side rails having their upper edges in a common plane inclined upwardly away from the shorter leg member; a top seated on the upper edges of the two side rails, and a foot-board clamped between the upper portion of the shorter leg member and the adjacent end of the said top.

**1,694,147. DISPLAY REFRIGERATOR.** ALFRED H. SIEBERT, St. Louis, Mo., assignor to St. Louis Butchers' & Hotel Supply Co., St. Louis, Mo., a Corporation of Missouri. Filed Dec. 13, 1926. Serial No. 154,891. 4 Claims. (Cl. 62—104.)



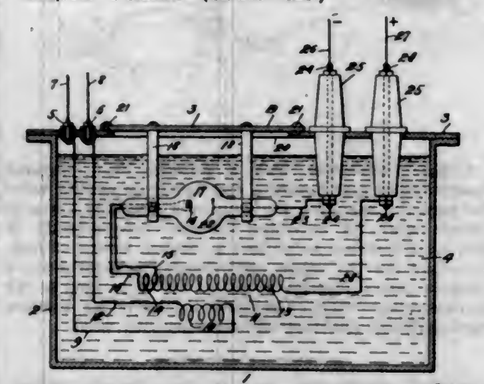
1. A display refrigerator comprising a casing, a tank containing a nonfreezing solution located in the bottom thereof, means for chilling said solution without adding to its quantity, a duct located in said casing and extending from a point near the top of said casing into said tank, its lower end being immersed in said solution, passageways formed in said duct and communicating with each other adjacent the level of the solution, a closure for the upper end of one of said passageways, there being a plurality of openings formed in the front wall of said passage below the closure, the other passageway being open at the top, means for circulating and forcibly spraying said nonfreezing solution downward vertically through said last mentioned passageway whereby air is drawn therein from the top of the casing and chilled and then forced upward in the closed passage, said chilled air being redischarged into the casing adjacent its top.

**1,694,148. DRY LUBRICATION OF TEXTILE MACHINES.** JOHN SPALDING, Stamford, Conn., assignor to Albert T. Otto & Sons, New York, N. Y., a Corporation of New York. Filed Aug. 19, 1926. Serial No. 130,354. 3 Claims. (Cl. 87—9.)



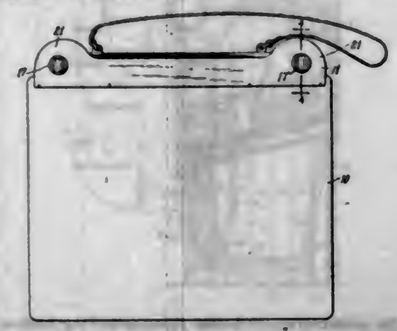
1. The method of lubricating bobbins and other parts of textile machines subject to contact with the textile product, which consists in applying thereto a metal salt of a fatty acid in a dry powder form insoluble in water.

**1,694,149. ELECTRICAL RESISTANCE.** CHARLES E. VAWTER, Philadelphia, Pa., assignor to Dubilier Condenser Corporation, New York, N. Y., a Corporation of Delaware. Filed Mar. 21, 1925. Serial No. 17,377. 1 Claim. (Cl. 201—63.)



A resistance member comprising an element of low electrical conductivity, an insulating sleeve to encase said element, and caps of conductive material to close the extremities of said sleeve, with a metallic binding material in the ends of said sleeve and engaging said ends in said caps to hold the caps in place, the sleeve being perforated between said caps.

**1,694,150. SAW.** GEORGE C. VOSS, Exira, Iowa, assignor of one-third to John H. Rendleman and one-third to Roy R. Wiard, Exira, Iowa. Filed July 21, 1927. Serial No. 207,444. 4 Claims. (Cl. 145—33.)

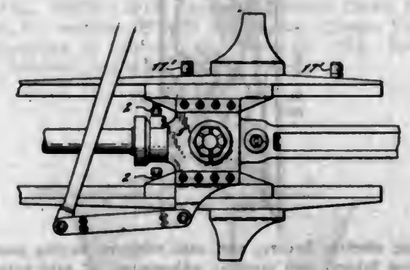


1. A saw comprising a relatively long handle, a spring bow on and extending longitudinally from one end of said handle, a U-shaped yoke having arms of unequal length mounted with the shorter of said yoke arms toward the free end of said bow on said handle adjacent and opposite to the fixed end of said bow, a flexible, toothed blade between the free end of said bow and the longer arm of said yoke, means for pivotally mounting for angular adjustment about its longitudinal axis and for tensioning said blade, and means pivotally mounted on the shorter of said arms and engaging said blade whereby said blade may be rotatively positioned.

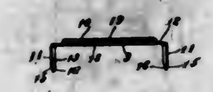
**1,694,151. RECTIFYING SYSTEM.** HARRY F. WAITE, New York, N. Y. Filed July 16, 1926. Serial No. 122,791. 4 Claims. (Cl. 175—326.)

1. A high tension current rectifying device, comprising a tank with oil therein, a high tension step up transformer in said oil, a hot cathode valve tube in said oil, wires connecting said transformer and tube, so that a low potential alternating current may be supplied to said device and a high tension, unidirectional current withdrawn from the same and means by which said tube may be separately removed.

**1,694,152. BAG-FRAME FASTENER.** JULIUS WARBURG, Brooklyn, N. Y. Filed Aug. 9, 1927. Serial No. 211,672. 5 Claims. (Cl. 292—70.)



1. The combination with two separable rigid frame pieces; of latching means therefor, comprising cooperating

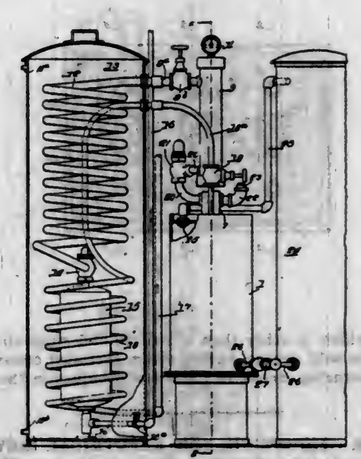


fastening elements held by the respective pieces against withdrawal therefrom and adapted to hold said pieces securely to each other, and means associated with said frame pieces whereby to rock the same and effect disengagement of the fastening elements and detachment of the one frame piece from the other.

**1,694,153. METHOD OF LUBRICATION AND APPARATUS THEREFOR.** LEWIS S. WATRES, Scranton, Pa., assignor to National Graphite Lubrication Company, Wilmington, Del., a Corporation of Delaware. Filed Nov. 15, 1923. Serial No. 674,813. 5 Claims. (Cl. 184—45.)

2. In combination a bearing, means for supplying oil thereto and a graphite stick held against one surface of the bearing in position to be reached by said oil supply.

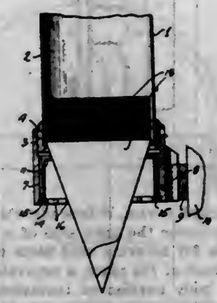
**1,694,154. WINDOW-SHADE FIXTURE.** JOHN W. WESTENDORF, Baltimore, Md. Filed Aug. 23, 1926. Serial No. 130,863. 2 Claims. (Cl. 156—24.)



1. In a window-shade fixture the combination with a guide-member having out-turned horizontal top and bottom guide-flanges and back-turned opposite ends each back-turned end of the guide-member being provided with sharpened edges for entering woodwork at right angles to the outer face of the guide-member and between said ends the guide-member having a spring-leaf extending parallel with and projecting outwardly between the horizontal top and bottom guide-flanges, of a bracket-member slidably engaging the flanges of the guide member and itself engaged by the said spring leaf.

**1,694,155. BASE-EXCHANGE COMPOUND AND PROCESS OF MAKING IT.** HAROLD JOSEPH WHEATON, Lower Walton, near Warrington, England, assignor, by mesne assignments, to American Doucil Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Nov. 3, 1921, Serial No. 512,631, and in Great Britain July 5, 1921. Renewed May 4, 1928. 4 Claims. (Cl. 23—113.)

4. A new base-exchanging compound which is insoluble in water, of great porosity, and absorptive power, and which contains between $Al_2O_3$, $4Na_2O$, $8SiO_2$, and $Al_2O_3$, $6Na_2O$, $14SiO_2$.

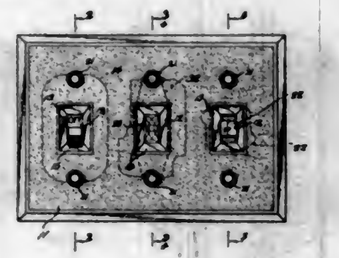


**1,694,156. REFRIGERATING APPARATUS.** ZEBULON WIRT, Omaha, Nebr. Filed Nov. 7, 1923. Serial No. 673,350. 1 Claim. (Cl. 62—116.)

A device of the kind described comprising a generator absorber having an inner container for the refrigerant material, means for heating said inner container, an outer shell, means for circulating water between the inner container and the outer shell, and a rectifier connected with said inner container, a flue for the heater extending

up through the inner container and a connection between the inner container and said flue, said connection being provided with a relief valve.

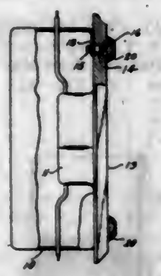
**1,694,157. CONICAL CUP DISPENSER.** CESARE BARBIERI, New York, N. Y., assignor to The Vortex Mfg. Co., a Corporation of Illinois. Filed May 6, 1926. Serial No. 107,011. 5 Claims. (Cl. 312—48.)



1. A cup dispenser comprising a container for a stack of cups, a support for said container, and a plurality of notched flat cup retaining rings removably positioned within said support with the notches in one ring staggered with respect to those in another ring and affording an arrangement through which the cups are adapted to be withdrawn to insure dispensing of the cups one at a time.

**1,694,158. COMBINATION ELECTRIC WALL FITTING.** TONJES A. BOTH, Stratford, Conn., assignor to The Connecticut Electric Manufacturing Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Aug. 7, 1925. Serial No. 48,912. 8 Claims. (Cl. 177—311.)

1. A finishing or cover plate of a size for a standard multiple gang wall outlet box provided with a plurality of spaced openings each of a size to take a standard tumbler switch lever and each opening have associated with it a

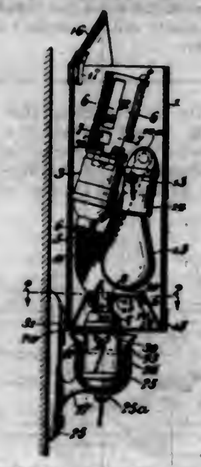


pair of openings for standard fixture securing screws, a plurality of interchangeable electrical devices at the back of the plate having parts fitting the said openings and at least

one of which is other than a switch, and supporting elements for said devices having screw threaded openings to receive securing screws in the screw openings in the plate.

---

1,694,159. MOUNTING FOR ELECTRICAL DEVICES. TONJES A. BOTH, Stratford, Conn., assignor to The Connecticut Electric Manufacturing Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Mar. 24, 1924. Serial No. 701,414. 6 Claims. (Cl. 247—23.)



1. In an electrical device, a face plate of insulating material adapted to cover the open side of a wall outlet box, a securing means for securing said plate to a support and exposed at the front of the plate, a separate finishing member including a body portion of insulating material, and means to removably secure said member to said securing means, said body portion being of a size to cover said securing means.

2. In an electrical device, an electrically dead front face plate adapted to cover the open side of a wall outlet box, an electrically conducting securing means for said plate having connection with said box and exposed at the front of the plate, a separate finishing member including a body portion of insulating material, means to removably secure said member to said securing means, said body being of a size to completely cover and insulate said securing means.

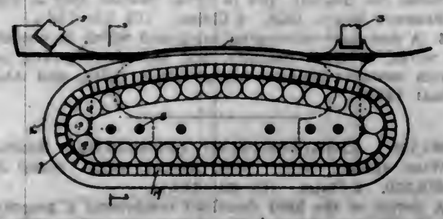
---

1,694,160. EMERGENCY CONVECTION HEATER. WILLIAM A. BROWN, Philadelphia, Pa. Filed Feb. 16, 1928. Serial No. 254,718. 15 Claims. (Cl. 219—34.)

1. In a quick demountable heating and lighting lamp, a flue, an electric heating unit surrounded by said flue, an electric light bulb mounted in proximity to said flue, a support for said flue, heating unit and bulb, said heating unit and bulb being so assembled and controlled as to give heat or light or both simultaneously or independently, means for attaching said support and its adjuncts to any

existing electric fixture, and said support having means to allow lateral and circular adjustment of said attaching means on said support.

---

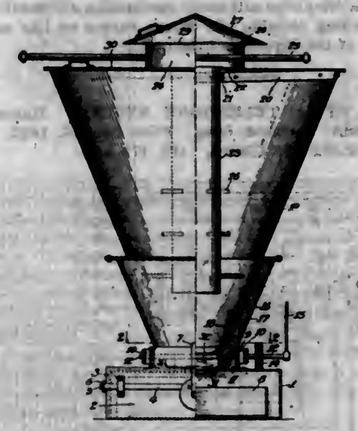


1,694,161. INFANTILE NAPKIN. MAURICE BUDWIG and JOSEPH N. SCHNEIDER, Cleveland, Ohio. Filed Mar. 3, 1926. Serial No. 91,935. 2 Claims. (Cl. 128—284.)

1. An infantile diaper having an inner moisture absorbing pad formed, for example, of cellulose wood fibers and having straight side edges converging toward the central region of the pad and an outer envelope formed of coarse mesh gauze comprising a single piece of fabric of considerably greater length than the pad length, and folded to present an increasing width greater than the pad width, the end portions of said gauze piece being refolded over the pad ends with the fold creases spaced a substantial distance from the end edges of the pad, whereby the pad is limited to the crotch region of the infant and only the gauze portion of the diaper contacts with the stomach, back and hips of the infant when the diaper is applied.

---

1,694,162. TRACK-LAYING SKATE. FRANK BUITENKAMP, San Francisco, Calif. Filed Aug. 24, 1926. Serial No. 131,159. 1 Claim. (Cl. 208—178.)

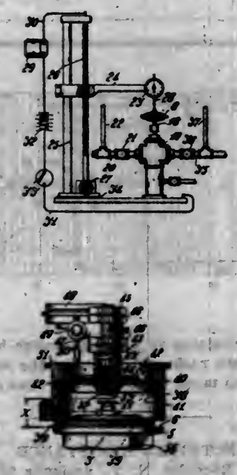


A roller skate comprising a body portion adapted to be attached to the foot of the skater, means for so attaching

the body portion, brackets extending below the body portion, a runway for ball bearings supported by the brackets, which runway is provided with a circuitous path for the ball bearings, ball bearings mounted on the runway in said path, a flat endless band surrounding and engaging the outer sides of the ball bearings so as to be rotatable around the runway in contact with the bearings, a plurality of separate blocks fastened to said band so as to abut one another on their opposed faces on upper and lower runs of the band and a rubber tread member associated with said blocks, which tread member is in endless form and is fastened to the outer ends of said blocks.

---

1,694,163. SMOKE BOX. JOHN ELLSWORTH COVEY, Chicago, Ill., assignor to Swift & Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 10, 1928. Serial No. 260,613. 5 Claims. (Cl. 90—2.)

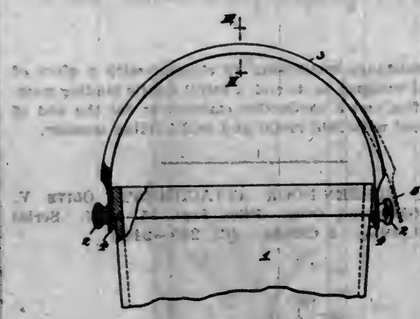


5. A smoke box of the class described, comprising a combustion chamber and a fuel hopper extending upwardly from said combustion chamber and flaring outwardly towards its upper end, a cover for said fuel hopper, a smoke tube rotatably mounted in said hopper and extending from the combustion chamber through said cover, a hood at the outlet end of said smoke tube, fuel agitator arms extending from the side of said smoke tube, and means for rotating said smoke tube.

---

1,694,164. METHOD AND APPARATUS FOR SETTING THERMOSTATS. DAVID N. CROSTHWAIT, Jr., Marshalltown, Iowa, assignor to C. A. Dunham Company, Marshalltown, Iowa, a Corporation of Iowa. Original application filed Sept. 30, 1925, Serial No. 59,704. Divided and this application filed Sept. 10, 1927. Serial No. 218,846. 7 Claims. (Cl. 73—151.)

1. The method of adjusting the setting of an expansion thermostat in the member by which it is supported when in service, which consists in first determining the maximum expansion which the thermostat will have under operating conditions, then assembling the thermostat with its supporting member and measuring its opening when contracted, and adjusting the setting to make the opening when contracted equal the previously ascertained expansion.

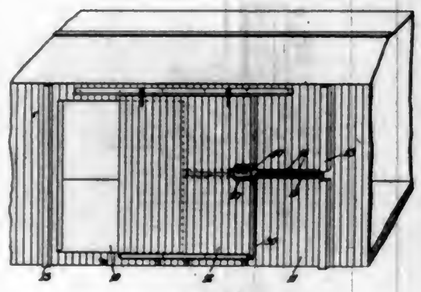


5. An apparatus for measuring the opening of a thermostat in a thermostatic trap, comprising a casing having an open side adapted to receive the assembled thermostat, valve and trap-top, the trap top being engaged by the open end of the casing with the thermostat and valve projecting into the casing, a plunger mounted in the casing in position to be moved into engagement with the valve,

a dial indicator carried by the plunger, and connections between the dial indicator and the casing, whereby the dial indicator will register the movement of the plunger.

---

1,694,165. BAIL FOR PAILS AND THE LIKE. ROBERT R. DEBACHER, New York, N. Y. Filed Oct. 14, 1927. Serial No. 226,132. 3 Claims. (Cl. 220—94.)



1. An article of the character described having, in transverse cross sectional form, less thickness at its edges than in the portion intermediate its edges, and having a substantially flat surface and flattened end portions, said end portions being of a thickness less than half that of the main body portion, of a width appreciably greater than the width of the main body portion and provided with apertures greater in diameter than the width of said main body portion, the apertures being adapted to engage projections on a receptacle, and the said article being composed of a resilient material such that it will retain itself in engagement with a receptacle by virtue of such resiliency.

---

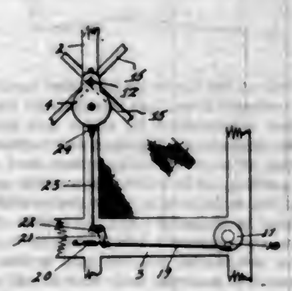
1,694,166. CAR-DOOR-MOVING MECHANISM. WILLIAM W. DOTY, Great Kills, N. Y. Filed Dec. 15, 1921, Serial No. 522,538. Renewed Sept. 27, 1928. 9 Claims. (Cl. 268—44.)

1. In a door operator, the combination with a wall having a door opening, a door mounted over same, a rack set

in the wall with its teeth at right angles thereto, and a pivoted normally vertically depending and bodily movable lever carried by the door, having a nose movable toward

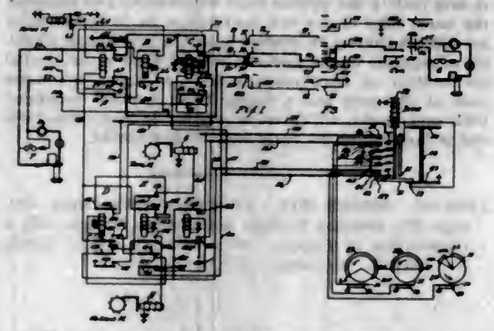
the door to a position to directly engage between two of the teeth of said rack and laterally the said lever being also oscillable to move the door when thus engaged.

---



1,694,167. ELECTRICAL RESISTANCE. WILLIAM DUBILIER, New Rochelle, N. Y., assignor to Dubilier Condenser Corporation, New York, N. Y., a Corporation of Delaware. Filed Mar. 26, 1926. Serial No. 96,098. 4 Claims. (Cl. 201—76.)

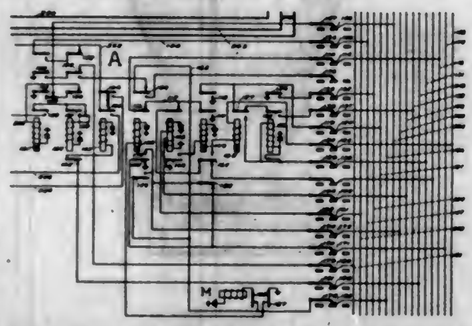
1. A resistance comprising an element with a piece of thin metal wrapped on its end, a spiral elastic binding member therefor, and a conductive embedment for the end of said element with said metal and said binding member.



---

1,694,168. SCREEN-DOOR ATTACHMENT. OLIVE V. DUSA, Gladstone, Oreg. Filed Sept. 15, 1927. Serial No. 219,719½. 3 Claims. (Cl. 230—244.)

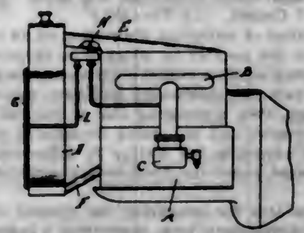
1. The combination in a screen door attachment, of arms having fan like members attached thereto, said arms being attached to a shaft mounted on a case attached to a rigid cross member of the screen door, motor means attached to the case adapted for winding, gear means connecting the motor means with the shaft carrying the arms, and means for the releasing of the gear for one cycle of operation all for the purpose as specified and described.



1,694,169. CALL REGISTER FOR TELEPHONE SYSTEMS. HERBERT M. FRIENDLY, Chicago, Ill. Filed Oct. 27, 1920, Serial No. 420,018. Renewed June 25, 1926. 78 Claims. (Cl. 179—9.)

1. In a telephone call meter mechanism automatic means for recording variable toll charge values on like calls, regardless of the duration of the call.

---

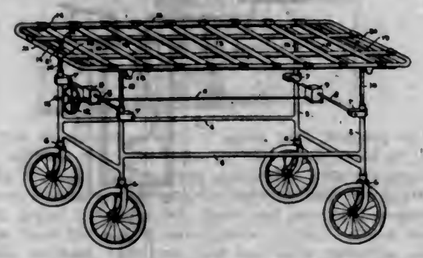


1,694,170. TELEPHONE SYSTEM. HERBERT M. FRIENDLY, Portland, Oreg. Filed Dec. 10, 1921. Serial No. 522,842. 53 Claims. (Cl. 179—9.)

1. In a telephone system, a call meter specific to a calling line, switch mechanism for establishing talking connections, a common means for operating the meter to record the charge for a call, means whereby said common means can only operate one meter at a time, means automatically operative responsive to the completion of recording the charge on said meter for disconnecting said common means from the meter, and means for then connecting said common means with another call meter in lieu of first said meter and for operating last said meter while the first said call continues.

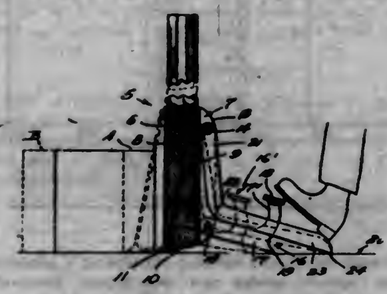
---

1,694,171. TEMPERATURE-CONTROLLING APPARATUS FOR INTERNAL-COMBUSTION ENGINES. FREDERICK M. FURBER, Revere, Mass. Filed May 27, 1916. Serial No. 100,411. 3 Claims. (Cl. 123—174.)



1. The combination of an internal combustion engine, a cooling system therefor including a radiator, means for controlling the flow of air through the radiator, said means comprising a shutter device associated with the radiator, means directly responsive to suction produced in the engine cylinders for holding said shutter device closed until the engine reaches a predetermined temperature, and a thermostatic device for rendering inoperative, the means responsive to suction when the engine reaches a predetermined temperature.

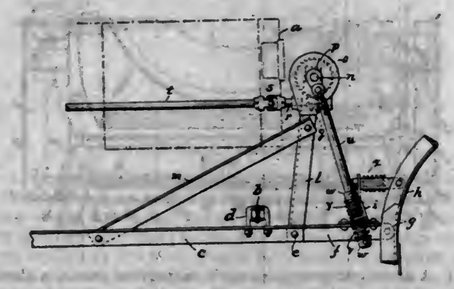
---



1,694,172. ADJUSTABLE WHEEL STRETCHER. GUSTAVE A. GALLOWITZ, New York, N. Y., assignor to The Kny-Scheerer Corporation of America, New York, N. Y., a Corporation of New York. Filed Apr. 1, 1926. Serial No. 99,080. 1 Claim. (Cl. 296—20.)

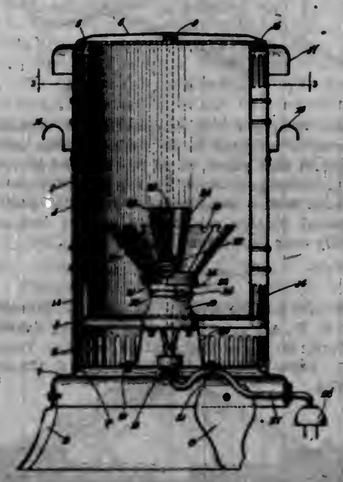
In a stretcher the combination of a rectangular frame having four vertical legs, a bicycle wheel rotatably mounted on the lower end of each of said legs, a gear box rigidly secured to the head of each of said legs, a cross shaft running through and between each end pair of gear boxes, a gear box mounted in the middle of each of said cross shafts so that said shafts run therethrough, a longitudinal shaft running through said middle gear boxes having a wheel and handle at one end, vertical rack bars housed in said vertical legs and passing through said leg gear boxes, a subframe mounted on said rack bars and a removable top member mounted on said subframe.

---



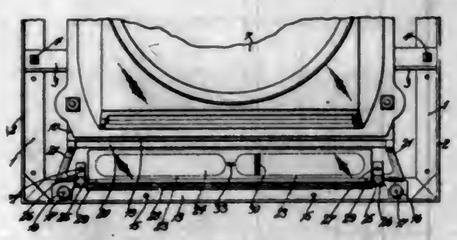
1,694,173. WAREHOUSE TOOL. JOSEPH O. GORANSON, Seattle, Wash. Filed Aug. 11, 1927. Serial No. 212,188. 4 Claims. (Cl. 254—131.)

1. In a tool of the character described, the combination of a lever, of a bifurcated dog fulcrumed to the lever in proximity to its lower end and provided with floor penetrating points rigid with the respective bifurcations of the dog, a tread piece rigid with both of said bifurcations, and a second dog fulcrumed to the lever at an elevation above that of the fulcrum of the first named dog, said second dog extending downwardly from its fulcrum and thence rearwardly through the space between the bifurcations of the first dog and terminating to the rear of the latter in a floor-penetrating point.



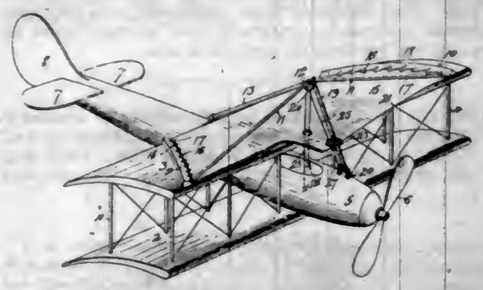
1,694,174. SNOWPLOW. RAYMOND C. GREENWOOD, Kennett Square, Pa., assignor to American Road Machinery Company, Inc., Kennett Square, Pa., a Corporation of Delaware. Filed July 16, 1926. Serial No. 122,839. 2 Claims. (Cl. 37—42.)

1. A main frame for a snow plow comprising two side members, means for connecting the side members to a tractor, an auxiliary frame having two side members pivotally connected at their rear ends to the side members of the main frame, a gusset plate connected to each of the side members of the auxiliary frame, a cross-bar connected to the gusset plates and extending beyond the side bars of the auxiliary frame, said cross-bars having openings therethrough adjacent their ends, means for pivotally connecting a snow plow to the other ends of the side bars of the auxiliary frame, auxiliary frame supporting rods extending through the cross-bars, and means on the main frame for raising and lowering the supporting rods.



---

1,694,175. PORTABLE ELECTRIC HEATER. GEORGE D. HAUSER, Utica, N. Y., assignor to Utica Products, Inc., Utica, N. Y., a Corporation of New York. Filed June 24, 1925. Serial No. 39,229. 5 Claims. (Cl. 126—90.)

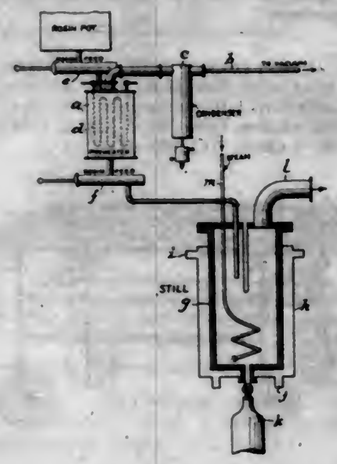


1. A heater comprising a body having an outer lateral wall, an inner lateral wall having a heating space within the same and a perforated top wall, said lateral walls being spaced apart to provide an air space between them, and said body being provided with means for admitting separate bodies of air laterally to the lower parts of said air space and said heating space respectively, and to permit the escape of air from the upper part of said air space, said spaces being closed at the bottoms thereof and open to the atmosphere through said perforated top wall, an upwardly directed reflector within said body adjacent the lower part thereof, and a heating element within said reflector.

1,694,176. STOVE. HERMAN HERRENBRUCK, Belleville, Ill., assignor to Orbon Stove Co., Belleville, Ill., a Corporation of Delaware. Filed June 14, 1928. Serial No. 285,244. 17 Claims. (Cl. 126—67.)

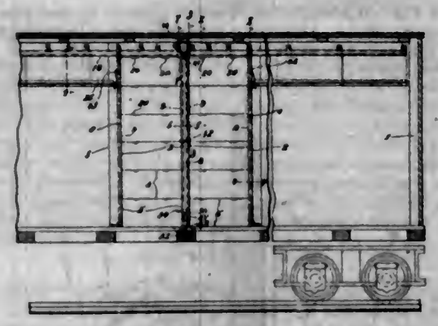
1. A stove comprising an open supporting frame, a stove supported by said frame, a casing enclosing said stove and having a door opening in the front side thereof, and a door controlling the rising of air through said frame at the front of said stove.

1,694,177. AEROPLANE. SIGMUND HORN and MAXIMILIAN ZIPKES, New York, N. Y. Filed Aug. 8, 1927. Serial No. 211,350. 8 Claims. (Cl. 244—12.)



1. In an aeroplane the combination of a plane and a pliable member adapted to be folded closely against the top surface of said plane, or to be extended in position to form an air passage between the top of said plane and said member, said pliable member when in folded position having a central portion adapted to project forwardly and downwardly over the leading edge of said plane.

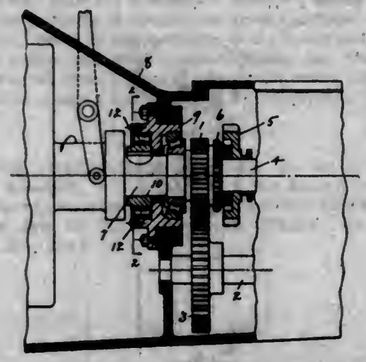
1,694,178. HEATING UNIT. WALTER E. HUDSON, Amagansett, N. Y., assignor to Hudson Heating Systems, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 5, 1924. Serial No. 697,030. 5 Claims. (Cl. 201—67.)



4. An electric heating unit comprising, in combination, a tube of refractory material, end caps for said tube of considerably larger exterior diameter than said tube and provided with radial passageways connecting with the interior of said tube, a coil of high resistance wire wound on said tube, and a protecting shell of refractory material enveloping said coil, said shell being of less exterior diameter than said caps.

1,694,179. PROCESS OF REFINING WOOD ROSIN. GEORGE E. JENKS, Bacchus, Utah, assignor to Hercules Powder Company, Wilmington, Del., a Corporation of Delaware. Filed May 15, 1923. Serial No. 639,064. 3 Claims. (Cl. 203—4.)

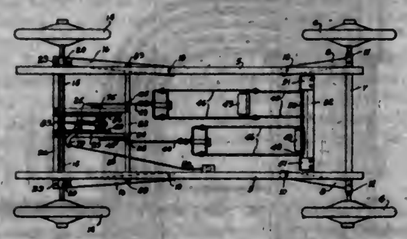
1. The process of refining wood rosin which comprises vaporizing the same under a high vacuum by the concurrent action of two heating media one of which is exteriorly applied and the other of which is superheated steam injected into the body of the rosin, and condensing a portion of the distillate at a temperature not less than about 350° F.



1,694,180. GRAIN DOOR FOR BOX CARS. NOAH JOHNSON and LOUIS H. STRASSER, St. Louis, Mo. Filed July 14, 1927. Serial No. 205,616. 1 Claim. (Cl. 20—34.)

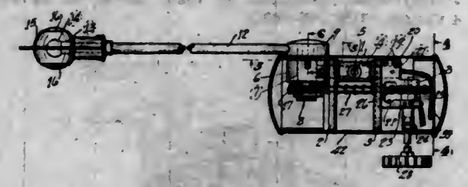
A closure for a door opening comprising a plurality of sections, upright guides and longitudinal substantially horizontal supporting ways extending across the top of the door opening and to one side thereof, whereby the sections may be arranged in vertical series to close the door opening and supported in longitudinal arrangement at the sides of the door opening, the sections having hooks for engaging the supporting ways, there being a plurality of hooks on each section, the corresponding hooks on each section forming a plurality of series, the longitudinal ways having slots to correspond to and pass each series of hooks, the hooks in each series being differently arranged from the hooks of the other series whereby the hooks of each series are enabled to bridge and be supported across the slots corresponding to the other series.

1,694,181. BRAKING DEVICE FOR VEHICLES. ABRAHAM I. KAPLON, Brunswick, Md. Filed Dec. 9, 1926. Serial No. 153,707. 3 Claims. (Cl. 192—4.)



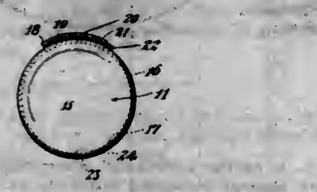
3. The combination with a speed gear housing of a shaft adapted to be connected to the drive wheel of the vehicle, a clutch shaft having connection with the source of power changing speed gearing between said two shafts, a disk keyed to the clutch shaft and having a number of cam faces thereon, a collar bolted to the housing, and a roller between each cam face and said collar to prevent backward movement of the car when in forward gear.

1,694,182. METHOD OF REMOVING SHELLS FROM NUTS. JOHN F. KOHLER, Larchmont Manor, N. Y. Filed Nov. 5, 1925. Serial No. 67,004. 3 Claims. (Cl. 146—219.)



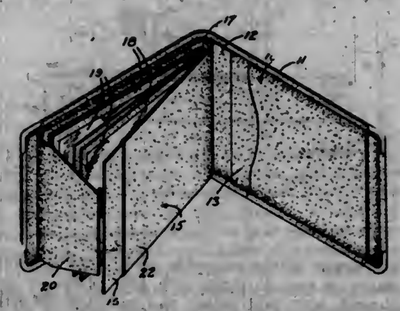
1. The method of shelling a nut which consists of cutting or sawing a plurality of lines around the nut, said cuts being made in planes parallel with the axis of the nut and in removing the separate sections freed by the lines of cutting.

1,694,183. JUVENILE VEHICLE. HERMAN L. KRAFFT, Cleveland, Ohio, assignor to Murray Ohio Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Jan. 8, 1927. Serial No. 159,794. 30 Claims. (Cl. 208—34.)



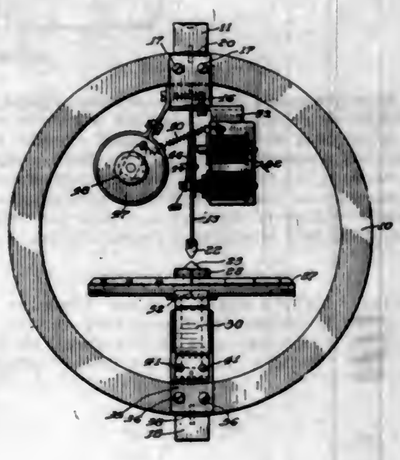
1. A child's vehicle comprising a frame, front and rear wheels therefor, two of the wheels having a resilient floating connection with the frame, driving mechanism for one of the floating wheels comprising a crank shaft operatively connected to such wheel and having a resilient floating connection with the frame and pedal lever mechanism with connections for rotating the shaft.

1,694,184. AUTOMOBILE TRAFFIC SIGNAL. WILLIAM J. KRAMER, St. Louis, Mo. Filed June 6, 1927. Serial No. 196,836. 3 Claims. (Cl. 116—51.)



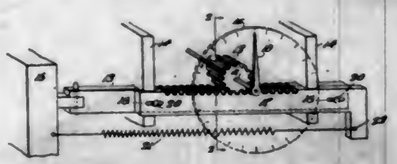
1. In an automobile signaling attachment, a bored block, a head having an end face in opposed relation to an end face of the block and having a reduced extension fitting for rotatory movement in the bore of the block, a signaling arm carried by the head, means for selectively effecting rotary actuations of the head, and co-operating means on the opposed end faces of the head and block for yieldingly retaining the head in rotarily actuated positions.

1,694,185. VANITY CASE. HARRY LEBERMAN, New York, N. Y., assignor to Groove Lock Co. Inc., New York, N. Y., a Corporation of New York. Filed Nov. 17, 1927. Serial No. 233,777. 3 Claims (Cl. 220—31.)



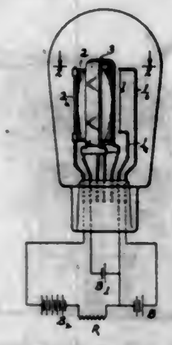
3. In a vanity case or the like, a pair of substantially circular case sections having opposed open sides, one of said case sections having a circumferential flange adapted to fit within the other section, said flange being provided with a bayonet slot, and the other case section being provided with an inwardly extending pin to engage in said slot, hinge lugs carried by the case sections in diametrically opposed relation to said slot and pin, and a curved hinge pintle connecting said case sections through the hinge lugs, said hinge pintle permitting relative rotation of the case sections about their common axes and being yieldable to permit opening and closing of the case.

1,694,186. COMBINATION BILL FOLD AND PASS CASE. CHARLES L'ENFANT, New York, N. Y. Filed Feb. 24, 1927. Serial No. 170,470. 8 Claims. (Cl. 150—35.)



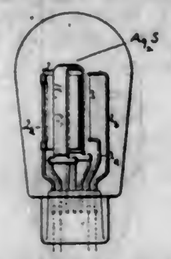
1. In combination with a bill fold having a pair of opposed sections, a pass case removably secured therein to one of the sections, and means carried by the pass case for engaging the other section to hold the bill fold in closed position about the pass case.

1,694,187. TESTING INSTRUMENT. ROBERT B. LEWIS, Philadelphia, Pa., assignor to Tinius Olsen Testing Machine Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Feb. 20, 1926. Serial No. 89,780. 4 Claims. (Cl. 265—63.)



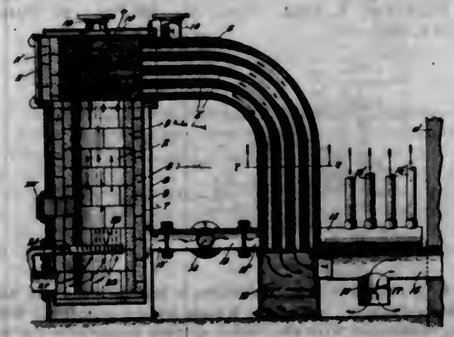
1. A testing instrument comprising a ring, a vibratory element suspended internally of said ring, an adjustable contact mounted in said ring opposite to and aligned with said element, and electrically operated means for vibrating said element whereby touching of said element by said contact is audible and indicates a distortion of said ring proportional to the amount of the external force.

1,694,188. MECHANISM FOR PREVENTING LOST MOTION. ROBERT B. LEWIS, Philadelphia, Pa., assignor to Tinius Olsen Testing Machine Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 26, 1928. Serial No. 249,577. 2 Claims. (Cl. 74—27.)



1. In a device of the character stated, the combination of a pinion, a rack in mesh with said pinion, a second rack in mesh with said pinion and mounted for relative movement with respect to said first rack, guides for respectively supporting said racks, a bar connected to one end of said first rack, and a spring stretched between said bar and said second rack whereby lost motion between said pinion and racks is prevented.

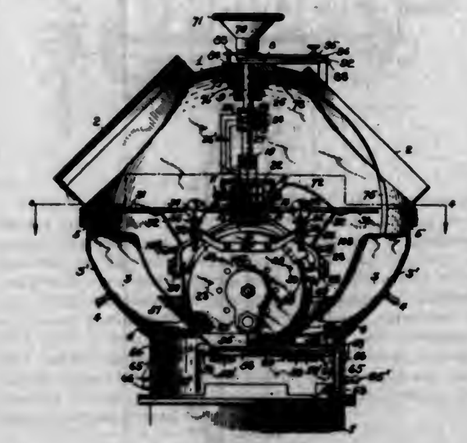
1,694,189. PHOTOSENSITIVE CELL. SAMUEL RUBEN, New York, N. Y. Filed Dec. 6, 1927. Serial No. 238,217. 10 Claims. (Cl. 250—27.5.)



10. In an electrical discharge tube, a cathode, an anode and a control element consisting of cuprous oxide.

1,694,190. PHOTO-ELECTRIC CELL. SAMUEL RUBEN, New York, N. Y. Continuation of application Serial No. 238,217, filed Dec. 6, 1927. This application filed Oct. 18, 1928. Serial No. 313,369. 4 Claims. (Cl. 250—27.5.)

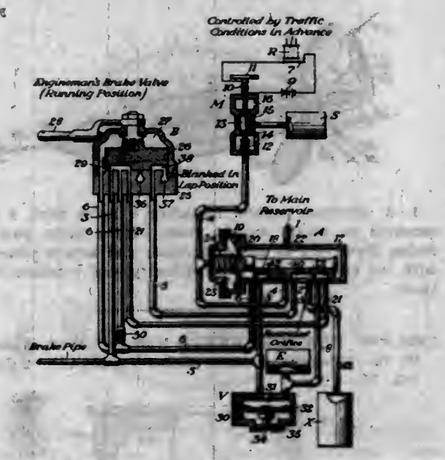
4. In a photo-electric cell a control element comprising a metal body having formed on its surface a photo-sensitive compound of the oxygen series of the sixth periodic group.



1,694,191. HEATING APPARATUS. WILLIAM H. SOMMER, Peoria, Ill. Filed Apr. 10, 1926. Serial No. 101,130. 6 Claims. (Cl. 122—1.)

6. In a hot-water heating apparatus, a vertical boiler having a combustion chamber and a water jacket, a water-containing flue chamber connected to the top of the boiler and extending horizontally therefrom and being curved downwardly and terminating in spaced relation to the boiler to one side thereof, flues in the flue chamber communicating with the combustion chamber, means to conduct the products of combustion from the lower ends of the flues, means to supply water to the lower ends of the water jacket and flue chamber, means for conducting heated water from the upper ends of the water jacket and flue chamber and a fuel burner in the combustion chamber.

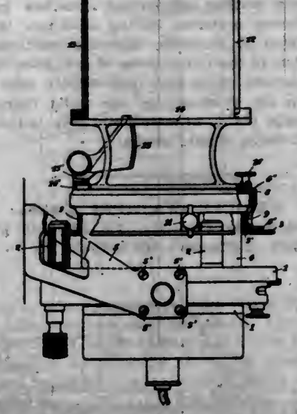
1,694,192. GYROSCOPIC COMPASS. ELMER A. SPERRY, Jr., Brooklyn, N. Y., assignor to The Sperry Gyroscope Company, Brooklyn, N. Y., a Corporation of New York. Filed Jan. 22, 1920. Serial No. 353,212. 22 Claims. (Cl. 33—226.)



2. In gyroscopic apparatus, the combination with a gyroscope of a jet thereon adapted to discharge a fluid for exerting a torque on the gyroscope, a member positioned adjacent the jet for varying the torque exerted thereby, and means for adjusting said member in either of a plurality of planes with respect to said jet.

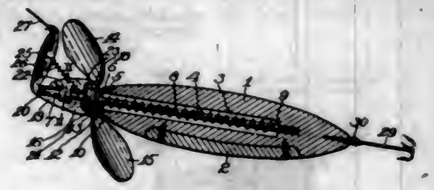
5. In a gyroscopic apparatus, the combination with a gyro rotor and a journal casing therefor, of a frame in which said casing is mounted for oscillation about a horizontal axis, a locking sleeve adapted to engage with said casing to centralize the casing about said axis, and means including a rotatable member for moving said sleeve to locking position.

22. In gyroscopic apparatus, a gyroscope pivoted for movement about axes at right angles to each other, there being indicating means on the gyroscope for showing the direction in which precession will occur about one axis when torque is applied in a certain direction about the other axis.



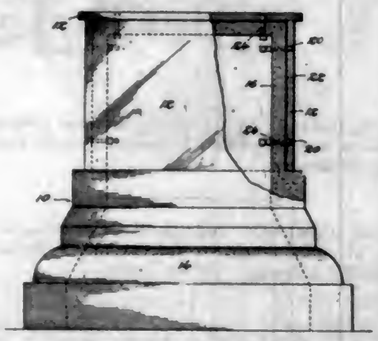
1,694,193. FLUID-PRESSURE BRAKING APPARATUS. CLARENCE W. SPROULL, Edgewood Borough, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Oct. 9, 1926. Serial No. 140,451. 6 Claims. (Cl. 303—18.)

3. In combination with automatic fluid pressure braking apparatus comprising an equalizing reservoir normally charged with fluid pressure, to approximately 70 pounds per square inch, an automatic brake application valve, and



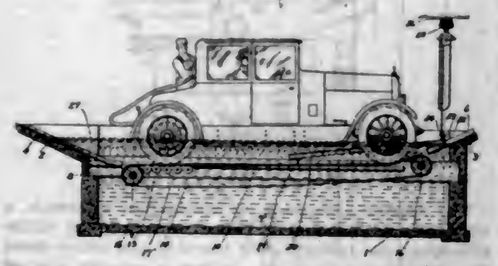
means controlled by said valve for at times reducing the pressure in said reservoir to approximately 55 pounds in at least 25 seconds.

1,694,194. COMPASS. EUGÈNE VION, Paris, France. Filed June 17, 1927, Serial No. 199,488, and in France Jan. 28, 1927. 3 Claims. (Cl. 33—222.)



1. A compass comprising, in combination, a binnacle, a collar on said binnacle, a compass bowl mounted within said collar, and rotatable with regard to said collar, about the geometrical axis of the compass, a covering ring on said bowl, a frame mounted on said covering ring and provided with standards, an alidade mounted on said frame, a reflecting and magnifying member mounted on said bowl and between said standards, means for attaching said frame to said covering ring, and a locking member by which the said bowl, the reflecting and magnifying member and the alidade are rendered immovable with regard to said collar.

1,694,195. VARIABLE DIRECTION CONTROL FOR TRAILING OBJECTS. THOMAS L. WATTS, Indianapolis, Ind. Filed Jan. 25, 1928. Serial No. 249,443. 14 Claims. (Cl. 43—46.)



1. A direction control including a main part, a blade mounted to rotate on the front of the main part and facing forwardly at an inclination, and means associated with the main part to intermittently stop rotation of the blade.

1,694,196. GRAVE MARKER. HARRY C. WAY, Wheeling, W. Va. Filed Oct. 6, 1927. Serial No. 224,404. 2 Claims. (Cl. 72—7.2.)

1. A grave marker comprising a hollow base member of cementitious material having openings in the walls thereof, plates of frangible material positioned in overlying relation to the outer faces of said base member, and fastening devices extending from within said base member through the openings in the walls thereof and anchored to said plates at points entirely within the plane of the outer faces of said plates.

1,694,197. VEHICLE WASHING TANK. MINER D. WOODLING, Kansas City, Mo. Filed Oct. 10, 1923. Serial No. 667,636. 2 Claims. (Cl. 141—1.)

1. A car washing apparatus comprising a tank, means for guiding a motor vehicle into the tank, channeled rails forming a trackway supported by the tank above the bottom thereof with the channels facing upwardly, endless belts having their upper laps traveling in the channels in the rails, idlers at one end of the tank on which the upper laps of the belts rest, and a vehicle-lifting mechanism at the opposite end of the tank.

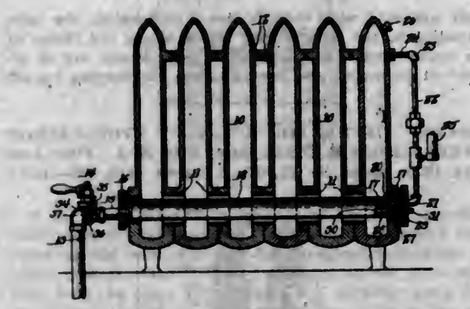
1,694,198. AUTOMOBILE FENDER GUARD. GEORGE W. YANSS, Bridgeport, Conn., assignor to American Chain Company, Inc., a Corporation of New York. Filed Sept. 15, 1925. Serial No. 56,416. 6 Claims. (Cl. 293—55.)

1. An automobile fender-guard comprising as elements a pair of main impact bars superimposed in vertical relation; a support for said impact bars comprising a bracket adapted to be attached to an automobile and having connecting means for the inner ends of said impact bars, and also having an extension part provided with connecting means for the outer ends of said impact bars; said bracket being adapted to support also an auxiliary impact bar.

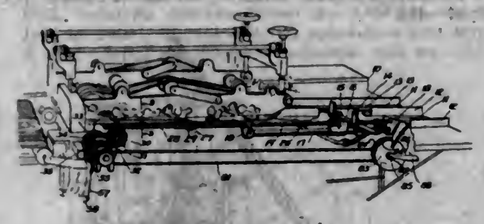
1,694,199. CELLAR DRAINER. HARRY GROSS, Brooklyn, N. Y. Filed Oct. 29, 1927. Serial No. 229,783. 4 Claims. (Cl. 103—26.)

1. A pumping device comprising a pump mounted in a frame, an electric motor connected to the said pump and adapted to operate the same, a snap switch having a spring and adapted to control the said motor, a switch rod connected to the said snap switch and adapted to operate the same, and a vertically movable float slidable with respect to said switch rod and adapted to operate the said switch rod at pre-determined points of the vertical movement of the said float, said float being located in said frame and slidable therein.

1,694,200. TOOTHPICK HOLDER. THOMAS BARTHOLOMEW, Columbus, Ohio. Filed Sept. 17, 1926. Serial No. 136,055. 3 Claims. (Cl. 312—77.)

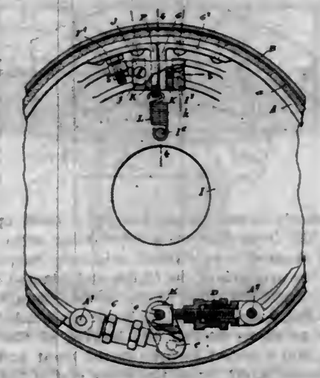


1. A holder for toothpicks or similar articles consisting of a pick supporting member and a gravity actuated pick



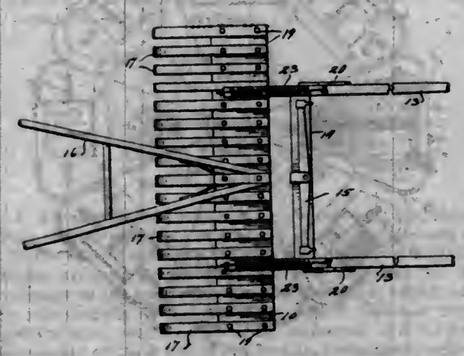
confining member having a sliding cover and telescoping on the supporting member, said cover cooperating with the confining member to form an opening at the top for the removal of the picks and means limiting the upward movement but permitting removal of the confining member as respects the supporting member.

1,694,201. CONVERTIBLE STEAM AND HOT-WATER RADIATOR. LOUIS G. BOSTEDO, Oak Park, Ill. Filed Aug. 15, 1927. Serial No. 212,856. 4 Claims. (Cl. 237—72.)



1. In a radiator of the type described, the combination with a plurality of vertical hollow sections having communicating openings in their lower portions, of bushings mounted in the outer openings of the end sections, a condenser pipe extending through the intermediate openings with clearance and telescopically engaged at its ends with said bushings to accommodate endwise expansion of said pipe, a steam by-pass pipe between said condenser pipe and the upper portion of one of said sections, a steam supply pipe communicating with said condenser pipe through one of said bushings, and means for draining the radiator through said condenser pipe.

1,694,202. INTERMITTENT FEEDING DEVICE. EDWARD M. BRACKETT and FRED M. BRACKETT, Topeka, Kans. Filed May 20, 1926. Serial No. 110,579. 17 Claims. (Cl. 74—4.)

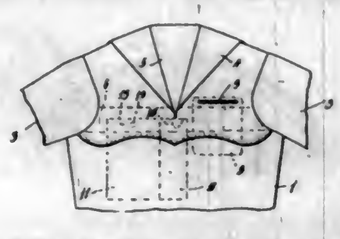


1. In a device of the character described, a rotatable member for moving a reciprocable member in one direction, means for intermittently rotating said rotatable member, comprising a constantly rotating member, a clutch device adapted to connect said constantly rotating member with said rotatable member, means actuating said clutch to connect said rotatable member with said constantly rotating member, means actuating said clutch to disconnect said members and means for adjusting said first mentioned actuating means to vary the interval between the actuations of said clutch to connect said rotatable member with the constantly rotating member.

1,694,203. BRAKE MECHANISM. FRANÇOIS BRAULT and ANDRÉ CORDIER, Levallois-Perret, France. Filed Oct. 12, 1927, Serial No. 225,773, and in France Oct. 13, 1926. 3 Claims. (Cl. 188—78.)

3. In brake mechanism of the type described, a construction including a hollow drum, a circular split band, means for separating the ends of the band, a flexible projection at the middle of the band and fixed means co-operating with the flexible projection to restrain its movement in either direction substantially as and for the purposes set forth.

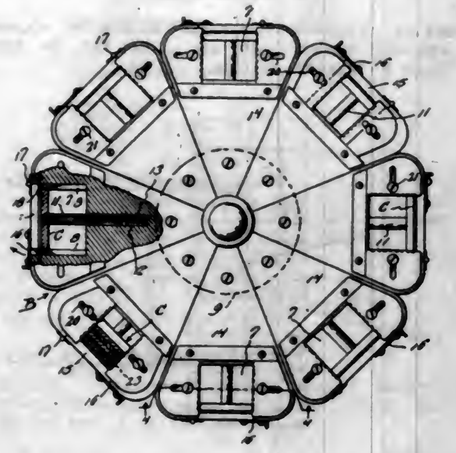
1,694,204. CROSS-ROW COTTON BLOCKER. SAMUEL FONTAINE BROWN, Heth, Ark. Filed Oct. 29, 1927. Serial No. 229,722. 1 Claim. (Cl. 97—23.)



A cross row cotton chopper of the character described including thills, runners mounted upon the thills and extending downward and rearward therefrom and upward above the thills, a transversely extending beam hinged to the thills for movement in a vertical plane and having upwardly and rearwardly extending handles, downwardly, rearwardly and forwardly extending teeth detachably mounted upon the beam and adapted to carry plow points at their lower ends, and contractile springs connected to the rear edge of said beam and operatively mounted at their forward ends upon the ends of the runners which extend above the thills and exerting a lifting force upon the beam.

1,694,205. WEED KILLER AND METHOD OF KILLING WEEDS. RALPH N. CHIPMAN, Plainfield, N. J. Filed Apr. 15, 1926. Serial No. 102,312. 10 Claims. (Cl. 167—45.)

6. A non-poisonous herbicide comprised essentially of both calcium chlorate and calcium chloride.

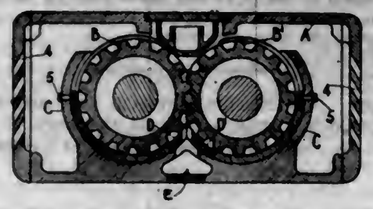


1,694,206. SAILOR'S DRESS BLOUSE. WELLINGTON I. CLEMENTS, Norfolk, Va. Filed Feb. 1, 1928. Serial No. 251,140. 2 Claims. (Cl. 2—122.)

2. A sailor's dress blouse having a head opening V-shaped at the front thereof, a reenforcing strip extending across and secured to said front, said strip having its ends secured to the arm pits of the blouse and adapted to prevent the stretching of the front of the blouse, the strip extending across the lower end of the V-shaped head opening of the blouse so as to prevent the tearing of the blouse at this point, and a pocket secured to the front and reenforcing strip immediately below the lower end of the V-shaped head opening and adapted to assist the strip in preventing the tearing of the blouse at this point.

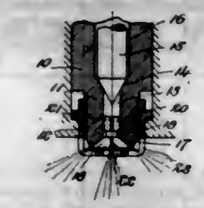
---

1,694,207. DISPLAY RACK. BERT COLEMAN, Plattsmouth, Nebr. Filed Mar. 3, 1928. Serial No. 258,801. 2 Claims. (Cl. 211—163.)



1. In a display rack, a frame member having an open-bottomed compartment, a presser member carried by the frame member and slidably mounted in said compartment for cooperation with the front wall of the latter to hold articles in suspension, spring means acting against said presser member for urging it toward said front wall of the compartment, means to adjust the effective width of said compartment embodying laterally adjustable slides mounted on the frame member at opposite sides of said compartment.

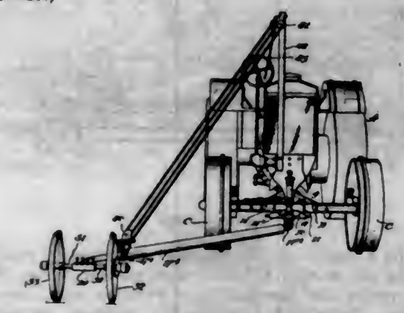
---



1,694,208. ROTARY ENGINE AND THE LIKE. ALBERT WILLIAM DAVIES, Glasgow, Scotland, assignor to Mavor & Coulson, Limited, Glasgow, Scotland. Filed June 28, 1926, Serial No. 119,203, and in Great Britain Sept. 30, 1925. 10 Claims. (Cl. 121—70.)

1. A peripheral admission rotary engine comprising a casing, an inlet, coresponding drums, the casing having two barrier surfaces, one for each drum, each drum having blades extending from end to end and thus through an intermediate region, intermediate between the ends of a drum, the blades having helical portions directed reversely from the intermediate region, the drums being correspondingly arranged with their blades intermeshing, the inlet extending to the intermediate region where the blades of the drums present surfaces which peripherally are of cylindrical character, and having means for varying cut-off.

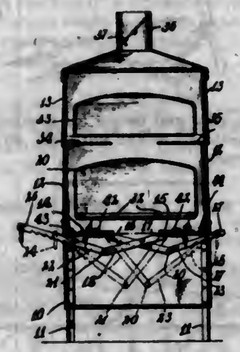
---



1,694,209. DEVICE FOR SPRAYING HYDROCARBON FUEL. HARRY E. DAVIS, Jersey City, N. J. Filed June 18, 1925. Serial No. 37,967. 5 Claims. (Cl. 299—141.)

1. In a device for spraying hydrocarbon fuel, a tubular member, an imperforate plug loosely seated against one end of the member across the bore thereof, one of the abutting surfaces of the member and plug having grooves coacting with the other surface to provide fuel delivery passages extending from the bore of said member to the exterior of both the member and plug, and a cage cap connected to the member and operating against the outer end of the plug to press the latter against its seat, said cage cap having an opening therein through which a tool is engageable with the plug to move the latter and effect grinding of the contacting surfaces of the plug and member.

---

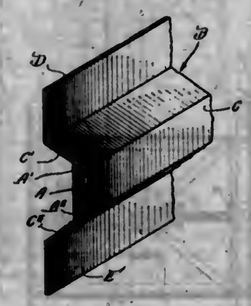


1,694,210. TRACTOR GUIDE. CHARLES E. EVERETT, Longford, Kans., assignor, by mesne assignments, to J. I. Case Plow Works, Inc., a Corporation of Maryland. Filed Aug. 27, 1926. Serial No. 131,931. 3 Claims. (Cl. 97—49.)

1. A tractor guide comprising a guiding element adapted to follow a previously formed trench, an arm connected to said element, an oscillatory member to which said arm is connected, a support for mounting said member on a tractor, means for connecting said oscillatory member to the spindles of the front wheels of the tractor, and means for yieldingly connecting the spindles of the front wheels of the tractor to the steering means of the tractor.

1,694,211. OVEN. EUGENIO FERNANDEZ, Valparaiso, Chile. Filed Nov. 26, 1927. Serial No. 235,821. 2 Claims. (Cl. 126—155.)

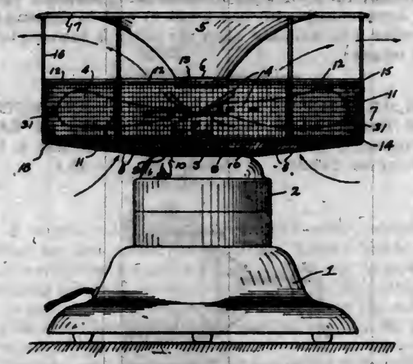
1. In combination with an oven of the class described, plate members horizontally extended from opposite inner sides of the oven, and forming an opening between the edges thereof, rods rotatively mounted on the plate members near the edges forming the said opening, grate bars pivotally attached at one of their extremities to the said rods, and directed towards each other and alternately positioned, other rods attached to the free ends or the grate bars, and rods formed with a plurality of notches, attached to the said second mentioned rods, and adapted for extending thru apertures in the sides of the said oven, and arranged for permitting the said notches to engage the edges of the apertures for holding the rods in various extended positions, so as to hold the grate bars in various inclined positions.



---

1,694,212. EXPANSION JOINT. ALBERT C. FISCHER, Chicago, Ill. Filed Oct. 16, 1925. Serial No. 62,907. 8 Claims. (Cl. 94—18.)

6. Preformed constructional material including ductile waterproofing binder having corn husks of relatively large surface areas incorporated therein, the binder being in excess of 50 per cent.



---

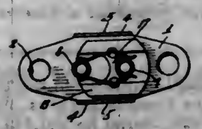
1,694,213. COMBINED EXPANSION AND CONTRACTION JOINT—SEMIHEXAGONAL TYPE. ALBERT C. FISCHER, Chicago, Ill. Original application filed Jan. 3, 1922, Serial No. 526,742, Patent No. 1,655,835, dated Jan. 10, 1928. Divided and this application filed May 9, 1927. Serial No. 190,083. 10 Claims. (Cl. 94—18.)

1. A contraction joint having a semi-hexagonal center with flanges extending therefrom, the center face of which is covered with an expansion joint strip and adapted to cooperate therewith.

1,694,214. PORTABLE FAN. WILLIAM H. GINDER, Haddonfield, N. J., assignor, by mesne assignments, to Electro Manufacturing Company of America. Filed Aug. 25, 1927. Serial No. 215,435. 2 Claims. (Cl. 230—274.)

2. A portable fan including a motor base, a propeller driven thereby to rotate in a horizontal plane, a truncated conical air deflector supported from the base with its axis concentric to the motor and having a curved surface varying uniformly from a maximum curvature at the vertex to a minimum at the base and discharging the air horizontally, and a perforated tubular housing supported in lateral alignment with the propeller and having its upper edge so disposed with relation to the under surface of the cone as to lie in a plane below the emergent stream of air deflected by the cone.

---

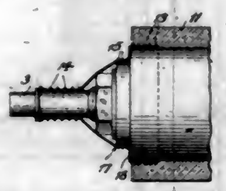


1,694,215. SLED RUNNER FOR AUTOMOBILES. BOLESLAW GOLEMBIEWSKI, Utica, N. Y. Filed Feb. 1, 1928. Serial No. 250,966. 4 Claims. (Cl. 280—13.)

1. A sled runner attachment for automobiles, comprising front shoe members for attachment on the front wheels of a motor vehicle, and provided with rear projecting brackets having arc-shaped apertures, rear shoe members for attachment on the rear axle housing of the motor vehicle and for receiving the rear wheels of the vehicle, trains of intermediate shoe members pivotally connected for vertical movements on the fronts of the rear shoe members brackets pivotally connected for vertical movements on the fronts of the said trains of intermediate shoe members, and bolts connected on the brackets and engaging in the said arc-shaped apertures for permitting lateral movements of the front shoe members relative to the trains of intermediate members for steering purposes.

---

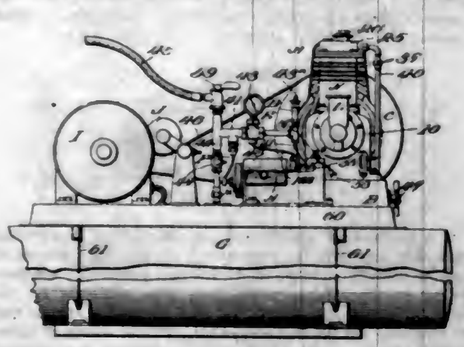
1,694,216. ELECTRIC SWITCH. JAMES J. GOUGH, Chicago, Ill., assignor to Chicago Electric Manufacturing Co., Chicago, Ill., a Corporation of Illinois. Filed June 27, 1927. Serial No. 201,715. 17 Claims. (Cl. 200—163.)



1. An electric switch comprising a base, a pair of spaced and relatively insulated terminals mounted thereon, a stop

member disposed between the terminals and slidable with respect to the base into engagement with one or the other terminal, a pair of switching members fast on the stop member and extending respectively at opposite sides of both terminals; the switching members being disposed to contact continuously with one terminal and to contact with the other terminal only when the latter is engaged by the stop member.

---



1,694,217. PRINTER'S INKING ROLLER AND METHOD OF PROTECTING JOURNAL SUPPORTS OF SAME. WILLIAM C. HART, New York, N. Y. Filed May 6, 1927. Serial No. 189,217. 7 Claims. (Cl. 18—48.)

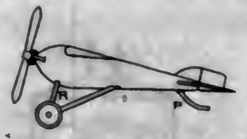
6. The method of protecting the journal supports of printer's inking rollers during the period of applying the inking composition surfacing material which consists in initially securing to the ends of the drum and to the journal supports a covering of moisture resisting material before the application of the composition to the drum.

---

1,694,218. AIR-COMPRESSING MECHANISM. GEORGE EDGAR HAZARD, Rochester, N. Y., assignor to Kellogg Manufacturing Co., Rochester, N. Y. Filed June 11, 1924. Serial No. 719,310. 14 Claims. (Cl. 230—211.)

1. A compressor mechanism, comprising a compressor having low and high pressure cylinders, an intercooler connecting said cylinders, a fly wheel having fan blades, a housing between said fly wheel and said cylinders, and the intercooler mounted in said housing, for the purpose described.

---

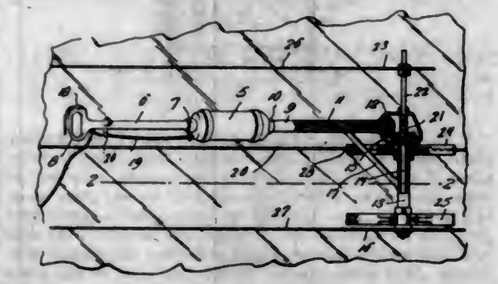


1,694,219. MOTHPROOFING SUBSTANCE AND METHOD OF PREPARING IT. LLOYD E. JACKSON and HELEN E. WASSELL, Pittsburgh, Pa., assignors to Mundatechnical Products Company, Detroit, Mich., a Corporation of Delaware. Filed Nov. 18, 1927. Serial No. 234,290. 9 Claims. (Cl. 167—6.)

7. An insectifuge containing a mixture of a quinoidine salt with a soap.

---

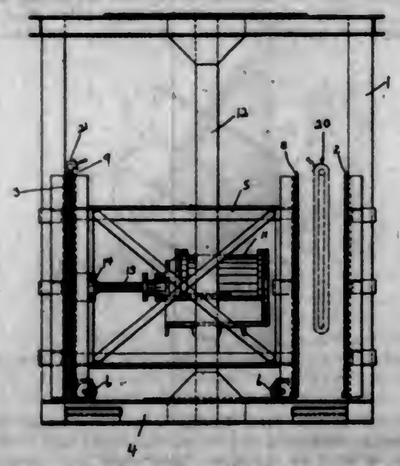
1,694,220. REVERSING-PROPELLER THROTTLE CONTROL. CHARLES FRANCIS JENKINS, Washington, D. C. Filed July 23, 1927. Serial No. 207,949. 4 Claims. (Cl. 244—25.)



1. The combination, in an airplane, of a motor therein, a throttle for controlling said motor, a propeller driven by said motor, reversing gear for said propeller, a lever for controlling the reversing gear, means for connecting said throttle and reversing-gear lever to insure simultaneous

operation of the two, and means for preventing operation of said last mentioned means until the airplane engages the landing surface.

---

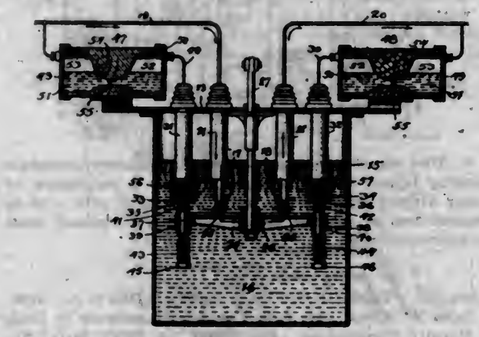


1,694,221. ICE SAW. DEE M. KING, Canton, Tex. Filed May 21, 1927. Serial No. 193,161. 7 Claims. (Cl. 262—7.)

1. An ice sawing implement including a motor having a casing, a handle having a shank attached to one end of said motor casing, a tubular shaft housing attached at one end to the other end of said motor casing, a gear casing attached to the other end of the shaft housing, a drive shaft for the motor journaled in said housing and projecting into said gear casing, a further tubular shaft housing attached at one end to and extending laterally from one side of said gear casing, a driven shaft journaled in said further shaft housing and projecting into said gear casing, gearing operatively connecting adjacent ends of the shafts within said gear casing, a circular saw fixed on the outer end of the said driven shaft, and a diagonal brace between said shaft housings.

---

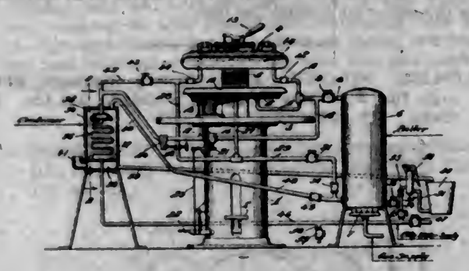
1,694,222. INNER-TUBE DEFLATOR. PAUL W. LEHMAN, Milwaukee, Wis., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Aug. 5, 1926. Serial No. 127,468. 1 Claim. (Cl. 154—9.)



A device for deflating inner tubes which comprises two

stationary platens, a platen secured to each end of the carriage adapted to co-operate with the adjacent fixed platen, all of said platens being supported so as to leave at least one side and the top edges thereof free for the admittance and ejection of a plurality of inner tubes having their valve stems above the upper edges of the platens, and means to reciprocate the carriage.

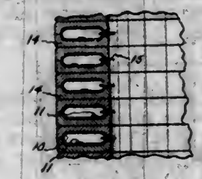
---



1,694,223. ELECTRIC SWITCH. GEORGE N. LEMMON, Marietta, Ga., assignor to Bait Manufacturing Co., Atlanta, Ga., a Corporation of Georgia. Filed June 19, 1923. Serial No. 646,387. 5 Claims. (Cl. 175—294.)

1. Circuit interrupting means comprising a main switch and an auxiliary switch, a secondary path for the current controlled only by the auxiliary switch, a vaporizable liquid in series with the auxiliary switch in the secondary path and adapted to be vaporized by the flow of current therethrough on the opening of the main switch and to interpose a resistance vapor in the secondary path, and means for automatically opening the auxiliary switch when the current flow is reduced by the vapor resistance.

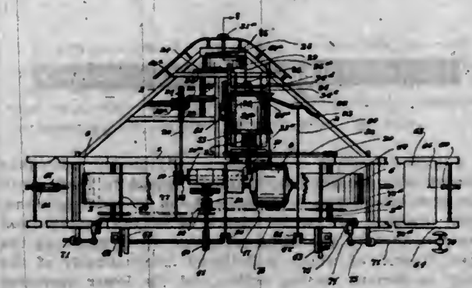
---



1,694,224. CLOTHES-PRESSING MACHINE AND THE LIKE. JACOB LEPLER, Providence, R. I. Filed Nov. 23, 1927. Serial No. 235,162. 3 Claims. (Cl. 68—9.)

1. A clothes pressing apparatus comprising a buck, a pressing head, a boiler, means for supplying steam from the boiler to the buck and pressing head, a steam suction pipe from the boiler connected with the buck, a condenser comprising a water chamber for condensing the steam from the suction pipe and utilizing the heat of condensation for heating water in the water chamber, means connecting the water chamber with the boiler for supplying heated water to the boiler, and means for applying pressure to the water chamber for forcing heated water therefrom to the boiler.

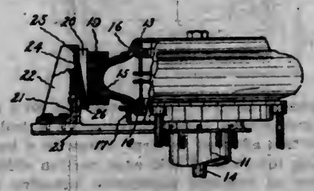
---



1,694,225. METHOD OF INSERTING VALVES IN ANNULAR TUBES. CHARLES EDGAR MAYNARD, Northampton, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Aug. 30, 1926. Serial No. 132,362. 3 Claims. (Cl. 154—14.)

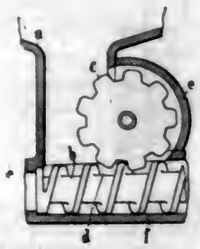
1. A method of making rubber tubes which comprises forming an open-ended tube, placing loosely inside the tube a portion of a valve adapted to form one member of a clamping means for sealing the valve in the tire, said portion being of insufficient weight to penetrate the rubber stock substantially during vulcanization, splicing the ends of the tube, vulcanizing the tube, inserting a valve stem into the tube, and affixing the first-mentioned valve portion to the valve stem.

---



1,694,226. TRACTOR. ANDREW MCDOWALL, Castle Douglas, Scotland. Filed Dec. 31, 1923, Serial No. 683,807, and in Great Britain Jan. 26, 1923. 10 Claims. (Cl. 180—17.)

1. A tractor comprising a chassis, wheels supporting same, a motor carried by the chassis and arranged to drive said wheels, a drum mounted on a horizontal axis and capable of axial displacement, means to move the tractor in a lateral direction, and means to displace said drum in an axial direction and arranged to act in unison with the lateral displacement of the tractor.

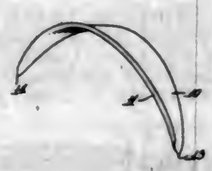


---

1,694,227. SPLICE HOLDING DEVICE FOR TIRE EXPANDERS. THOMAS MIDGLEY, Hampden, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Aug. 6, 1926. Serial No. 127,496. 2 Claims. (Cl. 154—10.)

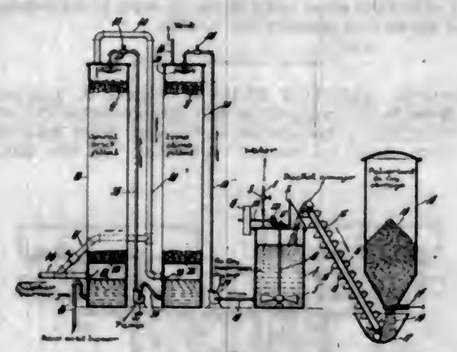
1. An apparatus for expanding a tire from the flat into tire form comprising means for applying a shaping force to a tire, and means for resisting the shaping force at the outer circumference of the tire to exert a holding pressure upon the splice of the tire tread while leaving the sidewalls of the tire unconfined for readjustment to shaped condition.

1,694,228. WORM COVEYER. RICHARD MÜLLER, Spandau, Germany, assignor to Krah & Kirchhoff, Berlin, Germany. Filed Apr. 1, 1927, Serial No. 180,291, and in Germany June 22, 1926. 1 Claim. (Cl. 198—229.)



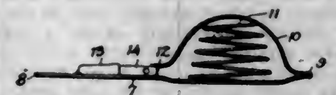
In a conveyer, a housing, a screw therein, an inlet to said housing, a toothed wheel engaging with said screw and mounted adjacent said inlet, whereby the toothed wheel aids in feeding material to the screw, and prevents rotation of material in the screw.

1,694,229. THREAD RESTORER. JOSEPH P. NESTOR, Lykens, Pa., assignor to Reiff & Nestor Company, Incorporated, a Corporation of Pennsylvania. Filed Apr. 22, 1927. Serial No. 185,787. 1 Claim. (Cl. 10—1.)



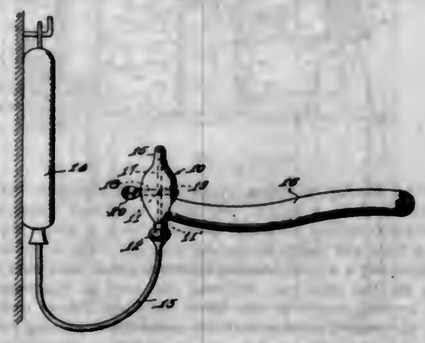
A thread restorer comprising a body having a file face formed with longitudinal channels spaced to conform to the pitch of a thread to be restored and intersecting transverse grooves of greater depth than the longitudinal grooves, thereby producing separated teeth members the apex of each of which is flattened longitudinally of the body to prevent cutting action and the lower operative portion of each cutting face being disposed above the base of the transverse groove and at the level of the longitudinal channel to provide a clearance space.

1,694,230. METHOD OF MAKING SWEATBANDS. HERMAN RAPPAPORT, Brooklyn, N. Y. Filed Nov. 2, 1928. Serial No. 316,743. 1 Claim. (Cl. 2—181.)



The method of constructing a sweatband for a cap which comprises providing a blank constituting a body portion and edge portion adapted to form therewith a booked edge and including the ends of said edge portion obliquely cut, with a layer of pressure aggressive adhesive along the length of the edge portion, feeding the blank in a direction parallel to the edge to be folded, gradually folding said edge, beginning intermediate the ends of the oblique cut portion and progressively folding a flap upon the body portion of the blank along the edge, peening said edge into engaging position and pressing said folded edge from one end of the blank to the other.

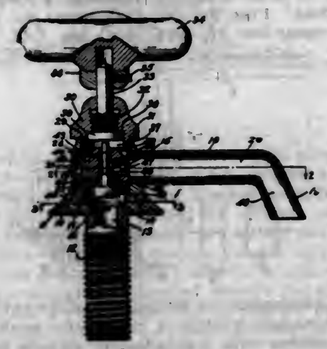
1,694,231. PROCESS OF MAKING RAW CALCIUM-BISULPHITE DIGESTING LIQUOR. GEORGE A. RICHTER, Berlin, N. H., assignor to Brown Company, Berlin, N. H., a Corporation of Maine. Filed Apr. 23, 1925. Serial No. 25,265. 6 Claims. (Cl. 23—132.)



1. That step in the process of making calcium bisulphite cooking liquor, which comprises passing a suspension of finely divided limestone in water in contact with, and in counter-flow to, sulphur dioxide, through a confined mass of limestone rock.

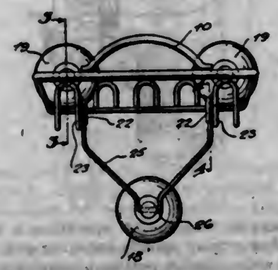
1,694,232. TIRE-DEFLATION SIGNAL DEVICE. ROWLAND W. RIDER, Salt Lake City, Utah, assignor to Utah Royalty Corporation. Filed Sept. 16, 1926, Serial No. 135,950. Renewed June 6, 1928. 2 Claims. (Cl. 116—34.)

2. A tire deflation signal device for use in connection with a pneumatic tire comprising a plate adapted to be inserted between the inner tube and the tire casing having at one end a cupped enlargement, an inverted cup secured to said enlargement, a spring between the cupped enlargement and the interior of the inverted cup, an enlargement at the other end of the plate having an opening therein to fit over the valve stem, a tube leading from the cupped enlargement to the opening in the enlargement at the other end of the plate and a signal device adapted to be operated by passage of air through the tube.



1,694,233. SYRINGE. JOHN WILLIAM ROBINSON, Chicago, Ill. Filed May 13, 1927. Serial No. 191,129. 1 Claim. (Cl. 128—227.)

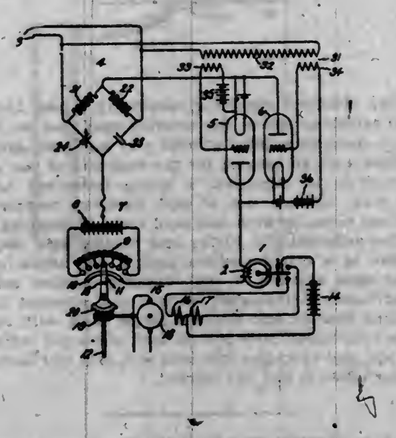
A syringe for internal bath comprising a solid rubber body including a relatively large intermediate portion and upper and lower reduced portions of considerable less diameter than the intermediate portion, said body having a longitudinal bore opening at both ends, a fluid supply pipe adapted to be associated with one of the reduced end portions, the other of said reduced end portions, and said intermediate portion having rounded or curved surfaces, a rotary plug valve arranged transversely of the intermediate portion and intersecting said bore, a handle for said valve arranged at one side of the body, and a handle for the syringe, said handle forming an integral part of the relatively large intermediate portion and arranged substantially at a right angle thereto.



1,694,234. FAUCET AND PROCESS OF MAKING SAME. LLOYD G. SCHIMMEL, Los Angeles, Calif., assignor to Perfection Faucet Mfg. Corp., a Corporation of Nevada. Filed Oct. 11, 1928. Serial No. 311,818. 2 Claims. (Cl. 251—156.)

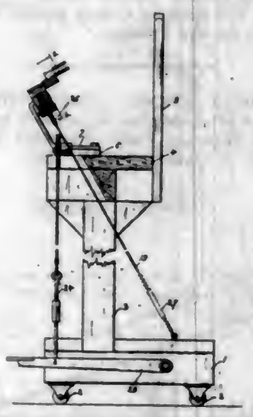
1. The process of producing a faucet having a body provided with a central chamber and also having a spout provided with a main straight portion and a bent terminal portion, comprising so locating a plurality of cores in a die, in angular relation, as to form desired sections, with a main-straight-portion-forming core extending through an opening in and projecting beyond a central-chamber-forming core to extend through what will be an opening in a wall of said body, and with a bent-terminal-portion-forming core meeting said main-straight-portion-forming core in mitre fashion to produce said bent terminal portion, pouring molten metal around said cores in the die, drawing said main-straight-portion-forming core through said opening in said central-chamber-forming core and through said opening in said wall of the faucet, and drawing said terminal-portion-forming core and said central-chamber-forming core.

1,694,235. SOAP DISH. ALFRED SCHOENFELDER, Chicago, Ill. Filed Aug. 16, 1926. Serial No. 129,518. 1 Claim. (Cl. 45—28.)



The combination with the rim wire of a soap dish, and suction elements, means for connecting certain of the suction elements to the rim wire, socket members connected to the soap dish, a connecting wire having opposite end portions detachably received by the socket members, a connecting member carried by the connecting wire and defining a threaded socket, and a screw member having a threaded shank portion adapted for threaded engagement in the socket and defining a head portion adapted to be embedded in a suction element.

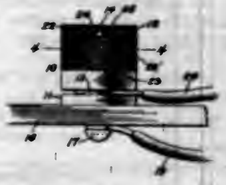
1,694,236. IRON STAND. CLARA SCHULTHESS, San Francisco, Calif., assignor of one-half to Bradford M. Melvin, San Francisco, Calif. Filed Nov. 2, 1927. Serial No. 230,481. 2 Claims. (Cl. 68—27.)



2. An iron stand comprising, in combination with a base, an inclined member flexibly joined to and extending above the base, and a spring member located between the base and the inclined member for normally resiliently maintaining the inclined member above the base.

1,694,237. CONTROL SYSTEM. DEWEY T. SIMONDS, Schnectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Feb. 6, 1926. Serial No. 86,677. 5 Claims. (Cl. 172—282.)

1. The combination of a steering apparatus, and a control circuit comprising a balanced bridge device controlled by the earth's magnetic field to regulate the current of said circuit, and means operated in response to movement of said apparatus for producing in said circuit an electromotive force whereby overtravel of said steering device is prevented.

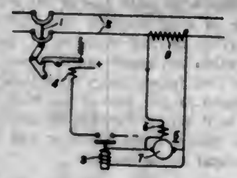


1,694,238. TUBE-SPLICING MACHINE. HORACE D. STEVENS, Akron, Ohio, assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Mar. 15, 1923. Serial No. 625,310. 11 Claims. (Cl. 154—5.)

1. In a machine for the uses and purposes set forth, the combination with a base plate, of a pair of tube engaging members and means to cause said member to separate to hold the end of the tube distended and unobstructed to receive the other end of the tube therein.

---

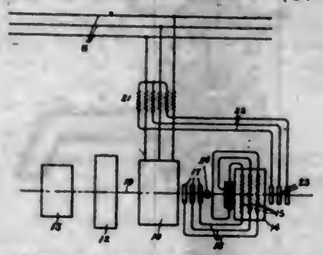
1,694,239. ELECTRICAL BINDING POST. CHARLES H. THONSEN, Brooklyn, N. Y. Filed May 29, 1925. Serial No. 33,742. 2 Claims. (Cl. 173—259.)



1. An electrical connector comprising a post having a head, attaching means for securing said post to a support, a clamping member slidable over said post, said post provided with an opening for the reception of one end of the wire to be connected, a spring interposed between said head and one end of said clamping member, and co-acting means between said head and said clamping member for automatically lifting and holding said clamping member in a raised position against the action of the spring upon rotation of said clamping member, said co-acting means including an inclined slot provided in said clamping member and disposed at an angle with respect to the longitudinal axis of said post, and a pin carried by said post and extending into said slot, said slot having an angular offset at one end thereof.

---

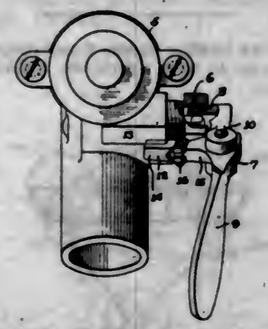
1,694,240. TIME-ELEMENT DEVICE. LUDVIG S. WALLE, Scotia, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Feb. 5, 1926. Serial No. 86,334. 9 Claims. (Cl. 175—294.)



1. A time element circuit controlling device comprising a relay having a winding connected to be energized from the circuit and means for controlling the energization of the relay comprising a motor having an armature connected in circuit with the relay winding, means for normally restraining the armature against movement arranged to permit movement of the armature on the occurrence of an abnormal circuit condition and to retard the building up

of the angular velocity of the armature whereby to delay the operation of the relay in accordance with the counter electromotive force of the armature.

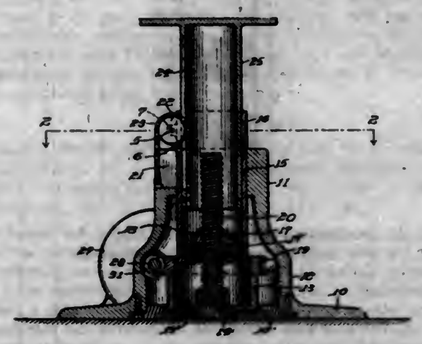
---



1,694,241. INDUCTION-MOTOR-REGULATING SYSTEM. WILHELM WEILER, Niederschonhausen, Germany, assignor to General Electric Company, a Corporation of New York. Filed Nov. 21, 1925, Serial No. 70,634, and in Germany Dec. 10, 1924. 2 Claims. (Cl. 172—120.)

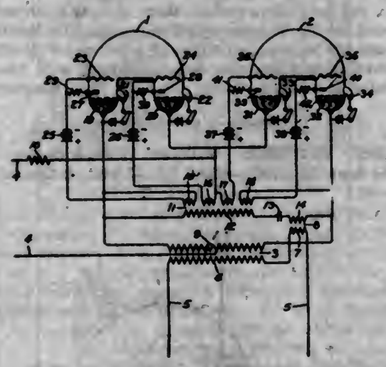
1. In combination, an induction machine having a form wound secondary winding, a commutator machine driven in synchronism with said induction machine and having relatively movable commutated and field windings connected in series in the secondary circuit of said induction machine, said windings being arranged to substantially compensate each other such that in so far as the flow therein of the secondary current in the induction machine alone is concerned neither motor nor generator action would be produced in said commutated machine, and means for exciting the commutated winding of said commutator machine by a current proportional to the primary current of said induction machine, the phase angle of said excitation being such as to include the power factor of said induction machine.

---



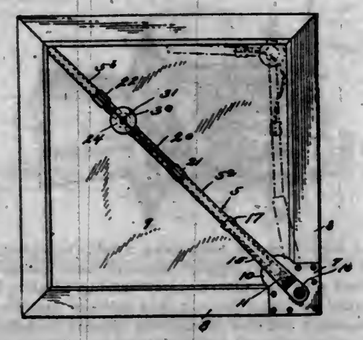
1,694,242. FAUCET WRENCH. ABRAM W. WHEATON, Jr., Maplewood, N. J., assignor to A. W. Wheaton Brass Works, Newark, N. J., a Corporation. Filed Feb. 19, 1925. Serial No. 10,160. 4 Claims. (Cl. 137—162.)

4. An attachable wrench for operating a self closing valve comprising a valve spindle engaging part and a stop engaging part with a fusible portion between the socket and stop engaging part whereby upon application of heat the fusible portion will yield and cause release of the valve spindle.



1,694,243. DENTAL CHAIR. EDWARD BURKE WILFORD, Merion, Pa., assignor to Ritter Dental Manufacturing Company, Inc., Rochester, N. Y., a Corporation of Delaware. Filed Mar. 31, 1926. Serial No. 98,912. 5 Claims. (Cl. 155—25.)

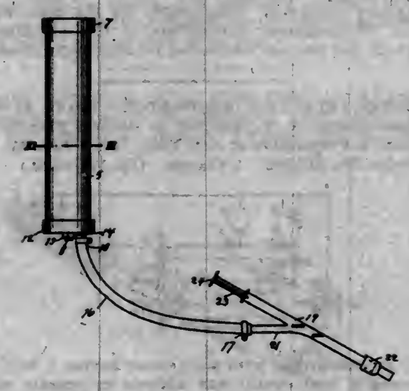
1. In a dental chair the combination with a support, of a guide section slidably mounted on the support, a dished gear into which the section nests, a screw operatively engaging said section and arranged for rotation with the gear, a standard slidably engaging said section and having a slot, a pulley mounted for rotation on said section and slidable in said slot, and means connected to said support and to said standard and extended through the slot over said pulley, and a power source for turning the gear, the whole so arranged that as the section is raised by the screw the standard is raised by said means.



---

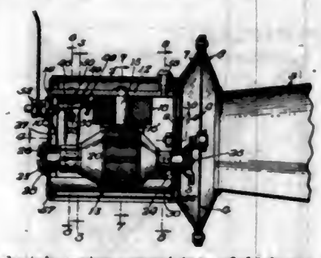
1,694,244. ELECTRICAL APPARATUS. ERNST F. W. ALEXANDERSON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Aug. 9, 1926. Serial No. 128,265. 5 Claims. (Cl. 175—363.)

1. The combination of direct and alternating current circuits, electron discharge means provided with main electrodes connected to transmit power in either direction between said circuits and with grids for controlling the starting of current between said electrodes, and means comprising a current transformer arranged to apply to each of said grids a potential of a phase dependent on the magnitude of the power transmitted between said circuits.



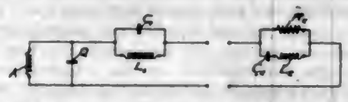
1,694,245. WINDOW CLEANER. GILBERT L. BAKER and HELEN W. PATTILLO, Oakland, Calif. Filed May 19, 1926. Serial No. 110,222. 2 Claims. (Cl. 15—255.)

2. In a window cleaner of the class specified, an arm adapted to be pivotally mounted adjacent one of its ends for oscillation on one lower corner of a window sash, an extension pivoted to the other end of the arm, the pivot organization of the arm and extension comprsing a rearwardly extending disc projection carried by the exension and a complemental disc projection carried by the arm for engagement with the first named disc projection, a pivot extending through the said arm and disc projections, a cap disc applied over the said disc projections and held by the pivot, the arm and extension having longitudinal slots, a cleaning device held in and projecting from the slots of the arm and extension to engage the glass, and flat spring means extending longitudinally over and engaging both the arm and extension.



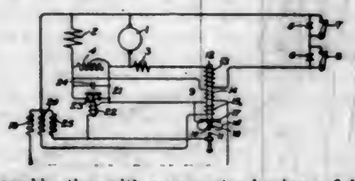
---

1,694,246. CAPSULE INJECTOR. FRANK C. BOYNE, Graton, Calif. Filed Sept. 27, 1927. Serial No. 222,323. 3 Claims. (Cl. 128—264.)



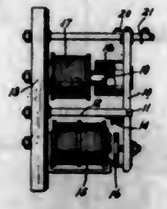
1. In a device of the character described, a cylindrical member adapted to receive a plurality of capsules, a flexible pipe extending from said cylinder, an injector secured to said flexible pipe, a slider movable in said injector and adapted to discharge capsules one at a time therefrom, said capsules entering said injector from said flexible pipe in the manner described.

1,694,247. ELECTRIC MOTOR. STEPHEN F. BRIGGS, Milwaukee, Wis., assignor, by mesne assignments, to Edwin B. H. Tower, jr., Milwaukee, Wis. Filed Aug. 28, 1922. Serial No. 584,691. 4 Claims. (Cl. 172—36.)



1. An electric motor comprising a field frame having side plates to provide and support opposite poles and end plates to connect said side plates, an energizing winding for said field frame, an armature arranged between said side plates and removable endwise through an opening therefor in one of said end plates, and a removable bearing plate arranged across said opening to support said armature.

1,694,248. TELEPHONE LINE. ALFRED BYK, Charlottenburg, Germany, assignor to General Electric Company, a Corporation of New York. Filed Jan. 5, 1924, Serial No. 684,645, and in Germany Jan. 30, 1923. 4 Claims. (Cl. 178—45.)

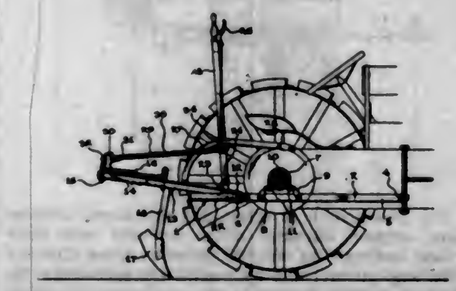


1. In a telephone line loaded with inductances, an arrangement for changing the impedance of the line to facilitate impedance simulation, said arrangement comprising means to build out the terminal of the line to a fraction of a section intermediate between a mid section and a full section so that the real part of the impedance of the line may be simulated by the real part of the impedance of a network comprising resistance shunted by capacity and inductance in series, and compensating means connected to the terminal of the line, said compensating means being such that its impedance has no real component and its imaginary component compensates for the difference between the imaginary components of the impedances of the built out line and simulating network respectively.

1,694,249. ELECTRIC REGULATOR. FRANK A. BYLES, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed June 17, 1926. Serial No. 116,762. 2 Claims. (Cl. 171—229.)

1. In combination with a generator having a field winding and a load circuit and adapted to operate with a drooping voltage-current characteristic, of a regulator for maintaining constant current in said load circuit comprising a winding responsive to the current in said load circuit, a winding responsive to the voltage of said field winding and arranged to operate accumulatively with respect to said current winding, a vibrating contact comprising a resiliently supported contact member actuated by said windings, and a winding responsive to the voltage of said generator and arranged to operate differentially with respect to said first-mentioned windings.

1,694,250. ELECTROMAGNETIC DEVICE. WILLIAM B. CLARKSON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Oct. 19, 1925. Serial No. 63,464. 3 Claims. (Cl. 200—97.)



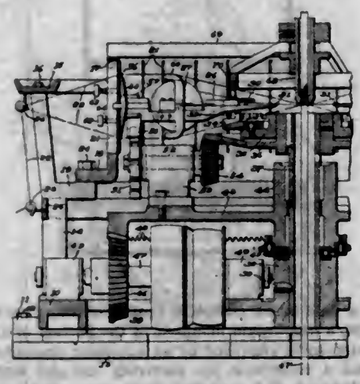
2. An electromagnetic controlling device for direct current electric motors comprising a non-magnetic movable member, means for biasing said member to one position, an electromagnet having a winding for connection with the motor circuit to be energized in accordance with a changing condition of said circuit for controlling the movements of said member, a non-magnetic current conducting element carried by said member and inductively related to said winding to have set up an induced current therein by said winding, the flux set up by the induced current in said element cooperating with the flux set up by said winding to provide a repulsive effect which holds the said member in a second position against the action of said biasing means while the rate of change of the current in said winding is above a predetermined value substantialy independently of the momentary value of the energizing current of said winding and then permits the member to move to said biased position substantially independently of the momentary value of the energizing current of said winding when the current in said winding becomes substantially constant.

1,694,251. ROLL FOR ROLLING METALS AND METHOD OF MAKING SAME. FRANCIS DAVID CORBIN, Llanelly, Carmarthen, South Wales, assignor of three-eighths to The Llanelly Foundry & Engineering Company Limited and one-third to Richard Nevill & Company Limited, Llanelly, Carmarthen, South Wales, Great Britain. Filed June 30, 1927, Serial No. 202,756, and in Great Britain July 7, 1926. 8 Claims. (Cl. 80—58.)

1. A roll for rolling metals, made in case-hardened alloy steel and having its case-hardened portion of a hard structure, and the remaining portion of a soft pearlitic or allied structure, both structures being obtained with the same slow rate of cooling of the roll from high temperatures.

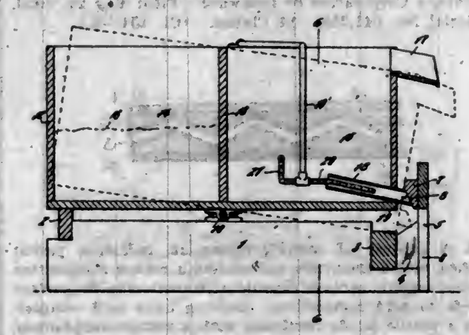
1,694,252. DITCHER. WILLIAM DOEPKE, Selah, Wash. Filed Sept. 22, 1925. Serial No. 57,842. 2 Claims. (Cl. 97—47.)

2. In combination with a tractor, a frame comprising spaced side bars having a pivotal connection with the tractor, spaced transverse bars spanning the side bars and connected thereto, plows supported at the remote extremities of said transverse bars, an arcuate rack carried by the tractor, a hand lever pivotally mounted on the tractor and provided with a latch engageable with said rack, the rear transverse bar having a lug formed with an eye, a rod connected with said lever and extending through said eye and provided on the rear end with a nut abutting said lug, and a compression spring in surrounding relation to the rod and abutting said lug on the forward face and engaging an abutment adjacent the point of connection of the rod with said hand lever.

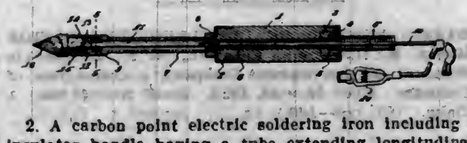


1,694,253. REGULATING SYSTEM. PETER W. FORSBERG, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Nov. 3, 1925. Serial No. 66,618. 6 Claims. (Cl. 171—224.)

1. In a voltage regulating system for a variable speed generator, an exciter driven at a speed proportional to the speed of said generator, and means for exciting said generator comprising a winding connected so as to be energized by the voltage of said exciter and a winding connected so as to be energized by the difference between the voltages of said exciter and generator.



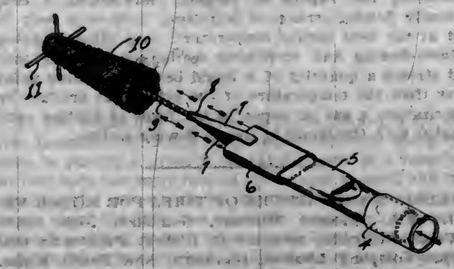
1,694,254. CIRCULAR LOOM. OTTO A. FREDERICKSON, Wethersfield, Conn., assignor to The Wire-Mold Company, Hartford, Conn., a Corporation of Connecticut. Filed June 5, 1925. Serial No. 35,101. 10 Claims. (Cl. 139—15.)



1. In a circular loom, in combination, a main frame provided with means for supporting warp threads to initiate the formation of a shed, a shuttle supported by said frame to travel in a circular path about the axis of the loom, means for driving the shuttle, a tilting nose mounted upon the shuttle, and means other than the warp thread and which is supported in a fixed position along the path traveled by the shuttle for shifting the nose to cause it to selectively direct the warp threads over and under the shuttle.

1,694,255. SAND WASHER AND SEPARATOR. EDWARD GARLICK, Kelso, Wash. Filed Apr. 9, 1927. Serial No. 182,477. 2 Claims. (Cl. 209—158.)

1. A device of the character described comprising a base, a box mounted for rocking movement thereon, weight means normally maintaining the box in horizontal position, said box being adapted to receive sand to be cleaned, a water over-flow spout at the top of the box, a sand out-let pipe at the bottom of the box, a stationary member positioned to be abuttingly engaged by the projecting outer end of said outlet pipe to form a closure therefor when the box is in normal position, and a water spray pipe located within the box and having a branch extending into said pipe.



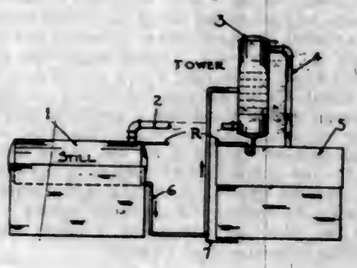
1,694,256. ELECTRIC SOLDERING CARBON. MICHAEL E. GEBEL, Armour, S. Dak. Filed Mar. 30, 1928. Serial No. 266,011. 2 Claims. (Cl. 219—26.)

2. A carbon point electric soldering iron including an insulator handle having a tube extending longitudinally therethrough, a sleeve in one end of the handle screwed on the tube, a flexible guard received in the sleeve and screwed on the said end of the tube, a hollow metal stem screwed on the second end of the tube, a lock nut screwed on the stem for sustaining the same on the tube, a conductor received through the guard and tube, a metal rod fixed on one end of the conductor and received in the stem, a metal split clutch member screwed in the end of the sleeve and clamping the rod, a chuck sleeve screwed on the stem, and designed to receive therein one end of a carbon point which contacts with the clutch, said conductor having a spring clamp on the outer end thereof and a second conductor having spring clips on both of its ends.

1,694,257. DUST OR DIRT REMOVING APPARATUS. SERPOOHIE HAGOPIAN, San Francisco, Calif. Filed May 20, 1927. Serial No. 193,033. 1 Claim. (Cl. 15—158.)

The combination with the blow pipe of a vacuum cleaner, of a dusting attachment therefor comprising a sleeve element operatively engaging the end of the blow pipe, a pair of oppositely disposed arms connected to said sleeve element and terminating in a tubular extremity, and a brushing element secured in the tubular extremity of said arms and being in axial alignment with the blow pipe of the vacuum cleaner.

1,694,258. PROCESS OF MANUFACTURING IMITATION LEATHER. ROBERT CLIFFORD HARTONG, Akron, Ohio, assignor to Seiberling Rubber Company, Akron, Ohio, a Corporation of Delaware. Filed May 24, 1923. Serial No. 641,258. 14 Claims. (Cl. 154—2.)

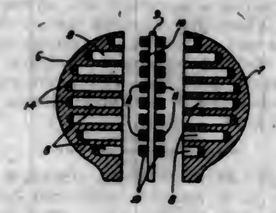


3. A process of manufacturing an imitation patent leather, which comprises calendering a rubber composition upon a smooth surface, capable of transferring its surface effects to said composition, doubling upon said composition a textile fabric frictioned with a rubber composition, and vulcanizing the product.

4. A process of manufacturing an imitation leather, which comprises frictioning a textile fabric on one side with a rubber composition, skim-coating said fabric on the side opposite said friction-coated side, with a rubber composition, doubling the friction coated side upon a rubber composition previously calendered upon a metallic liner, and vulcanizing the product.

---

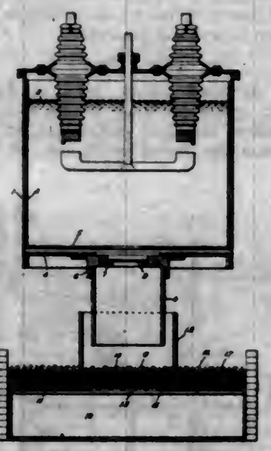
1,694,259. METHOD OF DISTILLING PETROLEUM. HENRY H. HEWETSON, Elizabeth, N. J., assignor to Standard Oil Development Company, a Corporation of Delaware. Filed June 18, 1923. Serial No. 646,005. 1 Claim. (Cl. 196—106.)



The method of continuously distilling petroleum which comprises maintaining a series of bodies of petroleum at successively higher temperatures, conducting away and condensing the vapors so formed, maintaining a continuously flowing stream of petroleum from each body to that at the next higher temperature, each stream having a down-flowing and up-flowing section, introducing into said stream a quantity of a liquid having a boiling point lower than the temperature of the stream, to produce by vaporization a gas or vapor in the form of bubbles commingled with the liquid in the up-flowing section.

---

1,694,260. MANUFACTURE OF TIRES FOR MOTOR VEHICLES. ERNEST HIBBERT, Goulburn, New South Wales, Australia, assignor to Hibbert Pneumatic Cell Tyre Company Limited, Goulburn, New South Wales, Australia, a Company of New South Wales, Australia. Filed Dec. 3, 1926, Serial No. 152,468, and in Australia Apr. 17, 1926. 2 Claims. (Cl. 18—53.)



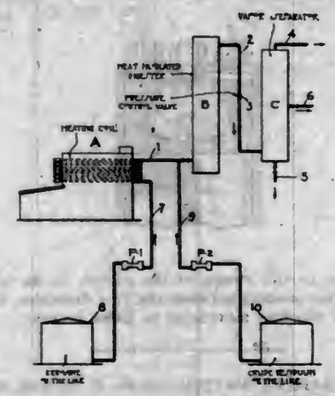
1. In the manufacture of tires for motor vehicles, forming a semi-vulcanized rubber core into two similar annular parts or halves, each of said halves having recesses or cells coinciding with recesses or cells in the opposed half and positioned transversely of the tread and in staggered relation in plan, placing a division member having lateral pins between the annular parts with the lateral pins adapted to partly enter the opposed recesses in the halves,

confining or passing air or gas into said cells, and vulcanizing the halves of the cores and the division members and pins together.

---

1,694,261. ELECTRIC SWITCH. JOHN D. HILLIARD, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Aug. 26, 1925. Serial No. 52,669. 3 Claims. (Cl. 200—150.)

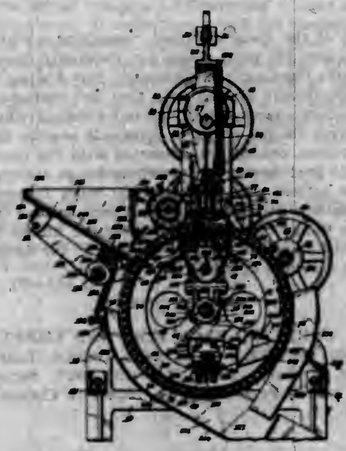
1. In a fluid break switch, a tank containing an insulating liquid, a diaphragm mounted in the bottom of the tank constructed to be ruptured by an excessive pressure in the tank, and a receptacle for receiving the gas and liquid ejected through the ruptured diaphragm, said receptacle having a cover comprising means for cooling and preventing combustion of the material received thereby.



---

1,694,262. PROCESS OF CONVERTING HYDROCARBONS INTO LOWER-BOILING PRODUCTS. FRANK A. HOWARD, Elizabeth, N. J., assignor to Standard Oil Development Company, a Corporation of Delaware. Filed May 21, 1923. Serial No. 640,491. 2 Claims. (Cl. 196—51.)

1. A process for the conversion of hydrocarbons into lower boiling products which comprises feeding a stream of light gas oil into a heating passageway at a temperature around 900–1000° F., to effect a material amount of cracking in vaporous condition, then passing the products into a further passageway which is guarded against heat loss, while also introducing a heavy gas oil, contacting said vapor and liquid products together for a substantial period of time and allowing conversion substantially in

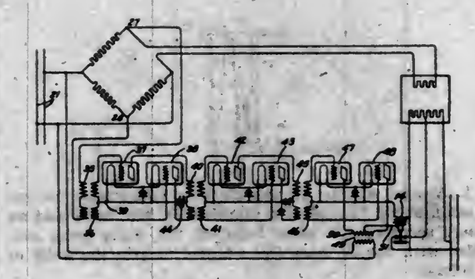


the liquid phase, to go on in the mixture solely on the heat already acquired, and passing the liquid products together with any vapors, from a point substantially above

the bottom of the passageway guarded against heat loss into a vapor-separating zone and separating the lighter hydrocarbons from the heavier.

---

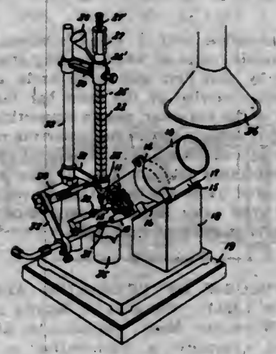
1,694,263. CHERRY-PITTING MACHINE. CHARLES T. HOWSON, Silver Creek, N. Y., assignor to Huntley Manufacturing Co., Silver Creek, N. Y., a Corporation of New York. Filed Aug. 7, 1925. Serial No. 48,737. 20 Claims. (Cl. 146—19.)



5. A cherry pitting machine, comprising an intermittently rotatable cylinder having pitting openings, pitting mechanism above said cylinder, a spout at one side of said cylinder and extending downwardly along the same, said spout being adapted to receive pitted cherries from said cylinder, and a cherry-discharge spout underneath said cylinder extending laterally and downwardly and receiving the pitted cherries from said first-mentioned spout.

---

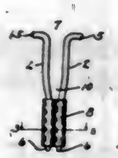
1,694,264. TEMPERATURE REGULATOR. ALBERT W. HULL, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed June 22, 1925. Serial No. 38,842. 17 Claims. (Cl. 219—20.)



9. A temperature regulator comprising a Wheatstone bridge provided with a resistance varying with the temperature to be regulated, a source of alternating current supply connected across two of the terminals of said bridge, an electron discharge device provided with input and output circuits, connections between said input circuit and the other two terminals of said bridge, connections between said output circuit and said supply source,

and temperature control means in said output circuit responsive to the current in said output circuit so as to maintain a predetermined temperature.

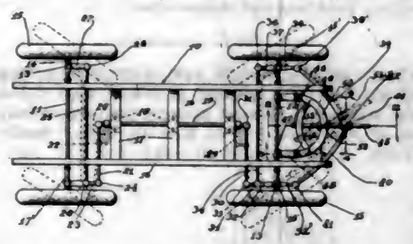
---



1,694,265. METHOD AND APPARATUS FOR TREATING FILAMENTS. GEORGE E. INMAN, East Cleveland, Ohio, assignor to General Electric Company, a Corporation of New York. Filed May 10, 1926. Serial No. 107,883. 2 Claims. (Cl. 91—45.)

1. The method of applying getter to filaments for electric incandescent lamps and similar articles which consists in placing a number of said filaments in a receptacle so that they are supported on the bottom thereof, and then spraying the getter material upon said filaments and at the same time directing gas pressure tangentially so as to cause a swirling of said filaments in front of the spray.

2. In an apparatus for applying material to filaments, the combination of a receptacle for holding a number of filaments and having a plurality of openings in its wall near the bottom thereof, a gas pressure jet disposed at each of said openings at least one of which is directed tangentially of the receptacle, and means for feeding a liquid containing said material so as to be encountered by the gas issuing from at least one of said jets and sprayed into the corresponding opening.



1,694,266. NAIL EXPANSION. JOHN KARITZKY, Garwood, N. J., assignor, by mesne assignments, to Henry B. Newhall Corporation, Garwood, N. J., a Corporation of New Jersey. Original application filed Aug. 20, 1926, Serial No. 130,387. Divided and this application filed Feb. 10, 1927. Serial No. 167,081. 2 Claims. (Cl. 85—2.4.)

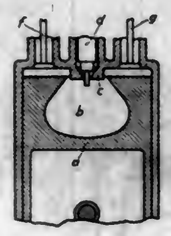
1. A new article of manufacture comprising an expansion shield formed of a plurality of wire units and an insert securing the units together, the units being provided with one or more feet adapted to grip the walls of a hole.

---

1,694,267. TRAILER. EMORY A. KING, Corydon, Iowa. Filed Jan. 28, 1927. Serial No. 164,289. 6 Claims. (Cl. 280—99.)

1. The combination with a vehicle chassis, axles carried by the chassis, pairs of wheel bearing stud axles pivotally carried by said first mentioned axels, and a draw bar, of a member carried by the draw bar for movement longitudinally of the draw bar, means connecting said member to one pair of said stud axles for imparting movement to the stud axles in a direction of movement of the draw bar, and means connecting said one pair of stud axles to the other pair of stud axles for imparting movement to said other pair of stud axles in an opposite direction to the movement of said one pair of stud axles.

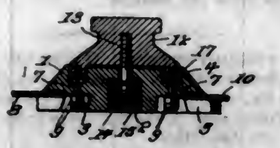
---



1,694,268. PROCESS OF PREPARING ALKYL COMPOUNDS OF LEAD. CHARLES A. KRAUS and CONRAD C. CALLIS, Worcester, Mass., assignors to Standard Oil Development Company, a Corporation of Delaware. Filed Apr. 13, 1923. Serial No. 631,941. 6 Claims. (Cl. 260—11.)

1. The process of preparing lead tetraethyl which comprises subjecting an alloy containing 20% sodium and 80% lead to the action of water in substantially equimolecular proportion to the sodium, in the presence of ethyl iodid and in the absence of an organic catalyst, while maintaining the mass at substantially its boiling point.

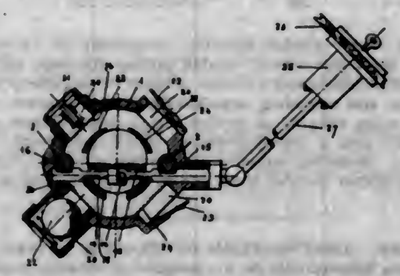
---



1,694,269. INTERNAL-COMBUSTION ENGINE. FRANZ LANG, Munich, Germany, assignor to Acro Aktiengesellschaft, Knessnacht-on-the-Rigi, Switzerland. Filed Apr. 3, 1925, Serial No. 20,468, and in Germany Apr. 4, 1924. 6 Claims. (Cl. 123—30.)

1. In an internal combustion engine, a combustion space, comprising a combustion chamber arranged in the piston head, said combustion chamber having its forward portion reduced to form a throat in combination with a second combustion chamber in the cylinder-head communicating with the first combustion chamber, and a fluid-injection valve arranged in the cylinder-head and arranged to project into the throat of the first chamber during the final portion of the stroke of the piston, so as to leave only a vertical passage between the two chambers, thereby imparting a whirling movement to gases present.

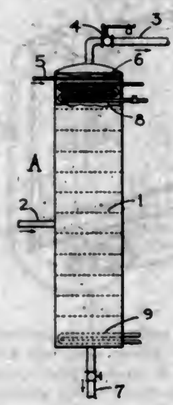
---



1,694,270. SAFETY SWITCH. JOHN F. LAUPER, Hollandale, Wis. Filed Oct. 24, 1927. Serial No. 228,348. 1 Claim. (Cl. 200—155.)

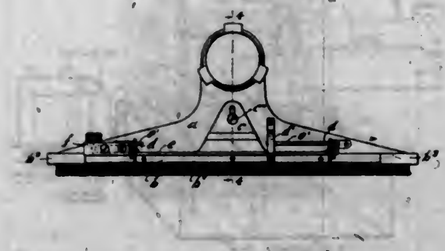
A switch of the class described comprising a stationary part and a movable part, means for yieldingly connecting the two parts together, the stationary part having an annular groove therein formed with four flat portions in its bottom and four concaved portions in its bottom which are placed between the flat portions, terminals passing through the flat portions, conductors connected with the terminals, the movable part having a depending flange entering the groove, the bottom edge of the flange being formed with four flat portions and four convex portions so that the bottom of the flange conforms to the bottom of the groove and a pair of plates on the bottom edge of the flange, one plate being arranged opposite the other plate.

---



1,694,271. COMBINED BACK FIRE AND THEFT PREVENTING DEVICE. ALEXANDER IEZEKIL LIBERMAN, Boulogne, France. Filed May 18, 1927, Serial No. 192,459, and in France Dec. 11, 1926. 10 Claims. (Cl. 251—6.)

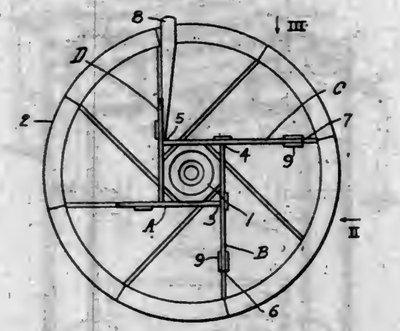
1. A combined theft and back-fire preventing device located in the induction pipe of an internal combustion engine comprising an obturating member located in said induction pipe and opening towards said engine, a lock, and means actuated by said lock for maintaining said obturating member in closed position.



1,694,272. PREPARING HYDROCARBON PRODUCTS. NATHANIEL E. LOOMIS, Elizabeth, N. J., assignor to Standard Oil Development Company, a Corporation of Delaware. Filed July 13, 1923. Serial No. 651,249. 1 Claim. (Cl. 196—12.)

The improvement in the art of preparing hydrocarbon products, which comprises introducing a light condensate containing some hydrocarbons which are normally gaseous into the intermediate region of an absorber tower, and passing vaporizing constituents up through progressively cooler zones, while maintaining a pressure of 100–300 lbs. per square inch and supplying a flow of heavy naphtha countercurrently, and drawing off a substantially balanced gasoline from the bottom of the tower.

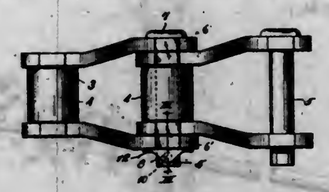
---



1,694,273. SUCTION CLEANING APPARATUS. EUGENE F. MARTINET, Cleveland, Ohio, assignor to The P. A. Geier Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 15, 1927. Serial No. 198,958. 5 Claims. (Cl. 15—158.)

1. The combination with a suction cleaning nozzle, of a brush member vertically adjustable with respect to the mouth of said nozzle and operatively associated therewith, a horizontally positioned rotatable adjusting member interposed between said brush and nozzle, detent means for maintaining the brush in adjusted positon, and an actuating lever provided on said adjusting member having a plurality of angularly positioned members adapted to be alternatively engaged by the foot of the user, substantially as set forth.

---

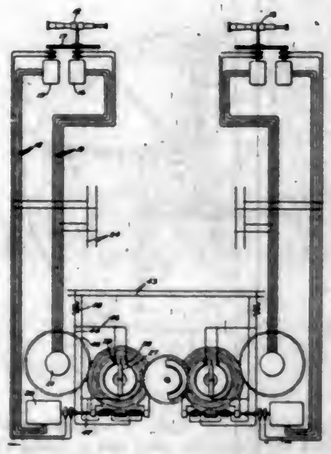


1,694,274. TUG WHEEL. JOHN I. MCKEAN, Parkersburg, W. Va., assignor to Standard Oil Development Company, a Corporation of Delaware. Filed Apr. 13, 1923. Serial No. 631,765. 4 Claims. (Cl. 64—51.)

1. In combination, a shaft, a rope-operated tug rim, spokes fitted to shaft and rim, and a series of rope-engaging members at one side of the wheel and arranged to receive the rope when displaced from the wheel, said members being fastened to the shaft and braced against each other in succession, one of the rope-engaging members being set into the side of the rim of the wheel.

---

1,694,275. SPROCKET CHAIN. JOHN CLIFFORD MERWIN, Milwaukee, Wis., assignor to Chain Belt Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Mar. 19, 1925. Serial No. 16,736. 1 Claim. (Cl. 74—32.)



The combination with a pair of sprocket chain links and a pin uniting them of a cross bar extending through the pintle, the opposite ends of the pin extending beyond the circumference of the pintle, and a washer interposed between the pin and the adjacent face of a side bar, the washer being of thin metal and formed with ribs parallel with the pin and with edge portions bendable and adapted to be bent outward to form flanges that lie opposite the ends of the pin.

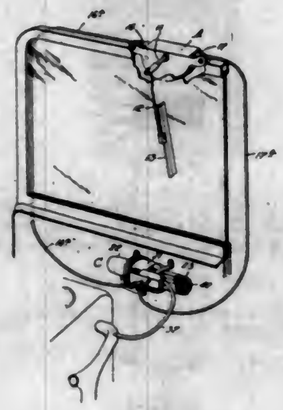
---

1,694,276. ELECTRICAL CONDENSER. ARTHUR MÖHRLE, Stuttgart, Germany, assignor to Robert Bosch Aktiengesellschaft, Stuttgart, Germany. Filed Apr. 5, 1927, Serial No. 181,284, and in Germany Apr. 21, 1926. 1 Claim. (Cl. 175—41.)

An electrical condenser having a dielectric which consists of fibrous material, said material being soaked essentially with a mass consisting of lime soap of purified Montan wax.

1,694,277. MEANS FOR REPRODUCING POSITION. EDWIN J. MURPHY and LEONARD P. HUTT, Schenectady, N. Y., assignors to General Electric Company, a Corporation of New York. Filed Oct. 9, 1924. Serial No. 742,732. 11 Claims. (Cl. 172—239.)

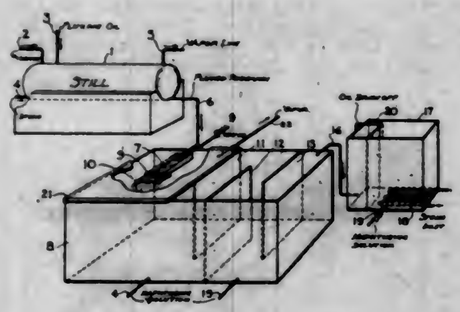
1. The combination with a driven object, of a plurality of driving means for said object operating at different speeds, driving connections between said driving means and said object, and means including an electric contact device operated by the driving means of lower speed for releasing said driving connection for the driving means of higher speed.



---

1,694,278. COUPLING AND STEERING DEVICE FOR AUTOMOBILES. ALGOT W. NORDGREN, St. Paul, Minn., assignor to Marquette Manufacturing Company. Filed Sept. 30, 1926. Serial No. 138,637. 1 Claim. (Cl. 280—33.55.)

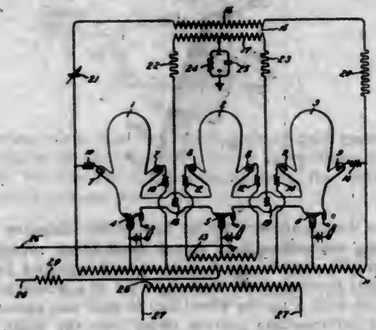
In combination with the axle of an automobile having steerable wheels thereon and a steering rod connecting the wheels whereby longitudinal movement of the steering rod imparts steering movement to the steerable wheels, a tow pole comprising an axle clamp, said clamp having means for engaging two sides of the axle, an adapter comprising a hinged band having hooked ends adapted to be engaged by said last mentioned means, a connecting member pivoted thereto for swinging movement in a horizontal plane, a rod pivoted to said connecting member for swinging movement in a vertical plane to provide for steering rods of different heights relative to the axle, a steering rod clamp having an opening therein tapered from each end thereof for slidably and loosely receiving said rod to provide for steering rods of different distances from the axle and to allow lateral swinging movement of said rod relative to the steering rod clamp, and a draw bar connected to said connecting member and having fastening means at its forward end.



1,694,279. MEANS FOR OPERATING MOTOR-VEHICLE ACCESSORY MOTORS. JOHN R. OISHEI, Buffalo, N. Y., assignor to Trico Products Corporation, Buffalo, N. Y. Filed June 21, 1924. Serial No. 721,439. 12 Claims. (Cl. 60—60.)

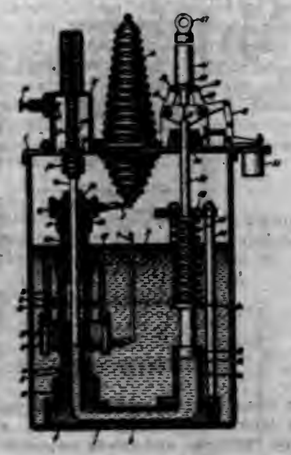
1. The combination with a fluid pressure operated accessory motor having a piston therein adapted to be moved alternately in opposite directions, of means for utilizing suction, as created in the normal operation of a vehicle internal combustion engine to produce a fluid pressure substantially above one atmosphere, said fluid pressure and said suction being adapted to be operatively communicated to said accessory motor at opposite sides of said piston to move said piston and actuate said accessory.

---



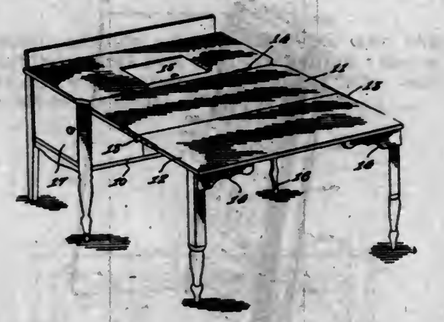
1,694,280. PROCESS FOR RECLAIMING DISTILLATION RESIDUES. RAYMOND E. POWELL, Houston, Tex., assignor to Standard Oil Development Company, a Corporation of Delaware. Filed Feb. 25, 1925. Serial No. 11,425. 4 Claims. (Cl. 196—146.)

3. Process of reclaiming a distillation residue containing water-soluble constituents, which comprises mixing a fluxing agent with a hot body of the residue, maintaining the heat of the mixture, discharging the hot fluxed residue upon the surface of a stream of water, allowing stratification to take place, and separately withdrawing the oil and the water containing dissolved constituents.



1,694,281. ELECTRICAL APPARATUS. DAVID C. PRINCE, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed June 29, 1926. Serial No. 119,431. 5 Claims. (Cl. 175—363.)

1. The combination of alternating and direct current circuits, an electron discharge device comprising a plurality of vaporizable electrodes connected between said circuits, means for controlling the transmission of current between said electrodes, and means connected between one of said electrodes and said control means for maintaining said control means at a negative potential with respect to said electrode while said current passes through its zero value.



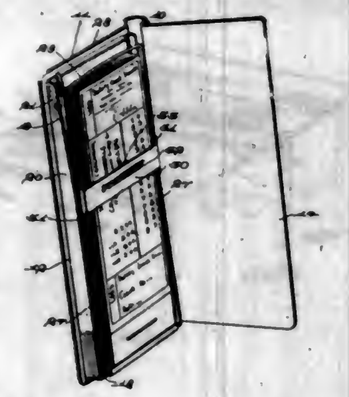
---

1,694,282. ELECTRIC SWITCH. WILLIAM K. RANKIN, Scotia, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Aug. 30, 1926. Serial No. 132,425. 3 Claims. (Cl. 200—150.)

1. An electric switch comprising an enclosing vessel adapted to contain an insulating liquid, an interrupting chamber therein having a fixed socket contact member at one end thereof, a cooperating movable contact rod extending through the opposite end thereof, a pump in the vessel in communication with the chamber whereby liquid forced into the chamber separates the contacts and flows through the socket contact member, a spring for operating the pump and load responsive means for releasing the spring.

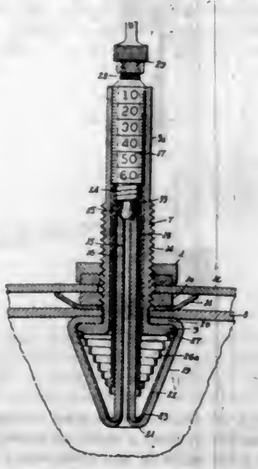
1,694,283. BUFFET TABLE. JAMES C. REID, Lincoln, Nebr. Filed June 29, 1927. Serial No. 202,328. 4 Claims. (Cl. 45—51.)

3. In a device of the character described comprising an article of furniture provided with leg members, said members having portions removed, and a table carried by the removed portions and adapted to be supported thereby when extended for use.



---

1,694,284. ELECTRIC HAMMER. MAX SANTA ANA, Huntington Park, Calif. Filed Dec. 1, 1927. Serial No. 237,040. 4 Claims. (Cl. 1—46.)

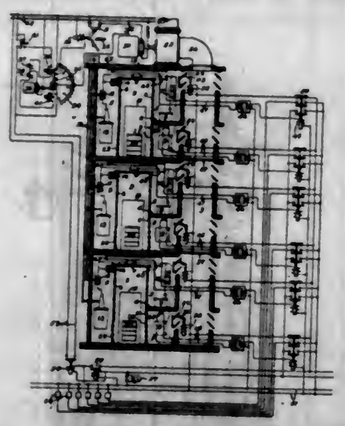


1. In a device of the class described, a magazine, plates in the magazine for holding a series of nails therebetween, a spring urging the nails in one direction, a separator between the first and second nails, a spring normally holding the separator in place, a bar having a cam, a spring holding the bar in one position, said separator having a shoulder engageable by said cam, a casing on the magazine, a pair of spring pressed blocks in the casing for functioning as guides for nails, one of said blocks being provided with a notch having an inclined edge, and an offset end on said bar engageable with said edge so that when the blocks are separated the bar is moved to bring the cam into play, against the shoulder of the separator and to release the separator between the first and second nails.

1,694,285. CASH-FARE MANIPULATOR. WILLIAM DAW SCALF, Pineville, Ky. Filed July 14, 1926, Serial No. 122,485. Renewed Oct. 15, 1928. 2 Claims. (Cl. 206—40.6.)

1. A device of the character described comprising a receptacle, having a bottom, side walls, and an end wall, the end wall being provided with an extension bent inwardly in spaced relation with the end wall, a bail of U-shaped construction having its free ends bent inwardly and located between the extension and the end wall so that the bail is not only pivotally mounted but slidably mounted in the container, a cutter having bearings on opposite ends, said bail including legs adapted to receive the bearings, a cutter being provided with a knife at one edge and an enlargement at the opposite edge and means for maintaining a book of fare receipts in the container.

1,694,286. TIRE VALVE STEM AND PRESSURE GAUGE. NELSON T. SHORTS, Fern, Pa. Filed Apr. 6, 1927. Serial No. 181,443. 5 Claims. (Cl. 152—11.5.)

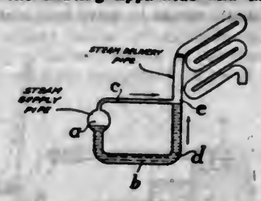


1. A tire pressure gauge comprising a barrel, an indicating member slidable therein, a flexible member connected to the indicating member and projecting from the inner end of the barrel, the bulb connected to the inner end of the barrel and said flexible member, and a coiled spring surrounding said flexible member and having its outer end connected to said indicating member, said spring extending within the bulb and having a reversely extending conical portion bearing against the inner end portion of the barrel.

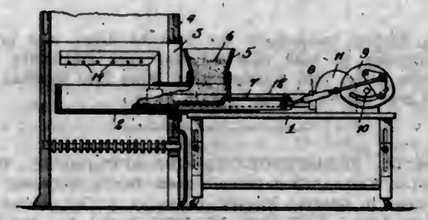
1,694,287. HEADBLOCK-STRAP ATTACHMENT. CLIFFORD L. SNYDER, Detroit, Mich., assignor to The Evans Auto Loading Co. Inc., Detroit, Mich. Filed Feb. 2, 1928. Serial No. 251,419. 6 Claims. (Cl. 105—368.)

2. The combination with an automobile shipping deck embodying supporting legs and a head block secured to the inner sides of the upper ends of said legs and formed with a seat to receive the lower portion of a wheel hub, of a strap for anchoring the wheel hub in said seat embodying a curved intermediate portion fitted over the upper portion of the hub and end portions secured to the inner face of the head block, and a buffer strap attached at its upper end to the intermediate portion of the anchoring strap and having its lower end portion secured to the inner face of the head block, said buffer strap having a U-shaped upper end portion adapted to snugly receive the wheel hub and to engage the outer end of the latter to hold the head block out of contact with the wheel.

1,694,288. INSTALLATION OF ELECTRIC APPARATUS. ERIK G. SOHLBERG, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Feb. 24, 1927. Serial No. 170,641. 9 Claims. (Cl. 175—298.)

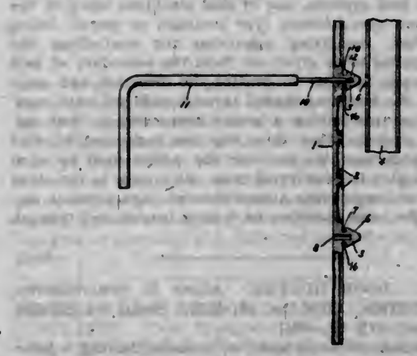


1. In an installation of electric apparatus, a structure comprising intercommunicating chambers, electric apparatus in said chambers, and means responsive to the presence of a predetermined amount of conducting material in the air in any chamber for preventing said air from escaping into other of said chambers.

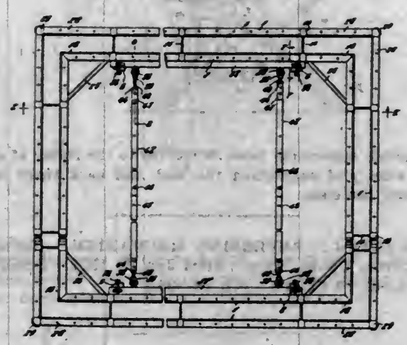


1,694,289. DEVICE FOR DRAINING THE MAIN PIPE OF HEATING INSTALLATIONS OF RAILROAD CARS. HERMANN SKULOWITZ, Vienna, Austria. Filed Feb. 20, 1922, Serial No. 538,118, and in Austria Mar. 2, 1921. 5 Claims. (Cl. 236—53.)

1. In a heating system for railway cars or the like, a main steam pipe and a heating apparatus, a receptacle for collecting the condensate in said main steam pipe, a communication path leading from the lower part of the receptacle to the heating apparatus and an additional communication path from the upper part of said main steam pipe joining the first and intended to carry steam into the heating installation simultaneously with the delivery of condensate into the same.



1,694,290. COMBINED COAL STOKER AND BURNER. JOHN CHRISTIAN ST. CLAIR, Butte, Mont. Filed Apr. 11, 1927. Serial No. 182,890. 1 Claim. (Cl. 110—75.)

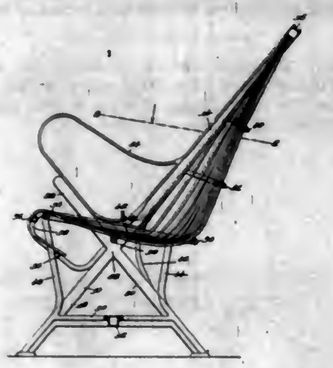


In a device of the character described, a hollow body extending into an opening in a side wall of the furnace casing, said hollow body constituting a fire box portion within the furnace casing, a fuel supply chamber outside of the furnace open at its upper end at the outer side of the furnace casing and a fuel feeding passage extending through the opening in the wall of said furnace casing and extending between said fire box and said fuel chamber, a plunger reciprocable in the lower part of the fuel supply chamber and in said fuel feeding passage for delivering fuel from said fuel supply chamber to said fire box and an air delivery conduit extending alongside of said body into said furnace casing and having a nozzle portion supported above said fire box, said discharge nozzle having rows of spaced discharge apertures in its lower part located in position to discharge air blasts downwardly and outwardly onto fuel within said fire box.

1,694,291. GASKET. PHILIP T. STWERT, Scotia, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Aug. 12, 1927. Serial No. 212,596. 12 Claims. (Cl. 20—69.)

1. A gasket adapted to be applied to a member having a perforation therein, said gasket having a portion larger than the perforation and adapted to be received thereby and having an opening extending incompletely through said portion whereby the gasket may be applied to the member by inserting a member in the opening in the gasket and forcing said portion into the perforation in the member.

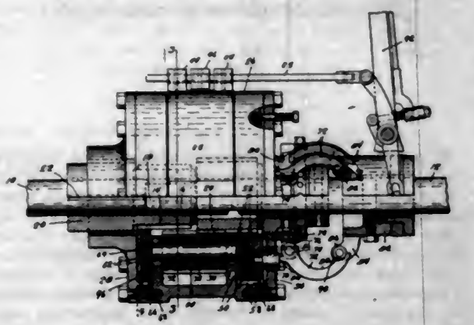
1,694,292. METHOD OF CONSTRUCTING AND SUPPORTING FORMS FOR CONCRETE WORK. FRED A. TRACEY, Portland, Oreg. Filed Feb. 10, 1928. Serial No. 253,405. 2 Claims. (Cl. 25—118.)



2. A form for concrete structures, comprising inner and outer units, all of which include frames of the same size and dimensions except the corner units, all of said frames having facings and the ends and edges thereof being provided with equidistantly spaced bolt receiving openings, the inner corner frames being of triangular formation and braced, said units designed to be arranged edge to edge and in superimposed relation and to have bolts passing through the registering openings therein, form supporting posts having equidistantly spaced bolt openings therethrough that are arranged between the confronting edges of the units and receiving the bolts therethrough, spacer strips between the form supporting posts and the frame units having equidistantly spaced openings for the reception of bolts, wire members passing transversely through the form supporting posts, corner posts for the corners of the outer frame units having equidistantly spaced bolt openings for the reception of the bolts therethrough, collapsible brackets removably and adjustably secured to the inner frame units, a beam supported in the brackets, wedge elements securing the beam in the brackets, shorings between the brackets, each comprising adjustably connected beams having sockets through the ends thereof, a casing surrounding said ends, swingably supported screws on the beams received through said casings and into said sockets and nuts threaded on said screws for contacting the casings

1,694,293. METAL CHAIR. EUGENE F. TAUDO, Weston Mass. Filed Aug. 24, 1927. Serial No. 215,009. 3 Claims. (Cl. 155—194.)

1. A chair comprising a frame having straight, metal, tubular portions forming the sides, means for maintaining the frame in an inclined position sloping rearwardly from the sides thereof, a series of spaced, metal tubes extending between the side members continuously throughout the seat and back portion, the tubes projecting rearwardly from the plane of the frame and thence curved and ex-

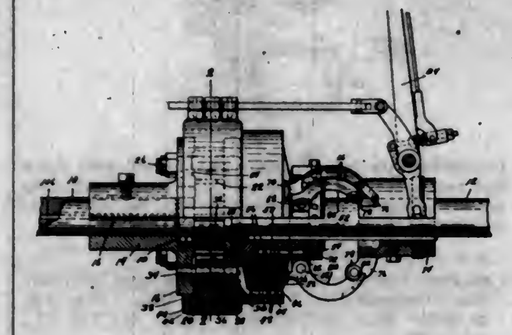


tending upwardly to join the frame at the upper end to project the junction of the seat and back portions of the chair rearwardly of the plane of the frame, and a series

of curved, transverse tubes connected to the frame at opposite sides and supporting the seat and back tubes intermediate the ends.

---

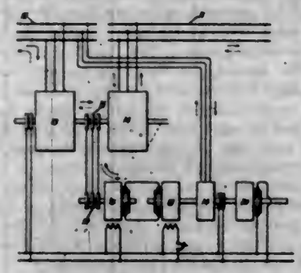
1,694,294. REVERSING MECHANISM. HENRY A. TUTTLE, Upton, Mass. Filed Jan. 7, 1927. Serial No. 159,543. 4 Claims. (Cl. 74—34.)



1. In a reversing mechanism, the combination of a driving shaft, a driven shaft, gearing connecting said shafts for reverse drive including a casing carrying components of said gearing, clutch mechanism connecting said shafts for forward drive including clutch-sections disposed on opposite sides of said gearing, and actuating mechanism for said clutch mechanism including pressure-transmitting means disposed within said casing independent of said gearing and interposed between said clutch-sections arranged to move one of them axially independently of corresponding movement of said gearing.

---

1,694,295. REVERSING MECHANISM. HENRY A. TUTTLE, Upton, Mass. Filed Jan. 7, 1927. Serial No. 159,544. 9 Claims. (Cl. 74—34.)



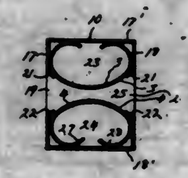
1. Reversing gearing having the combination of aligned driving and driven shafts, gearing conecting said shafts for reverse drive including a spur gear fixed to said driven shaft, a gear carrier fixed to said shafts, said gear carrier comprising a pair of detachably connected and spaced circular plates, pinion gears disposed between and carried by said plates some of which mesh with said spur gear, an internal gear disposed between and held against axial movement by said plates and surrounding and meshing with others of said pinion gears and overlying and having a rotatable bearing support on said carrier, one of said plates having an axial cylindrical extension, clutch plates disposed within and carried by said cylindrical extension, other and cooperating clutch plates connected with said driven shaft, means to move said clutch plates

into driving engagement for forward drive, and brake mechanism to hold said internal gear stationary for reverse drive, said internal gear being free to float on said gear carrier during forward drive.

---

1,694,296. FREQUENCY-CHANGER APPARATUS. WILHELM WEILER, Niederschonhausen, Berlin, Germany, assignor to General Electric Company, a Corporation of New York. Filed Apr. 16, 1927, Serial No. 184,215, and in Germany May 15, 1926. 3 Claims. (Cl. 172—281.)

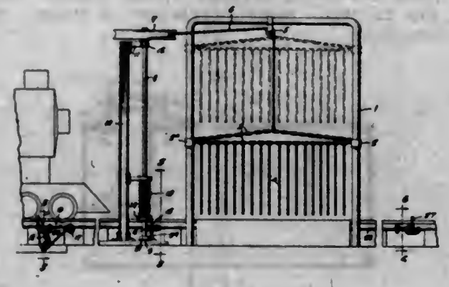
1. In combination, two alternating current systems, a frequency changer set connected between said systems comprising two mechanically connected alternating current dynamo electric machines respectively electrically connected to said systems, one of said machines being of the form wound asynchronous type arranged to operate below synchronism, regulating apparatus for controlling the power supplied to or given out from the secondary of said asynchronous machine to control the direction and magnitude of the load transferred through said set, said regulating apparatus having a power connection to that distribution system other than the one connected to said asynchronous machine so that the power used in such load regulation is transferred from one system to the other through said regulating apparatus and asynchronous machine in the same direction as load is transferred through said set.



---

1,694,297. DOOR BUFFER. ALLEN R. WHITTINGTON, Detroit, Mich. Filed Oct. 21, 1927. Serial No. 227,698. 5 Claims. (Cl. 16—85.)

1. In a door dovetail member, a casing having a laterally opening transversely extending recess for receiving a tongue of a door dovetail member, means in said casing for cushioning the tongue of a dovetail member including a

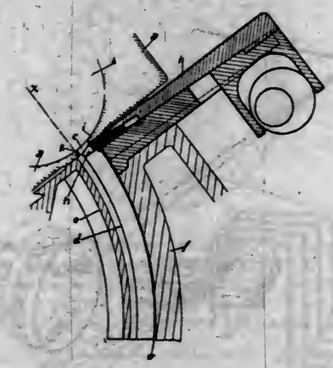


substantially arcuate shaped spring extending transversely but movable freely longitudinally of said casing at one longitudinal edge of said recess, abutments for said spring on said casing at opposite ends of said recess, and substantially C-shaped strips of yieldable material projecting rearwardly from said spring at the opposite ends thereof and freely slidably engaging fixed parts of said casing and

constantly pressing said spring toward said transversely extending recess whereby said spring will be held against said abutments when said tongue is outside of said recess and will be held against said tongue when in said recess, said C-shaped strips being contractible and adapted to curl and slide around on fixed parts of said casing when said spring is engaged and moved longitudinally of said casing by said tongue to cushion the said spring.

---

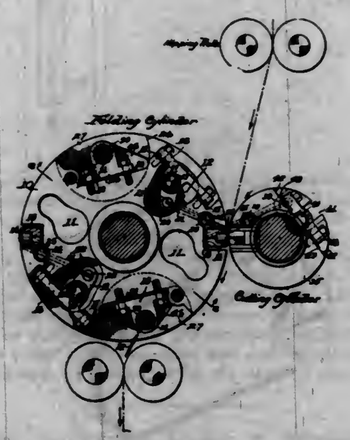
1,694,298. AUTOMATIC FOLDING CROSSING GATE. JAMES M. WILLIAMS, Sandford, Fla. Filed July 29, 1927. Serial No. 209,323. 3 Claims. (Cl. 246—293.)



1. An automatic crossing gate flexibly supported centrally of an arch before the crossing, comprising a foldable openwork fabric guided on sleeves slidable on the arch, automatic track instruments a determinate distance at the sides of the crossing, flexible means for operating the gate, a lever on the track instrument operated by a passing train and connected with said flexible means, a rotatable spring pressed standard at the side of the arch to lower the gate on approach of a train and raise the same when it passes.

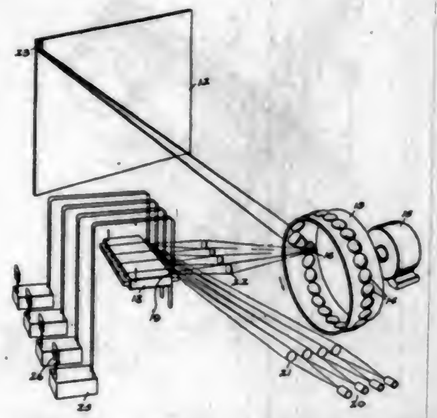
---

1,694,299. MACHINE FOR CASTING CURVED STEREOPLATES. CARL WINKLER, Bern, Switzerland. Filed Apr. 22, 1927, Serial No. 185,853, and in Germany July 17, 1926. 1 Claim. (Cl. 22—2.)



In a machine for casting curved stereotype plates, a melting pot having its lower portion reduced in thickness and provided therein with an outlet slot controlled by a cock, the slot being so located in the reduced portion of the pot that it will be in advance of a vertical line passing

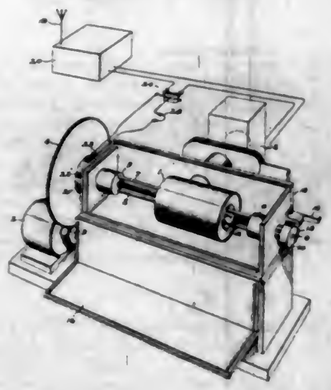
through the axis of the cock and its rear wall will be of greater height than its front wall, and a casting box adapted to be pressed against the melting pot.



---

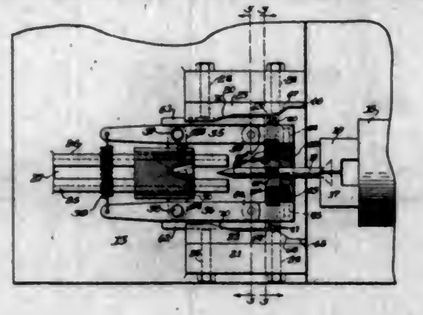
1,694,300. FOLDING AND CUTTING COUPLE FOR FOLDING MACHINES. HENRY A. WISE WOOD, New York, N. Y., assignor to Wood Newspaper Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed Oct. 3, 1923, Serial No. 666,365. Renewed May 2, 1928. 20 Claims. (Cl. 270—76.)

1. As an article of manufacture, a cylinder forming one of the cutting and folding couple of a folding machine, consisting of metal cast with a longitudinal opening, said opening being provided with a plurality of bearings of relatively soft metal cast in finished condition for rotatably supporting a shaft, whereby the machining of the surfaces of the cylinder is avoided.



1,694,301. ELECTRICAL TRANSMISSION OF PICTURES. ERNST F. W. ALEXANDERSON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Oct. 19, 1926. Serial No. 142,734. 11 Claims. (Cl. 178—6.)

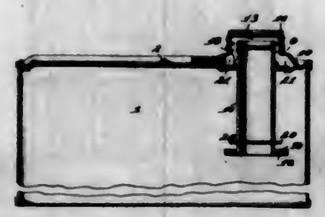
1. The method of transmitting pictures which comprises simultaneously scanning a group of adjacent bands of unit areas, successively scanning adjacent groups of said bands, and producing electric currents corresponding with the tones of the picture indicated by the light emitted by said unit areas.



---

1,694,302. TRANSMISSION OF PICTURES. ERNST F. W. ALEXANDERSON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Jan. 23, 1928. Serial No. 248,731. 4 Claims. (Cl. 178—7.)

1. A picture receiving apparatus including a rotatable member, a threaded member mechanically coupled to said rotatable member through frictional contact between said members, and means arranged to cooperate with said threaded member for moving said rotatable member along its axis of rotation when said rotatable and threaded members are moved with respect to one another.

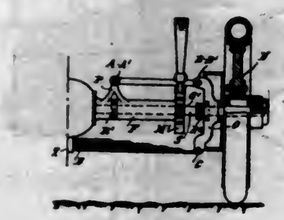


1,694,303. SCREW POINTING AND THREADING MACHINE. JOHN A. ARENZ, Chicago, Ill., assignor to International Screw Company, Wilmington, Del., a Corporation of Delaware. Filed Dec. 14, 1925. Serial No. 75,199. 10 Claims. (Cl. 10—4.)

2. In a screw pointing and threading machine, a frame, guides mounted on said frame, a pair of tool holding arms carrying the pointing and threading cutters and moving inwardly for the pointing and outwardly for the threading of the screw blank, a pointing head travelling with said arms to and from the screw and having cutters mounted therein, thread cutting dies in groups slidably mounted in said arms at the inner end thereof and spring-held, fixed cam plates engaging said dies and moving them to their engagement with the screw, a tension spring drawing on the outer ends of said arms, means for reciprocating said tool holding arms, and means for holding and rotating the screw in coaction with the pointing and threading tools respectively.

---

1,694,304. LIQUID-DISPENSING CONTAINER. GEORGE JACOB ARMSTRONG, Raymond, Alberta, Canada. Filed Aug. 22, 1927. Serial No. 214,628. 6 Claims. (Cl. 221—21.)

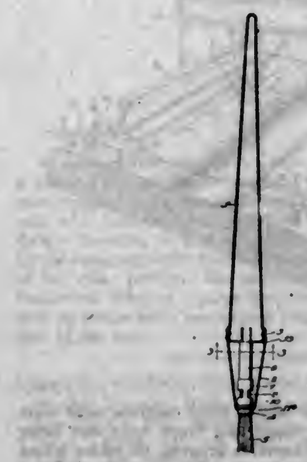


1. A liquid container having a cap closed dispensing opening, and a pouring spout of less diameter suspended therefrom within the container when not in use, and arranged to be lifted through and to project beyond said opening for dispensing purposes, said spout having a flanged lower end underlying the container at the edges of said opening with coacting members on the spout and container to clamp said flange against said edges in the projected pouring position of the spout.

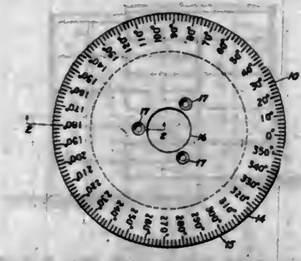
---

1,694,305. SWIVELED AXLE FOR MOTOR CARS. ENRICO ASCARELLI, Rome, Italy. Filed Apr. 10, 1926, Serial No. 101,178, and in Italy Apr. 14, 1925. 3 Claims. (Cl. 280—124.)

1. A supporting device for the wheels of motor cars, comprising in combination an axle connected to the frame by usual plate springs, an arm hinged to said axle, a plate spring fixed to said axle, a member pivotally connected to said arm and spring and carrying a swiveled axle-journal, all of the said parts with their points of articulation forming a non-parallelogrammatic elastic quadrangle, the two parallel sides of which forming upper and lower vibrating



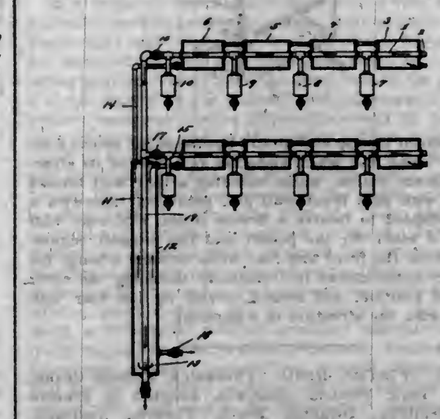
levers of different and suitably proportioned lengths whereby owing to the axle being elastically mounted and the axle-spindle rendered elastic by one side of the quadrangle which functions as a half cantilever, a double suspension is obtained.



---

1,694,306. BRUSH. EDWARD F. ASTLEY, Chicago, Ill., assignor to Humboldt M. Seyer, Chicago, Ill. Filed Mar. 7, 1927. Serial No. 173,880. 2 Claims. (Cl. 15—133.)

1. A brush comprising an applying-member, a tubular ferrule connected with the upper portion of said applying-member, an outer piece extending around a portion of said ferrule and applying-member and provided with an opening intermediate its end, a stop on said outer piece near one end thereof, and a fastening piece bent in the form of a loop, the loop-portion projecting into the hollow of said ferrule, said fastening piece having laterally extending engaging pieces, said engaging pieces limiting the inward movement of the fastening piece into the hollow of said ferrule.

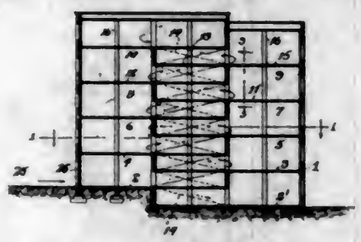


1,694,307. INDICATING DEVICES. RALPH E. BOOTH, Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed Apr. 25, 1924. Serial No. 709,057. 3 Claims. (Cl. 116—129.)

1. An indicating member comprising a support provided with apertures designating the desired markings thereon, a coating of opaque enamel on one surface of said support, and a coating of translucent enamel on the other surface of said support closing said apertures.

---

1,694,308. METHOD OF SEPARATION AND LIQUEFACTION OF GASES. WILLIAM SPENCER BOWEN, Westfield, N. J. Filed Jan. 11, 1927. Serial No. 160,446. 1 Claim. (Cl. 62—173.)



The method of segregating a gas from a mixutre of gases, which consists in passing a column of gaseous mixture at high pressure through a restricted opening, from one chamber to another, thereby reducing it to low pressure and to a temperature below the critical temperature of one of said gases at said low pressure, regeneratively cooling the advance portion of said column by gas liquefied at said lower than critical temperature, and the rearward portion of said column, by the ebullition temperature of said gas collecting the liquefied gas, and maintaining the restricted opening submerged in the liquefied gas.

---

1,694,309. BUILDING. CHARLES W. BUCKHAM, New York, N. Y. Filed Apr. 7, 1927. Serial No. 181,835. 10 Claims. (Cl. 20—1.13.)

1. A garage building, including outside, end and side walls, a plurality of substantially horizontally positioned floors extending from said side walls and overlapping for a certain distance adjacent the center of the building, a series of ramps connecting said floors, said ramps being positioned at the point where the floors overlap and spaced from said walls, means forming enclosures acting as private garages positioned between the respective ramps and said end walls, means between said ramps forming enclosed

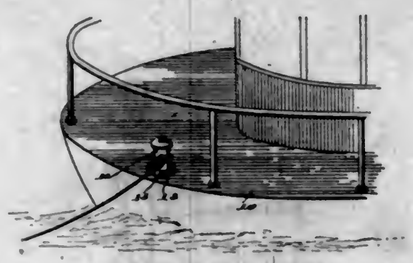
private garages, said ramps being spaced from said side walls, means spaced from said ramps for providing restricted parking spaces adjacent said side walls, said

parking spaces being spaced from said private garages and said ramps whereby connecting floor space passageways are formed connecting said ramps.

---

1,694,310. COMBINED BUTTON AND LICENSE PAPER HOLDER. HENRY E. BUTLER, Scotia, N. Y. Filed June 30, 1927. Serial No. 202,513. 1 Claim. (Cl. 40—10.)

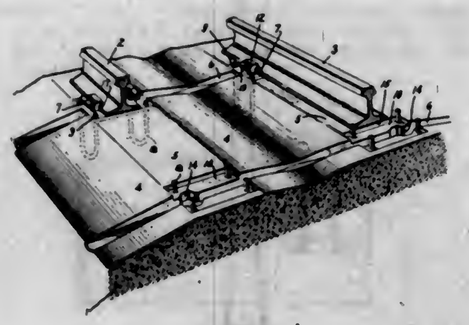
A combined license button and license paper holder comprising a front wall which embodies as a part of its structure a license button, walls including a rear wall formed integral with said front wall and providing therewith a pocket adapted to receive a license paper, said rear wall forming a cover for the pocket and the integral connection between the front and rear walls forming a hinge for the cover, catch means for releasably fastening the cover in closed position, and means carried by the rear wall for attaching the structure to a garment.



---

1,694,311. PISTON RING. FREDERICK ELBERT CLARK, Albert Park, Victoria, Australia, assignor to Frances Ida Schilling, Brighton Beach, Victoria, Australia. Filed Dec. 2, 1926, Serial No. 152,166, and in Australia Jan. 22, 1926. 3 Claims. (Cl. 74—109.)

1. A piston ring composed of an expansible split annular outer member having a slip joint at one side, and an inner member formed from a flexible resilient strip initially bent into substantially U-shape with its ends relatively widely spaced apart and each limb of the U-shaped member being curved inward adjacent the free end thereof, said resilient member being so inserted in the outer members as to exert maximum pressure on the outer member at points approximately diametrically opposite the slip joint in the outer member.



1,694,312. BITT. JAMES HENRY CLARK, Miami, Fla. Filed Mar. 9, 1928. Serial No. 260,321. 1 Claim. (Cl. 114—218.)

A bitt comprising a body having an elongated transverse passage therethrough, said body having laterally projecting flanges at the opposite ends thereof, one of the flanges being provided with means for attaching the body to a fixed support, the passage being elliptical in cross section, the side walls of the passage presenting substantially extensive flat portions to a rope threaded through the passage, the material of the body member at the opposite ends of the passage being rounded where the rope engages the body member adjacent the opposite ends of the passage.

---

1,694,313. RAILWAY ROADBED. WILLIAM DALTON, Glenville, N. Y. Filed Mar. 22, 1928. Serial No. 263,763. 3 Claims. (Cl. 238—7.)

1. A railway roadbed formed from concrete, said roadbed having ridges for supporting track rails and being provided with spaced transverse grooves, tie plates which span said grooves to render the ridges continuous, and means for anchoring the tie plates to the concrete roadbed, the top surface of the roadbed being sloping to drain water away from the ridges.

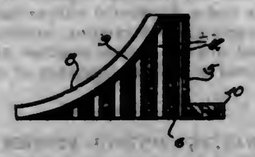
---

1,694,314. GUIDE TRACK FOR SCREEN CONSTRUCTION. HARRY DIXSON, Pella, Iowa, assignor to Rolscreen Company, Pella, Iowa. Filed Feb. 19, 1927. Serial No. 169,555. 3 Claims. (Cl. 156—39.)

1. A guide track for a flexible roll screen having a tubular portion provided with a slot extending lengthwise thereof for receiving the side edge of the screen and allowing it to travel in the guide track as it is rolled up and down, the material of said tubular portion for a part of its length being spread apart a greater distance than the width of said slot defining thereby an enlarged opening, whereby if the side edge of the screen normally traveling

in said track is accidently withdrawn from the guide track, it may travel back into the guide track through said enlarged opening as the screen is rolled up.

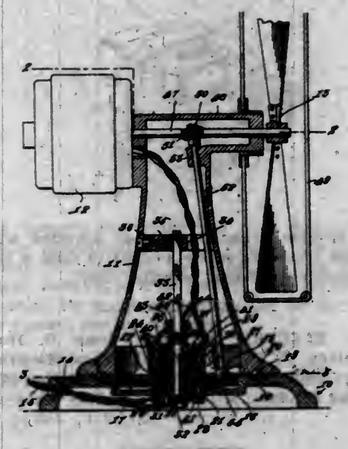
---



1,694,315. ARCH SUPPORT. WILLIAM F. DUNLOP, New York, N. Y. Filed Dec. 15, 1924. Serial No. 756,106. 1 Claim. (Cl. 36—71.)

An arch support for use in a shoe and being formed from a single piece of molded material possessed of resiliency, said support being longitudinally convexed at its upper side and longitudinally concaved at its underside, side flanges included in said support, a pendent ridge portion for said support with depressible portions at opposite sides of the ridge portion; the said ridge portion including a transverse ridge at a point intermediate the length of the arch and forwardly converging ridges at the forward portion of the arch.

---

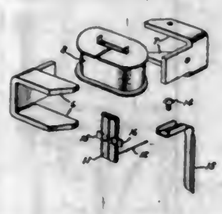


1,694,316. COMPOSITION CHOCK BLOCK. EDWARD S. EVANS, Detroit, Mich., assignor to The Evans Auto Loading Co. Inc., Detroit, Mich., a Corporation of Delaware. Filed Apr. 18, 1927. Serial No. 184,709. 1 Claim. (Cl. 188—32.)

A molded composition chock block formed with a curved bearing face and having therein a plurality of vertical holes separated by partitions and extending upwardly from the lower face of the block, said holes being of gradually increasing height from one end of the block to the other end and terminating in an arcuate line concentric with the curved bearing face of the block.

1,694,317. ELECTRIC FAN. SAMUEL GOOD, Newton, Kans. Filed Oct. 11, 1926. Serial No. 140,940. 1 Claim. (Cl. 230—254.)

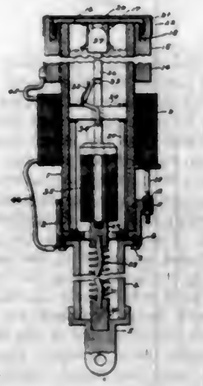
In a device of the character described, a base having a depressed central portion in its top, gear teeth formed on the vertical wall of the depressed portion, a hollow pedestal mounted for rotation upon said base, an elongated casing portion formed with the upper end of the pedestal, a motor carried by the pedestal and the elongated casing portion, said motor being disposed laterally of the pedestal and upon one end of the casing portion, a guard secured to the opposite end, a shaft included in the motor and longitudinally disposed through the casing portion, a fan on the shaft and arranged in the guard, superposed bearings projecting inwardly from the inner wall of the pedestal and disposed respectively at the top and bottom thereof, an inclined shaft arranged for rotation in the bearings, a gear on the lower end of the inclined shaft and meshing with the gear teeth, means on the shafts for transmitting rotation from the motor shaft to the inclined shaft, a transverse member arranged substantially centrally of the pedestal, a shaft detachably secured in said transverse member, cooperating contact members carried by the depressed portion and last mentioned shaft respectively, and means for electrically connecting one contact member to the motor and the other contact member to a source of electrical energy.



---

1,694,318. ELECTRIC INDUCTION APPARATUS. HANS GRÜNHOLZ, Charlottenburg, Germany, assignor to General Electric Company, a Corporation of New York. Filed Jan. 13, 1928, Serial No. 246,454, and in Germany Jan. 15, 1927. 3 Claims. (Cl. 175—356.)

1. Electric induction apparatus comprising a magnetic core, and a winding on said core, said core having portions forming parallel paths of different magnetic reluctance for the magnetic flux, the core portion forming one of said parallel paths being laminated and provided with an air gap, and the core portion forming the other parallel path being substantially solid.

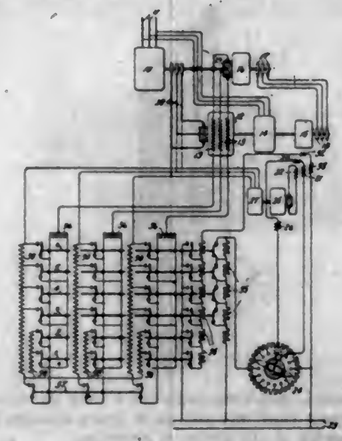


1,694,319. APPARATUS FOR PRODUCING SOUND. EMILE C. GUERDON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed July 18, 1927. Serial No. 206,408. 5 Claims. (Cl. 179—115.)

1. An integral armature member provided with opposed edges spaced from one another to form a slot and with outwardly extending mounting lugs.

---

1,694,320. ELECTRIC SWITCH. JOHN D. HILLIARD, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Mar. 17, 1924. Serial No. 699,699. 4 Claims. (Cl. 200—106.)

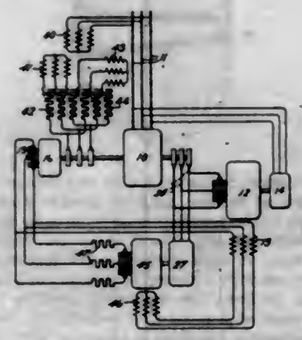


1. A switch of the character described comprising a tubular insulating supporting member containing an arc extinguishing liquid, a conducting ring at the upper end of said member having an annular groove in its upper face, a sealing liquid in said groove, a contact in said supporting member connected with said ring, a cooperating contact in said member adapted to be separated from said first member and submerged in said liquid, and a removable cover for said parts having a flange portion dipping into said sealing liquid.

---

1,694,321. SPEED-CONTROL SYSTEM. JOHN I. HULL, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Feb. 17, 1927. Serial No. 169,074. 13 Claims. (Cl. 172—274.)

1. A speed control system for induction motors comprising, in combination with such a motor, a commutator regulating machine concatenated with said motor, an exciting winding for said regulating machine and exciting means for impressing an electromotive force on said winding having components suitable for balacing the resistance drop and the inductive drop in said winding, said means including a dynamo-electric machine which is driven at a speed directly proportional to the slip of said induction motor, which speed becomes zero at zero slip.



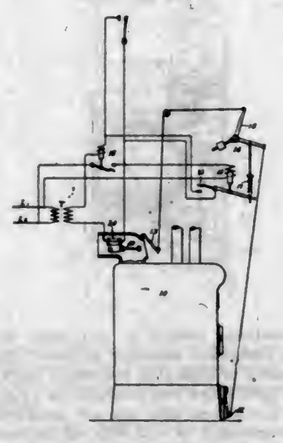
2. A speed control system for induction motors comprising, in combination with such a motor, a commutator regulating machine concatenated with said motor, an exciting winding for said regulating machine, and means for impressing an electromotive force upon the circuit of said exciting winding having a component for controlling the inductive drop therein, said means including a dynamo-

electric machine driven at a speed directly proportional to the slip of said motor, which speed becomes zero at zero slip.

---

1,694,322. SPEED-CONTROL SYSTEM. JOHN I. HULL, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Original application filed Feb. 17, 1927, Serial No. 169,074. Divided and this application filed Nov. 23, 1927. Serial No. 235,368. 4 Claims. (Cl. 172—274.)

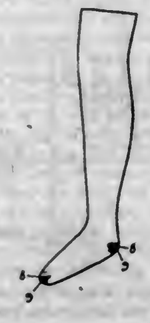
4. An induction motor regulating system comprising an induction motor of the wound secondary type, a commutator regulating machine concatenated therewith, an exciting winding for said regulating machine and means for supplying excitation to said winding comprising a frequency changer for supplying a frequency equal to the slip frequency of said motor, a dynamo-electric machine having a commutated winding supplied from said frequency changer and a distributed alternating current stator winding supplying said exciting winding and means for driving said dynamo-electric machine at a speed directly proportional to the slip frequency of said induction motor.



---

1,694,323. HEATING CONTROL SYSTEM. GEORGE H. JUMP, Buffalo, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Mar. 15, 1927. Serial No. 175,597. 5 Claims. (Cl. 236—9.)

1. A heating control system comprising means for heating a medium, electroresponsive means arranged upon energization thereof to operate to increase the heating action of said heating means and upon deenergization



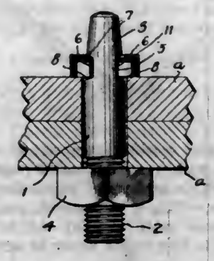
thereof to operate to decrease the heating action of said heating means, a pair of independently operable thermal responsive circuit controlling members, the first responsive to the temperature of the medium and the second responsive to the temperature of the heating means therefor, electrical connections jointly controlled by said thermal responsive circuit controlling members for establishing an energizing circuit for said electroresponsive regulating means to effect operation thereof to increase the

heating action of said heating means, and auxiliary switch mechanism arranged to be operated upon operation of the electroresponsive means to increase the heating action of said heating means for rendering the first thermal responsive member ineffective to interrupt the energizing circuit of said electroresponsive means and connecting the said energizing circuit of said electroresponsive regulating means to be interrupted exclusively by said second thermal responsive member for decreasing the heating action of the heating means.

---

1,694,324. REENFORCED HOSIERY AND METHOD OF PRODUCING SAME. LOUIS KAPLAN, Astoria, N. Y. Filed Aug. 25, 1927. Serial No. 215,351. 4 Claims. (Cl. 2—241.)

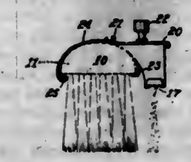
1. The method of producing a reenforced article of hosiery consisting in first completing the article with an opening at a point where a hole usually occurs, then applying reenforcement to the article along the opposite edges of the opening, and then securing the edges of the opening together to close the opening.



1,694,325. COSMETIC-PAD HOLDER. WILLIAM G. KENDALL, Newark, N. J. Filed Jan. 28, 1928. Serial No. 250,175. 9 Claims. (Cl. 132—82.)

1. A cosmetic pad holder and ring, comprising a substantially pan-shaped holder having an annular flat portion near the periphery, and a holding ring formed substantially Z-shaped in cross section, said ring being formed with means for yieldingly holding the flat portion of the holder against part of said ring.

---

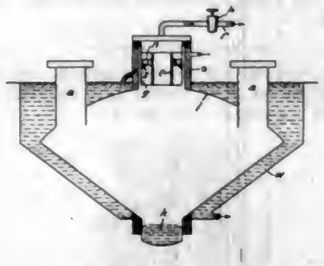


1,694,326. FITTING-UP BOLT DEVICE. EDWARD S. KLAUSNER, Owego, N. Y. Filed June 12, 1925. Serial No. 36,604. 1 Claim. (Cl. 85—1.)

A fitting-up bolt device, comprising a bolt threaded at one end and tapered at the opposite end, the base of the tapered end portion being recessed to receive a wedge key, the recesses being in opposite sides of the bolt with their vertical walls formed of planes, lines lying in said planes and in a plane passing through the axis of the bolt being parallel to each other, said walls being relatively divergent in horizontal plane, the upper walls of the recesses inclining in the direction of divergence of the vertical walls, and the lower walls being convergent with the upper walls and inclined downwardly and outwardly from the vertical walls, and a wedge key having divergent leg portions and their upper surfaces inclined downwardly in the direction of leg divergence, the lower surfaces of the legs being parallel to the horizontal plane of the key, whereby the divergent leg portions and inclined upper surfaces wedgingly cooperate with the similar vertical and upper walls of the recesses, while the horizontal lower surfaces of the legs bear on the plates with which the bolt cooperates.

---

1,694,327. FLOOR-BRUSH ATTACHMENT. HERMAN KLINGENBERG, Fitchburg, Mass. Filed Apr. 6, 1928. Serial No. 268,018. 3 Claims. (Cl. 15—131.)



1. In an attachment for a floor brush, the combination with a hopper for receiving a sweeping compound, said

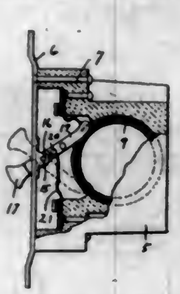
hopper being detachably mounted to the back of the brush and positioned to dispense said compound in advance of the brush, said hopper having a bottom provided with a series of perforations and with a pair of guides located horizontally but spaced from the bottom below it, of a valve slidably located between the guides and the bottom and having a series of perforations so located that when the slide is forced in as far as it can be the perforations in the slide and bottom will be out of registration, the slide having a projection at one end for manipulating it and a stop at the other end for stopping it with the perforations in wide open position.

---

1,694,328. MERCURY RECTIFIER. CHRISTIAN KRÄMER, Pankow, Germany, assignor to General Electric Company, a Corporation of New York. Filed Apr. 24, 1926, Serial No. 104,461, and in Germany May 9, 1925. 4 Claims. (Cl. 250—27.5.)

2. A mercury arc rectifier comprising an anode and cathode mounted within an evacuated vessel, and a receptacle located within said vessel and interconnected with said vessel for supporting a hygroscopic material and provided with a porous wall whereby mercury is excluded from said receptacle and water vapor is admitted thereto.

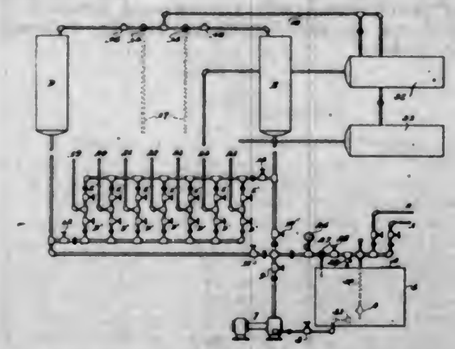
---



1,694,329. ROTARY PUMP. JOHN E. LE BUS, Electra, Tex., assignor of one-sixth to William Calvert, one-sixth to J. H. Howell, one-sixth to L. D. Embry, one-sixth to Gus M. Hamer, and one-sixth to A. L. Robb. Filed Oct. 11, 1927. Serial No. 225,509. 11 Claims. (Cl. 103—188.)

1. A pump comprising a tubular body, a pump cylinder in the body and supported by said body, a working barrel mounted for rotation in the body, a mandrel adapted to be rotated by the barrel, means for causing reciprocation of the mandrel when the same is rotated, a plunger connected with the mandrel, and a valve for controlling the flow of liquid to the cylinder, said mandrel and plunger each being provided with a passage for pumped liquid.

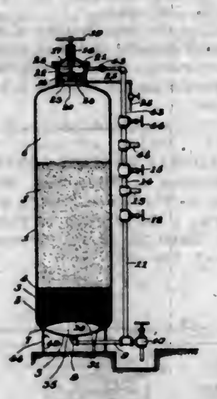
---



1,694,330. RESISTANCE SWITCH. OSCAR LUNDBERG, San Diego, Calif. Filed Dec. 15, 1927. Serial No. 240,165. 2 Claims. (Cl. 201—48.)

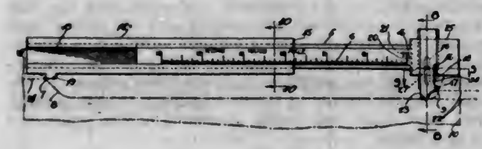
1. In a resistance switch of the class described, a switch box, a resistance assembly mounted therein comprising a plurality of insulated resistance units connected in series with each other and arranged in cylindrical formation about a common axis, contact members for each of said units arranged at one side of the mounting in spaced relation with each other, one of said units being connected with a feed wire an attaching plate for the box and a switch arm pivotally mounted on said plate having a circuit wire connecting therewith for communication with an electrical appliance and adapted for selective engagement with said contact.

---



1,694,331. GRAVITY SYSTEM FOR CONTINUOUSLY TREATING BOILER WATER. CHESTER THOMAS MCGILL, Elgin, Ill., assignor to Reiter Co., Elgin, Ill., a Corporation of Illinois. Filed Apr. 6, 1925. Serial No. 21,187. 6 Claims. (Cl. 210—33.)

1. A gravity pressure system for continuously treating boiler water while the boiler is in operation, consisting of gravity pressure tanks containing chemicalized liquid treatment, and means for admitting treatment of any desired chemical combination from the tanks to the boiler, consisting of controls for regulating the amount of liquid from each tank, thereby adapted to adjustment for the required degree of hardness in the boiler water, and means for admitting required percentage of chemicalized liquid from gravity pressure tank.

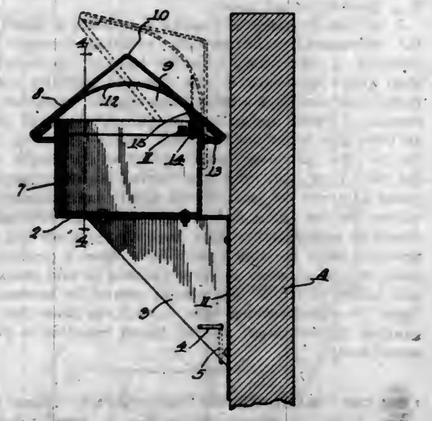


1,694,332. BASE-EXCHANGE WATER SOFTENER, SALT-POT ATTACHMENT. CHESTER T. MCGILL, Elgin, Ill., assignor to Reiter Company, Elgin, Ill., a Corporation of Illinois. Filed Nov. 19, 1925. Serial No. 70,154. 15 Claims. (Cl. 210—24.)

1. In a water softener having a fill nozzle attachment, the fill nozzle serving as a soft water outlet, a removable filter within the fill nozzle for the purpose of filtering the softened water.

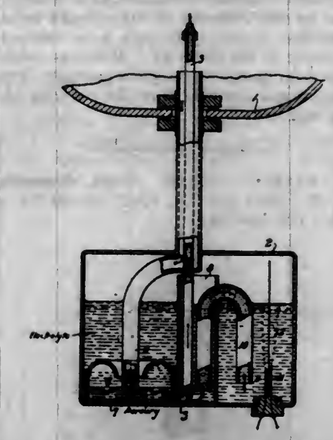
---

1,694,333. JOURNAL-LENGTH GAUGE. WARD N. MESSIMER, Jersey Shore, Pa. Filed Dec. 23, 1927. Serial No. 242,164. 5 Claims. (Cl. 33—193.)



1. A journal length gauge for axles comprising an extensible rule composed of a pair of slidably connected members adapted to be engaged at their outer ends against the journal and dust guard collars of the axle, a contact member on one member of the rule adjacent but inwardly of the outer end of the latter, said contact member being of a predetermined length to engage the journal fillet at a predetermined point inwardly of the periphery of the dust guard collar, and a contact finger adjustable transversely of the other member of the rule and mounted adjacent but inwardly of the outer end thereof, said contact finger being adapted to be engaged at one end with the journal bearing surface and having a lateral contact member at a predetermined distance from its said end to engage the inner side of the journal collar at a point a given distance outwardly of said journal bearing surface, one of said rule members being graduated to coact with the inner end of the other rule member for indicating the distance between the points on the journal collar and the journal fillet of a new axle engaged by said contact members.

---



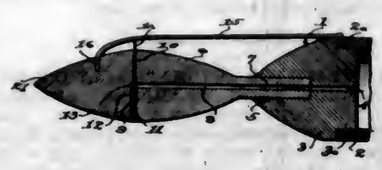
1,694,334. MAIL BOX. GEORGE G. MIRLACH, Beaver Dam, Wis. Filed Aug. 11, 1924. Serial No. 731,421. 1 Claim. (Cl. 232—33.)

The combination with a mail box, of a cover having its front and back portions inclined upwardly to provide a longitudinal ridge and an interior longitudinally extended angle portion, said cover being mounted to swing open to expose said angle portion, and an arcuate strip secured at its ends to opposed edge portions of the cover and arranged beneath and bridging said angle portion thereby to provide a newspaper receiving space or holder between the strip and the angle portion of the cover.

---

1,694,335. MEANS FOR AUTOMATICALLY DISCHARGING LIQUIDS FROM CHAMBERS, AUTOMATIC FOUNTAINS, AND THE LIKE DEVICES. GEORGE MURRAY and VICTOR OWEN SIMPKINS, London, England. Filed Dec. 20, 1927, Serial No. 241,335, and in Great Britain Dec. 18, 1926. 7 Claims. (Cl. 299—6.)

1. In combination, a chamber adapted to contain a liquid, means for substantially continuously creating gas pressure in the chamber, a pipe leading from the chamber through which the liquid is discharged by said gas pressure, inlet means having a valve means normally held closed by said gas pressure, said pipe serving to vent said gas pressure when the liquid level falls below a predetermined point in said chamber to allow opening of said valve means and inflow of liquid, and means for maintaining said pipe open for venting said gas pressure until the liquid level rises to a predetermined point in said chamber.



6. In combination, a chamber to contain a liquid, means for substantially continuously creating pressure in the chamber, means forming a passage for the discharge of the liquid from the chamber under said pressure and means for the return of the liquid to said chamber, said last

named means including a device functioning as a valve normally held against opening by said pressure, and means serving to vent said pressure when the liquid level falls to a predetermined extent and until the liquid level rises to a predetermined point.

7. In combination, a chamber to contain a liquid, means for substantially continuously creating pressure in the chamber, a tube rising from the base of the chamber and open above said base, a pipe disposed with its lower end in the tube and open adjacent the base of the latter for discharge of liquid upwardly therethrough by said pressure, an inlet pipe arranged to receive discharged fluid, the discharge pipe extending for a portion of its length through the inlet pipe, said inlet pipe having an offset portion disposed adjacent the base of and within said chamber, check means for the lower end of said inlet pipe normally held closed by said pressure, said discharge pipe serving to vent pressure when the liquid level falls below a predetermined point in said chamber to allow opening of said check means and inflow of liquid, and siphon means for conveying the liquid to said discharge pipe to seal the same and be discharged therethrough on the liquid reaching a predetermined level.

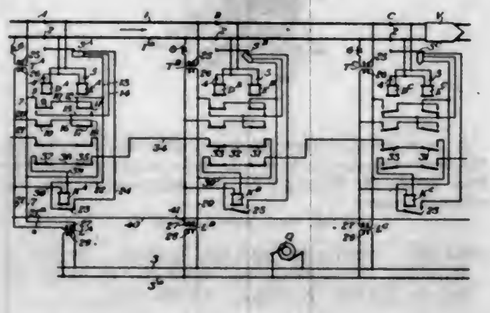
---

1,694,336. MANICURING IMPLEMENT. JOHN R. NEIDIG, Ollmont, Mont. Filed May 2, 1928. Serial No. 274,566. 5 Claims. (Cl. 132—73.)

1. A manicure implement comprising a reservoir, a tip seat carried by said reservoir, a tip mounted in said seat, said tip and seat having registering bores communicating with the interior of the reservoir, a discharge conduit leading from the bore in said tip, a valve normally closing said conduit, and means operable from the exterior of the tip for opening said valve.

---

1,694,337. SAFETY RAZOR. JACOB OBERHEIM, New York, N. Y. Filed Dec. 24, 1927. Serial No. 242,373. 3 Claims. (Cl. 30—12.)

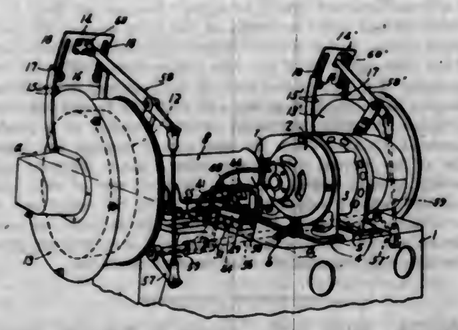


1. In a safety razor, blade clamping members, a pair of spaced lugs on each clamping member, each of said lugs having a slot shaped hole, a pivot extending transversely of the lugs on both clamping members in said slot shaped holes respectively in the lugs to allow the clamping members to have pivotal movement, and also movement toward and away from each other, and means acting on the pivot and the lugs to maintain the clamping members in clamping relationship.

1,694,338. PROCESS FOR THE MANUFACTURE OF ALUMINOUS CEMENTS. LOUIS GABRIEL PATROUILLEAU, Paris, France, assignor to Societe Alumine et Derives, Paris, France, a Joint Stock Company organized under the laws of the Republic of France. Filed Aug. 10, 1925, Serial No. 49,456, and in France Dec. 19, 1924. 5 Claims. (Cl. 106—25.)

1. A process for the manufacture of aluminous cements from a mixture of bauxite and lime, comprising adding to the mixture compounds of sulphur capable of releasing sulphurous anhydride when the mixture is heated and in heating said mixture.

---



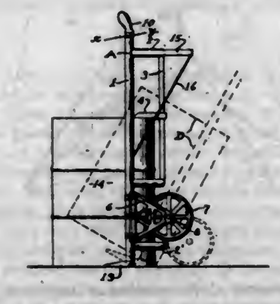
1,694,339. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. HOWARD A. THOMPSON, Edgewood Borough, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Feb. 5, 1926, Serial No. 86,306. Renewed Apr. 25, 1928. 6 Claims. (Cl. 246—34.)

1. In combination, a section of railway track, a source of alternating current constantly connected with the rails of said section, two relays connected with the rails of said section, asymmetrical units associated with said relays for permitting current of one polarity but not of the other to pass through one relay and for permitting current of the other polarity but not of the first polarity to pass through the other relay, and traffic governing means controlled by said relays.

---

1,694,340. GRINDING MACHINE. HERMON G. WEINLAND, Springfield, Ohio, assignor to The Safety Grinding Wheel & Machine Company, Springfield, Ohio, a Corporation of Ohio. Filed July 11, 1927. Serial No. 204,839. 23 Claims. (Cl. 51—165.)

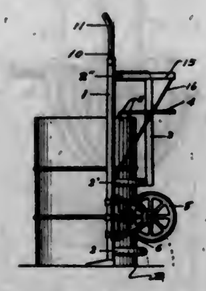
1. In a grinding machine, a grinding wheel, a constant speed motor for driving said wheel, and means controlled by the size of said wheel to prevent operation of the wheel at peripheral speeds other than predetermined speeds.



1,694,341. MAGNESIUM COMPOUND AND PROCESS OF PRODUCING THE SAME. FRANK CROSSLEY, Cleveland, Ohio, assignor to James E. Plant, Cleveland, Ohio. Filed Jan. 6, 1927. Serial No. 159,505. 4 Claims. (Cl. 167—7.)

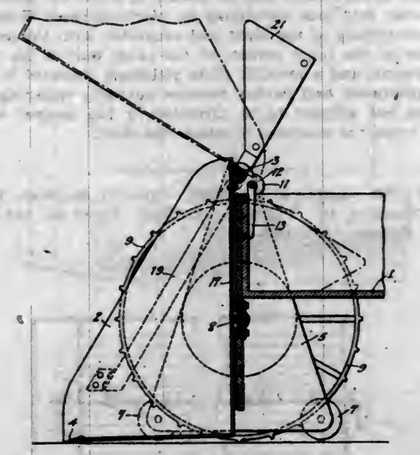
3. A wafer or tablet consisting of dried pure prepared precipitated hydrate of magnesia mixed with cornstarch and sugar in proportions to constitute a binder and having flavoring oils incorporated therewith and of a consistency to form a relatively smooth paste when subjected to water or saliva.

---



1,694,342. TRUCK. CARL KLEIN, Wichita, Kans. Filed Sept. 3, 1926. Serial No. 133,468. 2 Claims. (Cl. 280—57.)

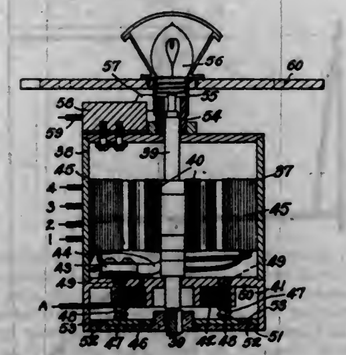
1. In a mechanism of the kind described, a truck having a frame with tubular side arm members and arcuate cross members to receive and support a barrel, a bar member carried by the arcuate members of the frame, and a hook member to slidably and rockably engage on the bar member, the hook to engage with the chime of a barrel to rock the same rearward with the truck, a shaft rotatably engaging in each of the side arm members, a toe member laterally extending and integrally connected to the front end of each of the shafts, a curved portion at the opposite end of each of the shafts functioning as handles and turning means for the shafts to rock the toes beneath the chime of a barrel as it is rocked rearward.



---

1,694,343. TRUCK. CARL KLEIN, Wichita, Kans. Filed Apr. 29, 1927. Serial No. 187,535. 9 Claims. (Cl. 280—57.)

6. In a device of the class described, a truck having a frame and supporting wheels, members journaled longitudinally of the frame at the sides of the truck for independent rotary movement, having angularly projecting toe members at their lower ends and handle members at their upper ends whereby the truck may be directed and the toe members controlled.

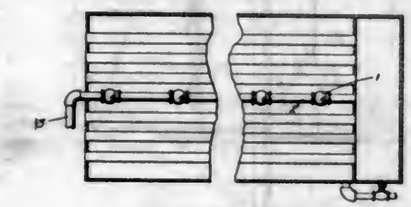


1,694,344. LOADER. JOSEPH J. KOELBEL, Baldwin, N. Y. Filed Feb. 24, 1928. Serial No. 256,636. 6 Claims. (Cl. 214—77.)

1. A loader for trucks and the like, comprising a body, means for disengageably connecting the body with the body of a truck, a pair of traction wheels carried by the body, a scoop pivotally mounted on the body, a pair of arms connected with each of the traction wheels, a link pivotally connected with each of the arms and pivotally connected with the scoop, and means associated with the traction wheels and arms for causing the arms to function to swing the scoop upwardly and then downwardly as the truck moves the loader forwardly and rearwardly.

---

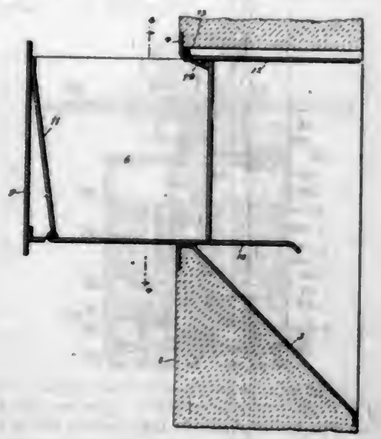
1,694,345. SIGNAL DEVICE FOR AUTOMOBILES. HENRI LOUIS LE BLANC and HECTOR BEAUDOIN, East Angus, Quebec, Canada, assignors of one-third to Ernest Leon Lessard, Disraeli, Quebec, Canada. Filed June 18, 1923. Serial No. 646,216. 2 Claims. (Cl. 177—327.)



1. A direction-signal mechanism comprising a casing, a shaft journalled for rotary movement therein, a compartment at one end of the casing, the outer wall of which is carried by the shaft, an indicator exterior of the other end of the casing and connected to rotate with the shaft, a

motor within the casing for rotating said shaft to move the indicator into any selected one of a plurality of different predetermined positions, and a lock operating automatically to hold said shaft against operation while the motor is stationary and to release it when the motor is started, said lock embodying an electro-magnet arranged concentrically of the shaft and connected with the motor, studs on the inner surface of the outer wall of the compartment, and a metallic plate yieldingly mounted in the compartment and having recesses normally engaging the studs but adapted to be attracted by the magnet when the magnet is energized to release the shaft.

---

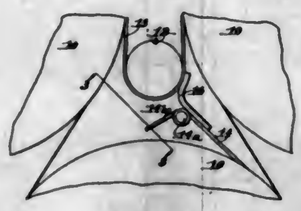


1,694,346. BOILER WASHER. SAMUEL RADWAY, West Frankfort, Ill. Filed Dec. 1, 1926. Serial No. 151,967. 3 Claims. (Cl. 122—405.)

1. The combination with a boiler, of a washing device comprising a tubular member horizontally disposed in said boiler in spaced relation to the walls thereof, said member closed at one end and connected to a supply of cleaning fluid at its opposite end, said member being provided with circumferentially and axially spaced ports arranged to discharge in a generally forward and spiral direction with respect to said member, whereby to induce a rotational movement of the cleaning fluid within the boiler.

---

1,694,347. INLET BOX. HAROLD D. SYMONDS and HARRY J. CULLEN, New York, N. Y. Filed June 2, 1927. Serial No. 196,069. 4 Claims. (Cl. 193—34.)



1. An inlet box for chutes, including a receptacle, a hinged bottom on the receptacle, a hinged cover independent of the receptacle but adapted to close the top thereof when the latter is in normal position, and a catch on said cover limiting the outward movement of the box.

---

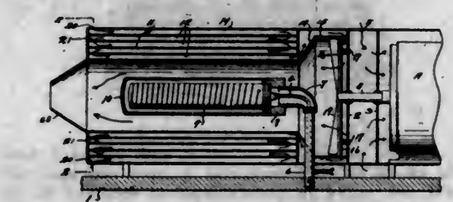
1,694,348. [WITHDRAWN.]

---

1,694,349. APPARATUS FOR CONTROLLING THE DRYING OPERATION IN PAPER MACHINES. GEORGE S. WITHAM, Jr., Hudson Falls, N. Y. Filed Apr. 2, 1928. Serial No. 266,777. 4 Claims. (Cl. 34—48.)

1. In apparatus of the character described, having two rows of drying rolls in staggered relation, wherein a web of paper passes alternately over a roll of each row, a felt roll between adjoining rolls of one row and opposite a roll of the other row and a doctor disposed between the felt roll and the last mentioned roll and bearing on the latter, the combination with the doctor, of a sheet of flexible material attached to the doctor and bearing upon the felt roll, whereby the doctor and the sheet form a partition connecting the felt roll and the drying roll upon which the doctor bears.

---



1,694,350. WHEEL FOR DRILLING-RIG STRUCTURES. RICHARD R. BLOSS, Columbus, Ohio, assignor to The International Derrick & Equipment Company, Columbus, Ohio, a Corporation of Ohio. Filed Apr. 25, 1925, Serial No. 25,910. Renewed Apr. 7, 1928. 3 Claims. (Cl. 64—17.)

1. In a tug wheel structure, a rim having a corrugated surface, the sides of which are bent inwardly toward the axis of the wheel, and a projecting member having a portion adjacent the bent sides of said rim bent outwardly in a diverging manner, the bent sides of said rim and the outwardly diverging portion of said projecting member providing a smooth surface to a tug rope when in contact therewith.

1,694,351. AIR HEATER. WILBER L. LONG, Kirksville, Mo., assignor of one-fourth to William P. Blake, one-fourth to William T. Minor, one-eighth to William E. Davis, and one-eighth to Jacob M. Wattenbarger, Kirksville, Mo. Filed Feb. 28, 1928. Serial No. 257,705. 5 Claims. (Cl. 219—39.)

1. An air heater of the class described comprising an elongated tubular member having one end closed and its opposite end open, a blast fan positioned within said member at the closed end portion thereof, means for driving said fan, a series of spaced nested members positioned within the open end portion of the first named member in advance of the fan and providing chambers therebetween, the ends of said chambers, with the exception of the inner chamber, being closed, the rear end of the innermost chamber discharging rearwardly of the fan, the peripheral wall of the first named member having openings at its outer portion affording communication between the atmosphere and the outer chamber, the remaining chambers being alternately in communication one with the other, and a heating unit arranged within the open end portion of the first named member at a point substantially axial of the nested members.

---

1,694,352. RADIATOR. DANIEL T. MACLEOD, Racine, Wis., assignor to Perfex Corporation, Racine, Wis., a Corporation of Wisconsin. Filed Apr. 25, 1927. Serial No. 186,306. 8 Claims. (Cl. 257—130.)

4. In a heat interchanger, a pair of core sections disposed one behind the other relatively to the direction of air flow, top and bottom header means therefor, an intake for one of said sections adjacent an upper corner, an intake for said other section adjacent the opposite upper corner, an outlet for said first mentioned section adjacent the corner diagonally opposite from its intake, an outlet for said second mentioned section adjacent the corner diagonally opposite its intake, and means providing communication between the two core sections.

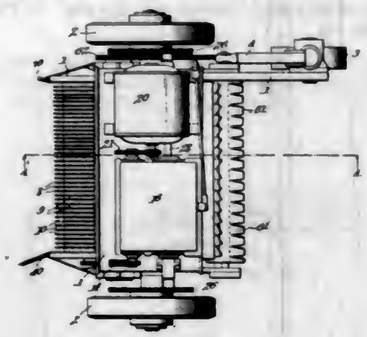
1,694,353. ARCH-SUPPORTING DEVICE FOR BOOTS AND SHOES. MATIE C. MESSLER, Providence, R. I., assignor to Madge Messler, Providence, R. I. Filed May 7, 1926. Serial No. 107,374. 5 Claims. (Cl. 36—71.)

1. The combination with a boot or shoe provided with a split insole having its lower split portion sewed to the upper of the shoe and having its upper split portion anchored at its front end to the fore part near the ball of the shoe and having its rear portion free from the lower split portion to move lengthwise of the shoe, of a cushioning member affixed to said upper split portion to move as one piece therewith and capable of being arched.

---

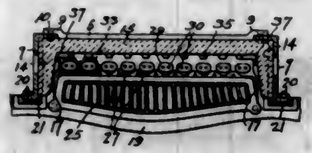
1,694,354. SHIPPING DRUM. CHARLES H. ROLLASON, Wheeling W. Va., assignor to Wheeling Steel Corporation, Wheeling, W. Va., a Corporation of Delaware. Filed Oct. 13, 1927. Serial No. 225,908. 3 Claims. (Cl. 220—61.)

1. A sealing device for use with receptacles having seats of substantially C-form in cross-section and having covers provided with flanges engaged in said seats, comprising a split ring having a vertical portion and a horizontal portion which latter engages on top of the flange and against the top wall of the seat, and an integral metal strap formed independent of the ring and having each of its ends rigidly affixed to the respective ends of the ring and having a central portion bowed toward the center of the ring and bridging the space between the ring ends, said strap being formed of malleable material so as to cause same to be flattened against the ring to expand the latter by the delivery of blows against the bowed portion of the strap.



1,694,355. MACHINE FOR PREPARATION OF MOLDER'S SAND. GEORGE F. ROYER, Wilkes-Barre, Pa., assignor to Royer Foundry & Machine Company, Wilkes-Barre, Pa., a Corporation of Pennsylvania. Filed Sept. 3, 1925. Serial No. 54,304. 10 Claims. (Cl. 259—144.)

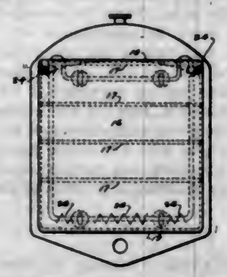
1. A machine of the class specified comprising a wheeled vehicle, a travelling material treating belt supported on the vehicle and operative to project the material to a distance from its rear end, and means supported on the vehicle at points entirely above the horizontal planes in which the belt operates for lifting material to be treated to the belt from the floor on which the vehicle travels.



---

1,694,356. SAND COLLECTING AND TREATING MACHINE. GEORGE F. ROYER, Wilkes-Barre, Pa., assignor to Royer Foundry & Machine Co., Wilkes-Barre, Pa., a Corporation of Pennsylvania. Filed Mar. 8, 1927. Serial No. 173,754. 15 Claims. (Cl. 22—89.)

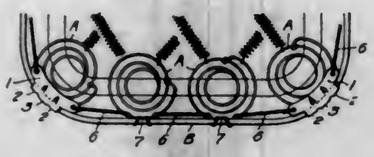
1. In a machine for lifting mixed moulders' sand and scrap metal from a foundry floor and separating the scrap and sand, the combination of a wheeled supporting frame, a material collecting and separating drum supported in said frame and provided with a series of annular, peripheral, pockets, means for positively rotating said drum as it is advanced by the wheeled frame into a pile of material to be treated, whereby as the drum is forced into a pile of material to be treated by movement of the wheel supported frame particles of sand will be collected in said pockets and carried upward and rearward, and means, located in rear of the vertical plane including the axis of the drum, for discharging the contents of the pockets.



1,694,357. GAS HEATER. ALEXANDER B. SHARP, Steubenville, Ohio, assignor to The Ohio Foundry and Manufacturing Co., Steubenville, Ohio, a Corporation of Ohio. Filed Jan. 8, 1925. Serial No. 376. 3 Claims. (Cl. 126—92.)

1. A stove comprising end walls each having a horizontal rib, a backwall supported at each end upon one of said ribs, and a tie plate secured at each end to one of said end walls for holding them in assembled relation.

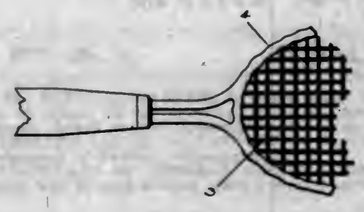
---



1,694,358. RADIATOR-FRONT COVER. MAURICE SWITZER, New York, N. Y., assignor to Max G. Scheuber, New York, N. Y. Filed June 3, 1927. Serial No. 196,274. 2 Claims. (Cl. 257—132.)

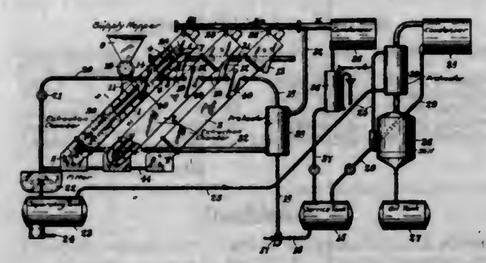
2. An automobile radiator cover support, comprising a rectangular frame characterized by parallel marginal cover attaching rods, an end of each of which is looped downwardly to form a cross connection therebetween, a second cross connection joining the opposite extremities of said rods, and slidably adjustable attaching bolts on a plurality of said cross connections.

---



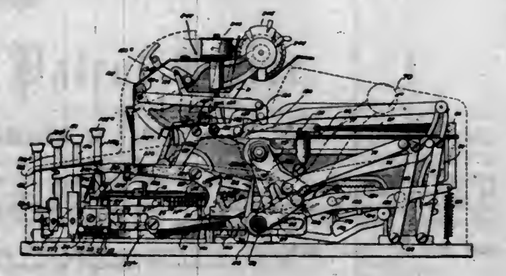
1,694,359. SPRING CUSHION AND THE LIKE. CHARLES P. TRIMBLE, Pittsburgh, Pa., assignor to Fort Pitt Bedding Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Dec. 28, 1925. Serial No. 78,009. 6 Claims. (Cl. 5—260.)

1. The combination with a cushion seat or the like having a frame and coiled springs secured thereto, of a plurality of spaced clip members having substantially flat body portions with means integral therewith for encircling the frame and a convolution of a coiled spring located adjacent thereto, together with means for tying said members together, the tying means comprising a wire having opposite ends secured to ends of the clip members and provided at intervals between said secured ends with hooked portions arranged to encircle the frame and a convolution of an adjacent coil spring, the wire being located substantially inside said border frame.



1,694,360. ELASTIC METAL STRINGING AND METHOD OF MAKING THE SAME. WILLIAM A. LARNED, Summit, N. J., assignor to The Dayton Steel Racquet Company, Dayton, Ohio, a Corporation of Ohio. Original application filed Feb. 13, 1922, Serial No. 536,135, and in France Mar. 20, 1922. Divided and this application filed May 22, 1922. Serial No. 562,718. 7 Claims. (Cl. 29—173.)

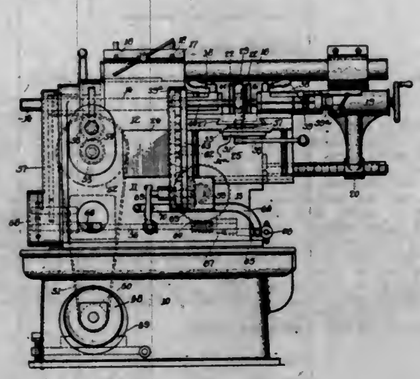
1. An elastic metal stringing comprising a number of wires that are first wound to form a helix of a number of coils per inch, and thereafter extended in the direction of the axis of said coils to reduce the number of the latter per inch to give to the stringing the degree of stiffness, weight and elasticity required for the use to which it is put.



---

1,694,361. APPARATUS FOR EXTRACTION OF WATER, OIL, AND FATTY MATTER FROM SOLID MATERIAL. JOHN ROBERT STERLING, London, England. Filed Mar. 8, 1928, Serial No. 260,115, and in Great Britain Nov. 8, 1926. 1 Claim. (Cl. 87—6.)

Apparatus for carrying out an extraction process of the type described comprising in combination a series of elongated extraction chambers each subdivided into substantially parallel compartments, a plurality of endless conveyors located respectively within the aforesaid extraction chambers and having the two runs of each conveyor arranged to traverse the two compartments aforesaid of each extraction chamber, means to supply the material to be treated to the first chamber of the series, means communicating between the chambers for the conveyance of the material from chamber to chamber throughout the series, means for supplying each chamber with a liquid-extracting medium, a plurality of heating jackets associated respectively with the several extraction chambers, means for conveying a gaseous heating medium through the jackets aforesaid, a preheater for the liquid extracting medium, and means for supplying the exhaust heating medium from the jackets aforesaid to said preheater.



1,694,362. ADDING AND LISTING MACHINE. GUSTAF DAVID SUNDSTRAND, Rockford, Ill., assignor, by mesne assignments, to Sundstrand Corporation, Wilmington, Del., a Corporation of Delaware. Filed Sept. 28, 1922. Serial No. 591,037. 10 Claims. (Cl. 101—93.)

1. In an adding machine, a plurality of type bars mounted for up and down movement, a hammer for each of said bars, a rock shaft, a plurality of type bar elevators operable in the movement of the rock shaft in one direction to raise said type bars, and means operable in the movement of the rock shaft in the opposite direction to release said hammers and drive the type to print, the last mentioned means comprising a member engaging the hammers, a pivoted member operatively connected with said hammer-engaging member, and a part movable with said elevators into engagement with said pivoted member and adapted to swing it in one direction only.

---

1,694,363. MACHINE TOOL. GUSTAF DAVID SUNDSTRAND, Rockford, Ill., assignor to Sundstrand Machine Tool Co., Rockford, Ill., a Corporation of Illinois. Filed June 25, 1924. Serial No. 722,242. 9 Claims. (Cl. 90—11.)

1. The combination of a bed and an upright column having a headstock at its upper end with a spindle journalled in the headstock, a feed shaft mounted in the lower end of the column in substantially parallel relation to the ond power transmission having one end operatively conspindle, means for driving the spindle, a power transmission connecting the spindle and said feed shaft, a fixture mounted on the forward side of the bed, a slide on said fixture movable toward and from the axis of the spindle, a shaft to be driven mounted on said slide, a secnected with said shaft to be driven and its other end operatively connected with said feed shaft, and a housing supported from the slide and enclosing said second transmission.

Patents Nos. 1,694,364 to 1,695,263.

# THE OFFICIAL GAZETTE
OF THE
# United States Patent Office.

Vol. 377—No. 2. TUESDAY, DECEMBER 11, 1928. Price—$10 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscription, $10.00 per annum; including annual indexes, $11.50; single numbers, 25 cents each.
PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.
CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

## Disclaimers.

1,592,489.—*Eugene O. Herthel*, Chicago, Ill., and *Edward W. Isom*, Locust Valley, N. Y. Art of Cracking Hydrocarbons. Patent dated July 13, 1926. Disclaimer filed November 23, 1928, by the assignee, *Sinclair Refining Company*.

Hereby enters this disclaimer to the method of said claims 1, 2, 7, 8, 9, and 10 except as applied to the separation from oil recirculated from the bulk supply tank through the heater of constituents vaporizable under the conditions of temperature and pressure prevailing in the bulk supply tank, and to the apparatus of said claims 11, 15, 16, and 18 except such apparatus in which the hot oil products from the heater are discharged together through the same circulating connections from the heater to the bulk supply tank.

1,651,193.—*Arvon R. Ohlsholm*, East Orange, N. J. Vanity Case. Patent dated November 29, 1927. Disclaimer filed November 14, 1928, by the *patentee*.

Hereby enters this disclaimer of that part of the claim in said specification which is in the following words, to wit: "with an outwardly projecting head at the junction of said vertical flange and bottom and formed integrally with said vertical flange and bottom."

## Adjudicated Patents.

(D. C. N. Y.) Miller patent, No. 945,570, for ice-cream freezers, claims 7, 8, 10, 11, 12, 20, and 21 *Held* valid and infringed. *H. H. Miller Industries Co.* v. *Emery Thompson Machine & Supply Co.*, 28 F. (2d) 420.

(D. C. Ill.) Kohler patent, No. 1,124,673, for apparatus for feeding paper to printing presses from series of rolls, *Held* valid and infringed. *Kohler* v. *Cline Electric Mfg. Co.*, 28 F. (2d) 405.

(D. C. N. Y.) Henderson patent, No. 1,270,519, for box for treating metallic articles by heat, claims 1 and 3 *Held* valid and infringed. *Driver-Harris Co.* v. *Hardite Metals*, 28 F. (2d) 413.

(D. C. N. Y.) Wappler patent, No. 1,371,404, for high-potential electric machines, claims 4 and 5 *Held* invalid. *Wappler Electric Co.* v. *Bronx Hospital and Dispensary*, 28 F. (2d) 419.

## Interference Notice.

U. S. Patent Office, *Washington, Nov. 21, 1928.*

*Chas. Anderson, his assigns or legal representatives, take notice:*

An interference having been declared by this Office between the application of Limoneira Company, Santa Paula, Calif., for registration of a trade-mark and trade-mark registered December 11, 1928, No. 177,148, to Chas. Anderson, Wasco, Calif., and a notice of such declaration sent by registered mail to said Chas. Anderson at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Chas. Anderson, his assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the Official Gazette for three consecutive weeks.

WM. A. KINNAN,
*First Assistant Commissioner.*

## Notice of Cancellation.

U. S. Patent Office, *Washington, Dec. 1, 1928.*

*Apex Steel Corporation, its assigns or legal representatives, take notice:*

A cancellation proceeding having been instituted by this Office upon the application of The Apex Electrical Manufacturing Company, of Cleveland, Ohio, to effect the cancellation of the trade-mark registration of Apex Steel Corporation, of 50 Church Street, New York, N. Y., No. 126,986, dated October 21, 1919, and the notice of such proceeding sent by registered mail to the said Apex Steel Corporation at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Apex Steel Corporation, its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the Official Gazette for three consecutive weeks.

WM. A. KINNAN,
*First Assistant Commissioner.*

## Condition of Applications Under Examination at Close of Business November 30, 1928.

(Total number of applications awaiting action, excluding Trade-Mark Division, 100,623; Trade-Mark Division, 1,798. Oldest new case, Jan. 27, 1928; oldest amended, Jan. 27, 1928. The dates given are 1928.)

# DECISIONS IN PATENT AND TRADE-MARK CASES.

## Commissioner's Decisions.

EX PARTE FISCHER.

*Decided May 28, 1928.*

PATENTABILITY—METHOD OF PREPARING AN EXPANSION JOINT COMPOSITION.

Claims for a method of preparing an expansion-joint composition *Held* patentable, since the method is new and productive of the desired result of imparting resiliency to the joint composition, so as to maintain a tight waterproof joint, and the process is not suggested by any of the references.

[This application has resulted in Patent No. 1,680,144.]

*Mr. Harry C. Alberts* for the applicant.

KINNAN, *First Assistant Commissioner:*

Applicant has appealed from the decision of the Examiners in Chief affirming that of the Examiner finally rejecting all the claims, four in number, of which the following is illustrative:

4. The method of preparing an expansion joint composition, which consists in mixing fibers and granules or pellets of a material having a cellular structure, with bituminous matter, while the latter is of a consistency below that at which it will saturate the cellular material.

The references are: Wallace, 1,107,782, August 18, 1914; Perry, 1,201,756, October 17, 1916; Perry, 1,288,159, December 17, 1918; Weiss, 1,334,061, March 16, 1920; Oliensis et al., 1,340,181, May 18, 1920.

Appellant's process relates to a method of preparing an expansion-joint composition comprising the steps enumerated in the illustrative claim. The composition produced by the process is molded into suitable form for disposition between concrete sections constituting a pavement, the purpose being to maintain a tight waterproof joint under all conditions of expansion and contraction due to temperature changes.

The claims have been rejected for inadequacy of disclosure of the process in the specification and as defining no invention over the prior art.

Appellant does not deny that the prior art discloses the process of mixing fibrous material with a bituminous binder to form an expansion joint. This is acknowledged at page 1 of his specification in the last two paragraphs, which clearly set out the disadvantages of using a mixture in which the fibrous material is saturated by the bituminous binder. Appellant's particular improvement over this admittedly old prior art is outlined at page 2 of his specification describing in the first paragraph the mixing of the fibrous matter in the mixture while the bituminous matrix is plastic and therefore lacking in penetration power. In the second paragraph of page 2 is described the result obtained from the process, namely that because of the unsaturated fibrous material the walls of the bituminous matrix can not adhere together upon compression and will therefore respond to expansion upon release of the compression or possess a resiliency lacking in the case where the fibrous material is saturated by the bituminous binder. It is believed that the portions of appellant's original specification referred to state the problem and the method proposed for its solution sufficiently clearly for one skilled in the art to practice the invention.

It is appellant's contention that none of the prior art patents mention the feature of keeping the bituminous binder from saturating the fibrous material. Appellant also contends that the references are from nonanalogous arts, since the patents considered below are directed to compositions which are primarily designed to accomplish a result foreign to that presented by appellant. The patent to Perry discloses a composition in which the filler is not saturated by the bituminous binder, and the patent to Oliensis et al. describes the mixing of fiber with semisolid asphalt. There is, however, no hint in these patents that the composition is useful as an expansion joint or that it was material for the purpose these patentees had in mind to produce a mixture which would be resilient or expand upon release of a compressing force. The patent to Weiss discloses a mixture of fibrous material and bituminous binder which it is stated may be used as a seal for cracks and joints. This patent, however, is silent as to whether the fibrous material is unsaturated, and so is no better as an anticipation of appellant's claims than the prior art acknowledged in his specification.

It is believed that appellant's claimed process for making an expansion-joint composition is not suggested by the references, and as the process is productive of the desirable result of imparting resiliency to the joint composition, so it may maintain a tight waterproof joint under all conditions of expansion and contraction due to temperature changes, it is considered the appealed claims are allowable over the art of record.

The decision of the Examiners in Chief is reversed.

---

EX PARTE GOTTLIEB.

*Decided July 30, 1928.*

TRADE-MARKS—GOODS OF THE SAME DESCRIPTIVE PROPERTIES—WATCHCASES AND WATCH MOVEMENTS.

Watch movements and parts thereof *Held* to be goods of the same descriptive properties as watchcases.

ON APPEAL.

Application for registration of trade-mark for watch movements and parts thereof filed January 29, 1925, Serial No. 208,809.

*Mr. Edward M. Evarts* for the applicant.

KINNAN, *First Assistant Commissioner:*

The applicant has appealed from the decision of the Examiner of Trade-Marks denying registration under the act of March 19, 1920, of the word "Windsor," used upon watch movements and parts thereof, in view of registration No. 19,208, March 14, 1891, issued to the Brooklyn Watch Case Company, renewed in 1921 by Joseph Fahys & Co., assignee, for the same mark used upon watchcases. The Examiner deemed watchcases and watch movements as goods possessing the same descriptive properties, and con-

sequently the registration of the applicant's mark would be likely to cause confusion of origin of goods.

The applicant has set forth at considerable length the view that watchcases are made by different manufacturers from those making watch movements, both classes of goods being well recognized in the trade as having different origins, and that the mere fact they are finally assembled, the case being but the container of the watch movements, is persuasive that the goods do not possess the same descriptive properties, and confusion in trade would not be probable. While the Examiner noted that purchasers of watches, seeing the same mark on the case as upon the movement, would deem the parts manufactured or sold by the same parties, the applicant has urged the purchasers of watchcases are generally parties who assemble the movements in the cases and their familiarity with customs of trade and manufacture precludes confusion.

It is believed the applicant's contentions are without merit and that anyone purchasing a watch expects to and does obtain the complete article of which the case and the works form parts. Such a purchaser would certainly be confused as to origin if the same trade-mark appeared upon both the movements and the case. The association of these two parts, always sold to the final user assembled into a unitary structure, is certainly more intimate than were the goods in the case of *Aunt Jemima Mills Co. v. Rigney & Co.*, 247 F. 407. Following the usual rule, doubts should be resolved against the newcomer. *William Waltke & Co. v. Geo. H. Schafer & Co.*, 273 O. G. 630, 49 App. D. C. 254.

The decision of the Examiner of Trade-Marks is affirmed.

---

## EX PARTE PADE.

*Decided July 5, 1927.*

1. PATENTABILITY—INVENTION—PROVIDING A MACHINE WITH A CONVEYOR IS NOT.

"In the light of the present state of the art, no invention is involved in broadly providing any machine with a conveyor."

2. SAME—SAME—AGGREGATION.

Certain claims for an apparatus for the manufacturing of inner tubes *Held* unpatentable since they merely include various mechanisms to perform independent and unrelated operations on a tube with conveyors to carry the tube from one machine to another, each of which performs its function without regard to the presence or the absence of the other.

[This application has resulted in Patent No. 1,677,868.]

APPEAL from Examiners in Chief.

APPARATUS FOR MANUFACTURING INNER TUBES.

*Mr. Albert L. Ely* for appellant.

MOORE, *Assistant Commissioner:*

This is an appeal from the decision of the Examiners in Chief affirming the decision of the Examiner finally rejecting claims 1 to 6, inclusive, and 9 to 24, inclusive.

The invention relates to an apparatus for manufacturing inner tubes. Claims 1, 3, and 10 are quoted as representative of the appealed claims:

1. An apparatus for the manufacture of tubes or similar articles of rubber, comprising an apparatus whereon the tubes are formed upon mandrels and a conveyor for removing the mandrels from the said apparatus.

3. An apparatus for the manufacture of tubes, a table whereon the tubes are rolled about a mandrel, a conveyor to carry the mandrel, a trackway leading from the table to a point in the path of the conveyor, and a wrapping lathe to which the conveyor delivers.

10. An apparatus for the manufacture of inner tubes, comprising tube forming apparatus for rolling tubes about a mandrel, wrapping lathes on which the tubes and mandrels are wrapped, heaters wherein the mandrels and tubes are placed for vulcanization, unwrapping machines where the cured tubes and mandrels are unwrapped, and transfer mechanism for moving the mandrel in a circuit through said machines in the order named.

The references are: Shaw, No. 758,805, May 3, 1904; Hinchman et al., No. 801,523, October 10, 1905; Reno, No. 1,018,586, February 27, 1912; Current, No. 1,179,077, April 11, 1916; Witsaman, No. 1,194,803, August 15, 1916; Fenton, No. 1,197,192, September 5, 1916; Moomy, No. 1,255,456, February 5, 1918; Ross, No. 1,282,294, October 22, 1918; Wattleworth, No. 1,320,812, November 4, 1919; Macbeth et al., No. 1,326,874, December 30, 1919.

In the art of manufacturing inner tubes, as the art is now practiced, certain operations are performed in sequence. The rubber sheet, after having been cut to the proper length and width, is rolled about a mandrel. The mandrel with the rubber sheet thereon is then wrapped with a fabric so as to hold the rubber sheet firmly in position. The next operation is that of vulcanization, after which the wrapping is removed, the tube stripped, and the mandrel returned for the initial operation in the formation of another tube. These several operations, respectively, are performed by machines conveniently arranged with respect to one another and with respect to the workmen. It is also common practice, as disclosed by the references, to provide carriers for conveying the mandrels between the stations at which the several operations are performed.

Witsaman shows a tube-rolling table. Fenton discloses a machine for rolling the rubber sheet upon the mandrel, said machine including a conveyor belt for conveying the mandrel with the inner tube thereon away from the place where the rolling operation takes place. Moomy discloses several machines conveniently arranged for performing the several operations prior to that of vulcanising the tube, the numeral 1 indicating a mandrel cleaning machine; 2, a cutting bench; 3, a tube-rolling bench; 4, a mandrel wrapping machine; and 16 a gravity conveyor. Ross, discloses an unwrapping machine. Current discloses machines for performing the rolling and wrapping operations; and the patents to Shaw, Wattleworth, and Macbeth et al. show continuously operating systems for the manufacture of tires, Shaw and Wattleworth disclosing conveyors of the hook type for conveying molds between stations.

The appealed claims are not confined to any particular structure of the machines for performing the several operations, but depend for their patentability upon the arrangement of said machines with respect to one another.

Claim 1 is drawn broadly to an apparatus on which the tubes are formed upon mandrels and a conveyor for removing the mandrels from the said apparatus. This claim stands rejected on Current or Fenton, the Examiners in Chief stating that patentability can not be predicated on the addition of a conveyor to the mechanism of either the Current or the Fenton patent.

[1] I find no error in the holding of the Examiners in Chief. In fact I am of the opinion that in the light of the present state of art no invention is involved in broadly providing any machine with a conveyor. Fenton, however, distinctly states that the conveyor belt 12 serves "as a conveyor belt, to carry the pole away," and that—

> the roller 8 may be located at any convenient distance from the rolling mechanism, its only purpose being to support and drive the belt 12.

Claim 2 includes, in addition to the subject matter of claim 1, a device for conducting the mandrel from the table to the conveyor.

In Fenton the conveyor belt performs two functions; it assists in the rolling operation and it also carries the mandrel away from the rolling mechanism. No invention would be involved in providing Fenton with an additional conveyor to cooperate with the belt 12.

[2] Claims 3, 9, 10, 11, 12, 13, 14 and 15 to 24, inclusive, stand rejected on the ground of aggregation, as the inclusion in a claim of various mechanisms to perform independent and unrelated operations on a tube with conveyors to carry the tubes from one mechanism to another does not set up a proper combination. Certainly there is no interdependence in action between the several machines in the production of a unitary result. Each performs its function without regard to the presence or absence of the others.

Claims 4, 5, and 6 stand rejected on the patent to Ross. The Examiners in Chief have pointed out wherein these claims fail to distinguish the invention in patentable respects from the Ross patent.

I am also of the opinion that these claims are not patentable in view of any modern tube-manufacturing plant in which is provided a table on which the mandrels are rolled, in view of the common use of conveyors of the hook type, tracks, stops, etc. In addition to the patent to Ross, reference may be made to the patent to Moomy in connection with these claims.

The decision of the Examiners in Chief is affirmed.

---

## Court of Appeals of the District of Columbia.

IN RE OWEN.

*No. 3,892. Decided April 2, 1928.*

DESIGNS—PATENTABILITY.

A claim for a design patent for an electric-storage-battery container, the drawing of the application showing a plain rectangular receptacle with a handle projecting from the top of each end, *Held* unpatentable since handles were old and the mere substitution of applicant's handle, which differs little in design from those of the prior art, does not involve invention.

APPEAL from the Patent Office. Affirmed.

*Mr. Bernard F. Garvey* for Owen.

*Mr. T. A. Hostetler* for the Commissioner of Patents.

Before MARTIN, Chief Justice, and ROBB and VAN ORSDEL, Associate Justices.

ROBB, *J.:*

Appeal from a decision of the Patent Office refusing to allow appellant's application for a design patent in the form of an electric storage battery container.

The container is a plain, rectangular receptacle, with a handle projecting from the top of each end.

Section 4929, Revised Statutes, provides that—

> Any person who has invented any new, original, and ornamental design for an article of manufacture, not known or used by others in this country before his invention thereof, and not patented or described in any printed publication in this or any foreign country before his invention thereof, * * * may, upon payment of the fees required by law and other due proceedings had, * * * obtain a patent therefor.

To entitle one to a design patent, there must be "originality and beauty. Mere mechanical skill is insufficient." *Smith v. Whitman Saddle Co.*, 148 U. S. 674. See also *H. C. White Co. v. M. E. Converse & Sons Co.*, 20 F. (2d) 311.

As observed by the Commissioner, handles were old, and the mere substitution of applicant's handle, which differs little in design from the handles of the prior art, does not involve invention.

The decision is affirmed.

Affirmed.

---

Miss Tourette

For Juvenile Wardrobe Hatboxes and Juvenile Wardrobe Suitcases.
Claims use since May 12, 1928.

## CLASS 4.

### Abrasive, Detergent, and Polishing Materials.

Ser. No. 262,328. PURFEX MFG. CO., Philadelphia, Pa. Filed Feb. 27, 1928.

PURFEX

For Liquid Preparation for Fabric Cleaners, Metal Polish, Nickel Polish, Hard Green Soap, Vegetable-Oil Soap, and Valve-Grinding Compound.
Claims use since November, 1910.

Ser. No. 272,889. FREDERICK F. INGRAM COMPANY, Detroit, Mich. Filed Sept. 24, 1928. Under section 5b of the act of 1905 as amended in 1920.

Ingram's

For Shaving Cream.
Claims use since about November, 1918.

Ser. No. 273,168. STANDARD OIL COMPANY, Whiting, Ind., and Chicago, Ill. Filed Sept. 29, 1928.

IANA

For Hydrocarbon Cleaning Fluid.
Claims use since Aug. 15, 1928.

Ser. No. 273,188. THE DRACKETT CHEMICAL COMPANY, Cincinnati, Ohio. Filed Oct. 1, 1928.

Dawn

For General Household Cleaning and Polishing Preparation in Powder Form.
Claims use since Sept. 19, 1928.

Ser. No. 273,729. WALGREEN CO., doing business as Valentine Laboratories, Inc., Chicago, Ill. Filed Oct. 12, 1928.

Man O'War

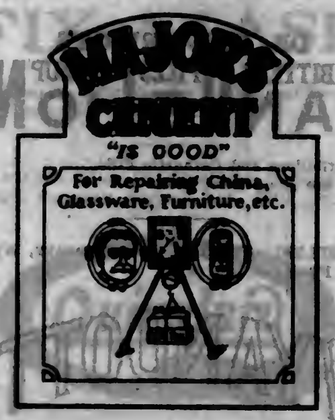
For Shaving Cream.
Claims use since Aug. 25, 1928.

Ser. No. 273,916. HASBROUCK, INC., New York, N. Y. Filed Oct. 17, 1928.

SHEMEN

For Soaps.
Claims use since Jan. 1, 1925.

## CLASS 5.



### Adhesives.

Ser. No. 269,269. WESTERN STATES MFG. CO., Sioux City, Iowa. Filed July 7, 1928.

For Adhesive Cement for Cementing Tire Patches, Adhesive Cement for Cementing Boots, Adhesive Cement for Patching Cloth, and Adhesive Cement for Patching Solid Materials, Nonfreezing Tire-Patch Cement.
Claims use since Dec. 10, 1925.

Ser. No. 272,504. MAJOR MANUFACTURING CO., New York, N. Y. Filed Sept. 15, 1928. Under 10-year proviso.

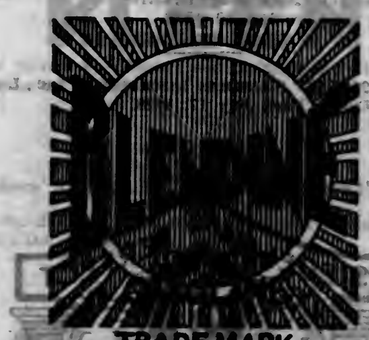
The photograph is that of Alphonse Major, deceased, the founder of the business.
For Adhesive Cement.
Claims use since July, 1877.

Ser. No. 273,903. COMPO SHOE MACHINERY CORP., Highland Park, N. J. Filed Oct. 17, 1928.

COMPO

For Adhesive Shoe Cement.
Claims use since Sept. 1, 1928.

Ser. No. 274,545. BOSTON BLACKING COMPANY INC., Boston, Mass. Filed Oct. 30, 1928.



Be-Be-Tex

For Latex Cement.
Claims use since about Oct. 15, 1928.

## CLASS 6.

### Chemicals, Medicines, and Pharmaceutical Preparations.

Ser. No. 254,677. WILLIAM J. MCKEE, doing business as The Blendine Co., Los Angeles, Calif. Filed Sept. 13, 1927.

No claim is made to the words "For Your Gasoline" or the words "Trade-Mark" apart from the mark shown. The vertical-line shading indicates red.
For Chemical Preparation to be Added to Gasoline to Increase Its Efficiency.
Claims use since Nov. 1, 1926.

PIC-RIC

PENATROME

No claim is made herein to the word "Pic-ric" apart from the mark shown in the drawing.
For Antiseptic.
Claims use since Aug. 1, 1928.

---

Ser. No. 272,334. HARDEMAN-KING COMPANY, Oklahoma City, Okla. Filed Sept. 13, 1928.

Meritine

For Insecticides.
Claims use since May 15, 1928.

---

Ser. No. 272,347. SPICER AND COMPANY, Glendale, Calif. Filed Oct. 8, 1928.

PANOPSIN

For Preparation for the Treatment of Flatulence and Nausea and an Auxiliary to the Assimilation of Carbohydrates.
Claims use since Aug. 31, 1928.

---

Ser. No. 273,447. THE DANDELION PILL CO. INC., Stamford, Conn. Filed Oct. 6, 1928. Under 10-year proviso.

DR. TROWBRIDGE'S

BITTERS PILLS SYRUP

DANDELION

For Antibilious and Cathartic Pills.
Claims use since about 1865.

---

Ser. No. 273,590. THE J. B. FORD COMPANY, Wyandotte, Mich. Filed Oct. 10, 1928.

WYANDOTTE

For Sal Soda for Use in the Cleaning Trade.
Claims use since Sept. 17, 1928.

Ser. No. 273,591. THE J. B. FORD COMPANY, Wyandotte, Mich. Filed Oct. 10, 1928.

WYANDOTTE

For Sal Soda for Use in the Cleaning Trade.
Claims use since Sept. 17, 1928.

---

Ser. No. 273,904. COMPO SHOE MACHINERY CORP., Highland Park, N. J. Filed Oct. 17, 1928.

COMPO

For Chemical Preparation for Softening Shoe Cement.
Claims use since Sept. 1, 1928.

---

Ser. No. 274,056. A. J. KRANK MFG. CO., St. Paul, Minn. Filed Oct. 20, 1928.

FIX-A-LASH

For Preparation for the Eye Lashes and Brows.
Claims use since Sept. 8, 1928.

---

Ser. No. 274,125. EMIL PEKAREK, doing business as Quinnlard Mfg. Company, Whiting, Ind. Filed Oct. 22, 1928.

Quinnlard

For Salve for External and Internal Use to Relieve Coughs, Colds, Bronchitis, Asthma, Whooping Cough, Sore Throat, Headache, Neuralgia, Rheumatism, Lame Back, and Swellings.
Claims use since October, 1922.

Ser. No. 274,126. PHILADELPHIA QUARTZ COMPANY, Philadelphia, Pa. Filed Oct. 22, 1928.

KEEPSAFE

EGG PRESERVER

WATERGLASS

No claim is made to the words "Keepsafe Egg Preserver Waterglass" apart from the mark shown in the drawing.
For Silicate of Soda.
Claims use since Sept. 6, 1928.

---

Ser. No. 274,420. WESTERN CHEMICAL CO., Kansas City, Mo. Filed Oct. 27, 1928.

—TOI—

KLEEN

For Solvent for Cleaning and Disinfecting Toilet Bowls.
Claims use since June 15, 1928.

---

## CLASS 8.

## Smokers' Articles, Not Including Tobacco Products.

Ser. No. 274,034. THE BURTIS CO. INC., Newark, N. J. Filed Oct. 20, 1928.

Kiltie

For Tobacco Pouches, Pipes, Cigar and Cigarette Holders Cigar and Cigarette Cases.
Claims use since July 1, 1928.

---

## CLASS 10.

## Fertilizers.

Ser. No. 269,389. THE BUHNER FERTILIZER COMPANY, Seymour, Ind. Filed July 11, 1928.

Butylizer

For Lawn and Garden Fertilizer.
Claims use since January, 1926.

Ser. No. 274,069. CHAS. W. PRIDDY & COMPANY, INC., Norfolk, Va. Filed Oct. 20, 1928.

LUCKY STRIKE

For Fertilizers.
Claims use since Dec. 1, 1925.

## CLASS 11.

### Inks and Inking Materials.

Ser. No. 272,670. REMINGTON ARMS COMPANY, INC., Bridgeport, Conn., Ilion and New York, N. Y. Filed Sept. 19, 1928. Under section 5b of the act of 1905, as amended in 1920.

REMINGTON

For Marking Ink.
Claims use since 1922.

Ser. No. 273,614. SCRIPTEX INK & PASTE CO., Philadelphia, Pa. Filed Oct. 10, 1928.

*Estex*

For Writing Inks.
Claims use since Sept. 15, 1928.

## CLASS 12.

### Construction Materials.

Ser. No. 250,344. GRAND RAPIDS PLASTER COMPANY, Grand Rapids, Mich. Filed June 10, 1927. Under 10-year proviso.

HOVEY'S

For Plaster.
Claims use since Jan. 1, 1860.

Ser. No. 255,753. LASTASEAL PAINT CORPORATION, Zanesville, Ohio. Filed Oct. 7, 1927.

Lastaseal

For Coating, Preservative, and Waterproofing Material—Namely, Asphaltic and Cementitious Compositions.
Claims use since Jan. 1, 1927.

Ser. No. 262,067. EDUARD DYCKERHOFF, Schlos-Blumenau, near Wunstorf, Germany. Filed Feb. 23, 1928.

Alfol

For Heat-Protecting and Insulating Material—Namely, Bright, Shining, and Preferably Crushed or Crumpled, Regularly or Irregularly Arranged Thin Metal Plates and Metal Foils, Particularly Aluminum Sheets, Aluminum Foils, Tinsel as Insulating Material, Thin Heat-Insulating Metal Plates and Metal Foils Adapted for Use as Heat-Insulating and Cold-Insulating and Heat-Exchange-Preventing Layers and Coatings, Flat and Substantially Dish-Shaped Plates of Peat and Asbestos, All for Thermal Insulating Purposes.
Claims use since Jan. 4, 1926.

Ser. No. 269,714. CENTRAL PAINT & ROOFING COMPANY, Louisville, Ky. Filed July 17, 1928.

DUR-A-BULL

For Smooth-Surface and Slate-Surfaced Composition Roofing.
Claims use since Apr. 19, 1927.

Ser. No. 269,715. CENTRAL PAINT & ROOFING COMPANY, Louisville, Ky. Filed July 17, 1928.

CENTROLASTIC

For Bituminous and Waterproof Composition Roof Coatings.
Claims use since Sept. 11, 1926.

Ser. No. 269,739. NATIONAL GYPSUM COMPANY, Buffalo, N. Y. Filed July 17, 1928.

LUCKY STRIKE

For Plaster.
Claims use since June 8, 1928.

Ser. No. 270,177. THE ELECTRO REFRACTORIES CORPORATION, Buffalo, N. Y. Filed July 26, 1928.

"BRONEX"

NAG-NO-SPALL

For Refractory Bricks, Blocks, Tile, All Made of Refractory Material, Furnace Linings, and Cement.
Claims use since June 15, 1928.

Ser. No. 270,491. HURD LUMBER CO., Medford and Merrill, Wis. Filed Aug. 2, 1928.

The word "Frame" is disclaimed apart from the other features of the mark shown on the drawing.
For Door and Window Frames, Cellar Sash Frames, Casement Sash Frames, Interior Finish, Cut to Size.
Claims use since Apr. 15, 1926.

Ser. No. 271,758. HAWKINS COMPANIES, INCORPORATED, Boston, Mass. Filed Aug. 30, 1928.

CONCENTRATION DISTRIBUTION

For Shingles, Doors and Door Jambs, Windows and Window Frames, Aromatic Cedar Closet Lining, Roll Roofings, Sheathing Papers, Flooring, Wood Moulding and Finish, Wall Boards, and Insulating Lumber, Stair Treads, Risers, and Newel Posts, Pergolas, Nonmetallic Fencing, Trellises, and Arches.
Claims use since June 14, 1928.

Ser. No. 272,012. UNITED STATES GYPSUM COMPANY, Chicago, Ill. Filed Sept. 6, 1928.

USG
CELL-O-CRETE
INSULATING ROOF TILE

No claim is made to the words "Insulating Roof Tile" apart from the mark shown.
For Concrete Molded Products—Namely, Light-Weight Tile and Blocks.
Claims use since July 25, 1928.

Ser. No. 272,280. LOS ANGELES PAPER MANUFACTURING CO., also doing business as El Rey Products Co., Los Angeles, Calif. Filed Sept. 12, 1928.

Palomar

For Prepared Roofing, Building Papers, Asphalt Shingles, Deadening Felt, Plaster Board.
Claims use since Jan. 15, 1926.

Ser. No. 272,291. LOS ANGELES PAPER MANUFACTURING CO., also doing business as El Rey Products Co., Los Angeles, Calif. Filed Sept. 12, 1928.

RANCHO

For Prepared Roofing, Building Papers, Asphalt Shingles, Deadening Felt, Plaster Board.
Claims use since Jan. 15, 1926.

Ser. No. 272,292. LOS ANGELES PAPER MANUFACTURING CO., also doing business as El Rey Products Co., Los Angeles, Calif. Filed Sept. 12, 1928.

**Rodeo**

For Prepared Roofing, Building Papers, Asphalt Shingles, Deadening Felt, Plaster Board.
Claims use since Jan. 15, 1926.

Ser. No. 273,085. THE VORTEX MANUFACTURING COMPANY, Cleveland, Ohio. Filed Sept. 27, 1928.

**Dens-tect**

For Dampproofing, Waterproofing, and Plaster Keys for Walls and Structural Surfaces.
Claims use since July 27, 1928.

Ser. No. 273,488. BELL & GOSSETT COMPANY, Chicago, Ill. Filed Oct. 8, 1928.

**No. 40**

For High-Temperature Bonding Mortar Cement.
Claims use since September, 1920.

## CLASS 13.

### Hardware and Plumbing and Steam-Fitting Supplies.

Ser. No. 269,071. THE AMERICAN STEEL AND WIRE COMPANY OF NEW JERSEY, Cleveland, Ohio; Chicago, Ill.; Pittsburgh, Pa.; New York, N. Y.; Worcester, Mass., and Hoboken, N. J. Filed July 5, 1928.

**National**

For Metal Fence Posts.
Claims use since May 10, 1928.

Ser. No. 274,038. C. A. DUNHAM COMPANY, Chicago, Ill. Filed Oct. 20, 1928.

**Prier**

For Radiator Valves.
Claims use since January, 1927.

## CLASS 14.

### Metals and Metal Castings and Forgings.

Ser. No. 264,672. LOUIS DANIEL, Paris, France. Filed Apr. 11, 1928.

**"BRONEX"**

For Alloys of Bronze in Bulk, in Ingots, in Bars, Sheets, in Plates, Wires, and in Fragments.
Claims use since Jan. 11, 1928.

Ser. No. 264,673. LOUIS DANIEL, Paris, France. Filed Apr. 11, 1928.

**"EXIUM"**

For Alloys of Lead in Bulk and Ingots, in Bars, in Sheets, in Plates, in Wires, and in Fragments.
Claims use since Jan. 11, 1928.

Ser. No. 272,155. GENERAL ALLOYS COMPANY, Boston, Mass. Filed Sept. 10, 1928.

**XITE**

For Castings of Metal Alloy.
Claims use since June 16, 1925.

Ser. No. 272,823. MARION MACHINE, FOUNDRY & SUPPLY CO., Marion, Ind., and Tulsa, Okla. Filed Sept. 22, 1928.

**MARLOY**

# REISSUES

## DECEMBER 11, 1928.

17,156. HOLLOW CONDUCTOR. WILLIAM H. BASSETT, Cheshire, Conn., assignor to The American Brass Company, Waterbury, Conn., a Corporation of Connecticut. Filed May 17, 1927. Serial No. 192,124. Original No. 1,597,422, dated Aug. 24, 1926, Serial No. 741,343, filed Oct. 3, 1924. 9 Claims. (Cl. 173—13.)

1. In a conducting cable comprising a series of strands cabled so as to form a tube, a core formed by a twisted strip having thickened conducting portions forming spiral surfaces engaged by said strands and supporting the same.

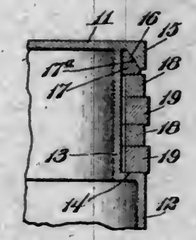
---

17,157. PURIFICATION OF BUTYRIC ALDEHYDE. CHARLES BOGIN, Terre Haute, Ind., assignor to Commercial Solvents Corporation, Terre Haute, Ind., a Corporation of Maryland. Filed Apr. 7, 1928. Serial No. 268,370. Original No. 1,556,067, dated Oct. 6, 1925, Serial No. 712,888, filed May 12, 1924. 10 Claims. (Cl. 260—138.)

1. A process for the purification of butyric aldehyde consisting in vacuum-distilling the aldehyde in the presence of sufficient water to form a constant-boiling mixture with the aldehyde.

---

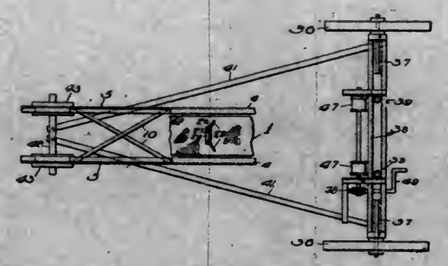
17,158. MULTIPLE TELEPHONY. ERNST RUHMER, deceased, Berlin, Germany, by Edwin Gruhl, assignee, New York, N. Y., assignor to Wired Radio, Inc., New York, N. Y., a Corporation of Delaware. Filed Feb. 21, 1925. Serial No. 10,983. Original application filed Apr. 4, 1911, Serial No. 618,871, and in France Apr. 5, 1910. Renewed Feb. 4, 1919, Serial No. 275,001. Original No. 1,356,222, dated Oct. 19, 1920. 6 Claims. (Cl. 179—15.)



1. The combination with a conductor, of transmission means coupled thereto for impressing electric oscillations thereon, receiving means associated with said transmission means, and shifting means operative to place either said transmission means or said receiving means into operative relation to said conductor and to simultaneously modify the coupling between said conductor and said transmission means.

---

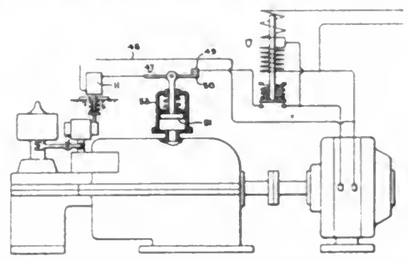
17,159. PISTON FOR INTERNAL-COMBUSTION ENGINES. HENRY R. YOUNG, Muskegon, Mich. Filed Mar. 4, 1927. Serial No. 172,917. Original No. 1,557,648, dated Oct. 20, 1925, Serial No. 741,607, filed Oct. 4, 1924. 2 Claims. (Cl. 74—109.)



1. A piston and ring construction for use in a cylinder comprising a piston having a head and skirt portion, said skirt portion having a relatively wide circumferential groove, a closed rear wall for the groove, closed shoulders for the groove, one of said shoulders being substantially perpendicular to the skirt, and the other of said shoulders being undercut to provide a downwardly and outwardly slanting surface, a plurality of rings in this relatively wide groove including a plurality of sealing rings which normally expand outwardly to seal against the cylinder, all of said rings having sides substantially perpendicular to the skirt of the piston and resting one upon the other with one end ring resting upon the said shoulder which is substantially perpendicular to the skirt, and a compensating ring which is disposed in the said undercut and which has a slanting

surface which contacts with the corresponding surface of the undercut, said compensating ring being outwardly expanding so as to pack the rings together tightly against the said perpendicular shoulder of the groove whereby the rings are tightly held between the said two shoulders and the rings effect a seal between themselves and the closed wall of the groove, while the outward expanding tendency of the rings to effect a sealing pressure with the cylinder walls remain substantially constant.

---



17,160. PORTABLE CONVEYER. HARRY H. BARBER, Aurora, Ill., assignor to Barber-Greene Company, Aurora, Ill., a Corporation of Illinois. Filed May 7, 1928. Serial No. 275,946. Original No. 1,589,091, dated June 15, 1926, Serial No. 260,934, filed Nov. 4, 1918. 22 Claims. (Cl. 198—121.)

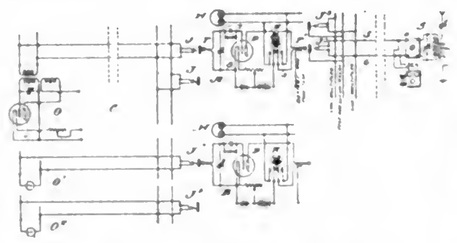
8. The combination of a transversely flexible conveyer belt, troughing rollers engaging and upbending its marginal portions, and flights transversely mounted on the belt secured only to the middle portion thereof with their laterally extending portions spaced away from the belt surface.

12. In a conveyer truck, an inclined boom adapted to have one end located at a predetermined point, a two-wheeled support pivotally connected to said boom above the nose thereof and movably responsive to variations in the inclination of said boom for maintaining said end at said predetermined point.

17,161. TURBINE-GOVERNING SYSTEM. WILLIAM INNES, Monkseaton, England, assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 10, 1928. Serial No. 311,683. Original No. 1,669,522, dated May 15, 1928, Serial No. 635,527, filed Aug. 3, 1923, and in Great Britain Aug. 4, 1922. 11 Claims. (Cl. 290—40.)

6. In an emergency governor for a turbine driving an electric generator, electrically operated means effective to control the turbine, a circuit for the electrically operated means, and means responsive to an operating condition of the turbine which varies with the load thereon together with means responsive to variations in electric load on the generator for controlling the circuit.

---

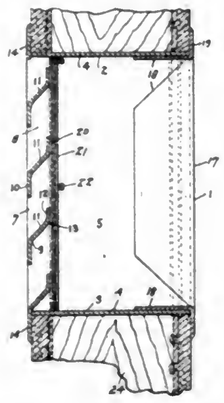


17,162. PROCESS OF REMOVING HYDROGEN SULPHIDE FROM COAL OR WATER GASES. WILLIAM E. LEUCHTENBERG, New York, N. Y. Filed Nov. 1, 1928. Serial No. 316,562. Original No. 1,629,396, dated May 17, 1927, Serial No. 44,925, filed July 20, 1925. 5 Claims. (Cl. 23—3.)

1. In a process for removing hydrogen sulphide from coal or water gases by treating the gases with an alkali carbonate solution to absorb the hydrogen sulphide, then activating the solution containing the hydrogen sulphide by passing the foul solution counter to a flow of air, the improvement which consists in removing the hydrogen sulphide from the air by passing it continuously upwardly through a stream of substantially dry discrete particles of iron oxide in active condition moving continuously downwardly through a container, continuously supplying fresh oxide at the top of the container, and withdrawing fouled or spent oxide at the bottom, and discharging the purified air from the container after passing through the newly supplied oxide.

---

17,163. RADIO BROADCAST SELECTING AND DISTRIBUTING SYSTEM. EDWARD E. CLEMENT, Washington, D. C., assignor to Edward F. Colladay, Washington, D. C. Filed Jan. 5, 1927. Serial No. 159,248. Original No. 1,522,360, dated Jan. 6, 1925, Serial No. 693,993, filed Feb. 29, 1924. 10 Claims. (Cl. 250—6.)

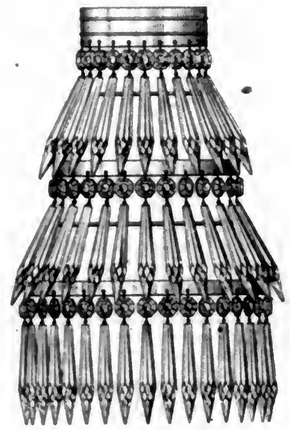


10. In a system of broadcast distribution the method of receiving signals modulated on carrier waves of superaudio frequency which consists in absorbing the energy of said waves, producing at a distant point other energy in the form of unmodulated asymmetric pulsating current at a frequency of the same order as that of the absorbed waves,

transmitting said produced energy, combining said produced energy with said absorbed waves and causing the resultant current wave to produce sound waves corresponding to the original signal modulations.

---

17,164. WALL LOUVER VENTILATOR. ROBERT J. MILLER, Oakland, Calif. Filed Mar. 30, 1927. Serial No. 179,682. Original No. 1,613,047, dated Jan. 4, 1927, Serial No. 35,566, filed June 8, 1925. 4 Claims. (Cl. 98—121.)



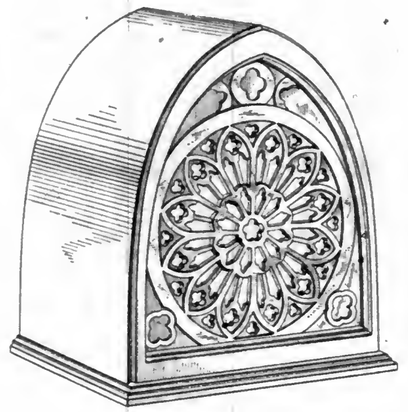
1. In combination, a box adapted for insertion in a wall and a louver front soldered to the front end thereof to project beyond the same so as to present an all-around flange, the louver front having parallel horizontal sections bent backward to contact the walls of the box and having the ends of said sections soldered to the said walls.

# DESIGNS

## DECEMBER 11, 1928.

77,144. LAMP SHADE. LUIGI ALBINO, Brooklyn, N. Y. Filed July 28, 1928. Serial No. 27,612. Term of patent 7 years.

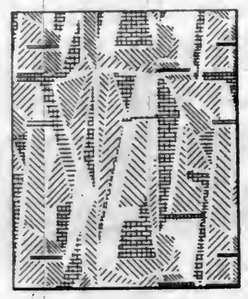
The ornamental design for a lamp shade substantially as shown.



---

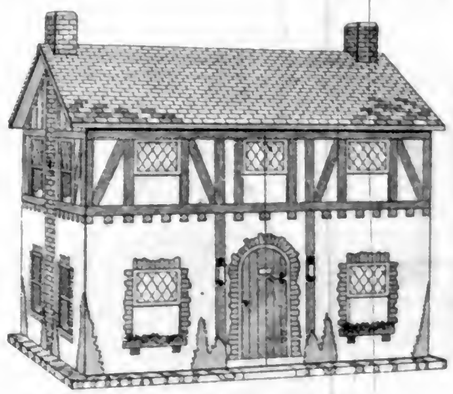
77,145. ICE-CREAM CONE. JAMES L. BALTON, Baltimore, Md. Filed Aug. 28, 1928. Serial No. 27,978. Term of patent 3½ years.

The ornamental design for an ice cream cone as shown.



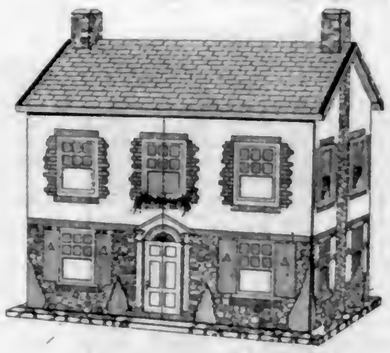
77,146. LOUD-SPEAKER CASING. CLAIR L. FARRAND, Forest Hills, N. Y. Filed June 8, 1928. Serial No. 27,051. Term of patent 14 years.

The ornamental design for a loud speaker casing substantially as shown.



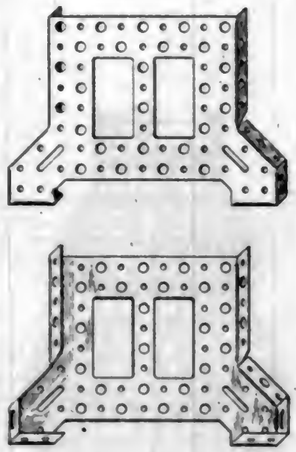
---

77,147. COVER PAPER OR THE LIKE. WILLIAM S. FOWLER, Holyoke, Mass., assignor to Hampden Glazed Paper & Card Company, Holyoke, Mass., a Corporation of Massachusetts. Filed Apr. 19, 1928. Serial No. 26,389. Term of patent 7 years.



The ornamental design for cover paper or the like as shown and described.

77,148. TOY HOUSE. JAMES HENLY FRIER, Jr., Webster Groves, Mo. Filed Sept. 19, 1928. Serial No. 28,203. Term of patent 14 years.



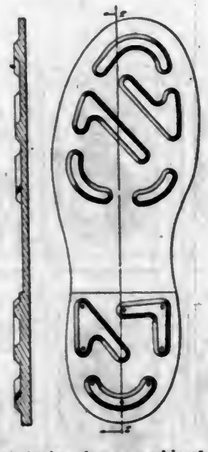
The ornamental design for a toy house, substantially as shown.

77,149. TOY HOUSE. JAMES HENLY FRIER, Jr., Webster Groves, Mo. Filed Sept. 19, 1928. Serial No. 28,205. Term of patent 14 years.

The ornamental design for a toy house, substantially as shown.

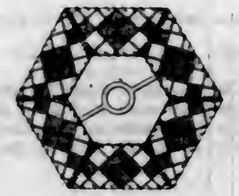
77,150. TOY MACHINE FRAME. ALFRED C. GILBERT, Hamden, Conn., assignor to The A. C. Gilbert Company, New Haven, Conn., a Corporation of Maryland. Filed May 10, 1928. Serial No. 26,624. Term of patent 14 years.

The ornamental design for a toy machine frame substantially as shown.

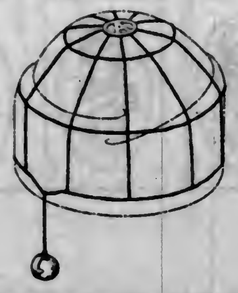


77,151. COMBINATION LAVATORY AND DRESSING TABLE. LUCY JANE GRAHAM, New York, N. Y., assignor to Crane Co., Chicago, Ill., a Corporation of Illinois. Filed May 12, 1928. Serial No. 26,651. Term of patent 14 years.

The ornamental design for a combination lavatory and dressing table as shown.

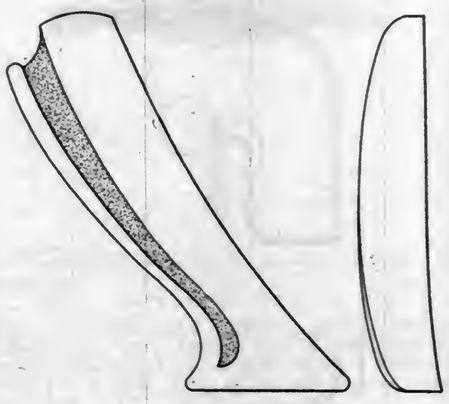


77,152. COMBINED SOLE AND HEEL. EDWARD F. GREENE, New York, N. Y., assignor to Revere Rubber Company, Chelsea, Mass., a Corporation of Rhode Island. Filed Jan. 21, 1928. Serial No. 24,969. Term of patent 14 years.



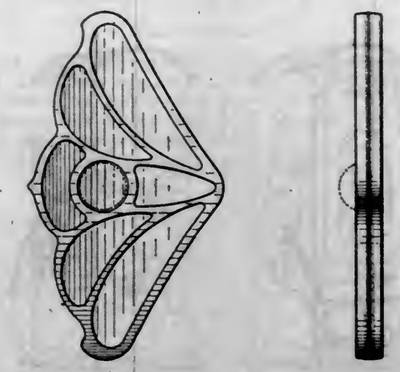
The ornamental design for a combined sole and heel, as shown.

77,153. LAMP SHADE. HAROLD GROBMAN, Brooklyn, N. Y. Filed Oct. 8, 1928. Serial No. 28,407. Term of patent 8½ years.



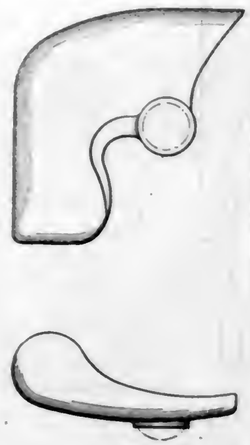
The ornamental design for a lamp shade, as shown.

77,154. HAT NET. GULIELMUS V. HEIDT, Governors Island, N. Y. Filed Apr. 19, 1928. Serial No. 26,380. Term of patent 7 years.



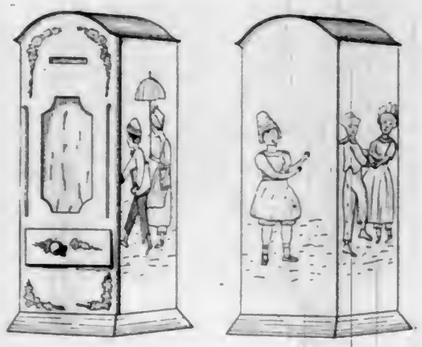
The ornamental design for a hat net as shown and described.

77,155. CLAMP PLATE. HERBERT S. JANDUS and JOHN RICHARD MORGAN, Detroit, Mich., assignors to The C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed Mar. 7, 1928. Serial No. 25,734. Term of patent 14 years.



The ornamental design for a clamp plate substantially as shown.

77,156. CLAMP PLATE. HERBERT S. JANDUS and JOHN RICHARD MORGAN, Detroit, Mich., assignors to The C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed Mar. 7, 1928. Serial No. 25,737. Term of patent 14 years.



The ornamental design for a clamp plate, substantially as shown and described.

77,157. PLATE FOR VEHICLE BUMPERS. HERBERT S. JANDUS and JOHN RICHARD MORGAN, Detroit, Mich., assignors to the C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed May 19, 1927. Serial No. 22,089. Term of patent 14 years.

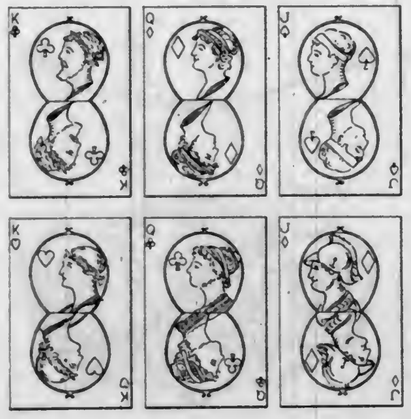
The ornamental design for a plate for vehicle bumpers, substantially as shown.

77,158. TOY BANK. ISIDOR SANFORD KRONOWIT, New York, N. Y. Filed June 16, 1928. Serial No. 27,160. Term of patent 7 years.

The ornamental design for a toy bank as shown.

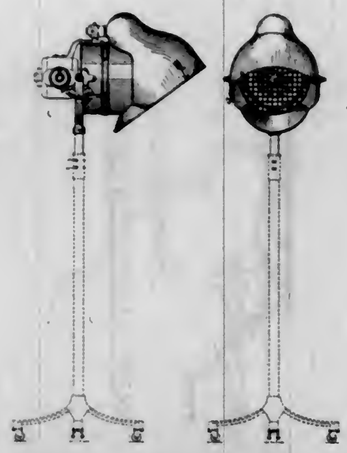
77,159. SET OF PLAYING CARDS. OTTO KUBATZKY, Tulsa, Okla., assignor to O. K. Playing Card Company, Tulsa, Okla., a Corporation of Delaware. Filed July 21, 1927. Serial No. 22,823. Term of patent 14 years.

The ornamental design for a set of playing cards, as shown.



77,160. SET OF PLAYING CARDS. OTTO KUBATZKY, Tulsa, Okla., assignor to O. K. Playing Card Company, Tulsa, Okla., a Corporation of Delaware. Filed July 21, 1927. Serial No. 22,824. Term of patent 3½ years.

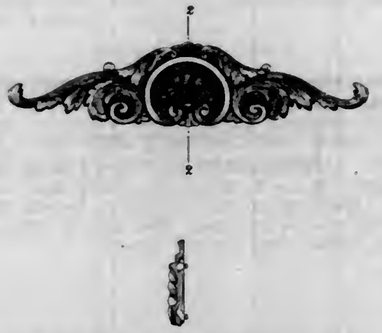
The ornamental design for a set of playing cards, as shown.



77,161. SET OF PLAYING CARDS. OTTO KUBATZKY, Tulsa, Okla., assignor to O. K. Playing Card Company, Tulsa, Okla., a Corporation of Delaware. Filed July 21, 1927. Serial No. 22,825. Term of patent 7 years.

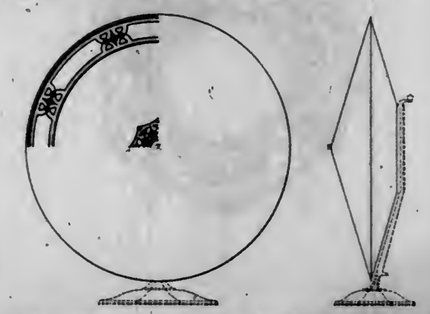
The ornamental design for a set of playing cards, as shown.

77,162. ELECTRIC HAIR DRIER. HENRI G. LEVY, San Francisco, Calif., assignor to The Electric Manufacturing Company, San Francisco, Calif., a Copartnership consisting of Henri G. Levy and Mons Abramson. Filed Jan. 17, 1928. Serial No. 24,906. Term of patent 3½ years.



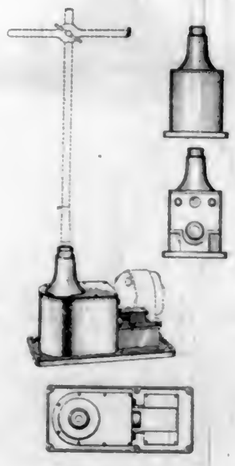
The ornamental design for an electric hair drier, as shown.

77,163. DRAPERY-POLE CENTER. GEORGE MELVIN LONG, Boston, Mass., assignor to H. L. Judd Company, Inc., Wallingford, Conn., a Corporation of Delaware. Filed May 2, 1928. Serial No. 26,528. Term of patent 3½ years.



The ornamental design for a drapery pole center, as shown.

77,164. DRAPERY-POLE CENTER. GEORGE MELVIN LONG, Boston, Mass., assignor to H. L. Judd Company, Inc., Wallingford, Conn., a Corporation of Delaware. Filed May 2, 1928. Serial No. 26,531. Term of patent 3½ years.

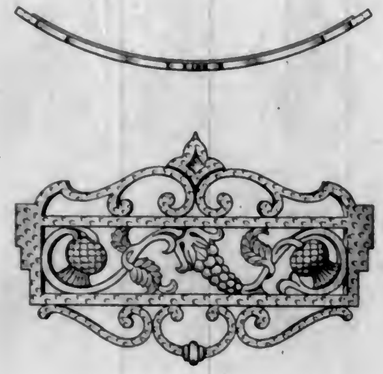


The ornamental design for a drapery pole center, as shown.

77,165. DIAPHRAGM FOR A LOUD SPEAKER. GEORGE R. LUM, New York, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 30, 1927. Serial No. 24,347. Term of patent 7 years.

The ornamental design for a diaphragm for a loud speaker, as shown.

77,166. CASING FOR MECHANICAL EXERCISERS. FRANK E. MARCY, San Diego, Calif. Filed Oct. 20, 1927. Serial No. 23,822. Term of patent 7 years.



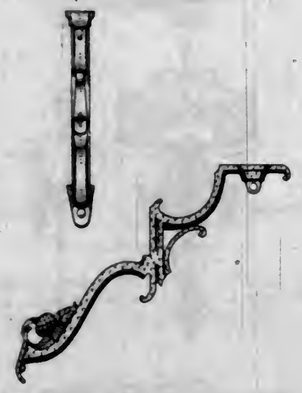
The ornamental design for a casing for mechanical exercisers, as shown.

77,167. LIGHTING-FIXTURE CANOPY RING OR THE LIKE. GLENN E. MCFADDEN, Detroit, Mich., assignor to Lincoln Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Sept. 8, 1928. Serial No. 28,080. Term of patent 7 years.

The ornamental design for a lighting fixture canopy ring or the like, as shown.

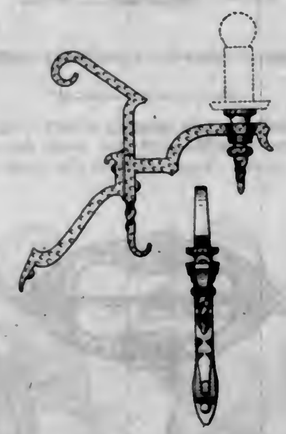
77,168. LIGHTING-FIXTURE BAND OR SIMILAR ARTICLE. GLENN E. MCFADDEN, Detroit, Mich., assignor to Lincoln Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Sept. 8, 1928. Serial No. 28,081. Term of patent 7 years.

The ornamental design for a lighting fixture band or similar article, as shown.

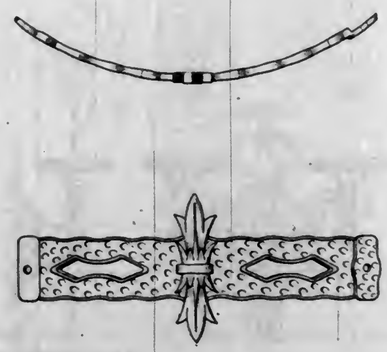


77,169. LIGHTING-FIXTURE ARM OR THE LIKE. GLENN E. MCFADDEN, Detroit, Mich., assignor to Lincoln Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Sept. 8, 1928. Serial No. 28,082. Term of patent 7 years.

The ornamental design for a lighting fixture arm or the like, as shown.

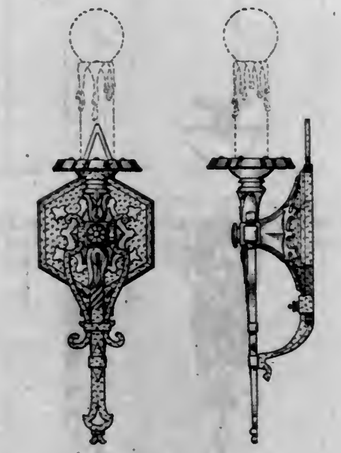


77,170. LIGHTING-FIXTURE ARM OR THE LIKE. GLENN E. MCFADDEN, Detroit, Mich., assignor to Lincoln Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Sept. 8, 1928. Serial No. 28,083. Term of patent 7 years.



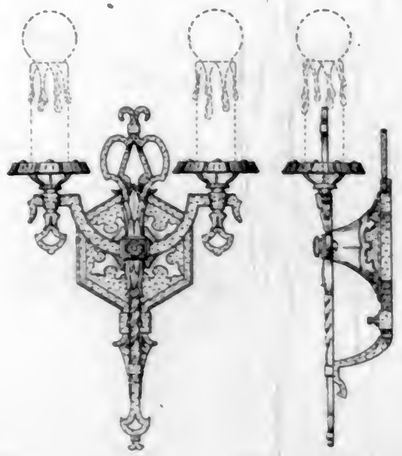
The ornamental design for a lighting fixture arm or the like, as shown.

77,171. LIGHTING-FIXTURE BRACKET OR SIMILAR ARTICLE. GLENN E. MCFADDEN, Detroit, Mich., assignor to Lincoln Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Sept. 8, 1928. Serial No. 28,084. Term of patent 7 years.



The ornamental design for a lighting fixture bracket or similar article, as shown.

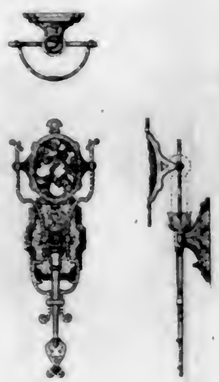
77,172. LIGHTING-FIXTURE BAND OR THE LIKE. GLENN E. MCFADDEN, Detroit, Mich., assignor to Lincoln Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Sept. 8, 1928. Serial No. 28,085. Term of patent 7 years.



The ornamental design for a lighting fixture band or the like, as shown.

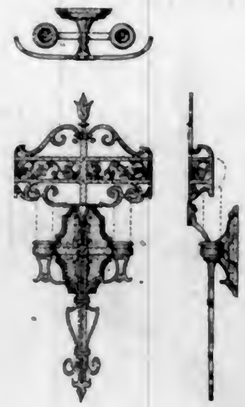
77,173. LIGHTING-FIXTURE WALL BRACKET OR THE LIKE. GLENN E. MCFADDEN, Detroit, Mich., assignor to Lincoln Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Sept. 8, 1928. Serial No. 28,086. Term of patent 7 years.

The ornamental design for a lighting fixture wall bracket, as shown.



77,174. LIGHTING-FIXTURE WALL BRACKET OR THE LIKE. GLENN E. MCFADDEN, Detroit, Mich., assignor to Lincoln Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Sept. 8, 1928. Serial No. 28,087. Term of patent 7 years.

The ornamental design for a lighting fixture wall bracket or the like, as shown.



---

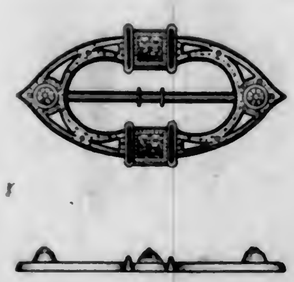
77,175. LIGHTING-FIXTURE WALL BRACKET OR THE LIKE. GLENN E. MCFADDEN, Detroit, Mich., assignor to Lincoln Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Sept. 8, 1928. Serial No. 28,088. Term of patent 7 years.

The ornamental design for a lighting fixture wall bracket or the like, as shown.

77,176. LIGHTING-FIXTURE WALL BRACKET OR THE LIKE. GLENN E. MCFADDEN, Detroit, Mich., assignor to Lincoln Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Sept. 8, 1928. Serial No. 28,089. Term of patent 7 years.

The ornamental design for a lighting fixture wall bracket or the like, as shown.

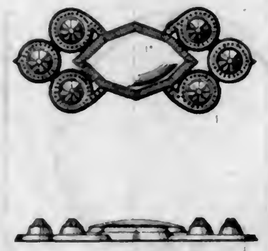
---



77,177. BROOCH OR SIMILAR ARTICLE. BERNAT MECHLOVITS, New York, N. Y. Filed Oct. 8, 1928. Serial No. 28,394. Term of patent 3½ years.

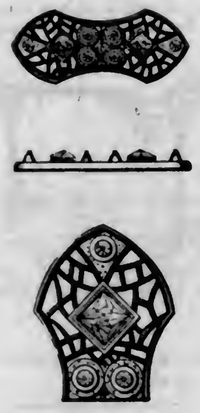
The ornamental design for a brooch or similar article, as shown.

---



77,178. BROOCH OR SIMILAR ARTICLE. BERNAT MECHLOVITS, New York, N. Y. Filed Oct. 10, 1928. Serial No. 28,423. Term of patent 3½ years.

The ornamental design for a brooch or similar article, as shown.



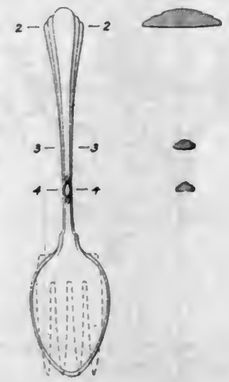
77,179. BROOCH OR SIMILAR ARTICLE. BERNAT MECHLOVITS, New York, N. Y. Filed Oct. 19, 1928. Serial No. 28,573. Term of patent 3½ years.

The ornamental design for a brooch or similar article, as shown.

---

77,180. BROOCH OR SIMILAR ARTICLE. BERNAT MECHLOVITS, New York, N. Y. Filed Oct. 20, 1928. Serial No. 28,582. Term of patent 3½ years.

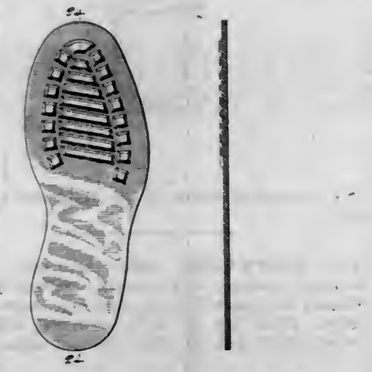
The ornamental design for a brooch or similar article, as shown.



---

77,181. DOLL. GRACE S. MORAHAN, Sag Harbor, N. Y. Filed June 28, 1928. Serial No. 27,312. Term of patent 3½ years.

The ornamental design for a doll, as shown.



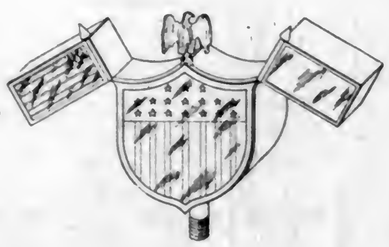
77,182. SPOON OR ANALOGOUS ARTICLE. HAROLD E. NOCK, Newburyport, Mass., assignor to Towle Manufacturing Company, Newburyport, Mass., a Corporation of Massachusetts. Filed Aug. 2, 1928. Serial No. 27,668. Term of patent 14 years.

The ornamental design for a spoon or analogous article, substantially as shown.

---

77,183. SHOE SOLE. LAURENCE M. OAKLEY, Trenton, N. J., assignor to Essex Rubber Company, Trenton, N. J., a Corporation of New Jersey. Filed Sept. 13, 1928. Serial No. 28,132. Term of patent 14 years.

The ornamental design for a shoe sole as shown.



---

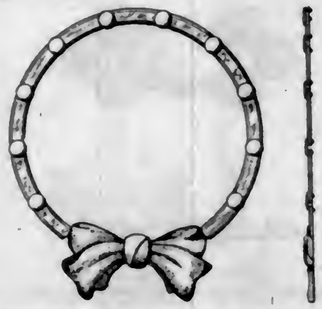
77,184. RADIATOR-CAP ORNAMENT. WALTER E. OTWELL, Linn, Kans. Filed Sept. 20, 1928. Serial No. 28,221. Term of patent 7 years.

The ornamental design for a radiator cap ornament as shown.

77,185. AUTOMOBILE RADIATOR ORNAMENT OR SIMILAR ARTICLE. VITO RIZZI, Windsor Locks, Conn. Filed Apr. 19, 1928. Serial No. 26,387. Term of patent 3½ years.

The ornamental design for an automobile radiator ornament or similar article as shown.

77,186. INDIVIDUAL COFFEEPOT. CATHERINE VERONICA RYAN, Quincy, Ill. Filed Mar. 28, 1928. Serial No. 26,042. Term of patent 7 years.



The ornamental design for an individual coffeepot, as shown.

77,187. BABY'S SHOE. BENNO SCHUBART, Nuremberg, Germany, assignor to Vereinigte Schuhfabriken Bemels-Wessels Aktiengesellschaft, Augsburg, Oberhausen, Germany. Filed July 21, 1928, Serial No. 27,557, and in Great Britain Mar. 29, 1928. Term of patent 3½ years.

The ornamental design for a baby's shoe as shown.

77,188. NECKLACE OR SIMILAR ARTICLE. EMIL ARTHUR SCHUELKE, Meriden, Conn., assignor to The Napier Co., Meriden, Conn., a Corporation of Connecticut. Filed Feb. 9, 1928. Serial No. 25,307. Term of patent 7 years.

The ornamental design for a necklace or similar article, as shown.

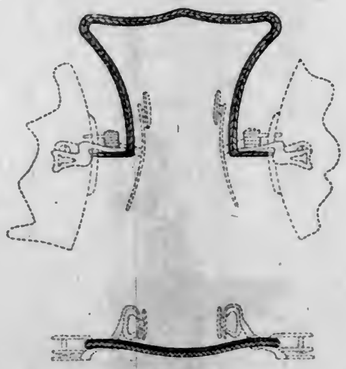
77,189. TABLE FOR RADIO RECEIVING SETS OR THE LIKE. FREDERICK SCHWARTZ, Brooklyn, N. Y., assignor to Robert Findlay Manufacturing Company, Inc., Brooklyn, N. Y., a Corporation of New York. Filed June 29, 1928. Serial No. 27,327. Term of patent 7 years.

The ornamental design for a table for radio receiving sets or the like, as shown.

77,190. COMBINED CIGAR CUTTER, ASH TRAY, AND LIGHTER. KURT SJOESTROEM, Chicago, Ill. Filed Sept. 4, 1928. Serial No. 28,032. Term of patent 3½ years.

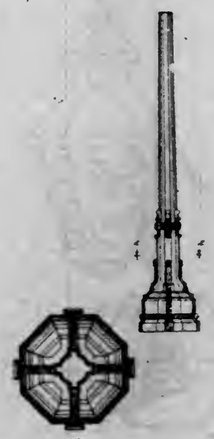
The ornamental design for a combined cigar cutter, ash-tray, and lighter as shown.

77,191. GOLF-CLUB HEAD. FRANK S. SMITH, Los Angeles, Calif. Filed Aug. 6, 1927. Serial No. 23,014. Term of patent 14 years.



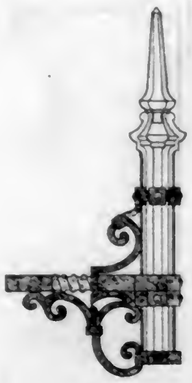
The ornamental design for a golf club head substantially as shown.

77,192. ICE PICK. NORMAN C. SMITH, Pittsburgh, Pa. Filed May 15, 1928. Serial No. 26,682. Term of patent 3½ years.



The ornamental design for an ice-pick, as shown.

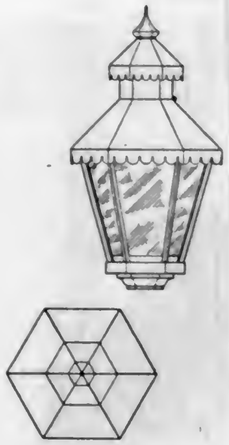
77,193. OPHTHALMIC MOUNTING. FRANK A. UBEL, St. Paul, Minn. Filed July 14, 1928. Serial No. 27,483. Term of patent 14 years.



The ornamental design for an ophthalmic mounting as shown.

77,194. LIGHTING POST. WESTERN UNDERWOOD, Los Angeles, Calif., assignor to La Lux Manufacturing Company, Los Angeles, Calif., a Corporation of California. Filed Sept. 12, 1928. Serial No. 28,117. Term of patent 7 years.

The ornamental design for a lighting post, as shown.



77,195. HEAD FOR LIGHTING POSTS. WESTERN UNDERWOOD, Los Angeles, Calif., assignor to La Lux Manufacturing Company, Los Angeles, Calif., a Corporation of California. Filed Sept. 12, 1928. Serial No. 28,118. Term of patent 7 years.

The ornamental design for a head for lighting posts as shown.

---

77,196. LANTERN FOR LIGHTING POSTS. WESTERN UNDERWOOD, Los Angeles, Calif., assignor of one-half to H. H. Walker, Los Angeles, Calif. Filed Sept. 12, 1928. Serial No. 28,119. Term of patent 7 years.

The ornamental design for a lantern for lighting posts, as shown.

77,197. ASH TRAY. ARTHUR VON FRANKENBERG, New York, N. Y., assignor to Frankart, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 15, 1928. Serial No. 28,165. Term of patent 14 years.

The ornamental design for an ash tray.

---

77,198. ASH RECEIVER. ARTHUR VON FRANKENBERG, New York, N. Y., assignor to Frankart, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 15, 1928. Serial No. 28,166. Term of patent 7 years.

The ornamental design for an ash receiver as shown.

---

77,199. CIGARETTE CONTAINER. ARTHUR VON FRANKENBERG, New York, N. Y., assignor to Frankart, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 15, 1928. Serial No. 28,167. Term of patent 3½ years.

The ornamental design for a cigarette container as shown.

77,200. ASH TRAY. ARTHUR VON FRANKENBERG, New York, N. Y., assignor to Frankart, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 15, 1928. Serial No. 28,168. Term of patent 3½ years.

The ornamental design for an ash tray as shown.

---

77,201. LAMP. ARTHUR VON FRANKENBERG, New York, N. Y., assignor to Frankart, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 15, 1928. Serial No. 28,169. Term of patent 7 years.

The ornamental design for a lamp as shown.

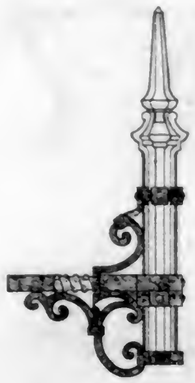
---

77,202. LAMP. ARTHUR VON FRANKENBERG, New York, N. Y., assignor to Frankart, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 15, 1928. Serial No. 28,170. Term of patent 7 years.

The ornamental design for a lamp as shown.

77,203. LAMP. ARTHUR VON FRANKENBERG, New York, N. Y., assignor to Frankart, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 18, 1928. Serial No. 28,192. Term of patent 7 years.

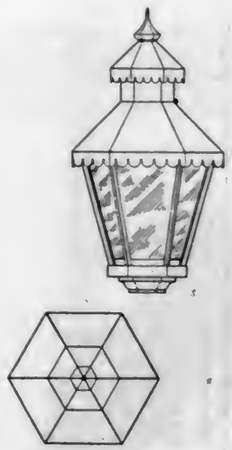
The ornamental design for a lamp as shown.



---

77,204. ASH RECEIVER. ARTHUR VON FRANKENBERG, New York, N. Y., assignor to Frankart, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 18, 1928. Serial No. 28,193. Term of patent 7 years.

The ornamental design for an ash receiver as shown.



77,195. HEAD FOR LIGHTING POSTS. WESTERN UNDERWOOD, Los Angeles, Calif., assignor to La Lux Manufacturing Company, Los Angeles, Calif., a Corporation of California. Filed Sept. 12, 1928. Serial No. 28,118. Term of patent 7 years.

The ornamental design for a head for lighting posts as shown.

---

77,196. LANTERN FOR LIGHTING POSTS. WESTERN UNDERWOOD, Los Angeles, Calif., assignor of one-half to H. H. Walker, Los Angeles, Calif. Filed Sept. 12, 1928. Serial No. 28,119. Term of patent 7 years.

The ornamental design for a lantern for lighting posts, as shown.

77,197. ASH TRAY. ARTHUR VON FRANKENBERG, New York, N. Y., assignor to Frankart, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 15, 1928. Serial No. 28,165. Term of patent 14 years.

The ornamental design for an ash tray.

---

77,198. ASH RECEIVER. ARTHUR VON FRANKENBERG, New York, N. Y., assignor to Frankart, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 15, 1928. Serial No. 28,166. Term of patent 7 years.

The ornamental design for an ash receiver as shown.

---

77,199. CIGARETTE CONTAINER. ARTHUR VON FRANKENBERG, New York, N. Y., assignor to Frankart, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 15, 1928. Serial No. 28,167. Term of patent 3½ years.

The ornamental design for a cigarette container as shown.

77,200. ASH TRAY. ARTHUR VON FRANKENBERG, New York, N. Y., assignor to Frankart, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 15, 1928. Serial No. 28,168. Term of patent 3½ years.

The ornamental design for an ash tray as shown.

---

77,201. LAMP. ARTHUR VON FRANKENBERG, New York, N. Y., assignor to Frankart, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 15, 1928. Serial No. 28,169. Term of patent 7 years.

The ornamental design for a lamp as shown.

---

77,202. LAMP. ARTHUR VON FRANKENBERG, New York, N. Y., assignor to Frankart, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 15, 1928. Serial No. 28,170. Term of patent 7 years.

The ornamental design for a lamp as shown.

77,203. LAMP. ARTHUR VON FRANKENBERG, New York, N. Y., assignor to Frankart, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 18, 1928. Serial No. 28,192. Term of patent 7 years.

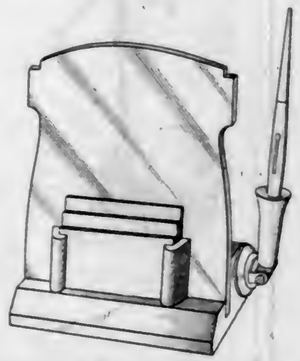
The ornamental design for a lamp as shown.

---

77,204. ASH RECEIVER. ARTHUR VON FRANKENBERG, New York, N. Y., assignor to Frankart, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 18, 1928. Serial No. 28,193. Term of patent 7 years.

The ornamental design for an ash receiver as shown.

77,205. SMOKING STAND. ARTHUR VON FRANKENBERG, New York, N. Y., assignor to Frankart, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 19, 1928. Serial No. 28,201. Term of patent 3½ years.



The ornamental design for a smoking stand as shown.

77,206. LAMP. ARTHUR VON FRANKENBERG, New York, N. Y., assignor to Frankart, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 22, 1928. Serial No. 28,241. Term of patent 7 years.

The ornamental design for a lamp as shown.

77,207. DESK SET. HERMAN WALDMAN, Chicago, Ill. Filed Aug. 30, 1928. Serial No. 27,987. Term of patent 3½ years.

The ornamental design for a desk set as shown.

77,208. HUSK FOR LIGHTING FIXTURES. LESTER R. WELLMAN, Chicago, Ill., assignor to Friedley-Voshardt Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 12, 1928. Serial No. 28,115. Term of patent 3½ years.

The ornamental design for a husk for lighting fixtures, as shown.

77,209. HUSK FOR LIGHTING FIXTURES. LESTER R. WELLMAN, Chicago, Ill., assignor to Friedley-Voshardt Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 12, 1928. Serial No. 28,116. Term of patent 3½ years.

The ornamental design for a husk for lighting fixtures, as shown.

77,210. RADIOCABINET. EVERETT WORTHINGTON, Chicago, Ill., assignor to Brandes Laboratories, Inc., Newark, N. J., a Corporation of New Jersey. Filed June 15, 1928. Serial No. 27,142. Term of patent 14 years.

The ornamental design for a radiocabinet as shown.

77,211. RADIOCABINET. JOSEPH WOLFF, Brooklyn, N. Y., assignor to Sonora Phonograph Company, Inc., a Corporation of New York. Filed July 16, 1927. Serial No. 22,770. Term of patent 7 years.

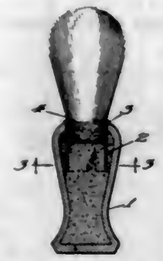
The ornamental design for a radiocabinet, substantially as shown.

77,212. ELASTIC FABRIC. FREDERICK J. ZIMMERER, Jr., Middletown, Conn., assignor to The Russell Manufacturing Company, Middletown, Conn., a Corporation of Connecticut. Filed Nov. 20, 1926. Serial No. 19,799. Term of patent 14 years.

The ornamental design for an elastic fabric, as shown and described.

# PATENTS

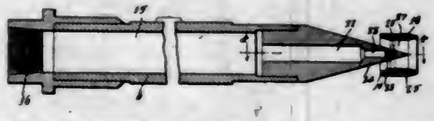
## GRANTED DECEMBER 11, 1928.



1,694,364. SHAVING BRUSH. ANDREW ALBRIGHT, 3d, Maplewood, N. J. Filed May 23, 1927. Serial No. 193,696. 2 Claims. (Cl. 15—192.)

1. A shaving brush having two sections of bristles, the middle section constituting the core having a cup-like depression therein to receive and retain lather or other shaving material, and the other section constituting a casing surrounding said core being constructed of bristles of relatively soft character, said brush being characterized by the capability of the stiff bristles constituting the core to work the lather into the beard simultaneously with the spreading and smoothing off of the lather by the relatively soft bristles constituting the casing.

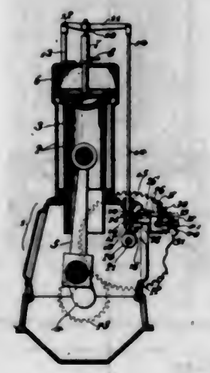
---



1,694,365. SHAVING BRUSH. ANDREW ALBRIGHT, 3d, Maplewood, N. J. Filed June 2, 1927. Serial No. 195,889. 2 Claims. (Cl. 15—193.)

1. A shaving brush comprising a hollow one piece handle, a ferrule having secured therein a knot of bristles, curved tongues formed on said ferrule, and a cementitious filler in the hollow handle forming an interlocking bond with said tongues.

---

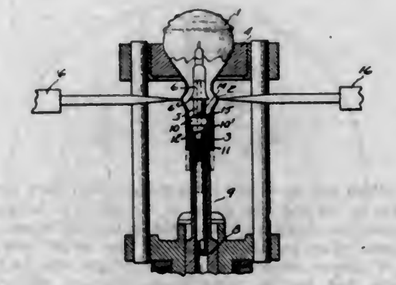


1,694,366. LIQUID-FUEL BURNER. CECIL H. BALMAT, San Francisco, Calif., assignor, by mesne assignments, to Standard Oil Company of California, San Francisco, Calif., a Corporation of Delaware. Filed Mar. 22, 1926. Serial No. 96,523. 5 Claims. (Cl. 158—78.)

1. In an oil burner, the combination of an outer nozzle for conducting an air blast and having a mouth at its forward end through which the air blast is delivered, an inner nozzle carried within the outer nozzle and having a fuel duct for the oil, said inner nozzle having a wedge shaped tip with a transverse fuel duct, for taking the fuel from the first named fuel duct, a delivery cap consisting of an inner annular shell encircling and attached to the said tip in said mouth, and an outer annular shell secured over the inner shell and co-operating with the same to form a substantially capillary space communicating with the transverse duct.

---

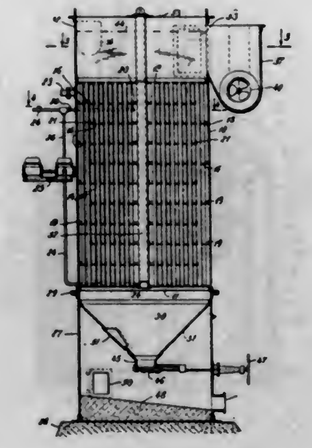
1,694,367. FEED-CONTROL MEANS FOR INTERNAL-COMBUSTION ENGINES. JACK B. BARTOW, Darby, Pa., assignor to Treiber Diesel Engine Corporation, Camden, N. J., a Corporation of New Jersey. Filed Sept. 13, 1927. Serial No. 219,199. 8 Claims. (Cl. 123—33.)



1. In fuel feed control means for internal combustion engines, the combination of lost motion actuating means for controlling and actuating the fuel feeding means, devices for varying and controlling the amount of lost motion in the said lost motion actuating means, means for withdrawing the said devices into positions to render the said actuating means inoperative, the outer ends of said devices having operative pivotal connection with the said means, and means for adjusting such pivotal connections in arcs of circles which, when the said devices have been withdrawn into inoperative position, are concentric with the axes about which turn the portions of said devices which are connected with said withdrawing means when the said connections are adjusted.

---

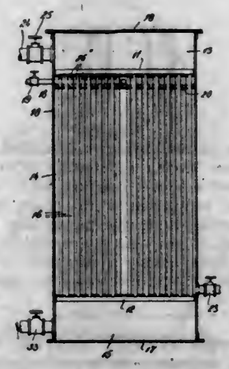
1,694,368. METHOD OF MANUFACTURING ELECTRIC BULBS AND BULB BLANKS FOR USE THEREIN. CLYDE C. BONNER, Maplewood, N. J., assignor to Tung-Sol-Lamp Works, Newark, N. J., a Corporation of New Jersey. Filed Feb. 25, 1927. Serial No. 170,768. 7 Claims. (Cl. 49—78.)



1. The method of manufacturing electric bulbs which consists in forming in the elongated neck of a bulb blank and in the plane of the seal and bulbous ring to cause a thinning of the glass walls thereat, assembling a mount within the bulb blank with the sealing flange of the mount disposed in the plane of the bulbous ring and then heating the latter to cause it to collapse upon and become

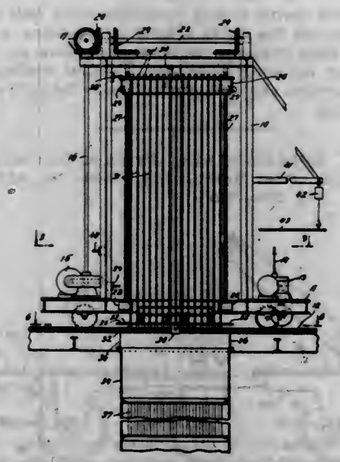
welded to the flange while the lower part of the neck causes a still further thinning of the glass walls in the plane of the seal by the stretching thereof.

---



1,694,369. REFRIGERATING APPARATUS. CHARLES LALOR BURDICK, New York, N. Y., assignor to Guggenheim Brothers, New York, N. Y., a Copartnership. Filed June 18, 1925. Serial No. 37,924. 11 Claims. (Cl. 62—124.)

1. In a refrigerating apparatus, a vaporizing chamber for refrigerant, a plurality of conduits extending therethrough, means for passing liquid to be cooled through said conduits, a plurality of vertically spaced trays arranged within the vaporising chamber and having outlets for distributing liquid refrigerant to the surface of said conduits, said trays each having a discharge lip for excess liquid refrigerant, said lips being in staggered relation one to another so as to discharge the excess liquid refrigerant from one tray onto the next lower, and said trays acting as baffles for the vaporised refrigerant, means for supplying liquid refrigerant to an upper tray, and means for withdrawing the vaporised refrigerant from said chamber.

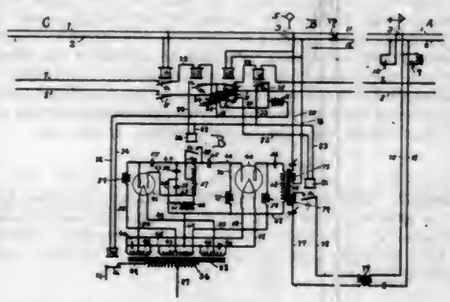


1,694,370. REFRIGERATING AND HEAT-INTERCHANGING APPARATUS. CHARLES LALOR BURDICK, New York, N. Y. Filed Nov. 21, 1925. Serial No. 70,512. 10 Claims. (Cl. 62—126)

1. In an apparatus for interchanging heat between two liquids, a plurality of tubes for separating said liquids having one end higher than the other so that liquid will flow through by gravity, means for discharging one of said liquids in an annular stream onto the exterior of each of said tubes, and means including an apertured cap fitted into the upper end of each of said tubes and supporting a cone-shaped member within the tube to receive liquid passing through the aperture in the cap and discharge it in an annular stream onto the interior surface of the tube.

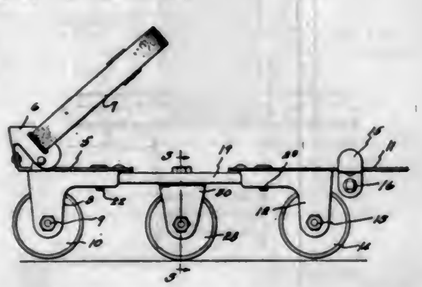
---

1,694,371. MULTIPLE-TUBE CLEANER. CHARLES LALOR BURDICK, New York, N. Y., assignor to Guggenheim Brothers, New York, N. Y., a Copartnership. Filed June 5, 1926. Serial No. 113,853. 7 Claims. (Cl. 15—104.05.)



2. A multiple-tube cleaner comprising, a plurality of vertically disposed floating cleaners adapted to be individually actuated by their force of gravity, means for lowering said cleaners a predetermined distance and automatically returning them to their original position.

1,694,372. BOOM TRACK FOR BUCKET CONCRETE DISTRIBUTORS. JAMES E. BUSHNELL, North Plainfield, N. J., assignor to Ransome Concrete Machinery Company, Plainfield, N. J., a Corporation of New Jersey. Filed June 18, 1927. Serial No. 199,665. 3 Claims. (Cl. 104—107.)

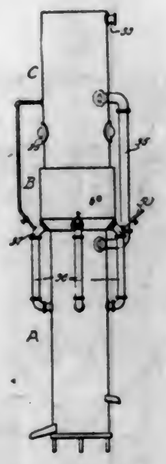


1. In a device of the character described, the combination with a boom having a laterally extending integral bottom flange and a bucket carriage with rollers adapted to travel thereon lengthwise of the boom, of a removable metallic strip having high wearing quality secured along the upper surface of the said flange and in close contact therewith, said strip having a plurality of wearing surfaces and capable of being reversed when one side is worn.

1,694,373. TRAIN-CONTROL SYSTEM. THOMAS E. CLARK, JAMES E. CLARK, and WILLIAM L. COOP, Detroit, Mich., assignors to Continuous Train Control Corporation, Detroit, Mich., a Corporation of Michigan. Filed Nov. 15, 1926. Serial No. 148,406. 8 Claims. (Cl. 246—41.)

3. A train control system comprising track rails divided into blocks and the blocks divided into sections, a generator for radio-frequency currents embodying an output transformer including a plurality of output windings, and wires connecting one of said windings to the rails of each block-section.

1,694,374. ROLLER SKATE. BYRON E. COLWELL, Addison, Mich. Filed Mar. 2, 1926. Serial No. 91,799. 3 Claims. (Cl. 208—175.)

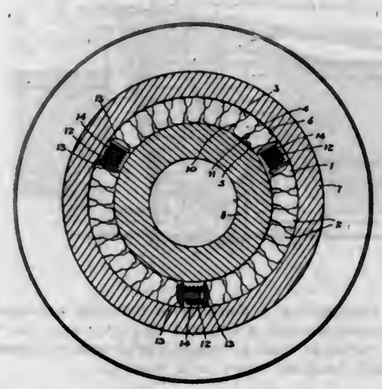


1. A roller skate comprising a heel portion carrying a roller, a toe portion carrying a roller, and a central portion carrying a roller, the heel and toe portions being adjustably secured by the same connecting member to the central portion.

1,694,375. BILLIARD-CUE-TIP HOLDER. COSMAS DARMIS, Philadelphia, Pa., assignor to American World Cue Tip Holder Co., Philadelphia, Pa. Filed Dec. 1, 1926. Serial No. 151,873. 1 Claim. (Cl. 273—70.)

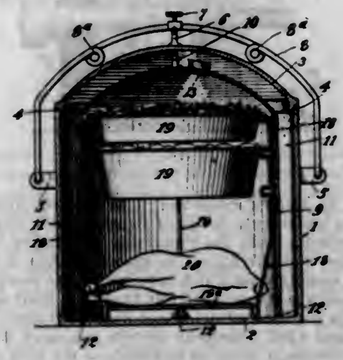
A billiard cue tip holder comprising a body part having a socket in one end and a cup in the other, a diaphragm separating the socket and cup, a pin on the diaphragm, and chamfered edges on the cup; both the socket and cup being of greater diameter at the diaphragm than at their openings and having their walls tapering uniformly, whereby a tip forced into the cup and a cue forced into the socket will be allowed to expand at their inner ends and held against unintentional removal.

1,694,376. FURNACE FOR REDUCTION OF IRON. CHARLES M. DAY, Kirkwood, and CHARLES J. SCULLIN, St. Louis, Mo. Filed Apr. 19, 1926. Serial No. 102,880. 5 Claims. (Cl. 266—14.)



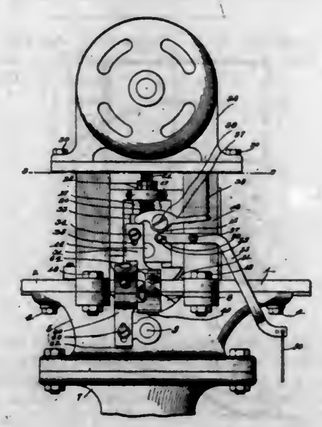
1. In a furnace for the reduction of metal, a charge chamber, a combustion chamber, a conduit joining said charge chamber to said combustion chamber, a tubular member mounted in said conduit, a nozzle directed into said tubular member, a pipe terminating in said nozzle and means for forcing air through said pipe and nozzle to create an injector action in said conduit.

1,694,377. FREE-WHEEL CLUTCH. DIMITRI SENSAUD DE LAVAUD, Paris, France. Filed Feb. 14, 1927, Serial No. 168,164, and in France Feb. 19, 1926. 6 Claims. (Cl. 192—41.)



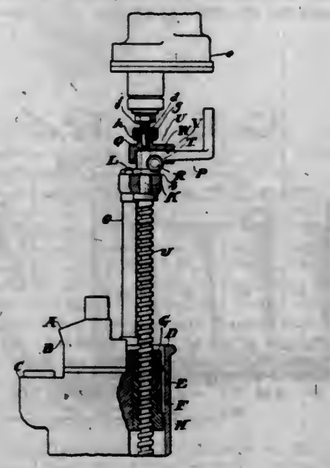
6. A free wheel clutch comprising driving and driven members having spaced cylindrical surfaces and clutch blocks having oppositely arranged eccentrically disposed clutch surfaces to engage the former surfaces and having pressure contact protuberances at opposite sides each

offset toward the point of greatest eccentricity of one of said clutch surfaces, and resilient means for forcing said blocks into pressure contact.



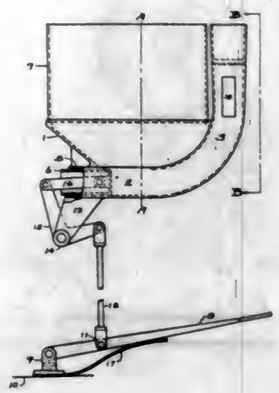
1,694,378. COOKING VESSEL. HENRY L. GOODWIN, New York, N. Y. Filed Jan. 31, 1927. Serial No. 164,717. 11 Claims. (Cl. 53—2.)

11. The method of cooking which comprises subjecting the material to be cooked to the action of steam in a container to drive out the air therefrom, and then utilizing the steam for insulating the walls of the container.



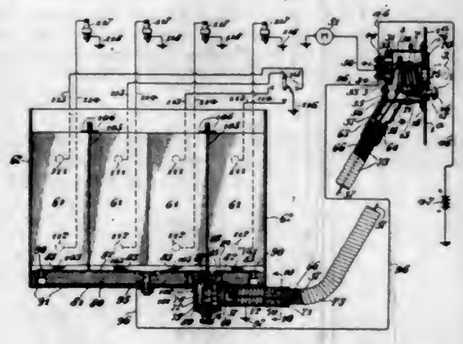
1,694,379. MACHINE FOR BEVELING THE EDGES OF LEATHER OR SIMILAR MATERIAL. GEORGE J. GORBUCH, Rochester, N. Y., assignor to Hickok Manufacturing Company, Rochester, N. Y., a Corporation of New York. Filed Dec. 1, 1922. Serial No. 604,171. 15 Claims. (Cl. 67—17.)

1. A beveling machine comprising means for feeding the material, two flat pressure surfaces between which one edge of the material is passed, one of said surfaces being fixed in a line with the line of travel of the material and the other of said surfaces being yieldable relatively to such first named surface, and a beveling cutter for beveling an



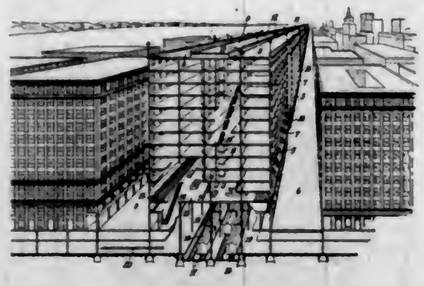
edge of the material secured in fixed relation to that pressure surface which is to cooperate with the face of the material to be beveled by such cutter.

1,694,380. CHUCK FOR CRANK HANDLES. CHARLES C. HANSEN, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Oct. 5, 1927. Serial No. 224,164. 4 Claims. (Cl. 64—89.)



1. A chuck for crank handles, comprising a plate, means on the plate engaging portions of the crank handle, said means for permitting slidable placement of the chuck on, and slidable removal of the chuck from, the crank handle and for maintaining said plate in operative position on the crank handle, and means on the plate adapted to be connected to the chuck of a power device whereby the crank handle and the element normally actuated thereby are rotated.

1,694,381. APPARATUS FOR ELEVATING POPPED CORN AND DELIVERING IT. GEORGE H. HARTMAN, Cleveland, Ohio. Filed Dec. 20, 1922, Serial No. 608,114. Renewed May 10, 1928. 2 Claims. (Cl. 221—102.)



1. Apparatus for elevating successive charges of popped corn, consisting of a bent, upwardly extending tube, said tube having its side walls outwardly flaring so that the charges of corn when forced therein will remain in the varying levels to which they are forced.

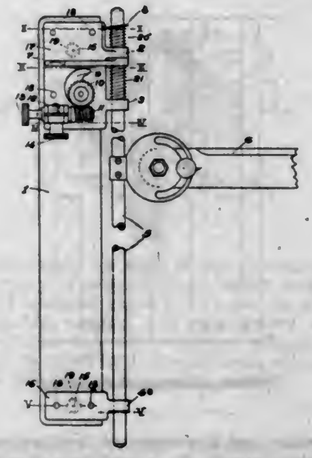
1,694,382. LOCKING MEANS FOR AUTOMOBILES. WILSON HEMINGWAY, Jr., Melrose Park, Pa., assignor to The Electrolock Manufacturing Company, Vicksburg, Miss., a Corporation of Mississippi. Filed Feb. 26, 1927. Serial No. 171,279. 13 Claims. (Cl. 175—361.)

1. Locking means for ignition mechanism, comprising, in combination, coils, a holder for said coils, a container for the said holder, locking means for protecting the said holder against removal from the said box, a switch for opening and closing the circuit of said ignition mechanism, an actuatable element for locking said switch in open position, and a connection between said locking element and said locking means whereby upon movement of said locking element into locking position the locking means is moved into locking position.

1,694,383. HIGHWAY BUILDINGS. JOHN K. HENCKEN, Brooklyn, N. Y. Filed Nov. 7, 1925. Serial No. 67,492. 5 Claims. (Cl. 104—27.)

1. In combination, a plurality of buildings arranged in an end-to-end relation, a roadway supported upon the tops of said buildings, and a transportation system arranged within said buildings below said roadway.

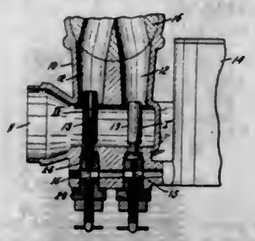
1,694,384. ELECTRICAL CONDENSER AND INDICATING MEANS. HENRY F. HERMAN, Chappaqua, N. Y., assignor to Straitline Radio Corporation, New York, N. Y., a Corporation of New York. Filed Apr. 22, 1925. Serial No. 25,138. 6 Claims. (Cl. 175—41.5.)



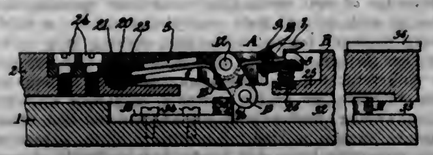
1. In an electric condenser, a pair of electrodes, each electrode including a series of flanged plates arranged in nested relation with the connecting portions in electrical connection and the flanges in spaced relation, a fixed dielectric support upon which one electrode is mounted with the plates in juxtaposed relation thereto, a shaft supported axially in the fixed electrode and support therefor to have rotary and axial movement therein and upon which the other electrode is mounted co-axially of the fixed electrode with the flanges thereof in opposed relation to the spaces between the flanges of said fixed electrode, and said second electrode being adapted to participate in the axial movement of the shaft to interengage the flanges thereof in the spaces between the plate flanges of the fixed electrode to increase and decrease the value of the inductance capacity of the condenser.

1,694,385. SECTION LINER. EDWARD R. INMAN, Franklin, Pa. Filed Nov. 21, 1925. Serial No. 70,566. 4 Claims. (Cl. 33—110.)

3. A section liner comprising a bed, a longitudinally movable rod carried by said bed, a ruler carried by said rod for movement therewith and an actuating lever for and carried by said rod; the combination with the foregoing of an infinitesimally-adjustable stop for said lever whereby its movements may be varied at will by infinitesimal degrees

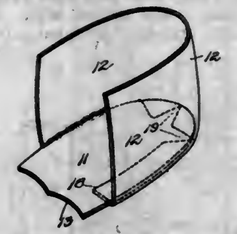


said stop comprising a cam-faced member pivotally carried by said bed with its cam-face arranged for contact by said lever, a worm wheel secured to said member for actuating



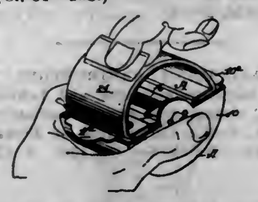
same, a worm revolubly carried by said bed in mesh with said wheel, and means for locking said worm against revolubility for the purpose set forth.

1,694,386. CARBURETOR. JOHN JUHASZ, New York, N. Y. Filed Jan. 7, 1924. Serial No. 684,765. 1 Claim. (Cl. 261—41.)



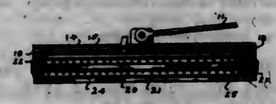
A carburetor including a plurality of independent carbureting chambers, a throttle for progressively bringing said carbureting chambers into service, and a suction controlled nozzle in each carbureting chamber, the lower ends of the bores of said nozzles being arranged at the same level and the said bores being of different lengths so as to discharge at different levels, the lengths of the bores increasing in the order in which said carbureting chambers are brought into and maintained in service during the opening movement of said throttle, said bores being unobstructed and each bore gradually decreasing in transverse cross-section from its upper end to its lower end.

1,694,387. BLANK FEEDING AND POSITIONING MECHANISM FOR CAN-BODY-MAKING MACHINES. PETER KRUSE, Brooklyn, N. Y., assignor to E. W. Bliss Company, Brooklyn, N. Y., a Corporation of Delaware. Filed June 17, 1927. Serial No. 199,465. 19 Claims. (Cl. 113—8.)



1. In a can body-making machine, a blank gripping device comprising a pair of jaws, a jaw-actuating member adapted to relatively move said jaws positively together, a feed member on which said jaws are mounted, and a part of said machine with respect to which said feed member moves, said part co-operating with said jaw-actuating member to effect a positive closure or gripping action of the jaws upon a predetermined movement of said feed member.

1,694,388. LINING FOR BOOTS AND SHOES. ALBERT E. MATHIEU, Natick, Mass. Filed Sept. 17, 1927. Serial No. 220,076. 3 Claims. (Cl. 36—55.)

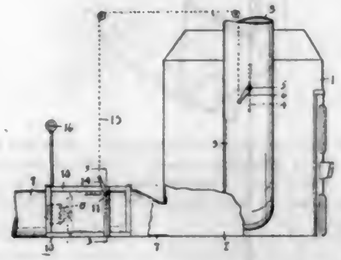


1. As a new article of manufacture a one-piece flat shoe lining blank of thin pliable sheet material of approximately uniform thickness throughout and comprising a base portion that is mainly heel-shaped and pliably conformable to the inside of the heel portion of the sole of a shoe, and a wall portion in the form of a strip integrally joined at one side and near one end thereof to one side of said base portion so as to extend rearwardly from the latter, and bendable into an upstanding heel embracing position so as to extend around the back and along the opposite side of said base portion, said wall portion being pliably conformable to the inside of the heel portion of the upper of the shoe.

1,694,389. RAZOR STROP. MICHAEL W. MCARDLE, Chicago, Ill. Filed May 13, 1925. Serial No. 29,879. 10 Claims. (Cl. 51—198.)

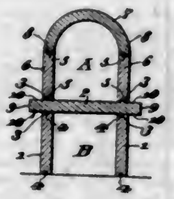
1. A device for the purpose indicated comprising a casing consisting of two cylindrical segment members pivoted together at their common axis and relatively dimensioned for telescoping one within the other by rocking relatively to each other about said axis, the total of their angular extent being substantially 360°, whereby when rocked relatively to withdraw the lesser from the larger they constitute a substantially closed case; a strop mount within said case mounted for rocking movement about said axis, comprising a cylindrical segment of angular extent suitable for substantially spanning the opening of the case when the case members are telescoped one within the other, and means for locking the strop mount as to its pivotal movement at a position at which its said segment is exposed through the opening of the open case.

1,694,390. WINDSHIELD WIPER. ROBERT C. MCCOLLEY, Indianapolis, Ind. Filed Nov. 28, 1927. Serial No. 236,115. 6 Claims. (Cl. 15—253.)



1. In a windshield wiper, a movable bar, an electrical heating element carried by the bar, a rotatable member housing the element and wipers between which the rotatable member rotates.

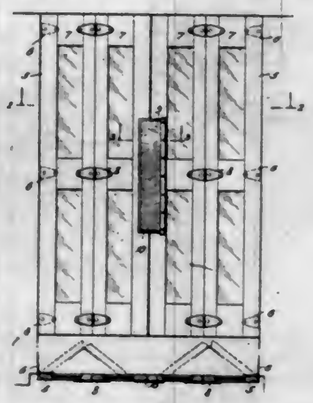
1,694,391. PREPARATION OF EDIBLE FATS. WHARTON B. MCLAUGHLIN, New York, N. Y.; Celia Brown McLaughlin administratrix of said Wharton B. McLaughlin, deceased. Filed Apr. 17, 1922. Serial No. 554,182. 2 Claims. (Cl. 99—11.)



1. The method of producing chocolate in powder form which consists in spraying melted chocolate into a current of cold air.

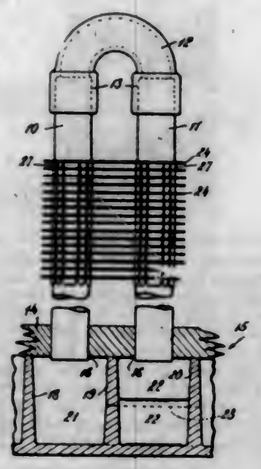
1,694,392. AIR FEED FOR HOT-AIR FURNACES. EDWARD G. MILLER, Grand Rapids, Mich. Filed Oct. 12, 1927. Serial No. 225,669. 6 Claims. (Cl. 126—110.)

4. The combination with the air heating chamber of a hot air furnace, of a gravity feed air flue delivering to said chamber and provided with a damper, a force feed air flue delivering to said chamber, a blower for said force feed air flue, a plurality of vanes mounted on a rock shaft at an angle to each other within said forced air flue at the front of said blower, and an operating connection from the rock shaft to said damper.



1,694,393. RADIATING COMBUSTION CHAMBER. ARTHUR E. NASH, Philadelphia, and JAMES S. ALCORN, Cynwyd, Pa., assignors to Alcorn Combustion Company, Philadelphia, Pa., a Corporation of Delaware. Filed Jan. 4, 1924. Serial No. 684,456. 8 Claims. (Cl. 110—86.)

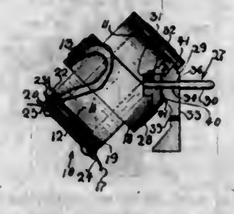
1. Combustion chamber structure comprising refractory wall members, and a dividing wall member of silicon carbide disposed within and supported by said wall members and having a heat-radiating surface external to said chamber for lowering the temperature of the portion of said dividing wall member within the combustion chamber.



1,694,394. SAFETY DEVICE FOR DOORS. ARTHUR W. PARSONS, Miami, Fla. Filed Mar. 12, 1927. Serial No. 174,728. 2 Claims. (Cl. 20—16.)

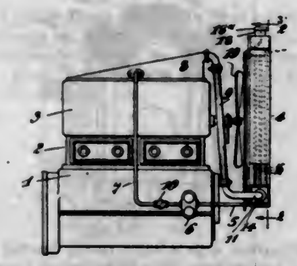
1. In combination, a pair of movable doors cooperating at their edges, which when in their closed positions come into approximate contact with one another only at their top and bottom edge portions and at their intermediate edge portions are so widely out of contact with one another as to leave an opening between said intermediate

edge portions, and door-supported flexible means covering the opening between the intermediate edge portions of said doors when they are in their closed positions.



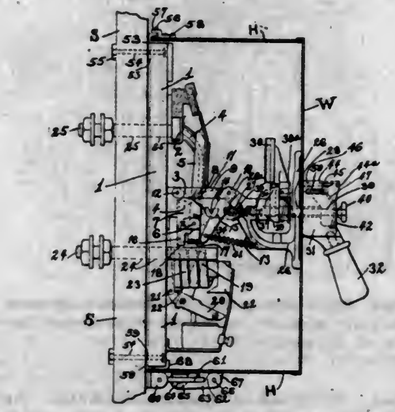
1,694,395. AIR COOLER. JOSEPH PRICE, West New Brighton, N. Y., assignor to The Griscom-Russell Company, New York, N. Y., a Corporation of Delaware. Filed June 16, 1923. Serial No. 645,735. 1 Claim. (Cl. 257—239.)

A heat exchanger of the class described including a passage for the gas being treated, a heat transferring unit comprising a plurality of fluid conveying elements extending into heat exchanging relation with the gas traversing the apparatus, said elements each comprising a pair of parallel tubes interconnected at one end of the element, a plurality of heat conducting vanes each spanning both tubes of each of said fluid conveying elements, a header having passages for delivering the working fluid in one direction through one tube of each element and collecting the fluid returning in the opposite direction through the other tube of each of the elements, said fluid conveying elements being identical with one another and each of said elements being supported independently of the others and being removable from said header independently of every other element.

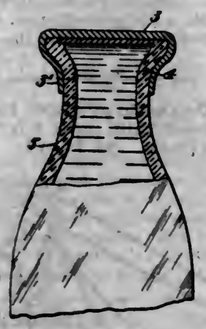


1,694,396. RADIO APPARATUS. PAUL H. ROOTH, Chicago, Ill. Filed June 15, 1927. Serial No. 198,880. 1 Claim. (Cl. 171—119.)

In a vario-coupler for radio circuits, a stationary primary winding, a winding rotatable within said primary winding and connected at one end to one end of said stationary primary winding, and a stationary secondary winding enclosing the said stationary primary winding and spaced therefrom and shielded from said rotatable winding by said stationary primary winding.



1,694,397. ENGINE-COOLING SYSTEM. SAMUEL W. RUSHMORE, Plainfield, N. J. Filed Aug. 10, 1926. Serial No. 128,345. 24 Claims. (Cl. 123—174.)

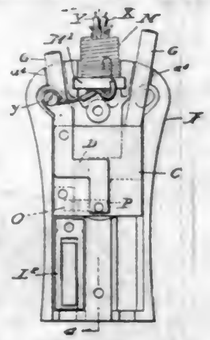


1. An internal combustion engine having a water and steam cooling circuit of inadequate radiating capacity, serially including a force feed pump supplying water to the jacket of the engine, an outlet discharging hot water and steam from the jacket into the lower chamber of an air cooled radiator of the upright type having a multiplicity of small diameter cooling passages of great radiating capacity connecting a lower chamber of small radiating capacity with an upper chamber which has a high level overflow outlet, and in combination with said parts, means for maintaining a thermo-circulating body of water upflowing through some of said cooling passages and downward through others, said means including a discharge device having a multiplicity of outlets arranged to discharge warm water and then hot water and the steam from the engine in and distributed lengthwise along a region of said body of water that is below and in proximity to the lower ends of at least one-half of said passages.

1,694,398. SWITCHBOARD MOUNTING OF CIRCUIT-BREAKER UNITS. WILLIAM M. SCOTT, Treddyfrin Township, Chester County, Pa. Original application filed Aug. 2, 1923, Serial No. 655,196. Divided and this application filed Aug. 16, 1924. Serial No. 732,394. 3 Claims. (Cl. 200—168.)

2. The combination with a switchboard, of a circuit breaker unit comprising a base, automatic circuit breaker mechanism secured upon the front of said base, and a housing enclosing said circuit breaker mechanism, means securing said unit to said switchboard comprising means securing said base upon the front of said switchboard, a member disposed between said base and switchboard and secured by said base-securing means, said housing detachably engaging said member, and connecting studs extending from said circuit breaker mechanism to the rear of said switchboard.

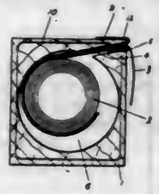
1,694,399. WRAPPER FOR RECEPTACLES AND METHOD OF PREPARING THE SAME. HENRY PHILIP SHOPNECK, Dorchester, Mass. assignor to John J. Daly, West Newton, Mass. Filed Jan. 13, 1927. Serial No. 160,836. 2 Claims. (Cl. 215—38.)



1. A bottle closure comprising a water laid felt containing short and long fibres felted together and impregnated with a thermo-plastic stiffener.

1,694,400. SOCKET AND SWITCH PLUG. ERNEST SJOLIN, Chicago, Ill., assignor to Chicago Flexible Shaft Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 11, 1922. Serial No. 528,893. 4 Claims. Cl. 200—51.)

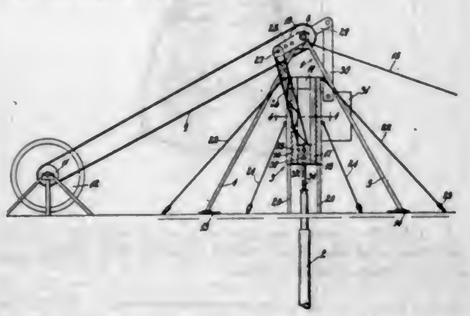
3. A socket and switch plug comprising in combination with a casing composed of two identically formed members an insulating mounting block fixed in the casing; a socket carried on the mounting block having a contact for the switch; a two-stemmed T-lever fulcrumed on the block,



having step bearings at the end of its stem members, a yoke fulcrumed on the block below the fulcrum of the T-lever, a pivot member having a stem guided in the yoke

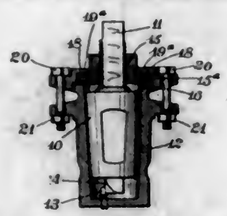
cross bar, and a spring reacting between said cross bar and the pivot member to stress the latter against the step bearings on the stem.

---



1,694,401. PHOTOGRAPHIC-FILM PACKAGE. BENJAMIN A. SLOCUM, Binghamton, N. Y., assignor, by mesne assignments, to Agfa Ansco Corporation, Binghamton, N. Y., a Corporation of New York. Filed Apr. 8, 1927. Serial No. 182,100. 1 Claim. (Cl. 242—71.)

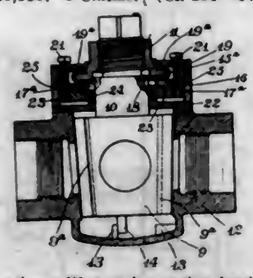
A film package comprising a receptacle adapted to receive a coil of film, a film guide therein, and a wax coating on said guide whereby to reduce the friction on said film.



---

1,694,402. LONG-STROKE PUMPING JACK. HUBERT J. SMITH, Long Beach, Calif. Filed July 14, 1926. Serial No. 122,279. 4 Claims. (Cl. 74—14.)

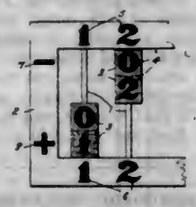
1. A long stroke pumping jack for wells having a pump and rod comprising a supporting frame, a drive shaft journaled on said frame, a cross head frame removably positioned adjacent the well and unattached to said supporting frame, a cross head reciprocally mounted in said cross head frame, means coupling said cross head to the well pump rod, means to rotate said shaft, a crank arm on said shaft, a connecting rod joining said crank arm and cross head, a second arm on said shaft, a pitman depending from said second arm and a counterweight secured to said pitman.



1,694,403. ADJUSTABLE-PLUG VALVE. CHARLES W. STEVENS, Columbus, Ohio. Filed Feb. 20, 1926. Serial No. 89,570. 1 Claim. (Cl. 251—97.)

In combination with a valve casing having a tapered valve seat, a rotary plug therein having a threaded stem, a cap for the casing having an inwardly standing lip, a nut on said stem having a flange extending under said lip and above the upper end of the casing, a washer engaged with the stem to turn therewith and extending around the rim and over both faces of the flange of the nut, said washer adapted to engage said lip of the cap when the plug is depressed to its seat by the stem, and to engage the upper end of the casing when the plug is raised by turning the nut.

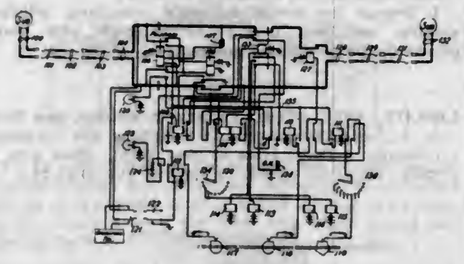
---



1,694,404. LUBRICATED ADJUSTABLE-PLUG VALVE. CHARLES W. STEVENS, Bexley, Ohio. Filed July 9, 1926. Serial No. 121,359. 3 Claims. (Cl. 251—97.)

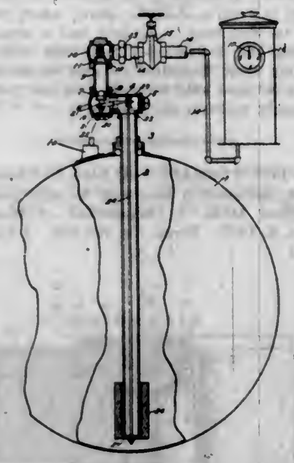
1. In combination with a valve casing having a tapered valve seat, a rotary plug therein having a threaded stem and an exposed end whereby the plug may be turned, a flanged nut on said threaded stem, a washer carried by a flange of the nut, a teat on said washer engaging a recess in the stem, a cap on said casing affording a purchase for said flange when the nut is turned in one direction, the wall of the casing affording a purchase for said flange of the nut when the nut is turned in the opposite direction.

---



1,694,405. EDUCATIONAL APPLIANCE. NELLIE YORK TROIDL, Niagara Falls, N. Y. Filed July 22, 1926. Serial No. 124,236. 12 Claims. (Cl. 35—2.)

1. In an educational appliance, a rod, a plurality of multi-faced objects independently rotatable upon said rod upon a common central axis, the faces of said objects having characteristics by which they may be identified and distinguished and also bearing selected character representations, the characteristics of each face of an object having a selected relation to that of a face of each of the other objects, and the character representations upon those faces having the same characteristics, when brought into view by proper selective rotation of the objects, together indicating an educational exercise.

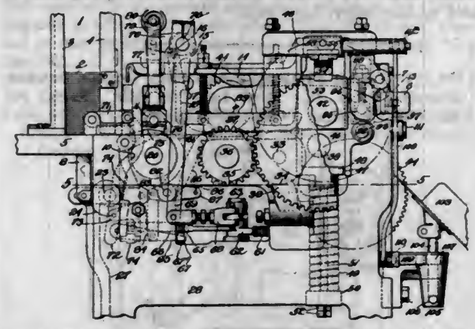


1,694,406. TELEPHONE-EXCHANGE SYSTEM. HENRY M. BASCOM, Brooklyn, and EMIL JACOBSEN, Plandome, N. Y., assignors to American Telephone and Telegraph Company, a Corporation of New York. Filed May 13, 1927. Serial No. 191,165. 9 Claims. (Cl. 179—27.)

1. In a telephone system, subscribers' lines, automatic switches, means for transmitting a number of impulses, means responsive to a part of said impulses to partially operate said switches to extend a connection in the direction of a subscriber's line, an operator's position, means for storing the remainder of said impulses, and means controlled by the operator for releasing the stored impulses to further operate said switches to complete the connection.

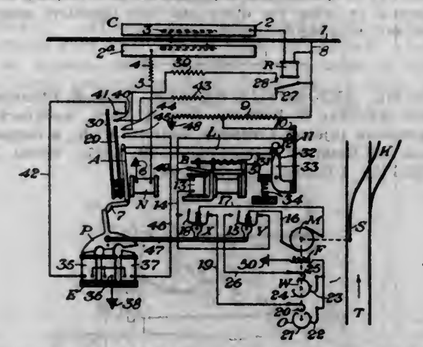
---

1,694,407. TANK-DISCHARGE-CONTROLLING MECHANISM. NELSON A. CARLSON, Erie, Pa., assignor to Erie Meter Systems, Inc., Erie, Pa., a Corporation of Pennsylvania. Filed Aug. 6, 1927. Serial No. 211,177. 3 Claims. (Cl. 221—74.)



3. In a tank discharge controlling mechanism, the combination of a tank; a discharge conduit leading from the tank; and means closing the conduit at a pre-determined level of liquid in the tank comprising a float, a valve in the conduit outside of the tank, and devices communicating through the conduit the movement of the float to the valve.

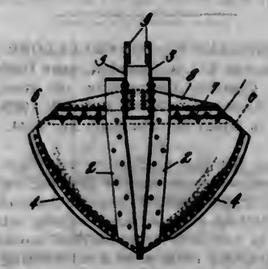
---



1,694,408. GRADING AND DISTRIBUTING MACHINE. LEANDER A. COGSWELL, Manchester, N. H., assignor to Lacene Manufacturing Company, Manchester, N. H., a Corporation of Maine. Filed Mar. 31, 1924. Serial No. 703,091. Renewed Mar. 7, 1928. 10 Claims. (Cl. 209—88.)

1. A machine of the class described comprising grade detecting mechanism for detecting the grade of successive blanks of stock according to thickness, a movable distributor for delivering the blanks into different position corresponding to their respective grades, setting mechanism including a transverse slide bar responsive to the detecting mechanism, distributor actuating mechanism connecting the slide bar and the distributor for adjusting the distributor in accordance with the adjustment of the slide bar, said distributor actuating mechanism including a yielding, centralizing spring member.

---

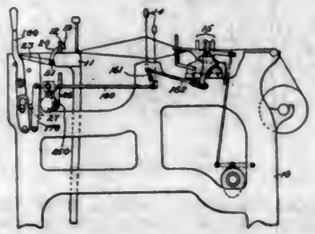


1,694,409. CAR-OPERATED SWITCHING MECHANISM. PAUL H. CRAGO, Forest Hills Borough, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Oct. 7, 1926. Serial No. 140,029. 13 Claims. (Cl. 246—242.)

6. A car operated switching mechanism comprising, a two-part contactor in spaced relation to the conductor, a current selective relay connected to one part of the contactor and to the conductor, a two-position armature, and means controlled by the current selective relay for shifting the said armature from one position to the other when the two parts of the contactor are bridged.

---

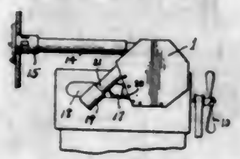
1,694,410. BLADE CONSTRUCTION. JOSEPH DAW, Quebec, Quebec, Canada, assignor to Brown Company, Berlin, N. H., a Corporation of Maine. Filed May 18, 1927. Serial No. 192,265. 3 Claims. (Cl. 37—182.)



1. In combination, a blade shaped generally in the form of a triangular spherical sector, a reinforcing member

extending centrally of the blade from its toe portion to a point above its upper edge, a support extending inwardly at the upper edge of said blade, and a supporting arm whose outer end portion is fixed to said support and to said member above said edge.

---



1,694,411. LOOM STOP MECHANISM. HONORE DEMERS, Manchester, N. H. Filed July 12, 1926. Serial No. 121,755. 1 Claim. (Cl. 139—342.)

In a loom, in combinantion, a shipper lever, a drop wire mechanism, a shipper rod, a reversing lever connecting said shipper rod to said drop wire mechanism, a lay, a shuttle box on the lay, a binder carried by said shuttle box, a binder finger engaging said binder, means including a dog depressed by said binder finger when a shuttle is in said shuttle box, a lug on said shipper rod, a bracket, a lever pivoted intermediate its ends to said bracket and positioned so that one end is engageable with said dog when depressed to bring the other end into operative engagement with said lug to stop the loom.

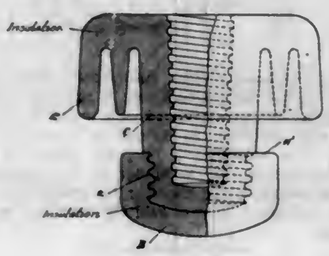
---

1,694,412. AUTOMOBILE HEATER. PAUL E. DIEDERICH and MARSHAL G. ROBERTS, Detroit, Mich., assignors to American Injector Company, Detroit, Mich., a Corporation of Michigan. Filed Sept. 29, 1927. Serial No. 222,711. 1 Claim. (Cl. 257—241.)

A heater adapted to be attached to an internal combustion engine comprising a casing formed of parallel sides and a connecting plate extending between the edges thereof, a tubular loop within the casing, removable plates closing the space between the sides and engaging the ends of said loop to position it within the casing, an opening being left between the sides to admit air driven toward said opening by the fan of the engine, said loop being adapted to connect to the exhaust manifold and to the exhaust pipe of an internal combustion engine, and a conductor pipe connected to one of said sides and adapted to convey heated air from the casing.

---

1,694,413. TREATMENT OF CELLULOSE ACETATE. GEORGE HOLLAND ELLIS, Spondon, near Derby, England, assignor to Celanese Corporation of America, a Corporation of Delaware. Filed Aug. 15, 1925, Serial No. 50,525, and in Great Britain Sept. 19, 1924. 31 Claims. (Cl. 8—5.)

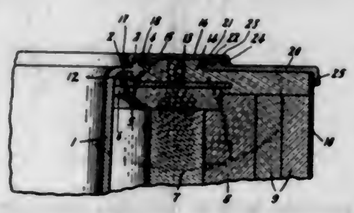


1. A process for the dyeing of materials comprising cellulose acetate which comprises treating said materials with relatively water insoluble organic compounds capable of coloring cellulose acetate, said organic compounds being employed in the form of solubilized modifications obtained by pretreating them with a solubilizing agent comprising a Twitchell reagent.

1,694,414. DYEING, PRINTING, OR STENCILING OF CELLULOSE ACETATE. GEORGE HOLLAND ELLIS, Spondon, near Derby, England, assignor to Celanese Corporation of America, a Corporation of Delaware. Filed Mar. 10, 1926, Serial No. 93,779, and in Great Britain Mar. 18, 1925. 18 Claims. (Cl. 8—5.)

1. Process for dyeing materials comprising cellulose acetate, comprising dyeing the materials with unsulphonated stilbene coloring compounds.

---

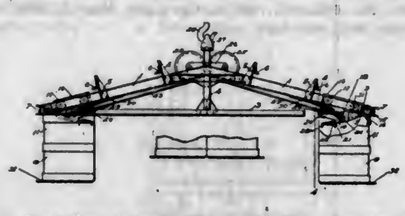


1,694,415. INSULATOR. CHESTER S. GORDON, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed July 1, 1925. Serial No. 40,894. 2 Claims. (Cl. 173—28.)

1. An insulator comprising a body of dielectric material having an internal screw threaded opening downwardly extending from the top into which a downwardly extending supporting pin may be screwed, a cap-like member of dielectric material arranged to be secured to the lower end of said body to form a shoulder above which the line conductor and tie wire may be secured, and a member extending outwardly and downwardly from said body to prevent moisture from being deposited on said shoulder, the shell of said body between said shoulder and said member being of substantially uniform thickness.

---

1,694,416. POT FURNACE. ALBERT J. HANSON, Arlington, Mass., assignor to American Metallurgical Corporation, Boston, Mass., a Corporation of Massachusetts. Filed Nov. 9, 1927. Serial No. 232,036. 4 Claims. (Cl. 263—14.)

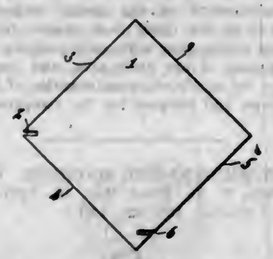


1. In combination, a furnace having a pot-receiving opening, a pot in said opening having an upper marginal portion extending outwardly in position to overlie a portion of said furnace, and an annular furnace plate engaging over said marginal portion and extending below its upper edge.

---

1,694,417. FLOOR SCRAPER. EDWARD L. HARRINGTON, Erie, Pa., assignor to G. H. Williams Company, Erie, Pa., a Corporation of Pennsylvania. Filed Sept. 24, 1925. Serial No. 58,465. 12 Claims. (Cl. 37—183.)

1. In a floor scraper, the combination of a track frame; scraper blades opposingly faced and slidingly and rigidly mounted on the frame; hoisting means; and mechanism acting with the frame and hoisting means moving the scrapers toward and from each other.



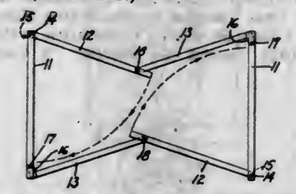
11. In a floor scraper, the combination of open bottom scraping blades; and mechanism actuated and controlled entirely from a single hoisting means hoisting and actuating the blades toward and from each other closing and opening the same for scraping material into a heap.

---

1,694,418. ROOFING. OTTO A. HEPPES, La Grange, Ill., assignor to The Flintkote Company, Boston, Mass., a Corporation of Massachusetts. Filed Sept. 8, 1928. Serial No. 661,573. 12 Claims. (Cl. 108—8.)

1. A roofing element comprising a polygonal shaped piece of sheet material having an open-ended slot extending inwardly from the apex of one corner and a slot extending inwardly from one side.

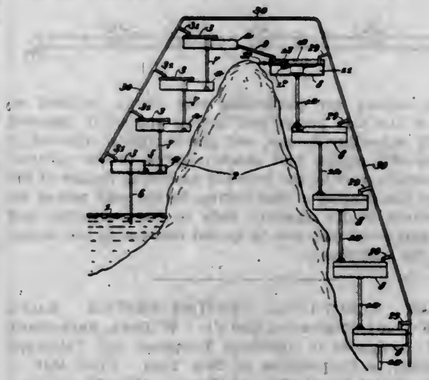
---



1,694,419. MEANS FOR CEMENTING WELLS. ARTHUR HAROLD HOBART, Honolulu, Territory of Hawaii. Filed Dec. 14, 1926. Serial No. 154,750. 1 Claim. (Cl. 194—69.)

In a device for cementing wells, comprising a supporting rod, a cylindrical anchor member suspended from said rod by loose jointed connections and adapted to be positioned on the bottom of the well, a tubular member surrounding said rod adapted to contain cementitious material and supported on said anchor member, a ball member attached to said tubular member recessed to engage the rod therein, a latch pawl pivoted in said rod adapted to pass the ball member on a downward movement of the rod and to engage the ball member in its upward movement whereby the tubular member is lifted and spaced apart from the anchor member in the withdrawal movement of the apparatus from the well.

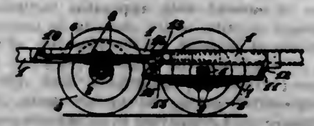
---



1,694,420. FOLDING BED. HARRY A. JOSELOWITZ, Minneapolis, Minn. Filed June 1, 1925. Serial No. 34,043. 4 Claims. (Cl. 5—112.)

1. A folding bed frame formed from angle-iron material including a pair of end rails having their concave sides facing inwardly and downwardly, and side rail members pivotally connected to said end rails with their concave sides facing outwardly and downwardly, each side rail member composed of two sections nested and overlapped at their inner ends and pivotally connected together, one section of each side rail having a right angular terminal extension terminally pivoted beneath respective end rails.

---



1,694,421. AUTOMATICALLY-OPERATING MECHANISM FOR ELEVATING LIQUIDS. REA D. LENTZ, Los Angeles, Calif., assignor of one-fourth to Ralph Mitchell, Los Angeles, Calif. Filed Jan. 12, 1927. Serial No. 160,593. 16 Claims. (Cl. 103—236.)

1. In a device of the class described, a series of superimposed, interconnected receptacles, means utilizing a vacuum to successively transfer a liquid from a low level through each of said receptacles to a higher level, and means utilizing liquid thus elevated for producing said vacuum.

---

1,694,422. SPRING SUSPENSION FOR LORRIES. MARCEL LEYTENS, Antwerp, Belgium. Filed Mar. 24, 1927, Serial No. 178,091, and in Belgium Apr. 28, 1926. 2 Claims. (Cl. 280—104.)

1. In spring-suspension for lorries having near the driving axle a supplementary axle provided with wheels, the

suspension blade-springs of both axles being mounted in the same vertical plane, the adjacent ends of said blade-springs being pivotally connected to a swivelling two-armed lever mounted on an axis fastened to the lorry-frame, the arrangement whereby the said adjacent blade-springs of both driving and supplementary axles overlap with their adjacent ends, said adjacent ends being pivotally connected to the swivelling lever, say one end above and the other beneath the swivelling axis of said lever, substantially as described.

---

1,694,423. CRUSHING MACHINE. WILLIAM K. LIGGETT, Columbus, Ohio, assignor to The Jeffrey Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Filed June 8, 1923. Serial No. 644,168. 9 Claims. (Cl. 83—11.)

1. In a machine of the class described, a rotary support, radially disposed crushing elements spaced axially from one another and removably mounted on said support, and a plurality of circumferentially disposed fastening means to rigidly secure each of said crushing elements to said support.

---

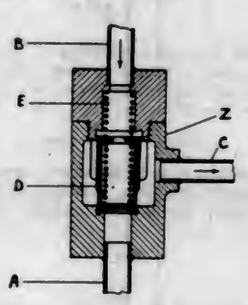
1,694,424. RAILWAY CAR. EDWARD H. MATTINGLEY, Chicago, Ill., assignor to Chicago-Cleveland Car Roofing Company, Chicago, Ill., a Corporation of Delaware. Filed Dec. 27, 1926. Serial No. 157,227. 3 Claims. (Cl. 105—355.)

1. A railway car comprising side plates, carlines secured to the side plates and having oppositely disposed laterally extending flanges, end plates rigidly attached to the said side plates, roof sheets secured to the carlines, and means carried by the laterally extending flanges of the carlines constituting a load lifting device, said means being secured at its opposite ends to the respective end plates and being disposed in spaced relation to the underside of the roof sheets.

---

1,694,425. ELECTRICAL TESTING SYSTEM. RALPH G. MCCURDY, Englewood, and PAUL W. BLYE, Rutherford, N. J., assignors to American Telephone and Telegraph Company, a Corporation of New York. Filed Mar. 1, 1926. Serial No. 91,650. 14 Claims. (Cl. 179—175.)

1. The method of studying the characteristics of a complex source of current with apparatus including a plurality of tuned circuits, which consists in impressing the complex source of currents on the plurality of tuned circuits each of which may be adjusted from one frequency to a different frequency, amplifying each different frequency, progressively noting the characteristics of each different frequency, and comparing these characteristics with the predetermined characteristics of currents from a known source.



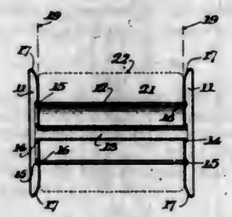
1,694,426. OPERATING JACK FOR DOUBLE-HOOKED NEEDLES IN KNITTING MACHINES. ADOLF MAX MÜLLER, Chemnitz, Germany. Filed May 31, 1927, Serial No. 195,481, and in Germany June 3, 1926. 1 Claim. (Cl. 66—14.)

In a device of the kind described in combination, a draft jack and a pushing jack, slidingly longitudinally and displaceably engaging each other and conjointly constituting a two part operating jack, an apertured portion, and a projecting portion, respectively disposed on said jacks, and engageable with play with each other, and for axial relative displacement of the jacks, stopping and impinging means on the draft jack, spaced from the pushing jack, and engageable with said pushing jack after a certain movement of the draft jack, and coacting retaining means at the confronting extremities of the two complemental jacks, and adapted for the reception of a needle hook.

---

1,694,427. REFRIGERATING MACHINE. HOLGER NIELSEN, Buffalo, N. Y. Filed Mar. 19, 1927. Serial No. 176,775. 1 Claim. (Cl. 62—115.)

In a refrigerating apparatus a coupling member connecting three pipes, one leading to the suction side of a compressor, one leading to a low pressure evaporator and one leading to a high pressure evaporator, and valve means in said member for maintaining a predetermined pressure difference between the two evaporators, said means closing said pipe leading to the high pressure evaporator when the pressure difference between the two evaporators is less than said predetermined difference and closing the pipe leading to the low pressure evaporator when the difference in pressure in the two evaporators exceeds said predetermined difference, said suction pipe being in communication with one of said pipes leading to the evaporators when the other is closed by said valve means.



---

1,694,428. MANUFACTURE OF BOBBINS, SPOOLS, OR THE LIKE. CHARLES WILFRED PALMER, Spondon, near Derby, England, assignor to Celanese Corporation of America, New York, N. Y., a Corporation of Delaware. Filed Mar. 9, 1927. Serial No. 173,993. 1 Claim. (Cl. 242—118.)

An improved bobbin for yarns comprising in combination a metallic core, a second core made of a fibrous material

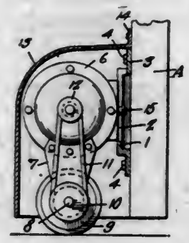
containing said metallic core, metallic flanges rigidly fastened to the ends of the metallic core, annular depressions in said flanges firmly holding the fibrous core in place, each of said flanges being of a single thickness and having a substantial part of the surface extending outwardly from

the fibrous core substantially at right angles to the axes of the cores, while the peripheral portions of said flanges flare outwardly, whereby a bobbin of light weight and substantial strength is obtained, which permits the ready winding or unwinding of yarn without the formation of soft spots.

---

1,694,429. AUXILIARY DIALING TOOL. WARNER L. PEAK, Los Angeles, Calif., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Aug. 5, 1927. Serial No. 210,891. 2 Claims. (Cl. 179—90.)

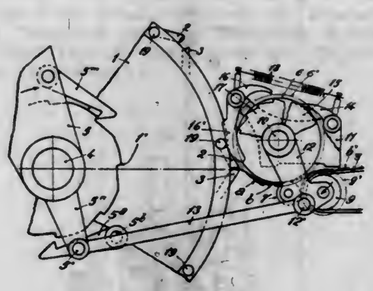
1. A device for operating a telephone instrument having a dial, said dial including a movable circular plate with a series of openings about its surface, said device comprising a lower portion having a casing of sufficient flexibility to be inserted in said openings and sufficient elasticity to be retained by the edges of said openings, and an upper portion comprising a finger-piece in swivel engagement with the first mentioned portion for imparting therethrough a rotary movement to said circular plate.



---

1,694,430. TUBULAR BEND AND METHOD OF MAKING SAME. BERTWELL C. ROOT, Berlin, N. H., assignor to Brown Company, Berlin, N. H., a Corporation of Maine. Filed Jan. 24, 1927. Serial No. 162,046. 17 Claims. (Cl. 154—8.)

1. A method of making bends from straight fiber tubes, which comprises forming a series of spaced, wedge-shaped cutouts in the wall of the tube, thereby leaving a series of sections of trapezoidal form; bending the tube until the adjacent ends of the sections substantially abut; and bonding together the abutting ends of the sections.

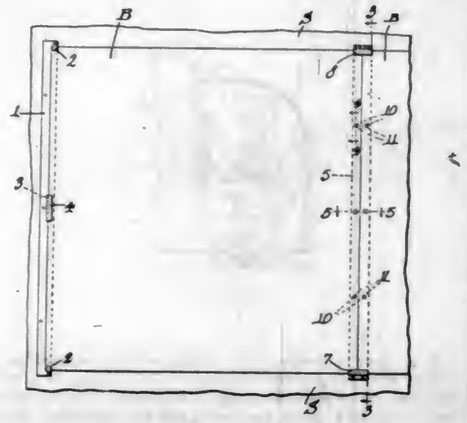


1,694,431. DOOR-OPERATING DEVICE. JOHN F. RUSSELL and HENRY E. RUFTY, Salisbury, N. C. Filed June 2, 1928. Serial No. 282,362. 4 Claims. (Cl. 268—65.)

1. A door opening and closing device comprising a slotted attaching plate adapted to be secured to a door adjacent its lower free edge, an electric motor, means carried by said motor and arranged for movement in the slots of the plate, and a friction roller carried by said motor and operated thereby for the purpose specified.

---

1,694,432. DEVICE FOR DELIVERING THE TUFTS OF TEXTILE FIBERS FROM COMBING MACHINES HAVING INTERMITTENTLY-ROTATING NIPPER DRUMS. CARLO SCHLEIFER, Novara, Italy. Filed Nov. 28, 1927, Serial No. 236,254, and in Germany Dec. 6, 1926. 16 Claims. (Cl. 19—121.)

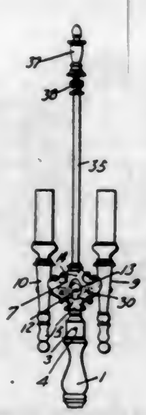


1. In a device of the character described, the combination with an intermittently rotating drum, and a series of nippers carried thereby, of a delivery cylinder, a feed cylinder, in parallel relation to the delivery cylinder, a carrier for the feed cylinder, means to rock the carrier about the axis of the delivery cylinder, and means operable by the movement of the carrier to rotate the feed cylinder.

---

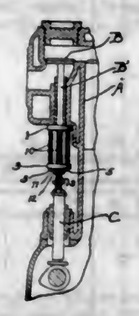
1,694,433. BLACKBOARD HANGER. GEORGE G. ALBERT, Bangor, Pa. Filed Nov. 11, 1927. Serial No. 232,657. 7 Claims. (Cl. 35—15.)

7. The combination with blackboards having meeting edges, of a strip back of said edges extending longitudinally thereof, said strip including an elongated piece of metal, a supporting hook adjacent one end thereof for engaging



and supporting the lower edges of the blackboard, a clamp connected to the upper end of the strip for engaging and holding the upper edges of the blackboard, and means ad-

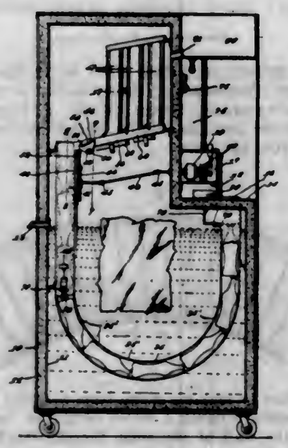
justably mounted on the strip for engaging the back faces of the blackboard to hold them against backward displacement relative to each other.



---

1,694,434. STANDARD LAMP OF CANDELABRA TYPE. JACOB H. BAETZ, Kitchener, Ontario, Canada. Filed Feb. 17, 1928. Serial No. 255,065. 3 Claims. (Cl. 240—81.)

1. In a standard lamp of candelabra type, the combination with the lamp standard proper provided with an upwardly extending reduced portion, of an inverted cup fitting upon such reduced portion and suitably secured thereto and having a central internally threaded orifice in its upper or base portion, a nipple threaded into such orifice so as to project upwardly therefrom, a hollow body having upper and lower vertical orifices into the lower one of which the aforesaid nipple is adapted to be screwed, a pair of candle fixtures, means for securing a candle fixture at each side of the body, and a shade supporting standard extending upwardly from the body centrally between the candle fixtures.

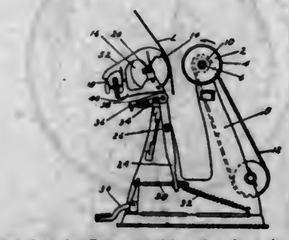


1,694,435. VALVE SPRING. ANDREW SEAMAN BARNEY, Sr., Flushing, N. Y. Filed Sept. 12, 1924. Serial No. 737,390. 1 Claim. (Cl. 123—188.)

In a valve spring construction for internal combustion engines the combination with an engine including a casing, a valve including a valve stem having a screw threaded end, means engageable with the screw threaded end for reciprocating the valve stem in the engine casing, an annular ring-shaped member slidable on the valve stem and having a central opening receiving the valve stem and being provided with opposed sets of transverse apertures at opposite sides of the valve stem, a nut adjustable on the screw threaded end of the stem for limiting the movement of the ring-shaped member, a second nut adjustable on the screw threaded end against the first mentioned nut to act as a lock nut, a second annular ring-shaped member having an opening therethrough larger than the opening of the first mentioned ring-shaped member and freely receiving therethrough the valve stem, said second member being adapted to abut directly against the engine casing without any portion of the engine casing obstructing the passageway thereof through which the valve stem freely extends, a plurality of spaced rods supported by the second member and extending parallel to the valve stem and snugly slidable through the sets of openings in the first mentioned ring-shaped member, and individual springs about said rods under compression between the first and second annular members.

---

1,694,436. COOLING AND DISPENSING MACHINE. CHARLES F. BAUER, Louisville, Ky. Filed Jan. 17, 1927. Serial No. 161,616. 6 Claims. (Cl. 312—36.)



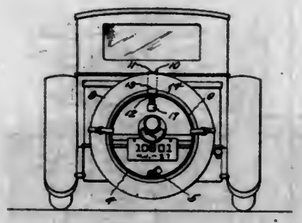
1. In a cooling and dispensing machine for bottled goods, a cabinet including a cooling chamber, a bottle dispensing tube arranged in said chamber and adapted to contain bottles in end to end relation, the outlet end of said tube passing through a wall of the cabinet, means for singly ejecting the bottles from said tube, and a normally closed pivoted cover for said tube and adapted to be opened by the bottle being projected, said cover being spaced an appreciable distance from the outlet end of said tube to prevent bottles being taken from the cabinet.

---

1,694,437. LEATHER-WORKING MACHINE. OSKAR BÖTTGER, Frankfort-on-the-Main, Germany, assignor to The Turner Tanning Machinery Company, Portland, Me., a Corporation of Maine. Filed Jan. 21, 1925, Serial No. 3,798, and in Germany Mar. 1, 1924. 6 Claims. (Cl. 149—14.)

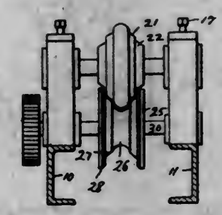
1. A leather buffing machine having, in combination, a supporting frame, a buffing roll mounted therein, means for rotating said roll at relatively high speed, a swing frame pivoted in said supporting frame, a bed roll and a tension roll carried by the swing frame, an endless felt band supported by said bed and tension rolls, a protecting apron above said band, means whereby the bed and tension rolls may be relatively adjusted to vary the tension of the band, and means whereby the swing frame may be moved toward the buffing roll to present a piece of leather resting against said band to the action of the buffing roll.

---



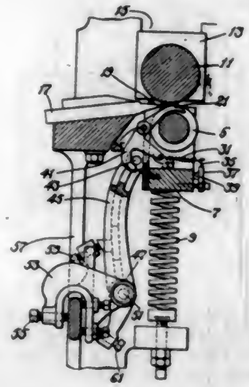
1,694,438. BEARING. NEIL M. CHINN, Perry, Okla., assignor of one-fourth to Robert H. Wilson and one-fourth to Theodora B. Wilson, Perry, Okla. Filed Oct. 26, 1925. Serial No. 65,025. 1 Claim. (Cl. 308—72.)

In combination, an elongated base having a centrally located opening, and including a relatively thick portion arranged concentric of said opening and constituting an upper bearing member, a lower bearing member arranged upon the base and having its upper edge secured to the first mentioned bearing member, a ball-like bearing arranged in said opening and operating between said bearing members, said members being designed to accommodate said ball-like bearing, said ball-like bearing having a central passage therethrough, a bushing arranged within the passage and having end flanges bearing against the ends thereof, said lower bearing member having a recess, and a pin projecting from the ball-like bearing and arranged in said recess to prevent the bearing from turning.



1,694,439. SPARE-TIRE CARRIER. AUGUSTUS M. FLYNT, Savannah, Ga. Filed Sept. 30, 1927. Serial No. 223,007. 2 Claims. (Cl. 224—29.)

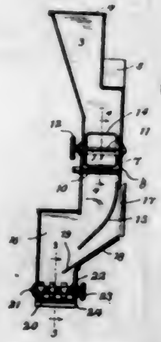
1. The combination with a spare tire carrier and a rim-carried spare tire thereon, of a sigmoidal strap having one end hooked over said spare tire and its other end projecting rearwardly therefrom, a second rim-carried spare tire behind the first named tire, the rearwardly projecting end of said strap being hooked under the rim of said second spare tire, an inwardly turned hook on the extremity of said projecting end of the strap and engaged with the rearmost flange of the rim of said second spare tire to prevent disengagement of the rim of said second spare tire from the strap until the latter is unhooked from the first named spare tire, and common means for locking said strap on the first named spare tire and for locking the latter and its rim to said carrier.



---

1,694,440. RIDGE-CAP-FORMING MACHINE. JESSE FULENWIDER, HARRY FULENWIDER, EDWARD W. ROBINSON, and HARRY NORRIS, Savannah, Ga., assignors to Harry Fulenwider and Jesse Fulenwider, Savannah, Ga. Filed June 26, 1926. Serial No. 118,723. 3 Claims. (Cl. 153—3.)

1. In a ridge cap forming machine, a roll having a central circumferential convex portion and tapered portions of reduced diameter on each side of the convex portion, and a cooperating roll having its central circumferential portion grooved to form walls complementary to the convex surface of the other roll, the cooperating roll having outwardly flared walls extending from the circumferential groove, said flared walls each including portions inclined in approximately the same degree and annular portions intermediate of the inclined portions and extending in planes perpendicular to the axis of the rolls.

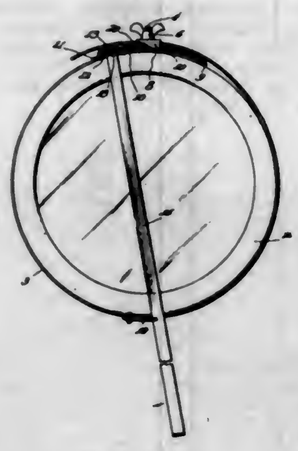


1,694,441. SPLITTING MACHINE. JOSEPH GOULDBOURN, BASIL POMEROY COOPER, and HAROLD ERNEST ELLIOTT, Leicester, England, assignors to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Apr. 30, 1925, Serial No. 26,928, and in Great Britain May 21, 1924. 9 Claims. (Cl. 69—13.)

1. Splitting mechanism comprising a knife, cooperating rolls for feeding a blank to the knife and a series of yielding fingers movable in unison with one of the rolls and arranged to hold the blank against the other roll in the locality in which the splitting takes place.

---

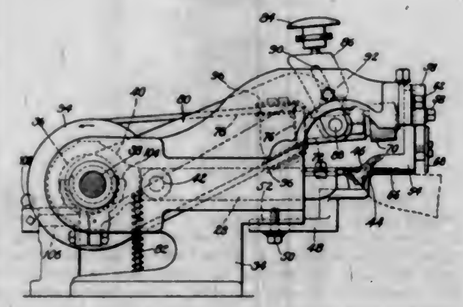
1,694,442. SEED-DUSTING APPARATUS. BENJAMIN F. GUSTAFSON, Redfield, S. Dak. Filed Sept. 16, 1926. Serial No. 135,862. 7 Claims. (Cl. 83—28.)



1. An apparatus for the purpose set forth comprising a hopper, a mixing chamber vertically below the hopper and in communication therewith and provided with a lateral inlet opening through which to receive seed to be treated, a screen between the hopper and said inlet opening, a stirrer cooperating with said screen, and a deflecting chute below the screen and in front of and extending over said inlet opening to direct the chemical from the screen onto the seed flowing through said opening below the chute.

---

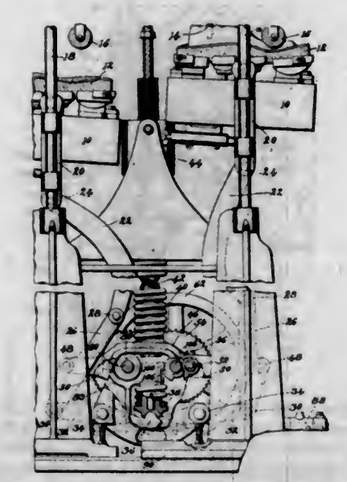
1,694,443. TOOL FOR REMOVING HEADLIGHT RIMS. WILLIAM H. GUTHRIE, Atlantic City, N. J. Filed Nov. 17, 1926. Serial No. 148,899. 1 Claim. (Cl. 81—64.)



A headlight rim removing tool comprising a clamping band consisting of a strip of resilient material having a circular contour with its end portions overlapped, the outer end portion being slotted longitudinally and the inner end portion being bent back upon itself to form an elongated tongue cooperating with the body of the strip to provide inner and outer jaws, a pivot extending transversely between the jaws adjacent the free end of the tongue, fasteners passed through the jaws at opposite sides of the pivot, a threaded post passed through an opening in the tongue

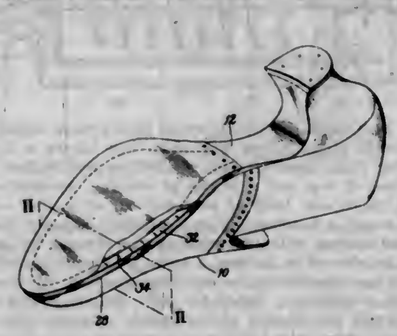
close to adjacent fasteners for the pivot and having a flat base between the jaws, fasteners passed through the jaws at the other side of the base of said post and spaced well away from the joined ends of the jaws, the post being passed through the slot in the outer end of said band, a fastener threaded upon said post, an actuating lever carried by said pivot and extending across said band, and an abutment carried by the band and projecting transversely therefrom for engagement by said lever.

---



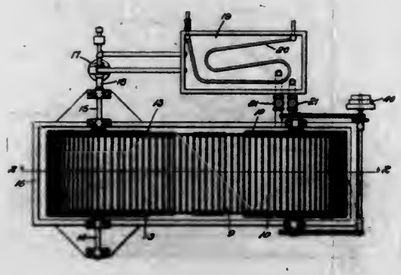
1,694,444. TRIMMING MACHINE. BERNHARDT JORGENSEN, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Jan. 29, 1924. Serial No. 689,371. 20 Claims. (Cl. 12—83.5.)

1. A machine of the character described comprising a knife having a straight cutting edge for trimming surplus material from the bottom of a lasted shoe, mechanism for reciprocating said knife lengthwise of its cutting edge, and means for guiding the shoe relatively to said knife.



1,694,445. SOLE-PRESSING MACHINE. NORWOOD H. KNOWLTON, Rockport, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Nov. 18, 1927. Serial No. 234,262. 11 Claims. (Cl. 12—34.)

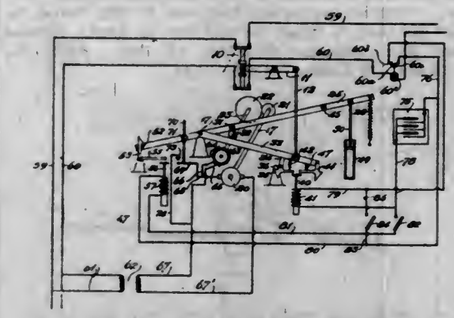
1. In a machine of the class described, a jack and a pressing member relatively movable to apply pressure to the bottom of a shoe on the jack, driving means including a friction clutch for effecting the relative pressure-applying movement, means for causing the co-operating friction clutch elements to engage each other and start the machine, and additional means to cause said clutch elements to engage each other more firmly.



---

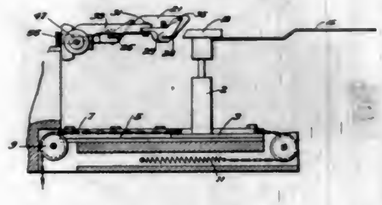
1,694,446. ATTACHMENT OF SOLE TO SHOE. JAMES WILLIAM MELOON, Wellesley, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Oct. 4, 1926. Serial No. 139,429. 9 Claims. (Cl. 36—18.)

1. That improvement in methods of repairing shoes which comprises trimming to a feather edge the edge portion of the sole of a shoe which is to be repaired and attaching a sole member to the sole so trimmed by staples extending from the shank around the ball portion to the toe of the shoe and positioned with the bars of the staples substantially at right angles to the edge of the sole member.



1,694,447. METHOD OF AND APPARATUS FOR TREATING HIDES AND SKINS. MATTHEW M. MERRITT, Middleton, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Sept. 16, 1922. Serial No. 588,606. 38 Claims. (Cl. 149—10.)

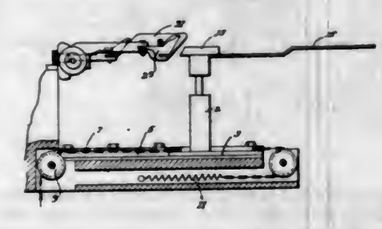
1. Material treating apparatus comprising, in combination, a carrier presenting upper and lower runs between which the material to be treated is carried, means for actuating said carrier to move the material being treated during the treating operation, said carrier providing for suspension of the material from the interior of the upper run of the carrier and for supporting the material above the lower run of the carrier in a treating liquor, and a member stationary in space at one end of the carrier and operative to bend the material progressively throughout its length.



---

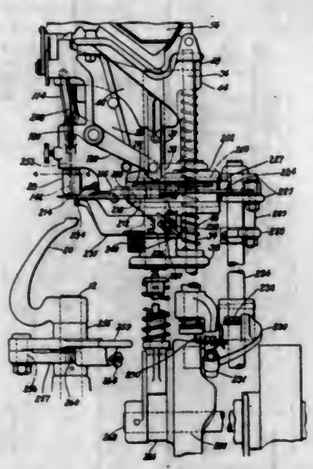
1,694,448. SWITCH-CONTROLLING DEVICE. GEORGE H. MIDDLEMISS, Birmingham, Ala. Filed June 21, 1923. Serial No. 646,885. 14 Claims. (Cl. 175—294.)

1. A circuit including a main switch, an operating mechanism for the main switch including a trip lever and means actuated by an overload on the main switch for tripping the trip lever to open the main switch, and resetting mechanism including an oscillating lever operable to effect resetting of the trip lever engageable with and disengageable from the trip lever, motor means to oscillate the resetting lever, said motor means including an auxiliary means normally tending to move the resetting lever in one direction and to impart an initial movement to said lever, means actuated by the initial movement of the resetting lever for energizing the motor means, and means controllable by load conditions in the circuit and controlling the mutual engagement and disengagement of said levers and also the initial movement of the resetting lever.



1,694,449. APPARATUS FOR USE IN ASSEMBLING UPPERS AND INSOLES. FRED RICKS and JOSEPH GOULDBOURN, Leicester, England, assignors to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Jan. 7, 1922, Serial No. 527,623, and in Great Britain Jan. 12, 1921. 34 Claims. (Cl. 12—1.)

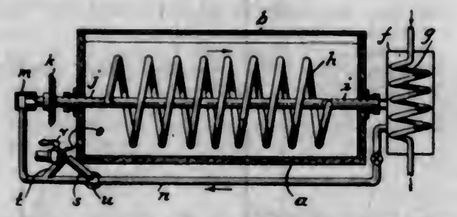
1. An apparatus for assembling an insole with an upper provided with a previously molded end portion having, in combination, means for supporting the corresponding end of the insole off the last, and means for engaging the molded end of the upper substantially at the margin of the insole and for pressing it inwardly against the edge face of the insole while leaving the remainder of the molded end of the upper substantially free from the inward pressure.



---

1,694,450. METHOD OF ASSEMBLING UPPERS AND INSOLES. FRED RICKS and JOSEPH GOULDBOURN, Leicester, England, assignors to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Original application filed Jan. 7, 1922, Serial No. 527,623, and in Great Britain Jan. 12, 1921. Divided and this application filed Mar. 16, 1927. Serial No. 175,880. 10 Claims. (Cl. 12—142.)

1. That improvement in methods of assembling an insole with an upper having a previously molded end portion, which consists in pressing the molded end of the upper inwardly against the edge face of the insole by engaging the upper substantially at the margin of the insole while leaving the remainder of the molded end of the upper substantially free from inward pressure, and while holding the end of the upper in that position fastening it to the insole.



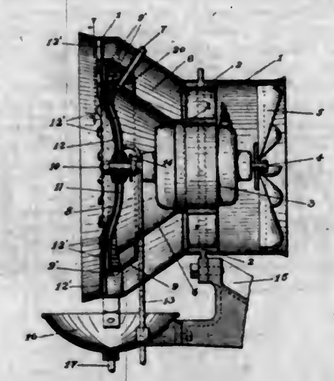
1,694,451. FASTENING-INSERTING MACHINE. WILLIAM THOMAS BUCKINGHAM ROBERTS, Leicester, England, assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Apr. 14, 1925, Serial No. 23,132, and in Great Britain May 2, 1924. 27 Claims. (Cl. 1—18.)

5. A fastening-inserting machine having fastening-inserting means arranged to strike a plurality of blows in succession upon each of the fastenings to be inserted, and means arranged to engage and to move a partially inserted fastening between the striking of two blows to feed the work.

---

1,694,452. MILK PASTEURIZER. WILLIAM SANGSTER, Peterborough, Ontario, Canada, assignor to The De Laval Separator Company, New York, N. Y., a Corporation of New Jersey. Filed Feb. 7, 1927. Serial No. 166,328. 5 Claims. (Cl. 257—79.)

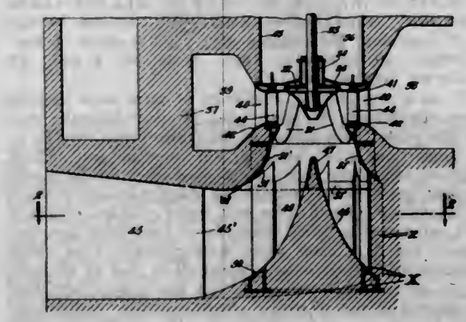
1. The combination with a milk pasteurizing vessel long relatively to its height and width and having a bottom sloping from opposite sides toward its longitudinal center and at one end a discharge opening communicating with the lowest level of said bottom, of a pipe coil in said vessel, a member having a laterally disposed channel communicating with said opening and through which the milk is adapted to outflow, a valve positioned outside the vessel and controlling the discharge through the channel, means providing a jacket for said channel between the valve and the interior of the vessel, a heater, pipe connections between the heater and opposite ends of the coil to provide an endless path for circulation of a heating medium, and means providing a by-pass around one of said pipe connections through said jacket.



---

1,694,453. HUMIDIFIER. EUGENE A. SPAULDING, Portland, Me. Filed Mar. 12, 1928. Serial No. 260,981. 6 Claims. (Cl. 261—90.)

6. A humidifier, comprising an outer, cylindrical casing, a blower fan in one end thereof, an inner casing, forming

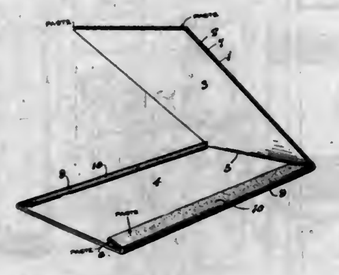


together with the said outer casing an annular space, a revoluble water-distributing disc, a plurality of impeditive elements arranged outwardly of and disposed in the same plane as the said water-distributing disc, means to conduct water to the side of said disc, a revoluble impeller

disc adjacent to but in separated relation to the said water-distributing disc, and a plurality of blades on the periphery of said impeller disc, said blades being so disposed within said outer casing that all water and vapor thrown off said distributing disc shall be subjected to impaction by said blades before passing outwardly from said outer casing.

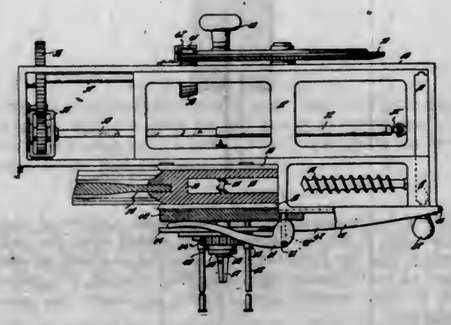
---

1,694,454. HYDRAULIC TURBINE. HARVEY BIRCHARD TAYLOR, Philadelphia, Pa. Original application filed July 24, 1917, Serial No. 182,498. Divided and this application filed Sept. 21, 1923. Serial No. 663,952. 30 Claims. (Cl. 253—117.)



1. In combination, a turbine runner, a structure on the discharge side of said runner having an outflow conduit with walls formed as surfaces of revolution around the runner axis and leading the discharge outward away from said axis and stay vanes between said walls arranged in a series around said axis, said vanes being inclined to radii of said axis and vanes on one side of the conduit having a different sectional curvature from vanes on the other side of the conduit.

---

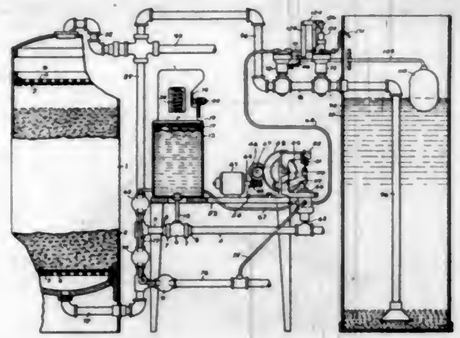


1,694,455. MULTIPLEX BAG AND THE METHOD OF MAKING IT. WILLIAM L. TAYLOR, Cincinnati, Ohio. Filed Oct. 26, 1925. Serial No. 64,862. 1 Claim. (Cl. 93—35.)

The herein described method which consists in first gluing together superposed plies of paper partly along their longitudinal edges and partly away from their longitudinal edges to form blanks for a multiplex bag then dieing out the blank to form a bag of the required dimensions with one side thereof narrower than the other side, then folding the longitudinal edges of the wider side inwardly to form securing flaps, then coating the exposed surface of the outer flaps with adhesive substance, then folding the plies transversely whereby the two sides are brought together and the longitudinal edges of the narrower side are pressed upon said adhesive substance to form the completed bag.

---

1,694,456. MORTISING AND BORING MACHINE. JOHN LEE THOMPSON, Meadow, Va. Filed Feb. 2, 1926. Serial No. 85,597. 1 Claim. (Cl. 144—70.)



In a boring machine, a main frame, gearing at one end of said frame, means for driving the gearing, an element slidable longitudinally of the frame, a crosshead slidable vertically in said element, a tool and means on the cross head for mounting and rotating the tool, a tubular shaft and a universal joint connecting the shaft with said means last named, and a shaft driven by the gearing mounted in the main frame, this shaft rotating the tubular shaft and being slidable therein.

---

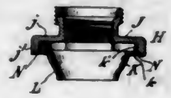
1,694,457. WATER-SOFTENING APPARATUS. HARRY A. TOULMIN, Jr., Dayton, Ohio, assignor to The Duro Company, Dayton, Ohio, a Corporation of Ohio. Filed Sept. 9, 1926. Serial No. 134,559. 12 Claims. (Cl. 210—24.)

1. In an automatic water softening apparatus, a container for softening material, a container for regenerating material, means to deliver water under pressure to the

system, a pressure reservoir outside of said means but connected therewith, a switch operated thereby, a circuit controlled by said switch, means to convert said softening

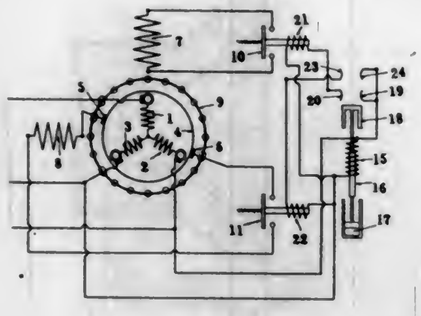
apparatus from softening position to regenerating position and back to softening position, and means controlled by said circuit for operating said converting mechanism.

---



1,694,458. CONFECTION. JOHN WEBSTER TRAUGER, Binghamton, N. Y., assignor to Fair Play Caramels, Inc., a Corporation of New York. Filed May 1, 1926. Serial No. 105,948. 2 Claims. (Cl. 99—16.)

1. An article of commerce comprising a piece of confectionery, a wrapper thereon and folded over the ends thereof, and an impaling stick piercing one end of said piece of confectionery and extending through the folded end of said wrapper and tending to retain the same thereon.



---

1,694,459. RIM NUT. JULIUS VOLCKHAUSEN, Weehawken, N. J., assignor to A. Schrader's Son, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Jan. 7, 1925, Serial No. 1,029. Renewed Oct. 4, 1926. 3 Claims. (Cl. 85—32.)

1. A sheet metal nut consisting of two parts, each having a body portion comprising a substantially plane portion and an outer peripheral axially-extending flange, and a tubular extension, the body portions of said parts being of similar polygonal contour and having their peripheral flanges fitting the one within the other and their plane portions in spaced relation to each other, one of said tubular extensions being tapered, and the other one being screw-threaded both internally and externally.

1,694,460. ALTERNATING-CURRENT MOTOR. HANS WEICHSEL, St. Louis, Mo., assignor to Wagner Electric Corporation, St. Louis, Mo., a Corporation of Delaware. Filed July 11, 1925. Serial No. 42,867. 1 Claim. (Cl. 172—274.)

In an alternating current motor, the combination of an inducing member having an inducing winding and a commuted winding, an induced member provided with an exciting winding, a high resistance closed circuited winding and with an auxiliary single phase secondary winding, means for closing the circuit of the auxiliary secondary winding at a speed below synchronous speed, and means for connecting the exciting winding in circuit with the commuted winding at a speed above said last mentioned speed but below synchronous speed.

---

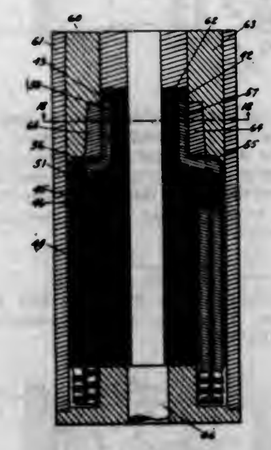
1,694,461. FATTY ACID AND SOAP DERIVED FROM MINERAL OIL AND PROCESS OF MAKING SAME. GELLERT ALLEMAN, Swarthmore, Pa., assignor to Sun Oil Company, Philadelphia, Pa., a Corporation of New Jersey. Filed July 18, 1925. Serial No. 44,629. 13 Claims. (Cl. 87—16.)

1. As a new product, a mixture of fatty acids derived from mineral oil, the same being insoluble in water and readily saponifiable, and when saponified being miscible in all proportions with mineral oil and water and when mixed with oil and water forming a homogeneous emulsion and having essential characteristics of soaps of animal or vegetable origin in that it forms with water a similar emulsion and undergoes the same character of hydrolytic decomposition: the fatty acids being distinguishable from other saponifiable derivatives of mineral oil in that in addition to the characteristics specified they are substantially free of mineral oil and petroleum resins, and being distinguishable from fatty acids of animal or vegetable origin in that they have a melting range below minus 30° C.

---

1,694,462. MINERAL-OIL DERIVATIVES AND PROCESS OF MAKING SAME. GELLERT ALLEMAN, Swarthmore, Pa., assignor to Sun Oil Company, Philadelphia, Pa., a Corporation of New Jersey. Filed Mar. 26, 1927. Serial No. 178,819. 8 Claims. (Cl. 260—11.)

1. The process of manufacturing metallic derivatives from petroleum which comprises separating, from an emulsion of soap, petroleum resins and mineral oil, a water soluble soap substantially free from mineral oil and containing a materially reduced amount of petroleum resins, adding thereto a water-soluble metal salt in amount sufficient to exchange the metallic ion of the added salt for the metallic ion of the water-soluble soap, the added metallic ion forming a water-insoluble soap with the acid radical, and separating out the metallic derivative.

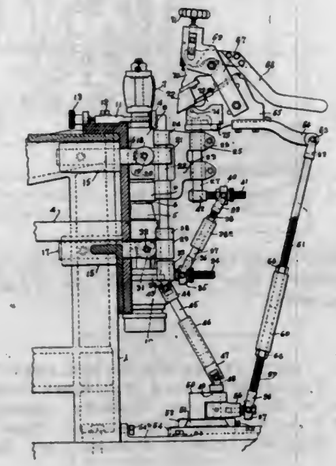


1,694,463. MINERAL-OIL DERIVATIVE AND PROCESS OF MAKING SAME. GELLERT ALLEMAN, Swarthmore, Pa., assignor to Sun Oil Company, Philadelphia, Pa., a Corporation of New Jersey. Filed Feb. 6, 1924. Serial No. 691,022. 9 Claims. (Cl. 87—16.)

1. The process of treating a composition containing mineral oil, petroleum resins and a fatty acid soap and having the characteristics of the precipitate produced in the alkali treatment of acid-treated mineral oil lubricating stock, to effect a substantially complete separation of the oil from the soap and resins, which comprises adding water to the composition and heating under sufficient pressure to separate the oil from the soap and resins, cooling under sufficient pressure to prevent substantial boiling and the re-entry of the oil, and resins and soap into the emulsion stage, and removing the oil.

---

1,694,464. METHOD OF MAKING AN ARMATURE. VINCENT G. APPLE, Dayton, Ohio. Filed Dec. 1, 1927. Serial No. 237,035. 3 Claims. (Cl. 18—59.)



1. A method of making an armature which consists of providing a core having longitudinally extending winding apertures, providing a plurality of winding loops of the character herein described, endwise entering the loops into the core apertures until their open ends extend thru and beyond the core in two concentric rows, circumferentially displacing the end portion of each bar relative to the position contained in a core aperture, leaving the end portions connected to the aperture portions by diagonal portions, molding a mass of insulating material thru and about the diagonal portions to hold them against displacement, radially displacing the end portions of the bars relative to the diagonal portions to bring the ends of the bars of one of the concentric rows into the spaces between the ends of the bars of the other concentric row to provide one cylindrical row composed of circumferentially adjacent ends of bars, holding adjoining ends of bars together in pairs and the pairs spaced apart, and molding insulating material between and about the ends to form a segment from each pair of ends and a commutator from said segments.

---

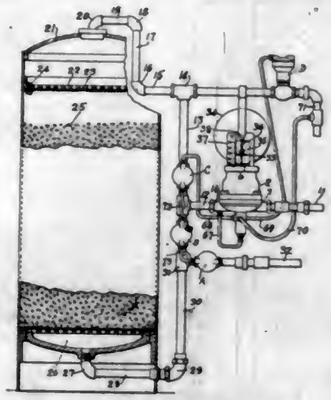
1,694,465. HEEL-TURNING MACHINE. GEORGE CLAUSING, Portsmouth, Ohio, assignor, by mesne assignments, to Vulcan Corporation, Portsmouth, Ohio, a Corporation of Ohio. Filed Nov. 14, 1927. Serial No. 233,163. 23 Claims. (Cl. 12—87.)

1. In a heel turning machine, a frame, spaced cutting knives, a vertically positioned pivot shaft therebetween, a heel block supporting bracket pivoted thereon, a heel block, means to clamp a heel blank thereon, and means comprising a link to adjust the position of the heel block with respect to the horizontal.

21. In a machine for turning heels, means to cut a heel, means to hold a heel to be cut, means to rotate the heel and means comprising a link to vary the angle to the horizontal of the heel during its rotation.

---

1,694,466. PROCESS OF OBTAINING METALLIC EFFECTS ON FABRICS CONTAINING ORGANIC DERIVATIVES OF CELLULOSE. RENÉ CLAVEL, Basel-Augst, Switzerland. Filed Apr. 6, 1926. Serial No. 100,179. 23 Claims. (Cl. 8—5.)

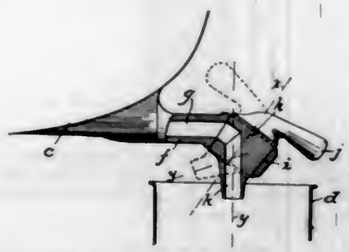


13. A process for treating fabrics containing an organic derivative of celluiose in order to obtain metallic or similar effects thereon which comprises applying to the surface of the fabric a paste containing a gum, a solvent for the organic derivative in the fabric and a powder suitable for obtaining the desired effects, and quickly drying the fabric, thereby fixing the paste on the fabric, then dyeing the fabric with the powder fixed thereon, subsequently stretching the fabric causing some of the partially or completely dissolved threads to break, thus exposing portions of the dyed fabric and finally calendering the stretched fabric.

---

1,694,467. FILTER. CHARLES P. EISENHAUER, Dayton, Ohio, assignor to The Duro Company, Dayton, Ohio, a Corporation of Ohio. Filed Aug. 18, 1925. Serial No. 51,015. 14 Claims. (Cl. 210—147.)

1. In a filtering apparatus, means for filtering, means for delivering fluid for filtering to one end of the apparatus and for delivering fluid for washing to the other end of the apparatus, and means for delivering water to a drain from the other end of the filter, and means con-

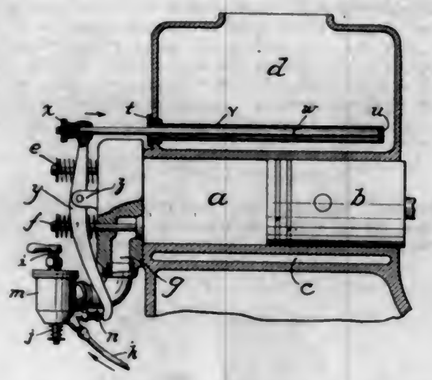


trolled by the incoming water to be filtered for regulating the period of filtering and washing, means for controlling the delivery and exit of fluid through the several means

hereinbefore recited and means to control the operation thereof which in turn is operated by the first-mentioned controlling means.

---

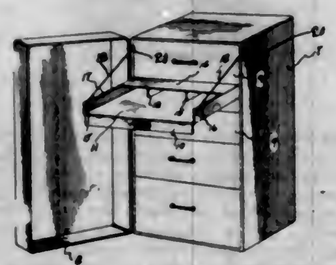
1,694,468. CENTRIFUGAL-SEPARATOR FEEDING DEVICE. VINCENT J. GILMORE, Wappingers Falls, N. Y., assignor to The De Laval Separator Company, New York, N. Y., a Corporation of New Jersey. Filed May 19, 1927. Serial No. 192,611. 4 Claims. (Cl. 233—21.)



1. The combination with a centrifugal separator, a supply can positioned thereon and a separating bowl and its regulating cup, of a faucet controlling the flow from the supply can to the regulating cup; said faucet comprising a turnable member movable into two positions, one to open the faucet and simultaneously lower its outlet to below the level of the top of the regulating cup, and the other to close the faucet and simultaneously raise its outlet to above the level of the top of the regulating cup to permit the supply can to be freely turned in a horizontal plane.

---

1,694,469. MEANS FOR CONTROLLING THE FEED OF GASOLINE ENGINES. CYRUS HOWARD HAPGOOD, Nutley, N. J., assignor to The De Laval Separator Company, New York, N. Y., a Corporation of New Jersey. Filed Mar. 30, 1926. Serial No. 98,423. 2 Claims. (Cl. 123—106.)

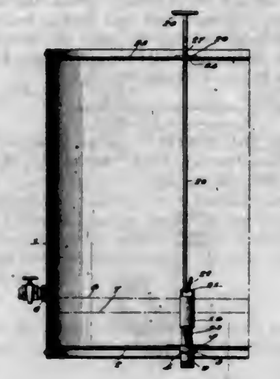


1. In an internal combustion engine, the combination with an engine cylinder, a chamber adapted to contain water and maintain a water jacket around the cylinder, means providing a passage for admission of gasoline to the engine, and a movable valve governing the rate of gasoline inflow, of a tube extending in the direction of extension of the cylinder and throughout the major part of the length of said chamber, said tube being open at one end and closed at the other, the open end of the tube extending into an orifice in the chamber wall and being supported by said wall, its closed end being unsupported, a rod having a coefficient of expansion different from that of the tube and one end of which is secured to the closed end of the tube and which extends throughout the length of the tube and beyond its open end, temperature changes in the water therefore effecting a longitudinal movement of one end of

the rod with the closed end of the tube while the other end of the rod has a longitudinal movement relative to the open end of the tube, and means, actuable by the rod in its longitudinal movement, adapted to control the position of the valve to effect a closing movement of the valve as the water warms and an opening movement of the valve as the water cools.

---

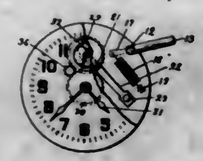
1,694,470. COMBINATION TRUNK. EVA Z. HURSH, Detroit, Mich. Filed Feb. 9, 1925. Serial No. 7,844. 2 Claims. (Cl. 190—9.)



1. In combination with a trunk having a plurality of drawers therein, a comparatively shallow drawer forming member having side walls and a front wall, said front wall being swingably mounted on said member and adapted for swinging into a downwardly extending position for permitting the use of the base of said drawer as a writing surface; and means permanently connected swingably at one end to said drawer forming member and adapted for detachable connection at the other end to said trunk for bracing said drawer forming member when used as a desk and preventing inward movement of the same.

---

1,694,471. OIL SAVER. NORBERT J. JACOBI, Electra, Tex. Filed Jan. 5, 1927. Serial No. 159,231. 7 Claims. (Cl. 210—51.)

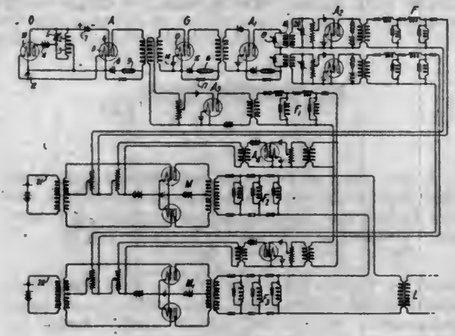


1. An oil saver for a tank having a drain opening in its bottom comprising a tubular member having an externally screw threaded lower end portion, a tubular base member having a relatively large and heavy flange at its upper end and having a lower end portion formed with a downwardly tapering external wall, said base member having a screw threaded counterbore in its flanged upper end for engaging with the threaded lower end portion of the first tubular member, a gasket on the tubular base member underneath the flange, said tubular base member being

adapted to be lowered through said tank until the tapering lower end portion thereof depends into the drain opening and until the gasket is clamped between said flange and the tank bottom, and a second tubular member vertically adjustable on said first named tubular member.

---

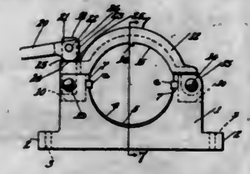
1,694,472. TIME SWITCH. HERMAN H. KEMPF, New York, N. Y. Filed Oct. 19, 1925. Serial No. 63,396. 6 Claims. (Cl. 200—39.)



1. Operating means, for an automatic time switch having an alarm clock tripping device, comprising a pin mounted transversely slidable in the clock frames, a shaft rotatably mounted in said frames, a plurality of relatively movable switch elements, a flat resilient switch lever fixed to said shaft near one end of same adapted to rotate with a flat face substantially parallel to one of said frames, said lever adapted when tripped to effect relative motion between the switch elements for opening or closing an electric circuit therethrough, said lever being suitably formed for locking engagement with the end of said pin, spring means for normally pressing said pin against said alarm tripping device whereby said pin follows same when tripped and releases the lever, said pin projecting when untripped into the path of said lever causing flexure of said lever when it is moved over the end of said pin into locking engagement therewith.

---

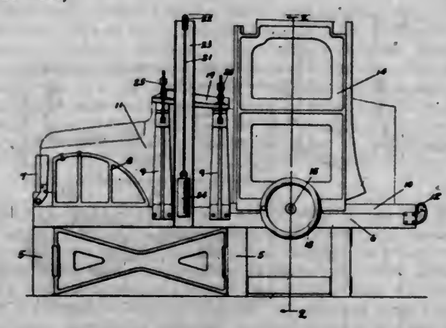
1,694,473. HIGH-FREQUENCY SIGNALING. BURTON W. KENDALL, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 21, 1919, Serial No. 291,449. Renewed Sept. 16, 1927. 20 Claims. (Cl. 179—15.)



5. The method of transmission which comprises deriving a carrier wave from base frequency oscillations, modulating said carrier wave in accordance with another wave, suppressing all components except one side band of the modu-

lated carrier wave, deriving other waves from said base frequency oscillations and reinforcing said side band with said other waves.

---



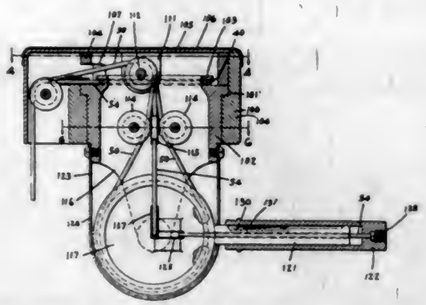
1,694,474. HOLDING AND CLAMPING DEVICE. ABRAHAM A. LAINER, Worcester, Mass. Filed June 20, 1927. Serial No. 200,153. 3 Claims. (Cl. 29—89.)

1. In a device of the class described, a base providing a substantially semi-circular cut out portion, lugs provided by said portion for the non-rotatable holding of a cylinder, a complementary clamping member pivotally attached to said base, a link pivotally connected to said base opposite the pivotal attachment of said clamping member, and a cam lever pivotally attached to said link, whereby to lock said clamping member firmly in place on said base and hold a cylinder from any movement.

---

1,694,475. JIG FOR USE IN MAKING AUTOMOBILE BODIES. JOSEPH LEDWINKA, Philadelphia, Pa., assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 15, 1924. Serial No. 706,675. 12 Claims. (Cl. 29—89.)

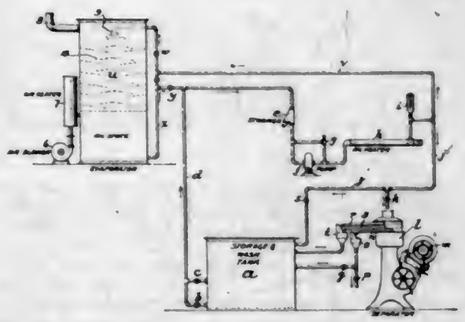
1. In a jig structure, a framework to receive a body, body unit assembly or the like, in combination with a positioning and retaining member arranged to engage between the door posts of the body or body unit, and means to adjust said member into and out of engaging relation with respect to the door posts, and means carried by said member to engage over the door sill of the body or body unit.



1,694,476. RUBBER FLOORING. VICTOR LEFEBURE, London, England. Filed Jan. 16, 1925, Serial No. 2,786, and in Great Britain May 6, 1924. 4 Claims. (Cl. 94—3.)

1. A floor construction comprising a base, a rigid intermediate layer of asbestos cement secured to said base, and rubber surface floor elements vulcanized on to said intermediate layer.

---



1,694,477. DIRIGIBLE MOUNTING AND CONTROL MECHANISM THEREFOR. GEORGE WILLIAM H. LONG, Indianapolis, Ind. Filed Apr. 2, 1921. Serial No. 458,013. 30 Claims. (Cl. 74—39.)

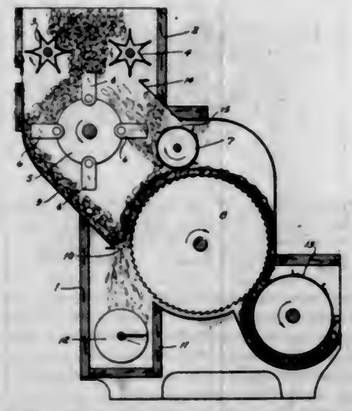
1. A dirigible construction including a completely dirigible movable mounting, a completely dirigible movable handle, cable means connecting said handle and said mounting, and means for maintaining said cable means taut at all times.

---

1,694,478. APPARATUS FOR RECLAIMING USED LUBRICATING OIL. PHILIP F. MILLER, Maplewood, N. J., assignor to The De Laval Separator Company, New York, N. Y., a Corporation of New Jersey. Filed Sept. 6, 1924. Serial No. 736,251. 4 Claims. (Cl. 196—16.)

1. In an apparatus for reclaiming used lubricating oil, the combination of a tank for containing the used oil, a centrifugal separator provided with outlets for relatively light and heavy constituents, an evaporator, a main conduit for used oil leading from the tank, a pump and a heater interposed in said conduit, three branch conduits communicating with the main conduit, one branch conduit leading to the centrifuge, the second branch conduit leading back to the tank and the third branch conduit leading to the upper part of the evaporator, and means to convey liquid from the light constituent outlet of the centrifuge to the tank above the level of the outlet therefrom to the main conduit, whereby oil can be circulated from the tank successively through the main and first branch conduits and centrifuge to the tank, through the main and second branch conduits to the tank, and through the main and third branch conduits to the evaporator.

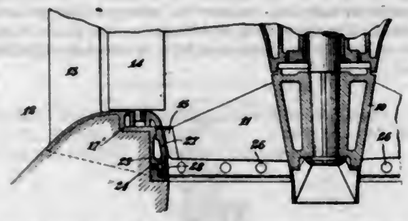
---



1,694,479. ELECTRIC SWITCH. JOHN L. MILTON, Louisville, Ky. Filed Apr. 17, 1922. Serial No. 554,300. 1 Claim. (Cl. 200—52.)

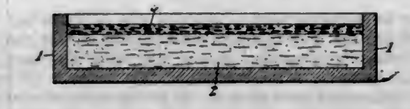
In a tiltable electric switch of the class described provided with a liquid conductor and a liquid conductor container in which a plurality of electrodes are located, means for operating said switch through different cycles, means within said container to cause the liquid conductor to flow at unequal time periods for the different cycles of operation, and at substantially equal time periods for the corresponding cycles.

---



1,694,480. BOLL-BREAKING AND COTTON-SEPARATING MACHINE. JOHN E. MITCHELL, St. Louis, Mo. Filed Feb. 14, 1927. Serial No. 167,974. 7 Claims. (Cl. 19—37.)

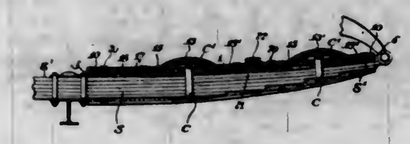
1. In a boll breaking and cotton separating machine, in combination with a rotatable saw cylinder, a rotatable kicker roll co-operating therewith for knocking back bolls and hulls carried up by the cotton, a hull-board, the lower end of which defines the size of an escape opening for hulls past said saw cylinder, and a rotatable breaker cylinder positioned to receive and act upon bolls and hulls thrown out by the kicker roll and to discharge such bolls and hulls together with the mixture of bolls, hulls and cotton delivered to the machine, and acted upon by said breaker cylinder, directly onto the saw cylinder, said breaker cylinder being adapted to be rotated in juxtaposition to said hull-board and downwardly as respects its side adjacent to said hull-board and in a direction opposite to the direction of rotation of the saw cylinder.



1,694,481. PROPELLER-TYPE TURBINE OR PUMP. LEWIS FERRY MOODY, Philadelphia, Pa. Filed July 12, 1926. Serial No. 121,787. 18 Claims. (Cl. 253—148.)

1. In a runner for a turbine or pump the combination with a central hub portion, of a circumferential series of unshrouded blades thereon normally having a fixed relation thereto, each blade being provided with yielding means at its tip for reducing clearance and increasing the efficiency of the runner.

---

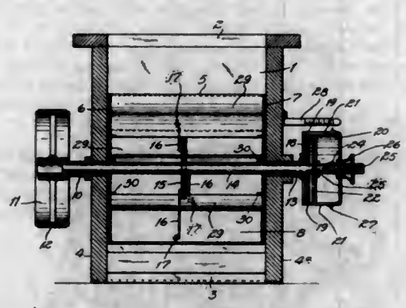


1,694,482. MUSHROOM BED. RICHARD HENRY MORRIS, 3d, Philadelphia, Pa. Filed Aug. 20, 1925. Serial No. 51,331. 2 Claims. (Cl. 47—1.)

2. A mushroom bed including a compost containing fertilizing material, associated with a mixture of fibrous peat and a material toxic with respect to mushroom disease germs.

---

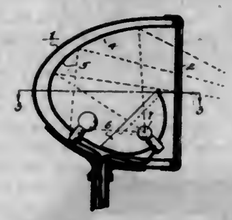
1,694,483. VEHICLE SPRING COVER. THOMAS MUNRO, Philadelphia, Pa. Filed Apr. 13, 1925. Serial No. 22,530. 2 Claims. (Cl. 267—37.)



1. A spring cover for vehicle springs comprising an outer envelop of flexible material having a central portion adapted to lie adjacent the top leaf of a spring and provided with a recess in its under face formed by striking up the material of the envelop and with side flaps laterally disposed with respect to the central portion and adapted to be turned down adjacent the sides of the spring, a strip of absorbent material disposed beneath said central portion and extending from one end of the cover to the other and into said recess to form a lining therefor, said strip being of less width than said recess, spacer strips of similar material interposed between said strip and the envelop adjacent each end of the recess, and means for securing said envelop, spacer strips and strip together.

---

1,694,484. PERCENTAGE FEEDER. BURTON NEAL, St. Louis, and GEORGE H. HEBEBRAND, Kinloch, Mo. Filed Mar. 26, 1926. Serial No. 97,494. 3 Claims. (Cl. 83—44.)

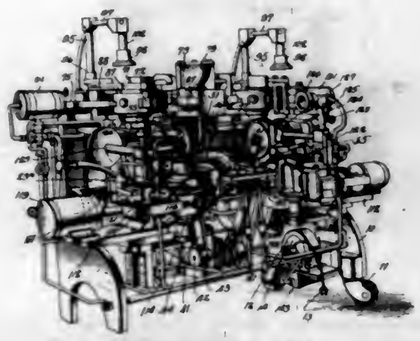


1. A feeding machine of the class described, comprising a casing affording an inlet and an outlet, a feed drum rotatably mounted in said casing between said inlet and outlet, a plurality of segmental members pivotally mounted at one end, a curved radially-disposed partition located in proximity to the free end of each of said segmental members, a shaft rotatably mounted in said casing, a disk on said shaft, and a series of arms each of which is pivotally connected at one end to the peripheral portion of said disk, and at the other, to the free end of a segmental member, means for rotating said feed drum, and means for manually turning said shaft in either direction

adjustable distances, whereby to simultaneously move the free ends of all of said segmental members toward or from the periphery of said feed drum to vary the size of peripheral pockets formed on said feed drum by said segmental members and partitions.

---

1,694,485. VEHICLE HEAD LAMP. KELLY NEWLAND and LEO J. MILLER, Columbus, Ohio. Filed Jan. 28, 1926. Serial No. 84,503. 1 Claim. (Cl. 240—41.)

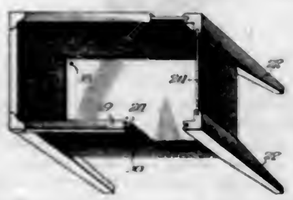


In a vehicle head lamp, a casing, a main reflector arranged within said casing, a baffle plate extending upwardly and forwardly from the bottom portion of said reflector and confined within said main reflector, the upper edge of said plate lies substantially in the horizontal axis of said main reflector to provide a light opening between the upper edge of said baffle plate and said main reflector, a second reflector formed integral with said baffle plate and having its reflecting surface facing the interior of said lamp, a source of light in each of said reflectors, the source of light in said main reflector being so positioned therein that it is concealed from view by the secondary reflector, and means for securing the baffle plate to said main reflector.

---

1,694,486. GLASS-BLOWING MACHINE. CLARENCE R. NIXON, Baltimore, Md., assignor, by direct and mesne assignments, to Baltimore Bottle Machine Corporation, Baltimore, Md., a Corporation of Maryland. Filed June 14, 1927. Serial No. 198,773. 26 Claims. (Cl. 49—9.)

9. In a glass blowing machine, a combined slug support and neck mold adapted to form a mold bottom, a primary blank mold having hinged sections movable to close on and open from said neck mold, a secondary blank forming mold also movable to close on and open from said neck mold, means to effect successive closing and opening of the primary mold and closing and opening of the secondary mold, means to retain the neck mold in fixed position during the opening and closing of the primary and

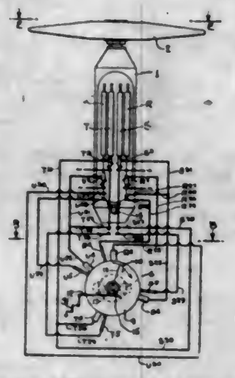


secondary molds, a finishing mold adapted to open and close at a point remote from the point of opening and closing of the primary and secondary mold, said neck mold retaining means including elements arranged to move the

neck mold into cooperative relation with the finishing mold subsequent to the opening of the secondary mold and prior to the closing of the finishing mold, and means to open and close the finishing mold.

---

1,694,487. METAL RECEPTACLE. SOREN RINGER, Worcester, Mass., assignor to Ringer-Worcester Company, Worcester, Mass., a Corporation of Massachusetts. Filed July 3, 1926. Serial No. 120,398. 1 Claim. (Cl. 312—1.)



A receptacle comprising a plurality of supporting legs each having mortises adjacent two of the corners thereof adjacent their tops, and a horizontally extending supporting portion adjacent the lower ends of the mortises, panels tenoned in said mortises and connecting adjacent legs, a sheet metal lining including a bottom supported by and secured to the supporting portions of the legs, the sides of said lining terminating at their top edges in outwardly and downwardly formed portions embracing the top edges of the panels, and sheet metal corner pieces secured to and connecting adjacent sides of the lining along the outwardly and downwardly formed edges thereof at the corners.

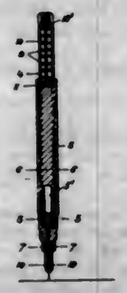
---

1,694,488. SYNCHRONIZED MACHINE GUN FOR AIRPLANES. OSCAR A. ROSS, New York, N. Y. Filed Apr. 9, 1927. Serial No. 182,346. 11 Claims (Cl. 89—27.)

1. In combination with a plurality of machine guns synchronized to fire between the blades of an air plane propeller, means for driving the propeller, means controlled by the driving means for firing the guns, in sequential order, a centrifuge driven by the propeller driving means, and means controlled by the centrifuge for varying the moment of fire of the sequential firing means with respect to the blade location, whereby the bullets of the gun are restrained to pass between the blades at the plane of movement of the blades upon operation of the sequential firing means.

5. In combination with a machine gun synchronized to fire between the blades of an air-plane propeller, of means for driving the propeller, means for firing the gun, a governor arranged to be rotated by the propeller driving means, and means controlled by the governor for rendering the firing means effective to fire the gun at one range of speed of rotation of the propeller and ineffective to so fire at another range of speed thereof.

---

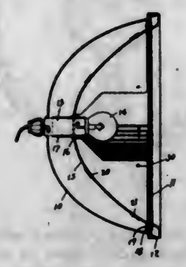


1,694,489. MACHINE FOR DRYING VENEERS. LEO RUBINSTEIN, Vienna, Austria. Filed Oct. 1, 1927, Serial No. 223,331, and in Austria Oct. 9, 1926. 13 Claims. (Cl. 34—31.)

1. In a machine for drying veneers, the combination of heaters, means for moving the heaters in the direction of the veneers, and means for feeding the veneers to be dried past the said heaters along a feed path.

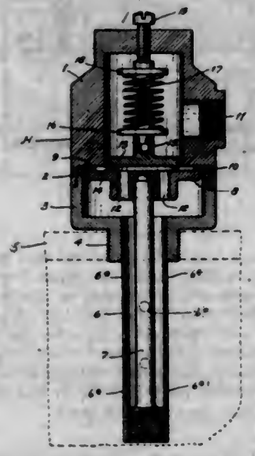
---

1,694,490. MARKING DEVICE. ERNST SALEMANN, Solothurn, Switzerland. Filed July 28, 1924. Serial No. 728,763, and in Germany Aug. 6, 1923. 5 Claims. (Cl. 33—27.)



1. A marking instrument for use in making drawings, including a spindle having a pricking needle adapted to form a point in a drawing surface, a sliding member having a bearing on said spindle and movable along the same, a marker carried by said sliding member and movable therewith from a normally retracted position into engagement with said drawing to form a mark thereon adjacent the point formed by said needle, and means for normally retaining said marker in its retracted position.

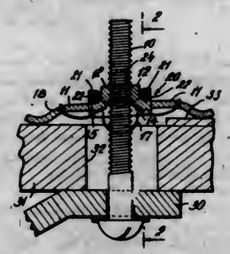
---



1,694,491. LIGHT DIFFUSER FOR HEADLIGHTS. BIRNEY K. SMITH, Newcastle, Ind. Filed Apr. 22, 1927. Serial No. 185,677. 1 Claim. (Cl. 240—484.)

In a headlamp, the combination with a concave reflector and a light bulb support disposed centrally therein; of a diffuser comprising a plurality of flat vanes arranged in spaced relation to each other and radially within said reflector and having their outer edges conforming to and engaged with the latter, the inner ends of said vanes curving inwardly and secured to said bulb support, and the inner edges of said vanes radiating outwardly and forwardly from said support with the forward edges terminating adjacent to the forward end of said reflector and concentric therewith.

---

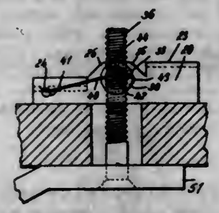


1,694,492. PRESSURE AND TEMPERATURE CONTROL VALVE. HARRY C. TABLER, St. Louis, Mo., assignor to American Heater Corporation, St. Louis, Mo., a Corporation of Missouri. Filed July 2, 1927. Serial No. 203,079. 4 Claims. (Cl. 277—42.)

1. A valve comprising a housing adapted to be secured to a hot water tank or the like and communicating with the interior thereof, a thermosensitive member mounted in said housing and extending into the tank, a relatively non-expansible rod secured to said thermosensitive member to move therewith, a valve on the end of said rod normally seated against a seat provided therefor in said housing to prevent water from passing out, said valve being provided with openings therethrough and a second valve in said housing large enough to cover the openings through said first valve and normally seated against said first valve but yieldable under predetermined pressure of the water in the tank, said housing being provided with a relief opening on the opposite side of said valves from said tank to permit escape of water when either of said valves is actuated.

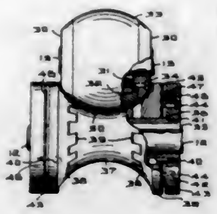
---

1,694,493. TOGGLE BOLT. CHARLES C. TOMKINSON, Plainfield, N. J., assignor to J. Edward Ogden, Mountainville, N. Y. Filed Feb. 3, 1925. Serial No. 6,617. 58 Claims. (Cl. 85—3.)



5. A pair of members having oppositely curved threaded portions so arranged that in different angular positions of the members the threaded portions thereof may engage the threads of a screw, said threaded portions being interrupted at an intermediate part of said threaded portions so as to release the threaded engagement between the member and the screw at one angular position of the members, said members together forming a nut.

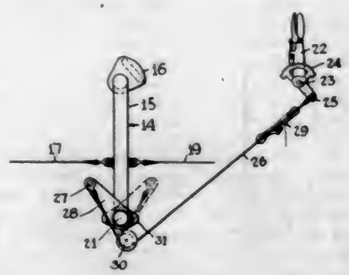
51. A toggle bolt head comprising a pair of wings having flat flanges extending from the sides of the wings, a collar having a pair of bars engaging the outer surfaces of said wings and around which the wings are arranged to swing and flat sides connecting the bars, each of said wings having lugs extending laterally from opposite sides of each wing arranged to engage the upper part of the sides of said collar and a spring having a coil interposed between the flanges of the wings and one of the sides of the collar, arranged to press the other flanges of the wings against the other side of the collar and having parts engaging the lugs and arranged to spread the wings apart.



---

1,694,494. TOGGLE BOLT. CHARLES C. TOMKINSON, Plainfield, N. J., assignor to John Edward Ogden, Mountainville, N. Y. Filed June 19, 1925. Serial No. 38,194. 20 Claims. (Cl. 85—3.)

1. A toggle bolt comprising a wing having a bearing portion, a nut rotatably mounted in said bearing portion, a bolt threaded into said nut, said nut and wing having stop means for limiting the rotatable movement of the nut relative to the wing, and a spring acting on the nut and wing to effect relative rotation of these elements, said stop means and spring being constructed and arranged to retain the nut in the wing bearing portion.

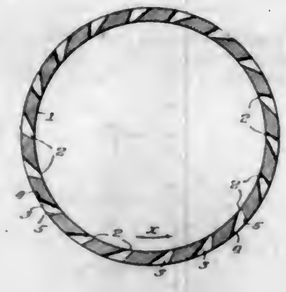


1,694,495. MACHINE FOR ROLLING SHEET METAL. ROBERT TRAFELET, Fostoria, Ohio, assignor, by direct and mesne assignments, to The Yoder Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 5, 1922. Serial No. 586,177. 8 Claims. (Cl. 153—58.)

7. A sheet metal rolling machine consisting of a pair of related complementary spaced rollers between which a section of said metal may be passed to effect shaping thereof, one of said rollers embodying a working roll comprising sections having dove-tailed joints between them, means tending to yieldingly maintain said sections together, and means for driving one of said rollers.

---

1,694,496. RUDDER-OPERATING MECHANISM FOR AIRCRAFT. THEODORE P. WRIGHT, Port Washington, and WILLIAM WAIT, Jr., Garden City, N. Y., assignors to Curtiss Aeroplane & Motor Co., Inc., a Corporation of New York. Filed July 13, 1926. Serial No. 122,144. 6 Claims. (Cl. 244—29.)

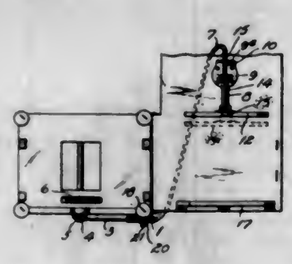


6. In control surface operating mechanism for aircraft, a movable control device, a connection between said control device and the control surface, an arm movable with said control device and with respect thereto from an angular position at one side thereof to a corresponding angular position at the opposite side thereof, means engaging said arm for holding it in either position of adjustment, and means fastened to said arm for exerting thereon and on said control device an operating force tending to counteract the resistance offered to the angular movement of said control surface, and mechanism operable to vary the degree of said operating force.

---

1,694,497. PLANT DISINFECTANT AND METHOD OF PRODUCING THE SAME. RUDOLF ZELLMANN, Radebeul, and DIETRICH LAMMERING, Brunswick, Germany, assignors to Chemische Fabrik von Heyden, Radebeul-Dresden, Germany, a Corporation of Germany. Filed Dec. 26, 1925, Serial No. 77,845, and in Germany Oct. 4, 1924. 4 Claims. (Cl. 167—16.)

1. A plant disinfectant in the form of a pulverulent mass, comprising metallic copper in an extremely finely divided state.

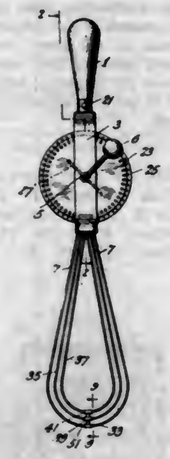


1,694,498. ROTARY SCREEN OR PLATE FOR PRODUCING SAME. WILLIAM CHARLTON BRUTON, Berkeley, Calif., assignor to American Manganese Steel Company, Chicago, Ill., a Corporation of Maine. Filed Apr. 6, 1927. Serial No. 181,356. 3 Claims. (Cl. 209—397.)

1. A circumferential wall for rotary mineral separators, having discharge openings, the inner or receiving ends of which are calibered to gauge the material discharged; said wall being of massive construction and having a thickness that provides, by the extension of its openings through it, and as confines of its said openings, faces of substantial dimensions; the face which provides the rear or trailing confine of each opening being inclined outwardly and rearwardly at a relatively large angle toward the tangent of the screen at the opening, so that the openings are flared circumferentially of the screen and assume a direction approaching that of the natural flow of material escaping from the separator under internal pressure and its own inertia.

---

1,694,499. PAPER JOGGER. JAMES A. CARLTON, St. Louis, Mo. Filed Apr. 7, 1926. Serial No. 100,333. 17 Claims. (Cl. 271—89.)

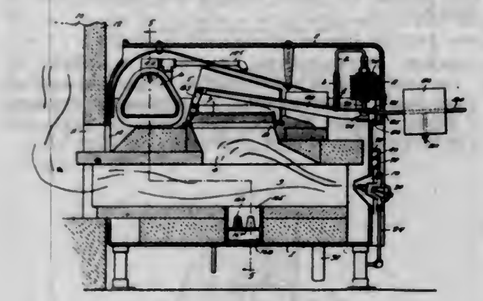


1. A pneumatic paper jogger of the class described, comprising a reciprocable vertically disposed plate, a piston connected therewith and adapted to reciprocate, a stationary cylinder for the piston, another cylinder, a flexible tube joining and affording communication between said cylinders, a piston reciprocable therein, and means for causing said last-named piston to reciprocate and to alternately compress and rarify the air in the tube and cylinders to thereby reciprocate said plate.

---

1,694,500. EGG BEATER. JAMES O. H. CAZENOVE, New York, N. Y. Filed May 21, 1926. Serial No. 110,651. 5 Claims. (Cl. 259—132.)

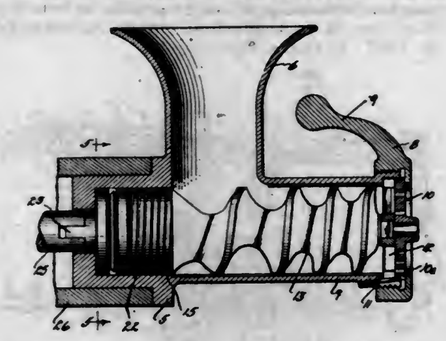
1. An egg beater including a handle, an upper frame attached thereto, a lower frame secured to said upper frame, two beaters mounted within said lower frame for rotation in relatively reversed directions, and means carried by said upper frame including two sprockets secured



to a single shaft by spacer elements riveted to said sprockets and keyed to said shaft, said shaft being journaled horizontally in said upper frame.

---

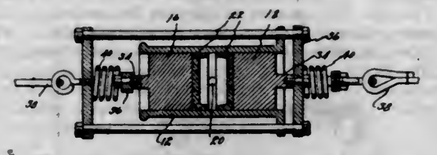
1,694,501. AUTOMATICALLY-CONTROLLED BURNER. LEE S. CHADWICK, Shaker Heights, Ohio, assignor to Perfection Stove Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 5, 1925. Serial No. 60,425. 12 Claims. (Cl. 158—28.)



1. In combination, an atomizing burner, a boiler situated to receive heat from the burner and from which boiler the burner receives its steam supply, means for supplying oil to the burner, means controlling the proportion of heat applied to the boiler, steam operated means communicating with the boiler for actuating the controlling means, and temperature controlled means functioning independently of the steam pressure in the boiler for varying the quantity of steam delivered to said steam operated means.

---

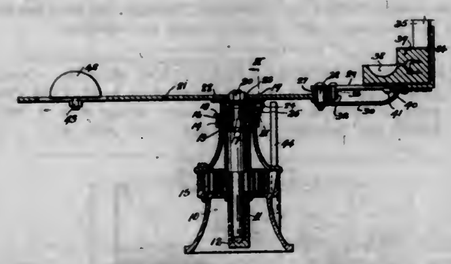
1,694,502. FOOD GRINDER. WILLIAM W. DRYDEN, Louisville, Ky., assignor to Walter F. Stimpson, Louisville, Ky. Filed Aug. 30, 1924. Serial No. 735,073. 4 Claims. Cl. 146—189.)



1. In a food grinder, a casing having a barrel open at its rear end and an inlet throat opening into the barrel intermediate its ends, a feed shaft mounted in the barrel and having a worm member extending from the inlet throat to the open extremity of the barrel and a widened portion

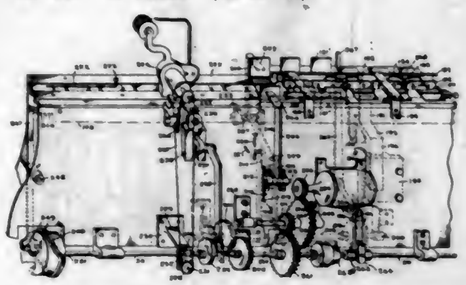
extending forwardly from the inlet throat opening, and a secondary worm feed arranged in the periphery of said widened portion.

---



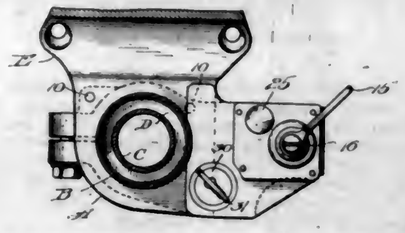
1,694,503. PISTON AND CYLINDER CONSTRUCTION. BURTON S. FLORADAY, Toledo, Ohio, assignor to Hydraulic Brake Company, Detroit, Mich., a Corporation of California. Continuation of abandoned application Serial No. 699,196, filed Mar. 14, 1924. This application filed Sept. 24, 1926, Serial No. 137,617. Renewed May 11, 1928. 1 Claim. (Cl. 21—38.)

In piston and cylinder construction, a cylinder, a pair of opposed pistons operatively disposed therein, a connecting rod for each piston, a yoke for each connecting rod, each yoke passing around the cylinder and arranged at an angle to the other yoke and passing therethrough, and a pair of springs one at each end of the cylinder disposed between the respective yokes to exert pressure thereon counter the force exerted by the piston.



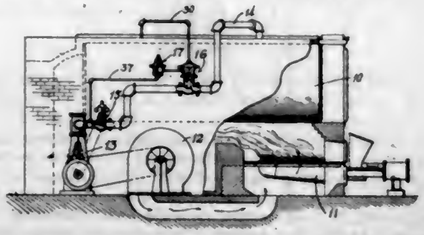
---

1,694,504. CENTRIFUGAL CASTING MACHINE. JOSEPH A. GARDNER and DAVID S. GARDNER, Memphis, Tenn. Filed Mar. 4, 1927. Serial No. 172,874. 2 Claims. (Cl. 22—65.)



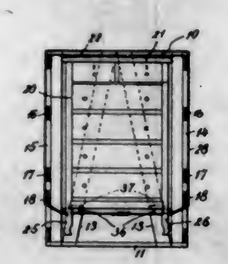
1. A casting apparatus comprising a vertical shaft, means for driving said shaft during a limited period, a mold carrying arm mounted for free rotation on the extreme upper end of said shaft, a pin projecting from said shaft, a pawl carried by said arm, depending into the path of said pin during action of said driving means, and over riding said pin when driving action is spent.

1,694,505. BOOK-MATCH MACHINE. LEO GREENBAUM, Far Rockaway, EDWARD VAN HOOFSTADT, Oceanside, and CHARLES GUSTAVSON, Brooklyn, N. Y., assignors to Lion Match Company, Inc., a Corporation of New York. Filed Apr. 30, 1925, Serial No. 27,110. Renewed July 23, 1927. 40 Claims. (Cl. 93—7.)



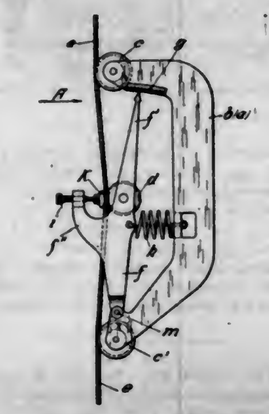
1. In a machine of the class described, means for intermittently feeding and cutting the covers and the match splints therefor, said covers fed beneath said splints, means for placing said cut splints upon said cut covers, means for partly folding said covers over said splints, and independent means for completing the fold of said covers, both of said folding means comprising folding members moving across the path of feed of said splints and covers, said splint feeding means and said cover feeding means comprising separate instrumentalities.

1,694,506. AUTOMOBILE LOCK. ORVILLE S. HERSHEY, Chicago, Ill., assignor to Hershey Manufacturing Company, Chicago, Ill., a Corporation of Colorado. Filed Apr. 12, 1926. Serial No. 101,300. 16 Claims. (Cl. 70—127.)



1. In a lock, the combination with an operating member, of a bolt movable into engagement with said member to oppose operation thereof, a control means for the bolt movable through a first portion of its cycle before actuating the bolt, and a releasable stop for normally preventing movement of the bolt, said stop being releasable only when the control means has advanced through the first portion of its movement cycle, substantially as described.

1,694,507. PRESSURE-REGULATION MEANS. CURTIS L. HOWSE, Detroit, Mich., assignor to A. W. Cash Company, a Corporation of Delaware. Filed Mar. 2, 1922. Serial No. 540,649. 10 Claims. (Cl. 236—85.)

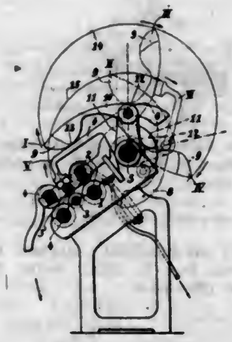


1. The combination with a steam boiler, a steam engine to be regulated consistently with boiler pressure, and regulating means comprising a valve connected to control communication between said engine and boiler and valve-operating means, said operating means comprising a valve-moving part, means for imposing a relatively small mechanical load on said moving part, means adapted and arranged to modify fluctuating fluid pressure to substantial constancy and maintain a substantially uniform fluid pressure of the order of, but lower than, the boiler pressure, acting on said part in the same direction as the load, and connections for imposing boiler pressure on said part in opposition to said substantially constant pressure and mechanical load.

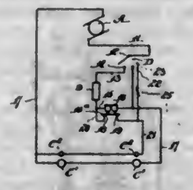
1,694,508. METHOD OF AND APPARATUS FOR CRATING FURNITURE. ALFRED P. KIVLIN, New York, N. Y., assignor to H. J. Forster, trustee of the American Railway Association. Filed Jan. 21, 1927. Serial No. 162,451. 4 Claims. (Cl. 217—52.)

1. In combination, a furniture crate having a top, longitudinal and transverse side members and a bottom, and flexible means for suspending the article to be crated extending across the top, down the sides and through the crate beneath the article in supporting position with respect thereto.

1,694,509. TENSIOMETER. WOLFGANG KLEMPERER, Akron, Ohio, assignor to Luftschiffbau Zeppelin Gesellschaft mit Beschraenkter Haftung, Friedrichshafen, Bodensee, Germany. Filed Nov. 12, 1925, Serial No. 68,491, and in Germany Dec. 1, 1924. 6 Claims. (Cl. 265—1.)



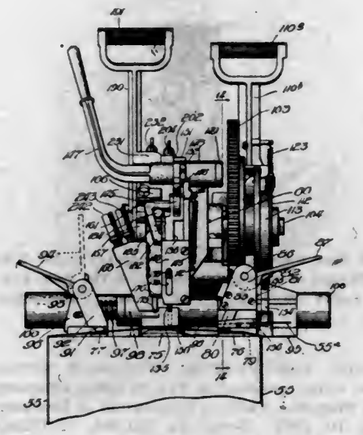
1. A tensiometer comprising three operatively connected guides disposed in staggered relation, two of the guides



serving as supports for a tension member situated at the same side of all three of the guides, the other guide being disposed intermediately of the supporting guides, means connected to the intermediate guide for pressing the tension member against the latter guide, resilient means connected to the intermediate guide for resisting movement of the latter with respect to the supporting guides.

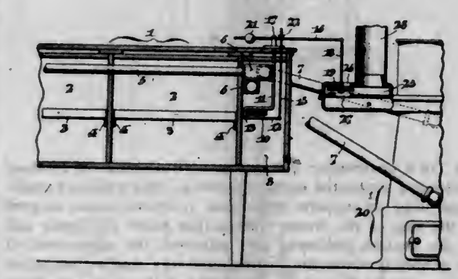
1,694,510. DRAWING FRAME. HERMANN KLUFTINGER, Kempten, Germany. Filed June 23, 1927, Serial No. 200,840, and in Germany Aug. 3, 1926. 6 Claims. (Cl. 19—135.)

1. In drawing frames for textile fibres, the combination of a plurality of pairs of rollers through which the strand or thread of fibres is passed; a balanced pressure lever bearing on one of the rollers of an intermediate pair and means for regulating the load on the said balanced pressure lever.



1,694,511. AUTOMATIC CONTROL FOR HEADLIGHTS. ELAINE VON DER LIPPE-LIPSKI, Atlantic Highlands, N. J. Filed June 23, 1924. Serial No. 721,962. 3 Claims. (Cl. 171—97.)

1. Means for controlling the brilliancy of electric headlights comprising a source of electric energy, electric headlights in circuit therewith, and a light sensitive medium having the property of decreasing its conductivity of the electric current by the action of light thereon, said medium being included in the circuit between the source of electric energy and the electric headlights.

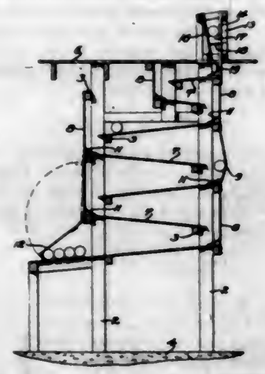


1,694,512. ELECTRIC WELDING MACHINE. CHESTER M. MACCHESNEY and RALPH H. NORTON, Chicago, Ill., assignors to Acme Steel Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 21, 1923. Serial No. 664,089. 20 Claims. (Cl. 219—4.)

1. A device for welding a metal strap comprising means for holding a strap in the form of a loop, means for severing said strap from the source of supply with the ends of the loop overlapping and directed in opposite directions, and means operating thereafter for electrically welding the overlapping ends of the strap.

1,694,513. AUTOMATIC TEMPERATURE-CONTROLLING DEVICE FOR INCUBATORS. PERRY STOVER MARTIN, Harrisonburg, Va. Filed Sept. 23, 1920, Serial No. 412,258. Renewed Aug. 11, 1926. 2 Claims. (Cl. 236—4.)

1. The combination with an incubator having associated therewith a heater, and comprising a multiplicity of separate incubator compartments, an auxiliary chamber completely isolated from said incubstion compartments, and a primary temperature controlling device located at the egg level within said auxiliary chamber, said device including a thermostat and coordinated means for governing the draft of the heater and thereby automatically controlling the temperature of the heating medium.

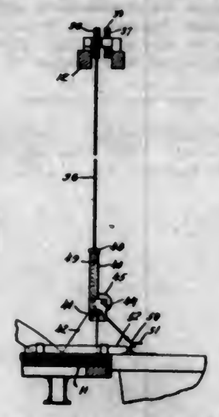


1,694,514. FLOOR JOIST. HARRY M. NAUGLE and ARTHUR J. TOWNSEND, Canton, Ohio, assignors, by mesne assignments, to The Columbia Steel Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Sept. 9, 1924. Serial No. 736,679. 7 Claims. (Cl. 189—40.)

1. A floor joist including an integral metal U-bar beam with flanges extending upward from the web, and a wood strip bodily clamped by and between the flanges of the U-bar.

---

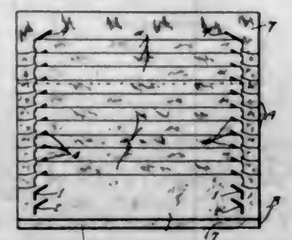
1,694,515. LOWERVATOR. WILLARD H. NUTTING, Oakland, Calif., assignor to The Paraffine Companies, Inc., San Francisco, Calif., a Corporation of Delaware. Filed Aug. 10, 1927. Serial No. 211,993. 2 Claims. (Cl. 193—27.)



1. In a lowervator, a frame, a vertical series of inclined guideways supported on said frame so that adjacent guideways slope in opposite directions, resilient means secured to the side of the frame terminating above the lower end of the bottom guideway and adjacent the upper end of the guideway above the bottom guideway, and a trap pivotally mounted adjacent the upper end of the guideway above the bottom guideway and adapted to rest on the bottom guideway in closed position and against the resilient means in open position.

---

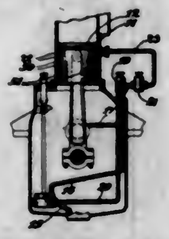
1,694,516. FERRY BRIDGE. ARTHUR T. PRESCOTT, East Orange, N. J., assignor to J. Edward Ogden, Mountainville, N. Y. Filed Aug. 3, 1927. Serial No. 210,287. 4 Claims. (Cl. 14—42.)



1. The combination with a ferry bridge of mechanism for mooring a ferry boat thereto comprising a single lifting and pulling element operatively connected to the bridge and to the boat and constructed and arranged to have a vertical lifting component and a horizontal pulling and mooring component, the portion of said element between

the bridge and the boat being disposed obliquely with relation to the portion of the element disposed above the connection to the bridge.

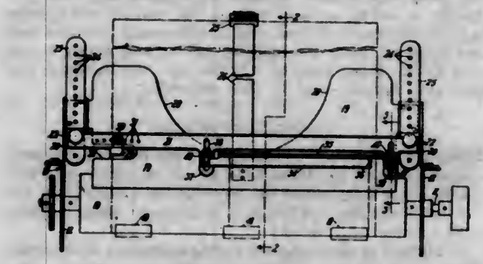
---



1,694,517. INDEX OR RECORD. HERBERT O. ROSS, St. Louis, Mo. Filed Nov. 5, 1924. Serial No. 747,936. 28 Claims. (Cl. 129—16.)

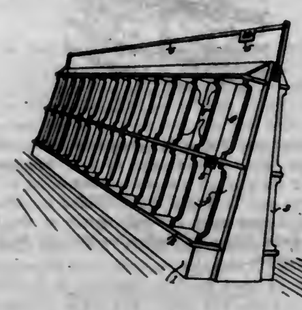
1. A sectional record including a plurality of separate sections each provided with a pair of horizontally aligned and opposed tongues and a pair of horizontally aligned and opposed obtuse-angular slots and adapted for interengagement at said tongues and slots in an imbricated series.

---



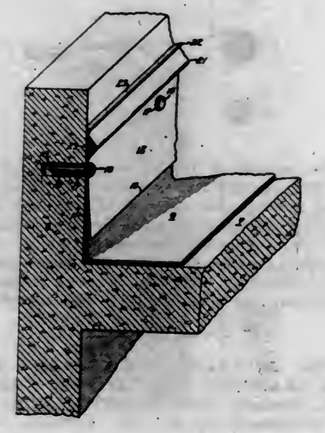
1,694,518. ENGINE-LUBRICATING SYSTEM. SAMUEL W. RUSHMORE, Plainfield, N. J. Filed Oct. 9, 1924. Serial No. 742,636. 10 Claims. (Cl. 74—108.)

1. An internal combustion engine, including a cylinder and piston and a pressure feed oiling system for the engine and, in combination with said parts, means for supplying oil about the surface of the piston at a level near but below the lowermost point swept by the top piston ring thereof during periods of excessive oil pressure, and means removing excess of such oil from the piston surface below said ring.



1,694,519. TYPEWRITING MACHINE. JESSE A. B. SMITH, Stamford, Conn., assignor to Underwood Elliott Fisher Company, New York, N. Y., a Corporation of Delaware. Filed Sept. 16, 1924, Serial No. 737,961. Renewed July 17, 1926. 18 Claims. (Cl. 197—127.)

1. In a typewriting machine, the combination with a platen and writing instrumentalities, of a knife for severing web-sections, means for adjusting the knife toward and from the platen to position it in registration with the leading edge of a web-form having its first writing line at the line of writing of the machine, and a leading-edge gage adjustable to position it a form-length in advance of the knife, the arrangement being such that the leading-edge gage is effective simultaneously to locate the leading web-form for severing and the second web-form for typing.



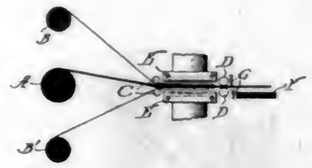
---

1,694,520. SHELVING. CHARLES E. STURDAVANT, Wichita Falls, Tex. Filed Mar. 19, 1928. Serial No. 262,630. 1 Claim. (Cl. 211—134.)

In a store shelving, the combination with spaced vertical end members, relatively high and narrow, each of said end members havig substantially the shape of an inverted V with their opposite edges inclined from the perpendicular and converging upwardly, of upper, lower and intermediate shelves extending between said end members, a plurality of spaced partitions between said end members and said shelves, forming a plurality of relatively high and narrow compartments, each of said partitions between the upper shelf and intermediate shelf having its front edge cut away from a point adjacent said upper shelf to a point adjacent said intermediate sheft, and each of said partitions between said intermediate shelf and said lower shelf having its front edge cut away from a point adjacent said intermediate shelf to a point adjacent said lower shelf, to give a pleasing bracket effect to the entire shelving and at the same time to permit light to enter each compartment freely to illuminate the goods throughout the entire height of each compartment, said upper, intermediate and lower shelves being substantially parallel with each other and substantially at right angles to said inclined edges of said end members, all of the said shelves being thus inclined to prevent forward tilting of the goods and also to bring the display of goods in more direct line of vision of a person passing down said passage on either side of said shelving.

1,694,521. FLASHING STRUCTURE. EDGAR M. TUCKER, South Pasadena, Calif., assignor to The Paraffine Companies, Inc., San Francisco, Calif., a Corporation of Delaware. Filed Jan. 17, 1927. Serial No. 161,492. 3 Claims. (Cl. 108—26.)

3. A counterflashing comprising a strip of sheet metal adapted for fastening to a wall over the exposed ends of a covering, and having adjacent its upper edge a longitudinally disposed outwardly extending corrugation having its upper ridge adapted to lie against the wall to provide a recess between the strip and the wall for the reception of a plastic sealing material.



---

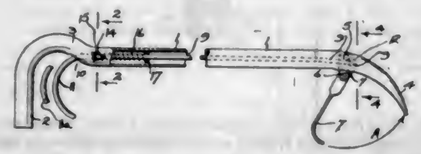
1,694,522. FLUSH DOOR. FRANK VICTOR, Ridgway, Pa. Filed Mar. 26, 1928. Serial No. 264,903. 11 Claims. (Cl. 20—35.)

1. In a door of the class described, a core frame, an edging frame, the said frames each comprising members having interlocking parts for holding the same assembled to form the respective frame, and certain of the members of the two frames having interlocking parts for holding the frames mutually assembled, and panels extending over the opposite sides of the assembled frames and having interlocking engagement with one of said frames.

1,694,523. WATERPROOF SHEET STRUCTURE. JOHN F. WHITE, Chicago, Ill., assignor to White Products Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 11, 1924. Serial No. 731,357. 6 Claims. (Cl. 154—2.)

6. The method of forming structural board which comprises disposing flexible non-adhesive surfacing sheets upon opposite non-adhesive surfaces of a flexible sheet of felt having an impregnation of adhesive water-repellant material, then compressing the sheets together and applying heat thereto to compact the felt and express water-repellant material therefrom into the surfacing sheets to form a uniting bond and water-resisting filler therefor.

---



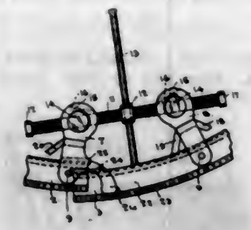
1,694,524. APPARATUS FOR KNEADING AND FORMING AMALGAMS. KARL ZENTNER, Frankfort-on-the-Main, Germany. Filed Dec. 29, 1926, Serial No. 157,854, and in Germany Dec. 31, 1925. 3 Claims. (Cl. 83—10.)

3. An apparatus for forming amalgams, comprising an upper member having a longitudinal bore, a lower member having a telescopic engagement with the upper member, means for locking the members together against longitudinal motion but permitting independent rotatory motion of the respective members, and a piston fitted in the bore of the upper member and having a rod provided with threads on its lower end engaging the threads in the bore of the lower member, whereby rotation of the upper and lower members in opposite directions will move the piston in the bore of the upper member to regulate the cubical capacity of the bore above the piston, and also to discharge the finished amalgam from the bore.

---

1,694,525. TONGS. BERNARD J. BLOEMSMA, Wayne, Mich. Filed Dec. 27, 1927. Serial No. 242,565. 1 Claim. (Cl. 294—11.)

Tongs comprising a tubular member having a fixed jaw at one end and a handle at the other and having an opening therethrough, a movable jaw pivotally mounted at the inner end of said jaw and having its outer end adapted to close against the outer end of said fixed jaw, an operating rod having one end attached to said movable jaw, extending intermediately through said tubular member, passing through said opening and terminating in a handle adjacent said first named handle, the sides of said tubular member being cut to form opposed stops which are flexed inwardly, a spring around the rod one end of which rests against said opposed stops and an enlargement around said rod against which the opposite end of said spring bears, said spring being adapted to force said rod forward and hold said movable jaw in open position.

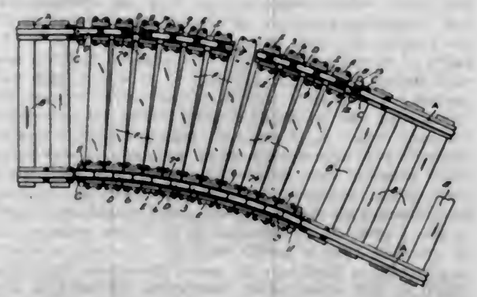


---

1,694,526. DYEING. ALBERT BODMER, Wattwil, Switzerland, assignor to Heberlein & Co. A. G., Wattwil, Switzerland, a Corporation of Switzerland. Filed July 10, 1926, Serial No. 121,736, and in Germany July 14, 1925. 13 Claims. (Cl. 8—5.)

1. Method of modifying the dyeing properties of cellulosic fibers which consists in acting on the same with a phosphorus compound capable of making the cellulosic fibers relatively immune to substantive dyestuffs and relatively attractive to basic dyestuffs.

---



1,694,527. DEMOUNTABLE-RIM TOOL. WILLIAM N. BOOTH, Detroit, Mich. Filed Aug. 21, 1922. Serial No. 583,338. 6 Claims. (Cl. 157—1.)

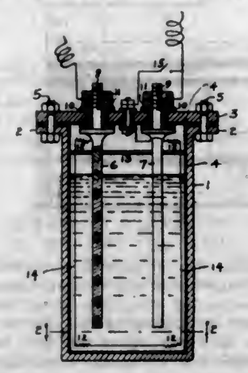
1. In a rim tool for a transversely split rim having a side flange, the combination with a member secured to one end of the rim, of a member connected to the other end of the rim and having a lug arranged to extend at the side of and fulcrum upon the side flange at the first mentioned end of the rim, and means for moving said members toward each other.

---

1,694,528. FLEXIBLE RAILWAY TRACK. JOHN L. CLARKSON, Nashville, Ill. Filed July 18, 1928. Serial No. 293,619. 10 Claims. (Cl. 238—10.)

1. A flexible railway comprising rail sections, rail chairs interposed between adjacent rail sections, and means for mechanically interlocking said chairs with the adjacent ends of said rail sections, whereby said rail sections and said rail chairs are capable of relative endwise sliding and vertical and horizontal swinging movement.

1,694,529. ANTIOXIDANT OR AGE RESISTER. ALBERT M. CLIFFORD, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Dec. 13, 1927. Serial No. 239,807. 10 Claims. (Cl. 18—53.)

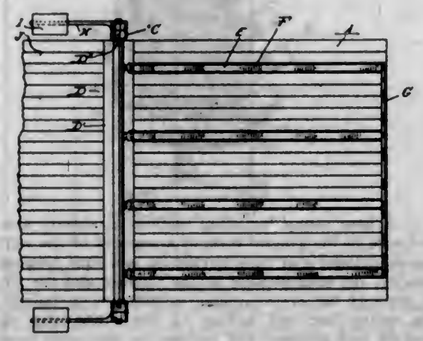


1. A rubber product containing a material having the formula—

$$R{-}\underset{\displaystyle H}{\underset{|}{N}}{-}R_1$$

in which R and $R_1$ are similar naphthylene radicals.

---



1,694,530. CATALYTIC AGENT IN STORAGE BATTERY. DEAN W. DAVIS, Elmhurst, Ind., assignor to Albert L. New, Greenfield, Ind. Filed Aug. 5, 1927. Serial No. 210,765. 2 Claims. (Cl. 136—179.)

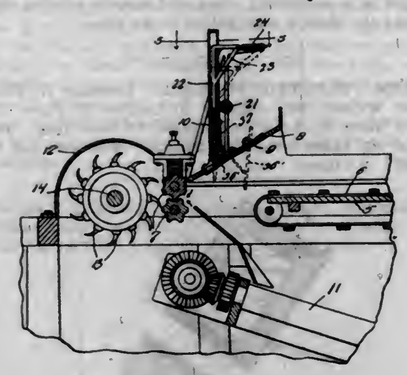
1. In an electric accumulator subject to tilting and inversion, electrodes, a more or less liquid electrolyte from which gases may be evolved, a sealed holder and a catalyst for promoting the combining of said gases distributed to such positions within the holder that at least one portion of the catalyst will be unsubmerged in any and all positions of the accumulator.

---

1,694,531. TURNING TABLE FOR SKIN-DRYING PLATES. ELLIS A. DE GRAFF, Detroit, Mich., assignor to Leather Makers' Process Company, Detroit, Mich., a Corporation of Michigan. Filed June 18, 1923. Serial No. 646,221. 3 Claims. (Cl. 149—12.)

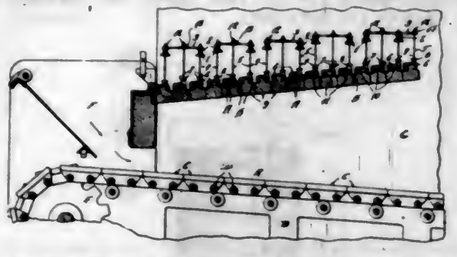
1. The combination with a platform having two sections, one of said sections having grooves and each corresponding in area to a skin mounting plate, of a rock shaft extending between said sections, arms projecting from said rock shaft and engaging said grooves in one section of said platform, and means for rocking said shaft to turn the plate from the grooved section of the platform onto the other section.

---



1,694,532. REFRIGERATING APPARATUS. FRENCH E. DENNISON, Beloit, Wis., assignor to National Refrigeration Corporation, Beloit, Wis., a Corporation of Delaware. Filed July 21, 1926. Serial No. 123,992. 11 Claims. (Cl. 257—250.)

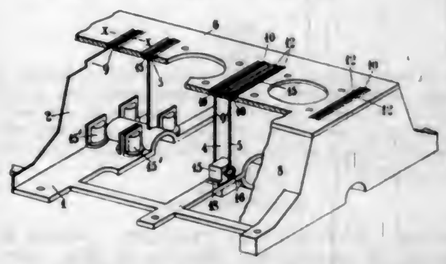
4. A refrigerating unit comprising a casing having a chamber formed therein, said chamber comprising a plurality of uniformly spaced spiral passages of gradually varying pitch whereby said refrigerant is unequally distributed over said unit for maintaining the unit at a uniform temperature throughout.



---

1,694,533. SNAPPING-ROLL CLEANER. THOMAS H. DILLON, Jr., Greeley, Nebr. Filed Jan. 31, 1928. Serial No. 250,813. 6 Claims. (Cl. 180—5.)

1. In a snapping roll cleaner, a plunger, yieldable means to normally elevate said plunger, manually operable means to lower said plunger, and means to automatically tilt said plunger when lowered, for causing the lower end of the plunger to move away from the snapping rolls.



1,694,534. FURNACE ARCH. WILLIAM M. DUNCAN, Alton, Ill. Filed June 13, 1921. Serial No. 477,054. 1 Claim. (Cl. 110—99.)

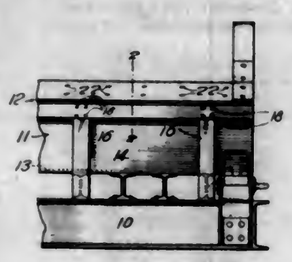
An inclined heat-radiating arch comprising heat-radiating blocks separated from each other to permit expansion thereof, and suspension members, each supporting only one of said blocks, each of said suspension members and the center of gravity of the block supported thereby being vertically alined and at an oblique angle to the face of the block.

---

1,694,535. CRANK AND LIKE CASE. EUGÈNE FEJES, Budapest, Hungary. Original application filed Sept. 5, 1923, Serial No. 661,110, and in Germany Oct. 13, 1922. Divided and this application filed Aug. 12, 1926. Serial No. 128,868. 6 Claims. (Cl. 189—36.)

1. In combination, thin and comparatively thicker plates lying at right angles to one another and connecting means between such plates, said connecting means including a metal block having a screwthreaded hole adapted to be engaged by a connecting screw and narrow welding fillets whereby the block is edge-welded to the plates.

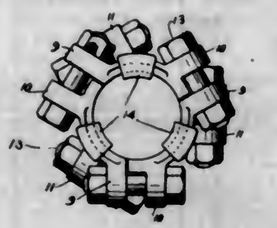
---



1,694,536. ELECTRIC FURNACE. CHARLES B. FOLEY, Fort Wayne, Ind., assignor to Charles B. Foley, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 13, 1920, Serial No. 365,633. Renewed Apr. 14, 1927. 2 Claims. (Cl. 266—1.5.)

1. In a furnace of the tilting type, the combination of a tapping device including movable means for opening and closing the outlet and a gas inlet extending through the side walls of the furnace and so located that, during normal operation, the tapping device is above the surface of the melt while the gas inlet is below the surface of the melt.

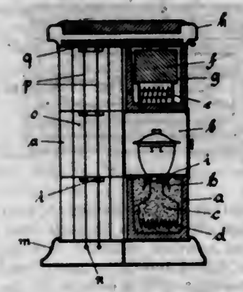
---



1,694,537. BOX-GIRDER CONSTRUCTION FOR CAR BODIES. GEORGE D. FRAUNFELDER, Easton, Pa., assignor to Easton Car & Construction Company, Easton, Pa., a Corporation of Pennsylvania. Original application filed Apr. 25, 1925, Serial No. 25,866, now Patent No. 1,609,807, dated Dec. 7, 1926. Divided and this application filed Nov. 9, 1926. Serial No. 147,232. 4 Claims. (Cl. 105—272.)

1. A reinforcing edge for metallic car bodies comprising, a plurality of transversely spaced supporting beams, each of said beams extending completely along the bottom and sides of the car, conforming to the contour thereof and secured thereto, the outer edge of said body being provided with a transverse and outwardly extending member integrally formed with respect thereto and extending the substantial distance of the thickness of said supporting beams and further provided with an integrally formed and downwardly bent portion and means for securing it to said supporting beams.

---

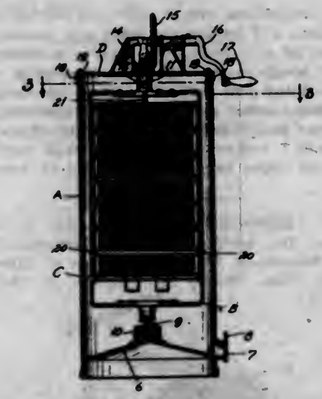


1,694,538. HOSE CLAMP. HOWARD W. GOODALL, Aldan, and JOSEPH W. WALSH, Philadelphia, Pa. Filed June 26, 1928. Serial No. 288,325. 5 Claims. (Cl. 24—19.)

1. A hose clamp including sections circularly arranged and each in the general form of a segment of the wall of a hollow cylinder and each having on one edge tongues and grooves, the ends of some of the tongues and the bottoms of some of the grooves being at different distances from the center line and having on the other edge similar tongues and grooves, the tongues on one edge being opposite the grooves on the other edge whereby tongues match up with grooves in the assemblage, each segment having outwardly extending bolt lugs arranged in parallel transverse planes and the lugs in one plane being staggered in respect to the lugs in another plane, the lugs being disposed at the roots of the tongues and at the bottoms of the grooves and to one side thereof, and bolts engaging the confronting lugs of adjacent sections.

1,694,539. ELECTRICALLY-HEATED TILE STOVE. FRANZ GRAF, Baden, Switzerland. Filed June 26, 1924, Serial No. 722,611, and in Switzerland July 3, 1923. 6 Claims. (Cl. 219—35.)

1. An electrical heating stove comprising a plurality of interchangeable rectangular cup-shaped units, each of said units containing a heating element and being filled with granular material, and a plurality of connecting means on the sides of each of said units coacting with corresponding connecting means on adjacent units.



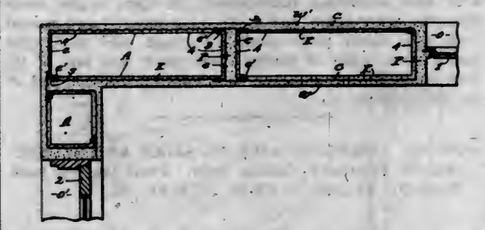
---

1,694,540. SINTERED MAGNESITE BRICK AND METHOD OF MAKING THE SAME. KARL HARR, Horde, Germany. Filed Nov. 10, 1923, Serial No. 674,002, and in Germany Nov. 14, 1922. 3 Claims. (Cl. 106—9.)

1. The method of producing sintered magnesite refractory material, which comprises mixing relatively pure natural magnesite with aniline oil residues and sintering the mixture.

---

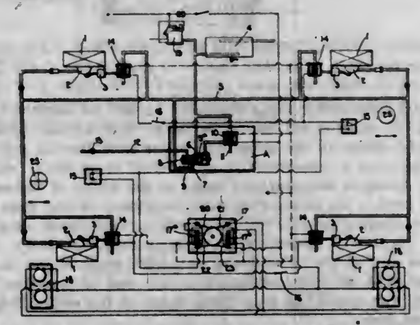
1,694,541. HONEY EXTRACTOR. GEORGE Y. HARRY, Wapakoneta, Ohio. Filed Sept. 3, 1927. Serial No. 217,513. 4 Claims. (Cl. 210—65.)



1. In a honey extractor a rotatable rack; a comb-holding frame pivotally mounted in said rack; and a latch mounted in said rack and arranged to hold said frame in alinement with said rack; with means for rotating said rack.

---

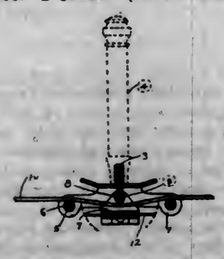
1,694,542. METHOD OF AND MEANS FOR CONSTRUCTING BUILDINGS. VERN D. HEDDEN, Santa Barbara, Calif. Filed May 25, 1926. Serial No. 111,535. 6 Claims. (Cl. 72—16.)



1. The method of constructing a hollow concrete wall which consists in disposing parallel sheets of perforated metal edgewise on a foundation, tying said sheets together and to said foundation, supporting sheets of paper or the like in spaced positions from and on adjacent sides of said

metal sheets to form a backing, and applying a cementitious material to the exterior of and through said metal sheets to form a body of substantial thickness on opposite sides of said metal sheets.

---

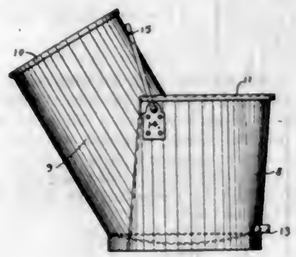


1,694,543. APPARATUS FOR OPERATING AND CONTROLLING THE DOORS OF TRAMWAY OR LIKE VEHICLES. HORACE REGINALD HOCKLEY and HEDLEY BERTRAM WHITE, Slough, England, assignors to The National Pneumatic Company, New York, N. Y., a Corporation of West Virginia. Filed July 26, 1927, Serial No. 208,540, and in Great Britain Sept. 8, 1926. 9 Claims. (Cl. 303—6.1.)

3. In a door control system for vehicles, the combination with door operating motors for the entrance and exit doors of the vehicle, a fluid pressure source, connections between said source and motors including electro-magnetic valves, circuits for said valves including switches operated by the main power controller, an interlock switch included in said circuits and controlled by said switches whereby the exit door is opened automatically when the main power controller is turned to off position, and a fluid pressure operated means connected to said fluid pressure source and in said circuits whereby the doors are free for operation by hand when there is a failure of fluid pressure from the source.

---

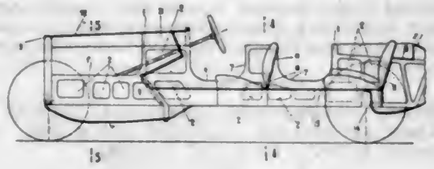
1,694,544. RAZOR-BLADE SHARPENER. CHARLES L. JAMES, San Francisco, Calif. Filed Nov. 4, 1925. Serial No. 66,700. 1 Claim. (Cl. 51—153.)



In a razor blade sharpening device of the character described, a tiltable blade holding carriage, said carriage

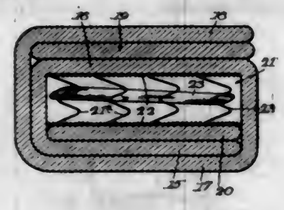
being provided with an under and outer plate adapted for clamping the blade therebetween, the outer plate being hinged to the under plate and the under plate provided with ends extending substantially at right angles away from the outer plate, and a bar lying parallel and spaced from said under plate passing through said ends, said under plate being of spring sheet metal and one of its ends split to form a spring lip overlying the free end of the outer plate.

---



1,694,545. COMBINED MILKING STOOL AND BUCKET. JENS M. JOHANSEN, Omaha, Nebr. Filed Jan. 16, 1928. Serial No. 247,052. 1 Claim. (Cl. 31—51.)

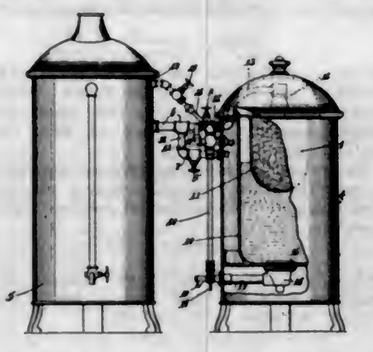
In a combined milking stool and bucket, an upright oval body of sheet-metal having a cover and bottom permanently affixed to the upper and lower ends thereof respectively, and a substantially cylindrical sheet-metal spout of a diameter substantially equal to the width of the body and having its lower rear portion affixed to the body to form continuous side-walls therewith, said spout extending diagonally upward and forward from the body, the upper end of the spout being above the level of the body-cover, and the vertical extent of the line of junction between the spout and body being equal to the entire height of the body.



---

1,694,546. MOTOR CAR. VINCENZO LANCIA, Turin, Italy. Filed May 10, 1923, Serial No. 638,058, and in Italy June 28, 1922. 2 Claims. (Cl. 296—28.)

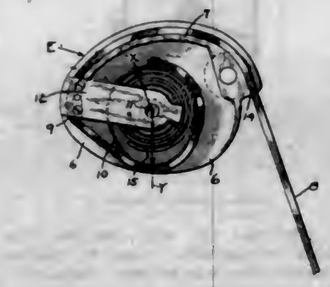
1. Motor car structure comprising two sides of sheet metal extending from end to end of the final structure with flanges along their lower edges in their middle portion, said sides being connected together by transverse members including a radiator frame, seat back supports and a transverse channel member providing space for the car rear axle, and a longitudinal channel member providing passage for a shaft connecting the car engine and rear axle, the edges of said longitudinal channel member forming projecting flanges cooperating with said flanges of said sides for supporting footboards.



1,694,547. PILLOW. FRANCIS KARR, Holland, Mich. Filed Dec. 4, 1926. Serial No. 152,579. 5 Claims. (Cl. 5—337.)

2. In combination, a pad having a body portion provided with wings attached to opposite side edges of said pad in staggered relation, whereby said wings and body portion may be folded into a compact bundle to form a pillow, and a resilient unit enveloped in the folds of said wings and body portion.

---

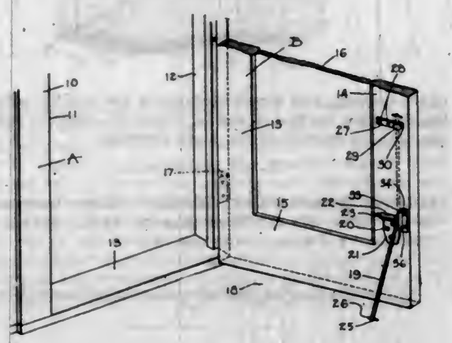


1,694,548. COFFEE URN. HENRY MARCUSON, Chicago, Ill. Filed Feb. 23, 1928. Serial No. 256,154. 4 Claims. (Cl. 53—3.)

1. In combination with a coffee urn having an exterior coffee gauge, a T having the lower arm connected to the upper end of said gauge, the upper arm connected to a source of steam or other pressure exterior to said coffee urn; the third arm connected to an upturned pressure vent having a collar surrounding said vent and extending thereabove; and a delivery tube positioned in the upper arm of said T and extending therethrough into the upper end of said coffee gauge, substantially as described.

---

1,694,549. REBOUND CHECK. NORRIS F. MCNAUGHT, Chicago, Ill., assignor to Cross Manufacturing Company, Woodstock, Ill., a Corporation of Illinois. Filed Dec. 8, 1924. Serial No. 754,502. 7 Claims. (Cl. 267—10.)



1. In combination with a body and a spring support therefor, a rebound check fixedly secured to the one and

having a flexible connection with the other, the rebound check including in its structure a spring-operated cam whereon the flexible connection is adapted to wind, and a friction wall over which the flexible connection is required to travel, the cam having an oval form with its axis of rotation equidistant from the major portion of its periphery, and the flexible connection passing to the wall from the cam at a point of maximum radius when the parts are in normal working position.

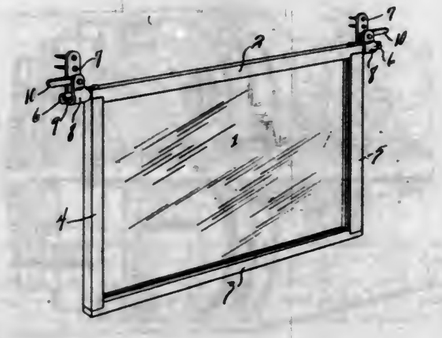
---

1,694,550. DOORSTOP. GUY G. MELLEM, Minneapolis, Minn. Filed July 8, 1927. Serial No. 204,307. 6 Claims. (Cl. 292—338.)

1. A door stop comprising a mounting, said mounting being formed with a transverse bearing, a rod, a pintle formed on said rod and swingably mounted in said bearing, a keeper for engagement with said rod, said rod being laterally movable for engagement with said keeper, said pintle being transversely movable within said bearing to permit of the lateral movement of said rod for engagement with said keeper.

---

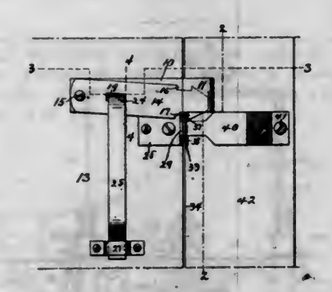
1,694,551. DISPLAY DEVICE. REGINALD B. MELLER, Alameda, Calif., assignor to The Paraffine Companies, Inc., San Francisco, Calif., a Corporation of Delaware. Filed Dec. 26, 1924. Serial No. 758,071. 4 Claims. (Cl. 211—157.)



1. A display device comprising a single sheet having opposite ends joined and provided with creases to form a plurality of panels, and a plane portion forming a mounting for an object, said portion being partially severed from more than one of said panels and united thereto along a crease spaced within the front panel.

---

1,694,552. GLARE SHIELD FOR MOTOR VEHICLES. SAMUEL A. MENCZER, Fort Worth, Tex. Filed May 7, 1927. Serial No. 189,644. 1 Claim. (Cl. 296—84.)

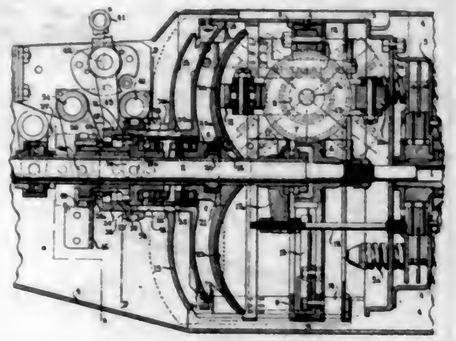


A glare shield for motor vehicles comprising a stained plate and a frame therefor, pivot lugs rigid with said frame and provided with grooves in the ends thereof, hooked bearing brackets for pivotally attaching the shield to a motor vehicle frame, latches adapted to engage the

grooves in said lugs for holding said shield at different positions, and pivot bolts projected through said brackets and their beaks for pivotally connecting said latches to said brackets.

---

1,694,553. BARN AND GARAGE DOOR LATCH. GEORGE R. MOSS and ROBERT D. PARKS, Lohrville, Iowa, assignors to J. J. McCulloch, Pomeroy, Iowa, and Silas C. Sweet, Des Moines, Iowa. Filed Oct. 30, 1926. Serial No. 145,195. 4 Claims. (Cl. 292—236.)

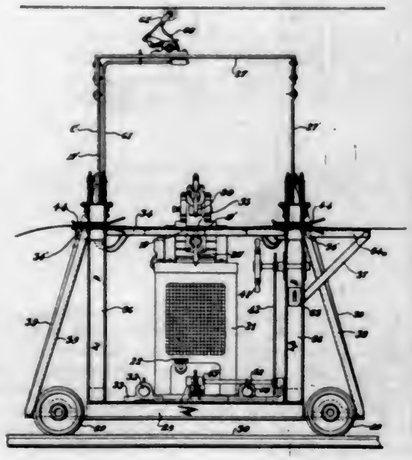


1. A barn and garage door latch, comprising a base plate formed with an opening and a curved, overlapping end portion, a latch plate pivoted on said base plate and formed with a slot extending across said opening at times, one end of said latch being received under said overlapping end portion, a lift member extending through said opening and slot and arranged for oscillation therein, and a handle integral with said lift member and depending from one end portion thereof.

---

1,694,554. VARIABLE-SPEED GEAR AND REVERSE FOR MOTOR VEHICLES AND OTHER MACHINES. HUGH BARTON MURRAY, Wellington, New Zealand. Filed Aug. 10, 1927, Serial No. 212,072, and in New Zealand June 21, 1927. 9 Claims. (Cl. 74—34.)

1. In a speed gear and reverse mechanism for motor vehicles and other machines, comprising a driving shaft, a driven shaft, a rotary member surrounding the latter and adapted to rotate with the driving shaft, skew gears carried by the rotary member and the driven shaft, selectively operative means for preventing relative rotation of the skew gears whereby the driving and driven shaft ro-

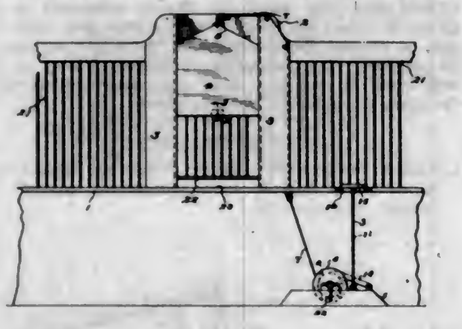


tate together at the same speed, or for driving the skew gearing while the same is being rotated with the driving shaft, so as to vary the speed of rotation of the driven

shaft and means to vary the position of the skew gearing to effect a reversal of the turning movement of the driven shaft.

---

1,694,555. WELDING MACHINE. HARRY M. NAUGLE and ARTHUR J. TOWNSEND, Canton, Ohio, assignors, by mesne assignments, to The Columbia Steel Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Sept. 18, 1926. Serial No. 136,360. 5 Claims. (Cl. 219—4.)



1. A welding machine including a reciprocating carriage, welding means operatively mounted upon the carriage, and strip gripping means operable independent of the welding means, and connected to the carriage.

---

1,694,556. SAFETY DEVICE FOR BANKS. GEORGE W. NEELY, Santa Ana, Calif. Filed Feb. 24, 1927. Serial No. 170,654. 2 Claims. (Cl. 268—2.)

1. In a protective device for banks including a counter, a window frame adjacent the counter, a plate slidable in the frame, a drum, a cable connecting the plate and drum, said counter having an opening therein, means for holding the drum against rotation and the cable wound thereon to normally hold the plate in an elevated position, a tray

in the opening, and means operable by the tray for actuating the drum holding means to release the same to permit the cable to unwind as the plate descends.

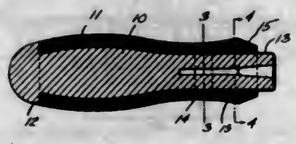
---

1,694,557. FLANGEWAY GUARD. HENRY OETTINGER, Jersey City, N. J. Filed Aug. 3, 1927. Serial No. 210,240. 6 Claims. (Cl. 238—9.)

1. In a track structure the combination with a track rail and a flangeway guard comprising a guard member of standard rolled section and supporting members therefor, consisting of bracket members formed with a bearing opening for the reception of the guard member and having flange bearing portions formed to engage the track rail and a base flange portion adapted for securing the bracket to a tie, and said base flange portion being spaced from the track rail to porvide clearance for the usual tie plates.

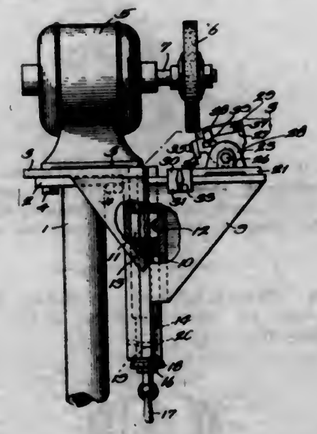
---

1,694,558. TOOL CHUCK. EDWARD J. O'FLAHERTY, Lakewood, Ohio. Filed Sept. 18, 1926. Serial No. 136,254. 7 Claims. (Cl. 279—65.)



1. In a chuck, a body member, a boss on said body member, said boss having a tapered face provided with a plurality of tapering cam faces, said body member being provided with a plurality of tapered faces, the tapered faces of the boss and the body member being formed on the same angle, a plurality of jaws having sliding engagement in a longitudinal direction with the tapered faces of the body member and means on said jaws cooperating with the tapering cam faces for holding said jaws against sliding movement.

---

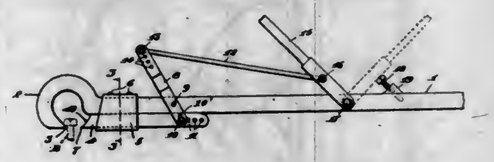


1,694,559. TOOL HANDLE. JOHN L. OSGOOD, Buffalo, N. Y. Filed Dec. 26, 1925. Serial No. 77,677. 12 Claims. (Cl. 145—61.)

12. A tool handle comprising a core of wood or the like having a tang-receiving hole extending in a lengthwise direction from one end, a reinforcing ring surrounding said core at a point over said hole and spaced inwardly from said one end, a ferrule surrounding said core at said one end and extending along said core for some distance, and a grip of plastic material moulded over said core, ring, and inner end of said ferrule, and secured to said core by hardening, the inner end of said ferrule at its periphery having abutments over which said material is moulded to mechanically interlock said ferrule to said grip.

---

1,694,560. MACHINE TOOL. FRANK P. PARISH, Chicago, Ill. Filed Nov. 23, 1927. Serial No. 235,272. 1 Claim. (Cl. 51—220.)



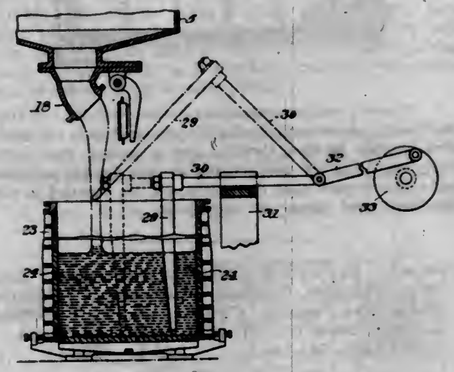
A work support in combination with a screw for adjusting the position of the work support; a block having threaded engagement with the screw and non-rotative engagement with the work support; a bearing sleeve for the screw, said sleeve and screw having interengagement preventing their relative movement longitudinally of their common axis; and a support for said bearing sleeve and in which said sleeve may be turned and with which said sleeve has cam connection enabling said sleeve and screw to be moved simultaneously along their common axis.

---

1,694,561. BOLT AND ROD CUTTER. OLIVER B. PICKETT, Long Beach, Calif. Filed May 31, 1927. Serial No. 195,339. 2 Claims. (Cl. 81—204.)

1. In a rod cutter, an elongated main member provided with a hook-shaped cutting jaw at one end, a slidable jaw to cooperate with said hook-shaped jaw, a guide for said slidable jaw mounted on said main member, an intermediate lever pivoted to said main member and having one of its ends adjustably pivoted to said slidable jaw, a link pivoted to the other end of said lever, a hand lever

pivotally connected near one end with said link, that end of said hand lever being pivotally secured to said main member, and an adjustable stop mounted on said main member to arrest the movement of said hand lever when the cutting elements are in a predetermined proximity to each other.



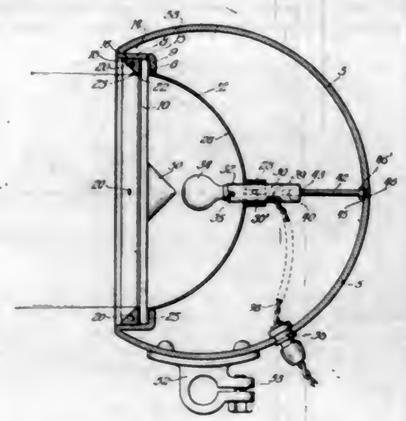
---

1,694,562. PROCESS OF PRODUCING DYEINGS FAST TO LIGHT. PAUL RABE, HERMANN STÖTTER, and BERTHOLD WENK, Leverkusen-on-the-Rhine, and WILHELM SCHERER, Wiesdorf-on-the-Rhine, Germany, assignors to Grasselli Dyestuff Corporation, New York, N. Y., a Corporation of Delaware. Filed Dec. 15, 1926, Serial No. 155,101, and in Germany Dec. 22, 1925. 16 Claims. (Cl. 8—5.)

1. In the process of dyeing fiber the step which comprises precipitating on the fiber by means of an organic fixator a complex acid containing at least one metal of the group including molybdenum and tungsten.

---

1,694,563. METHOD OF MOLDING CERAMIC MATERIALS. DONALD W. ROSS and JAMES M. LAMBIE, Washington, Pa. Filed Feb. 2, 1927. Serial No. 165,324. 13 Claims. (Cl. 25—156.)

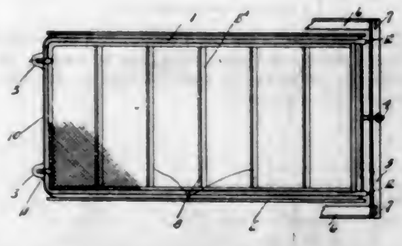


1. The method which comprises introducing deflocculated plastic ceramic material into a mold and simultaneously vibrating the material.

---

1,694,564. LAMP. HARRY W. SISSON, Hammond, Ind. Filed May 16, 1927. Serial No. 191,611. 6 Claims. (Cl. 240—41.)

1. In a lamp, a casing of spherical contour truncated forwardly of its center to form a light projection opening



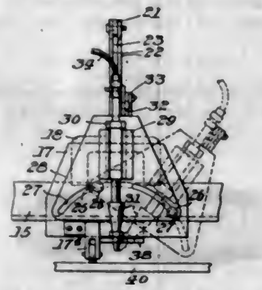
and having an inwardly extending mounting portion, a radial shoulder at the inner end of said inwardly extending

portion, a bezel ring threaded from the front of the lamp into said inwardly extending portion, and a lens clamped between said shoulder and said ring.

---

1,694,565. VIBRATORY SCREEN. LEWIS E. SOLDAN and GEORGE W. BEHNKE, Gladwin, Mich., assignors to Simplicity Engineering Company, a Corporation to be formed with offices at Durand, Mich. Filed Apr. 6, 1925. Serial No. 20,940. 1 Claim. (Cl. 209—275.)

A vibratory screen comprising a substantially rectangular frame, spaced apart slightly crowned bars of graduated heights secured therein, and a woven wire screen stretched thereover and secured to said frame, said bars being so arranged that the screen will be crowned in both horizontal and transverse directions.



---

1,694,566. EXPANDER FOR SEALING RINGS. DEAN M. SOLENBERGER, Cleveland, Ohio, assignor to Simplex Piston Ring Company, Cleveland, Ohio, a Corporation of Ohio: Filed Dec. 31, 1925. Serial No. 78,678. 3 Claims. (Cl. 74—109.)

2. An expander for a sealing ring comprising a resilient ribbon corrugated to form a series of spaced reverse curves having radii selected to produce in the operation of the expander a predetermined radial pressure, and intermediate portions tangent to said curves inversely variable to the radii thereof to maintain a substantially constant spacing between centers of curves.

1,694,567. METAL-CUTTING APPARATUS. SAMUEL BLAINE STINE, Osceola Mills, Pa. Original application filed June 25, 1926, Serial No. 118,506. Divided and this application filed Jan. 19, 1928. Serial No. 247,837. 5 Claims. (Cl. 266—23.)

1. Flame cutting apparatus for operating upon metal plates and the like, comprising a support, a slide plate mounted for vertical movement on said support, a second plate tiltably adjustable on the slide plate, a torch carried by the second plate, and means for moving said torch with respect to the last-named plate, in a direction parallel to the axis of the torch.

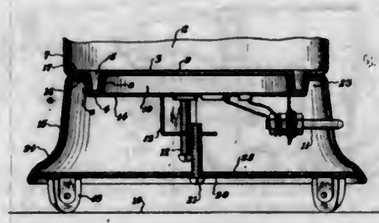
---

1,694,568. AZO DYES AND PROCESS OF MAKING SAME. HERMANN WAGNER, Soden-on-the-Taunus, and HEINZ EICHWEDE and ERICH FISCHER, Hochst-on-the-Main, Germany, assignors to Grasselli Dyestuff Corporation, New York, N. Y., a Corporation of Delaware. Filed Dec. 22, 1925, Serial No. 77,097, and in Germany Aug. 6, 1923. 6 Claims. (Cl. 260—70.)

5. As new products the dyestuffs of the general formula:

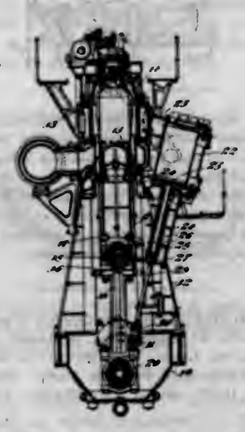
wherein R represents a non-sulfonated phenyl group, R' a non-sulfonated aryl residue, and X a non-sulfonated residue of the group including the benzene and naphthalene series being substituted by at least one auxochromic group.

---



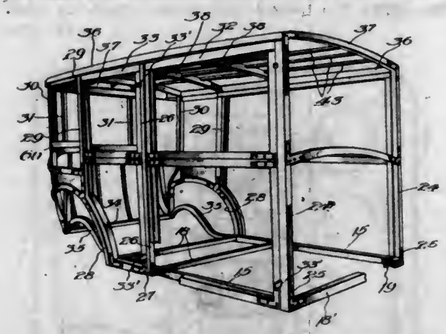
1,694,569. SWITCH. ARTHUR E. WALSH, Chicago, Ill. Filed Sept. 14, 1925. Serial No. 56,128. 5 Claims. (Cl. 200—67.)

1. A switch comprising, in combination, an open-top casing of insulating material, a metallic member bridging the top of said casing and having an ear depending into said casing, a spring carried between bearing surfaces on said ear, said bearing surfaces being spaced apart less than the length of said spring, an operating handle connected with said spring and extending beyond the top of said casing, a relatively stationary contact member mounted in said casing, and a relatively movable contact member operatively connected with said spring and adapted by the operation of said handle to be snapped into and out of contact with said relatively stationary contact member.



1,694,570. ENAMELED ELECTRIC PERCOLATOR. VERNER WATTS, Alliance, Ohio, assignor to The Sebring Manufacturing Corporation, Sebring, Ohio, a Corporation of Ohio. Filed Nov. 16, 1927. Serial No. 233,622. 5 Claims. (Cl. 53—3.)

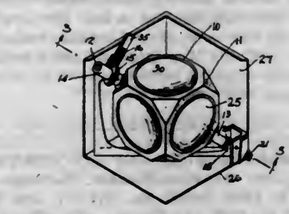
1. A pot including a tubular side wall and a bottom wall, a tubular base secured at its upper end to the pot and spacing the pot bottom wall above its lower end, a water leg formed in the pot bottom and depending downwardly therefrom, the outer wall of the water leg being spaced inwardly from the tubular walls of the pot and base, and the inner wall of the water leg and a central plate of the pot bottom forming a downwardly opening cup, and a heating unit fitting snugly in the cup.



---

1,694,571. COMPRESSOR DRIVE MECHANISM. ARTHUR JACKSON WEST, Bethlehem, Pa., assignor to Bethlehem Steel Company, Bethlehem, Pa. Filed Sept. 25, 1925. Serial No. 58,644. 2 Claims. (Cl. 123—72.)

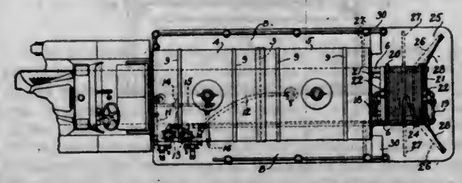
1. An internal combustion engine comprising an engine frame, a cylinder carried by the frame, a piston in the cylinder, cross head guides carried by the frame, a cross head connected to one end of the piston and fitting the guides, a crank shaft, a connecting rod pivotally connected to the cross head and to the crank shaft, a compressor cylinder disposed laterally of the engine cylinder and inclined toward the crank shaft, guides carried by said frame structure and arranged parallel to the axis of the compressor cylinder, a piston in the compressor cylinder, a piston rod connected to the compressor piston, a cross head carried by the outer end of said compressor piston rod and fitting the inclined guides, and a link pivotally connected at one end to the connecting rod between the cross head and crank shaft bearings and pivotally connected at its other end to the cross head of said compressor piston rod.



1,694,572. CLOSED ROAD-MOTOR-VEHICLE BODY. CHARLES TESRES WEYMANN, Paris, France. Filed Mar. 27, 1925. Serial No. 18,714. 14 Claims. (Cl. 296—28.)

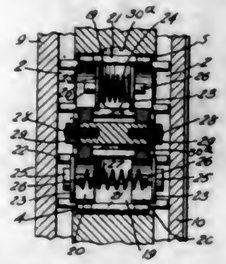
1. In a road motor vehicle body, the combination of vertical posts, and a roof structure comprising side rails supported on said posts, a plurality of cross bows having grooves, fabric covering the cross bows, longitudinal pieces positioned over said fabric and in said grooves, padding distributed over said fabric, and a top finishing fabric stretched over said padding.

---



1,694,573. SIGNAL MECHANISM. EDWARD N. WINSLOW, Shaker Heights, Ohio. Filed Apr. 5, 1927. Serial No. 181,253. 12 Claims. (Cl. 116—63.)

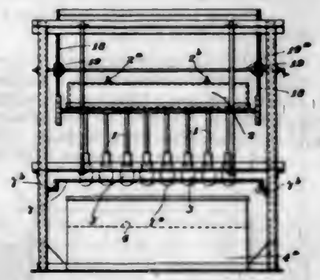
1. In a signal mechanism, the combination of a supporting frame and a signaling element pivotally mounted in said supporting frame about an axis extending therethrough, said element being provided with adjoining faces lying in planes at identical angles with respect to said axis, and said axis being so disposed with respect to said faces that upon rotation it will bring said faces successively into substantially vertical planes.



---

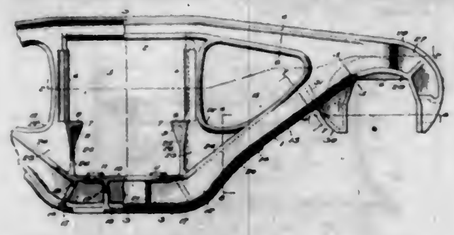
1,694,574. MOTOR FIRE APPARATUS. WILLIS D. WITTER and JAMES A. HARTE, Utica, N. Y., assignors, by mesne assignments, to American La France and Foamite Corporation, a Corporation of New York. Filed Aug. 10, 1925. Serial No. 49,234. 2 Claims. (Cl. 169—24.)

1. A motor-propelled foam fire-extinguishing apparatus comprising in combination with a motor vehicle chassis, a two-compartment tank structure secured thereon with its center of gravity in advance of the rear wheels of the vehicle, a twin hose reel mounted in rear of said structure, a power driven pump, pipe lines connecting the tank compartments, pump and hose and a step platform depending from the chassis and extending beyond the side and end of the hose reel to provide access thereto either from the sides thereof or the rear end of the vehicle.



1,694,575. PUMP. ZENAS P. ADAMS, Little Falls, N. Y., assignor to D. H. Burrell & Co., Inc., Little Falls, N. Y. Filed Feb. 17, 1927. Serial No. 168,962. 3 Claims. (Cl. 103—175.)

1. In a pump or the like, a casing having a plurality of bores from end to end, one of said bores forming a pump cylinder and another bore a valve pocket, a cover closing each end of the casing and permitting communication between corresponding ends of said bores, said casing having a passage leading to said valve pocket intermediate of its ends, a valve unit disposed in said valve pocket, and means carried by the ends of said casing, engaging with said unit, and confining it within said valve pocket independently of said covers to permit removal of either cover without releasing said unit.



---

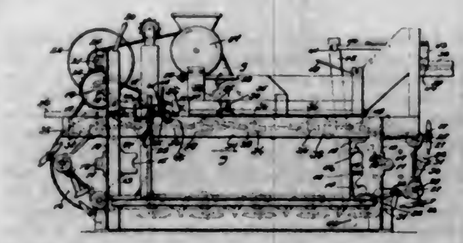
1,694,576. MANUFACTURE OF CONFECTIONERY. WILLIAM ERNEST BAMFORD, Belfast, Northern Ireland. Filed Sept. 9, 1926, Serial No. 134,474, and in Great Britain Sept. 17, 1925. 23 Claims. (Cl. 107—1.)

7. A device for the manufacture of confectionery comprising an expansible and contractible member, means whereby said member may be expanded and contracted, a vessel adapted to contain soft confectionery material, mechanism for lowering said member into said confectionery material and for raising the said member, with a coating of confectionery material adhering thereto, clear of said vessel and an uprising flange on said member adapted to form an opening in said adhering confectionery material.

1,694,577. SIDE FRAME. DONALD S. BARROWS, Rochester, N. Y. Filed Aug. 20, 1927. Serial No. 214,303. 17 Claims. (Cl. 105—205.)

1. A side frame comprising a compression member, a tension member, struts interposed therebetween and spaced to leave a bolster opening, and stop portions extending toward each other from intermediate portions of said struts and comprising horizontal flanges serving as emergency supports for the bolster, said flanges being reinforced with respect to the struts by webs depending therebeneath and tapering to merge into said struts.

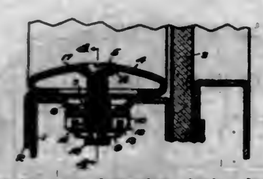
---



1,694,578. SWITCH. EARL T. BENNINGTON, Cleveland Heights, Ohio, assignor to The Cleveland Crane & Engineering Company, Wickliffe, Ohio, a Corporation of Ohio. Filed July 2, 1927. Serial No. 203,063. 6 Claims (Cl. 104—102.)

1. A switch for overhead carrier systems comprising a supporting frame having a track section bodily movable laterally thereon to and from a position bridging the space between ends of fixed tracks, and a fixed safety rail substantially parallel with said track section when the same is in bridging position and positioned to cooperate with a carrier passing over said section to prevent movement of the section away from bridging position.

---



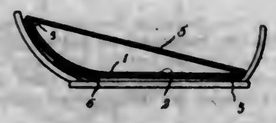
1,694,579. MACHINE FOR FORMING PLASTIC TILE. HOLDEN BROCK, St. Louis, Mo., assignor of one-half to James Brock, St. Louis, Mo. Substitute for application Serial No. 89,013, filed Feb. 18, 1926. This application filed Oct. 17, 1927. Serial No. 226,830. 7 Claims. (Cl. 25—42.)

1. In a machine of the class described the combination of a conveyor, a normally open-bottomed receptacle, palettes supported by the conveyor to form a bottom for the receptacle, a packer, a dam, a trowel, and a perforating device.

1,694,580. SHIFTABLE NUT FASTENING. FRED S. N. Y., assignor, by mesne assignments, to The Texas Company, Cambridge, Mass., a Corporation of Maine. Filed July 22, 1925. Serial No. 45,279. 4 Claims. (Cl. 85—32.)

1. A shiftable nut fastening device including a nut holder having resilient means for engagement with a suitable support and a shiftable nut assembled with said nut holder, said nut having a boss cooperating with lugs presented by said holder for limiting cross-wise movement of said nut relative to said resilient means.

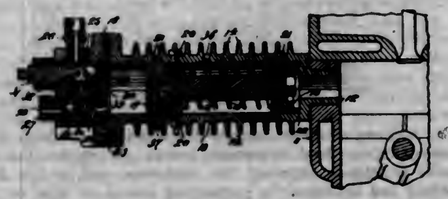
---



1,694,581. DEVICE FOR SHARPENING THE POINTS OF PENCILS. RAMON MARPONS CATÁ, Barcelona, Spain. Filed Dec. 23, 1927. Serial No. 242,241. 1 Claim. (Cl. 120—89.)

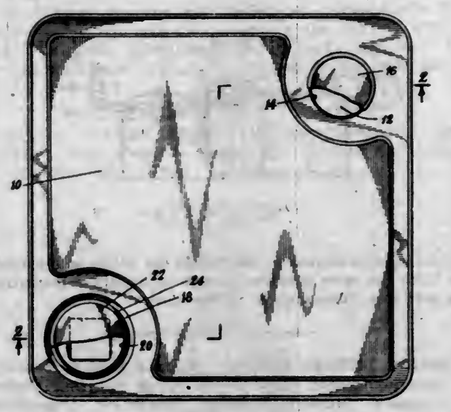
A device for sharpening leads of propelling pencils, comprising in combination a pair of hingedly connected metal jaws having each on the inner side a layer of abrading material, a rearward extension of each jaw bent in outward direction, a spring on the hinge connecting said two jaws the ends of said spring bearing against said extensions to spread the same, and an adjusting screw guided in one of said jaws and in the coating layer of the same adapted to adjust the angle at which said jaws open.

---



1,694,582. ARCH SUPPORTER. MILTON E. CHRISTIANSON, Jasper, Minn. Filed Apr. 16, 1928. Serial No. 270,345. 4 Claims. (Cl. 36—71.)

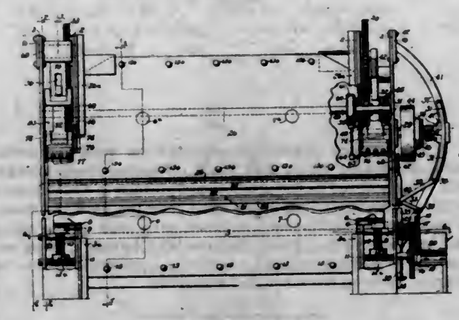
1. An arch supporter comprising a resilient frame, an elastic web folded around the frame and means for adjustably connecting the ends of the web.



---

1,694,583. AIR COMPRESSOR. ROSCOE D. CONKLIN, N. Y., assignor, by mesne assignments, to The Texas Company, New York, N. Y., a Corporation of West Virginia. Filed Dec. 23, 1924. Serial No. 757,582. 2 Claims. (Cl. 230—50.)

1. In an air compressor, a single cylinder, a double headed piston member in said cylinder, means mounted between the heads of said member for tensioning said double headed piston in one direction, and means for alternately opening and closing one end of said cylinder to the atmospheric air.

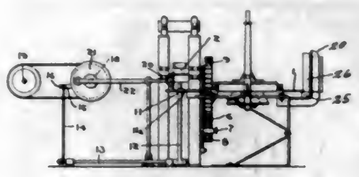


1,694,584. CONTAINER. RALPH CULLINAN, Richmond, N. Y., assignor, by mesne assignmens, to The Texas Company, New York, N. Y., a Corporation of Delaware. Filed May 19, 1926. Serial No. 110,081. 1 Claim. (Cl. 220—27.)

In a can top having a filling and pouring opening and a permanent closure therefor, a restricted area in the top of the can indicated by a depression spaced from the permanent closure and adapted to be punctured to provide a temporary refilling opening, a rim around the inner edge of the depression, and a cap adapted to fit over said rim and to be permanently secured thereon to close and conceal the temporary refilling opening.

---

1,694,585. BENDING MACHINE FOR BENDING PLATES OR STRIPS OF SHEET METAL. HERMAN C. DREIS, Chicago, Ill. Filed Aug. 19, 1925. Serial No. 51,242. 10 Claims. (Cl. 153—21.)

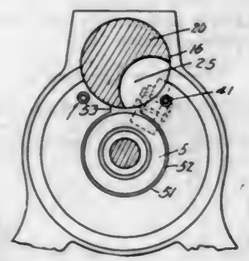


1. In a bending machine, parallel vertical plates, connecting pins extending through said plates, means to vertically adjust and maintain said plates in adjusted position, in combination with a die mounted on the upper edges of the outside ones of said plates, additional plates, connecting pins extending through said additional plates, a die mounted on the lower edge of the middle one of said additional plates, and means to move the said additional plates vertically.

---

1,694,586. BRICK DELIVERING AND STACKING MEANS. LAURITZ NEILSEN DYHRBERG, Ashburton, New Zealand. Original application filed July 15, 1921, Serial No. 485,008, and in New Zealand Aug. 5, 1920. Divided and this application filed Nov. 8, 1924. Serial No. 748,702. 4 Claims. (Cl. 214—6A.)

1. Apparatus for dealing with bricks including in combination a hinged tray receiving bricks on the flat; a tiltable



surface; means for tipping said tray and means for delivering the bricks on end and in rows on to said surface; a stop on said tiltable surface opposite the means delivering

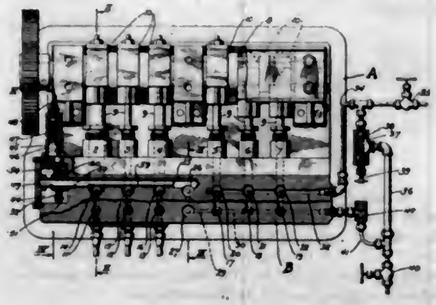
bricks in rows thereonto; and means for tilting said surface to bring the rows of bricks thereon into stacked formation on said stop, substantially as described.

---

1,694,587. ROTARY ENGINE. WILLIAM ELRICK, Toronto, Ontario, Canada, assignor to Elrick Rotating Engine Company, Limited, Toronto, Canada, a Corporation of Ontario. Filed Nov. 8, 1926. Serial No. 147,168. 3 Claims. (Cl. 121—71.)

1. In a rotary engine, the combination with the annularly chambered stator and shaft extending therethrough, of a rotor secured to the shaft and contained in the chamber of the stator, a revolving abutment coacting with the rotor, a packing ring interposed between each side of the rotor and the wall of the stator chamber and having a wing extension extending radially therefrom opposite the line of contact between the rotor and abutment.

---

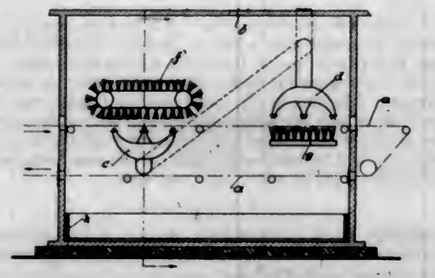


1,694,588. METHOD OF CURING CONCRETE. DOZIER FINLEY, Berkeley, and WILLIAM LAUREN RHOADES, San Francisco, Calif., assignors to The Paraffine Companies, Inc., San Francisco, Calif., a Corporation of Delaware. Filed Oct. 4, 1924. Serial No. 741,759. 5 Claims. (Cl. 94—24.)

2. The method of curing concrete which comprises overlaying the surface with a porous sheet containing water and covering said sheet with an impervious sheet.

---

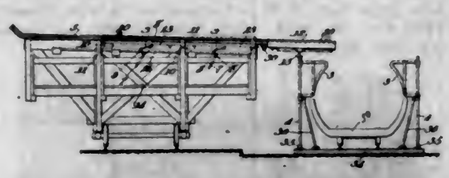
1,694,589. EMULSIFYING APPARATUS. GEORGE LEANDER FISH, Los Angeles, Calif., assignor to Raymond Salisbury, trustee, Oakland, Calif. Filed Nov. 25, 1925. Serial No. 71,505. 7 Claims. (Cl. 259—98.)



1. An apparatus for emulsifying liquids and the like, comprising means for measuring the liquids to be emulsified, means for mixing and impregnating the liquids with an expansible fluid, means for subjecting the impregnated mixture to high pressure, a discharge through which the mix-

ture is liberated and expanded, and means whereby a predetermined pressure on the impregnated mixture regulates delivery of the fluid and liquids to the apparatus.

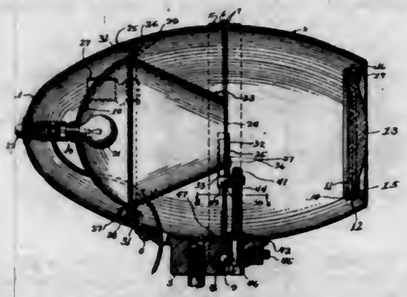
---



1,694,590. DEVICE FOR DISPOWDERING CONFECTIONERY. CARL GÖPEL, Halle-on-the-Saale, Germany. Filed Jan. 21, 1927, Serial No. 162,612, and in Germany Jan. 28, 1926. 3 Claims. (Cl. 107—44.)

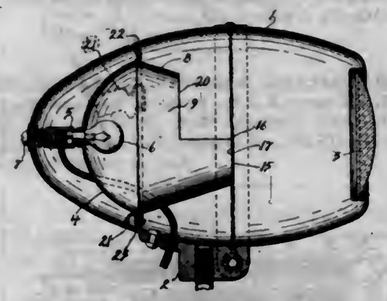
1. A device of the character described for dispowdering pralines and the like comprising an endless travelling sifting apron for carrying the articles, air-blasts arranged so as to play on said apron from opposite sides of the same, and a resilient support for the articles arranged opposite each air-blast.

---



1,694,591. DUMPING TABLE. WILLIAM H. GRADY, Louisville, Ky., assignor, by mesne assignments, to American Creosoting Company, a Corporation of Delaware. Filed June 29, 1927. Serial No. 202,312. 6 Claims. (Cl. 214—41.)

1. A dumping table adapted for handling railroad ties comprising inclined skidways, means for supporting a series of rollers adjacent the skidways, and means for raising and lowering the supporting means to raise or to depress the rollers above the tops of the skidways, the rollers being mounted in frames, and comprising inclined bearing plates, feet on the frames resting on the bearing plates, and means for moving the frames to and fro to thereby raise and lower the frames.



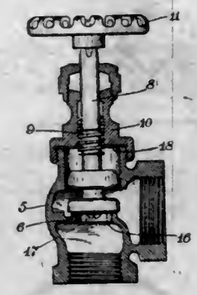
1,694,592. LAMP. RICHARD GRAF, South Bend, Ind., assignor to Graf-Lite Corporation, Chicago, Ill., a Corporation of Illinois. Filed July 29, 1926. Serial No. 125,634. 3 Claims. (Cl. 240—41.)

1. In a lamp the combination of a casing, a forwardly facing cup reflector in the casing and provided with an exterior circumferential flange of angular radial section, a tubular light shield in the casing in front of the reflector and provided with an exterior circumferential flange of corresponding angular radial section adapted to engage against said flange of the reflector to form a light tight joint therewith, a plurality of brackets spaced about said flanges and secured to the interior of said casing and interiorly grooved circumferentially about said flanges, and a retractable spring ring engageable in the groove of said brackets for securing said flanges in overlying relation on said brackets for the mounting of the reflector and shield.

---

1,694,593. LAMP. RICHARD GRAF, South Bend, Ind., assignor to Graf-Lite Corporation, Chicago, Ill., a Corporation of Illinois. Filed July 29, 1926. Serial No. 125,650. 2 Claims. (Cl. 240—41.)

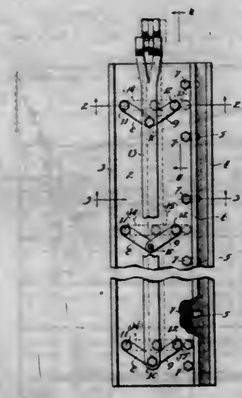
1. In a lamp of the character described, the combination of a casing open at its front end, a forwardly facing light concentrating cup reflector mounted rearwardly in said casing, an incandescent electric lamp located in the axis of the reflector so as to have its rays converged by said reflector forwardly thereof, a condensing lens mounted forwardly on the casing in axial alinement with the reflector and having its rear focus forwardly of said reflector and lamp at a point of convergence of said rays, and an opaque light shield extending about the focal axis of the lamp below the same between said lens and eflector and extending and enlarging rearwardly from the transverse plane of the rear focus of said lens with a generally semi frusto-conical interior reflecting surface and having a vertical transverse portion at the transverse plane of said rear lens focus and presenting a horizontal lower shield edge adjacent said rear lens focus, said transverse portion having an opening on one side thereof below said lower shield edge, said shield permitting free emanation of the light above the focal axis of the lamp at and rearwardly adjacent said transverse plane.



1,694,594. PROCESS FOR THE PURIFICATION OF GASES TO BE USED IN THE PRODUCTION OF AMMONIA. BIRGER FJELD HALVORSEN, Oslo, Norway, assignor to Norsk Hydro-Elektrisk Kvaelstofaktieselskab, Oslo, Norway. Filed Feb. 3, 1927, Serial No. 165,762, and in Norway Feb. 25, 1926. 2 Claims. (Cl. 23—7.)

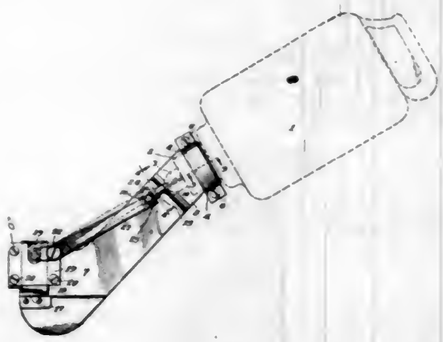
1. Process for the purification of hydrogen-nitrogen mixtures, which consists in washing the mixture with a liquid ammonia containing inorganic salts capable of reacting with water, carbon dioxide and carbon monoxide.

---



1,694,595. VALVE. JESSE C. HOWARD, Columbus, Ohio. Filed May 5, 1927. Serial No. 189,139. 3 Claims. (Cl. 251—46.)

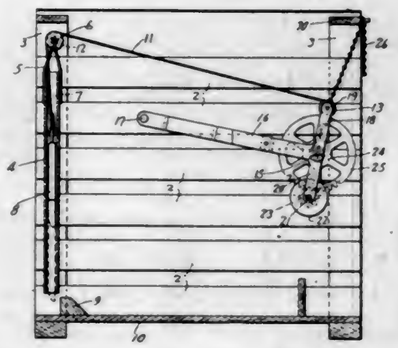
1. In a device of the kind described, a valve stem having a flanged swiveling head, and a valve head recessed to receive said stem head, the wall of said recess above the bottom thereof provided with an annular groove, the material of the recessed portion of said head above the annular recess pressed into retaining swiveling engagement with said swiveling head.



---

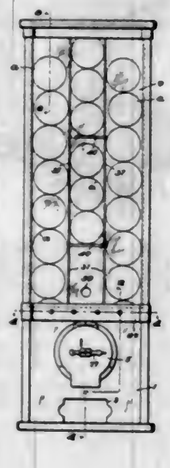
1,694,596. MACHINE FOR CLOSING THE FOLD OF A SHEET OF METAL. THOMAS J. KELLEHER, Chicago, Ill. Filed May 16, 1927. Serial No. 191,887. 5 Claims. (Cl. 153—21.)

2. A beam having a vertical member and a horizontal member in combination with an additional beam having a vertical member and a horizontal member movably mounted on said first named beam, a plurality of slots in said first named beam and bolts extending through said slots and into the horizontal member of said additional beam, and means to move said additional beam laterally to control the relative position of said vertical members of said beams.



1,694,597. ELECTRICAL SHEET-METAL CUTTER. THOMAS J. KELLEHER, Chicago, Ill. Filed Dec. 12, 1927. Serial No. 239,549. 4 Claims. (Cl. 164—75.)

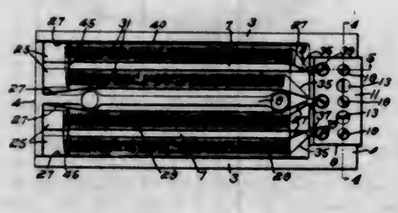
3. In an electrical sheet metal cutter, in combination, a base, a clamp rigidly attachable to the shell of an electric motor, means to removably attach said base to said clamp, said means to attach comprising a co-acting groove and rib on said base and clamp, a slot on said base, a screw threaded bolt, and a nut on said bolt.



---

1,694,598. DOOR FOR HOGPENS. JACOB W. LAFFERTY, Mechanicsburg, Ohio, assignor of one-half to John M. Lafferty, Mechanicsburg, Ohio. Filed Apr. 24, 1928. Serial No. 272,489. 11 Claims. (Cl. 119—15.)

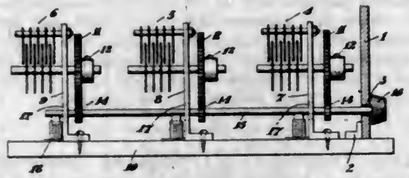
1. In a structure of the character described, a door, a latch for said door, and means for moving said latch progressively to or from its latching position by animals passing therethrough independently of the position of said door.



1,694,599. VENDING MACHINE. CHARLES LEA, Boston, Mass., assignor to The Automatic Merchandizer, Inc., Boston, Mass., a Corporation of Delaware. Filed Feb. 3, 1922. Serial No. 533,859. 20 Claims. (Cl. 312—84.)

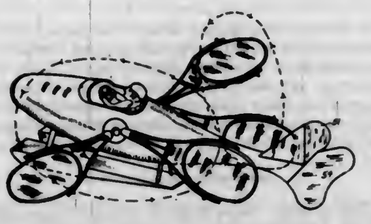
1. A vending machine having, in combination, a plurality of hoppers for the articles to be vended, a plurality of mechanisms operative to permit discharge of articles from said hoppers, actuating means for said mechanisms comprising Geneva-stop-motion-means connecting said mechanisms to each other, and a single operating member for said Geneva-stop-motion-means.

---



1,694,600. ELECTRIC RESISTANCE HEATING ELEMENT. HOWARD S. LEE, Peabody, Mass., assignor to Jasper Marsh, Danvers, Mass. Filed Feb. 12, 1927. Serial No. 167,687. 6 Claims. (Cl. 219—19.)

1. An electric resistance heating unit having, in combination, casing means providing parallel, elongated chambers separated by a wall of electrically conductive material, the latter formed to provide a transverse passage establishing communication between said chambers at one of the corresponding end portions thereof, coils of resistance wire extending lengthwise of said chambers, a coil engaging member of heat refractory insulating material for holding said coils under tension, said member extending through said passage and resting against the walls thereof, and a filler of heat refractory insulating material in said chambers insulating the turns of said coils from each other and spacing the coils from the walls thereof.



1,694,601. CONTROL MECHANISM FOR RADIO APPARATUS. ROBERT J. MARTIN, North Asbury Park, N. J., assignor to B. M. C. Patent Company, Trenton, N. J., a Corporation of New Jersey. Filed Dec. 16, 1925. Serial No. 75,731. 5 Claims. (Cl. 74—7.)

1. In a control mechanism for radio apparatus, a plurality of substantially aligned elements separately mounted, a driven member affixed to each of said elements, a common operating shaft having driving members thereon adapted to coact with said driven members, said shaft being mounted in resilient members to maintain coaction between said driving members and driven members.

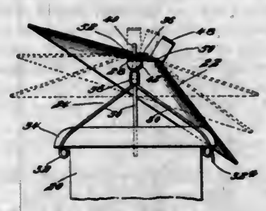
---

1,694,602. PROPULSION MEANS FOR AIRCRAFT OR THE LIKE. RICHARD NUTTALL, Sydney, New South Wales, Australia. Filed Apr. 13, 1926, Serial No. 101,788, and in Australia Mar. 11, 1925. 8 Claims. (Cl. 244—16.)

8. Propulsion means of the character described comprising a plurality of wings, a hub bracket carrying said wings, means to rotate said hub bracket, and means in engagement with said first means to revolve the wings upon rotation of the hub bracket.

---

1,694,603. COMBINATION FOUNTAIN PEN AND CIGARETTE HOLDER. UMBERTO PIAGNERI, San Francisco, Calif. Filed Oct. 24, 1925. Serial No. 64,494. 6 Claims. (Cl. 120—42.)



1. An article of manufacture comprising a barrel having an ink containing chamber formed therein; a head member on each end of the barrel and forming closures for the ink chamber; one head adapted to carry a pen; a mouth piece on the opposite head; means whereby a cigarette may be supported with relation to the first named head and means whereby smoke is conveyed from the cigarette supporting means to the mouth piece.

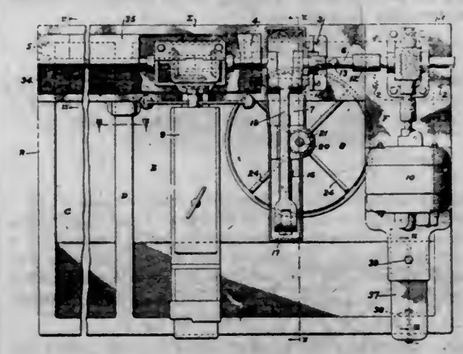
---

1,694,604. HEAT-DEFLECTION SHIELD. GEORGE E. RYAN, Taunton, Mass. Filed Sept. 8, 1926. Serial No. 134,169. 16 Claims. (Cl. 126—96.)

1. A device for deflecting heat from a heating unit, comprising a hood support adapted to be attached to said unit and terminating in a roughened upper end, a hood attachable to said support in any angular desired position and having a centrally roughened support engaging portion and

means on said hood and support to limit the tilting movement of said hood to a single plane at any degree of tilt up to substantially 45° to the horizontal.

---

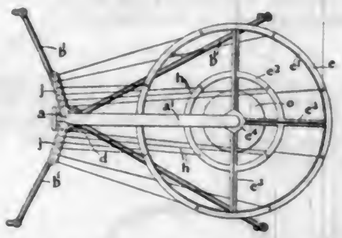


1,694,605. TESTING LAMP FOR HEAVY CURRENT INSTALLATIONS. JOHANNES FRANCISCUS SCHLEPER, Amsterdam, Netherlands. Filed Sept. 10, 1923, Serial No. 661,851, and in the Netherlands Sept. 12, 1922. 1 Claim. (Cl. 200—115.5.)

In an electrical testing lamp, a separable two part plug of insulating material containing a safety fuse, a movable pin having a plate at the inner end, and a conducting spring betwen the fuse and plate whereby the pin is urged outwardly.

---

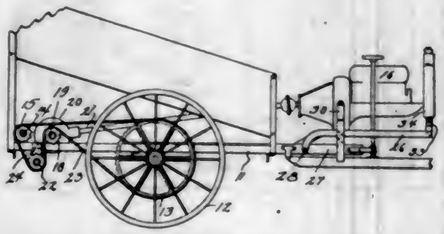
1,694,606. WASHING MACHINE. FRANK B. SCHUYLER, Berkeley, Calif; Ella S. Schuyler executrix of said Frank B. Schuyler, deceased. Filed Nov. 1, 1926. Serial No. 145,536. 5 Claims. (Cl. 68—15.)



1. In a washing machine of the character described, a base member consisting of a longitudinally extending base section, a second section extending at right angles thereto, said section being detachably secured to permit it to assume a right angle position at either side of the first named base section, a drive shaft extending from end to

end of the first named section and journalled thereon, a driving motor carried by the second named section and adapted to transmit power to the driving shaft, an arm journalled on the first named section at right angles thereto and adapted to be swung from a vertical to a horizontal position on either side of the first named section, a shaft journalled in the arm and assuming a vertical position when the arm assumes either of its horizontal positions, means whereby an oscillating movement is transmitted to said shaft from the drive shaft in either horizontal position of the arm and an impeller connected to and driven by said shaft.

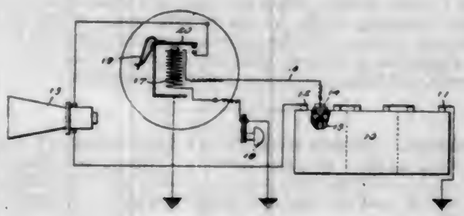
---



1,694,607. APPARATUS FOR WAVING OR CURLING THE HAIR. EUGÈNE FRANÇOIS SUTER, London, England. Filed July 9, 1925. Serial No. 42,487, and in Great Britain June 18, 1925. 4 Claims. (Cl. 132—36.)

1. Apparatus for waving or curling the hair, comprising a stand adapted to support the whole of the said apparatus from the ground, a supporting member at the upper part of the said stand, the said supporting member extending outward laterally to overhang from the said stand and adated for the support of a number of separate movable flexible members, the said separate movable flexible members suspended from the said supporting member, electrical heaters respectively depending from one end of the said movable flexible members beneath the said supporting member, means upon the said stand for the support of the said movable flexible members in position adjacent the said stand at their ends opposite to those from which the said electric heaters respectively depend and are supported in position adjacent to each other and away from the said supporting member, counterweights respectively carried at the said adjacent ends of the said flexible members, and juxtaposed and substantially vertically disposed guideways upon and in position adjacent the said stand, within which guideways the said counterweights respectively slide on the arising or lowering of the respective heaters, substantially as described.

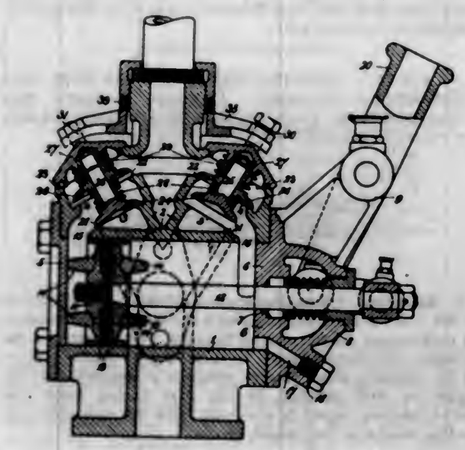
---



1,694,608. POWER ATTACHMENT FOR CORN PICKERS. KINNEY TJOSSEM, Paullina, Iowa. Filed Feb. 23, 1928. Serial No. 256,264. 1 Claim. (Cl. 180—53.)

In combination with a corn picking vehicle having travel wheels, a bull sprocket, a frame including spaced longitudinal rails, a power receiving shaft journalled upon said frame, just above the rails, parallel to the main wheel axis, and spaced from the wheels, and a driven sprocket on said shaft, a power drive attachment comprising an automobile power plant and transmission mounted upon the frame, the rear axle housing thereof being secured transversely upon the rails, a power drive sprocket secured to the rear axle of said transmission and aligned with the driven and bull sprockets, an idler sprocket mounted on the frame below and between the power drive and driven sprockets, and a chain travelling around and under the bull sprocket, thence over the drive sprocket, thence under the idler sprocket, thence around and over the driven aprocket, and thence back to the bull sprocket.

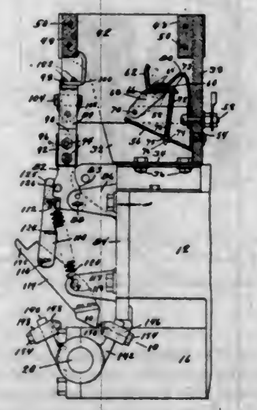
---



1,694,609. BATTERY WATER-LEVEL INDICATOR. LELAND ROSS WILLITS, Atlantic City, N. J. Filed Dec. 10, 1927. Serial No. 239,203. 3 Claims. (Cl. 136—182.)

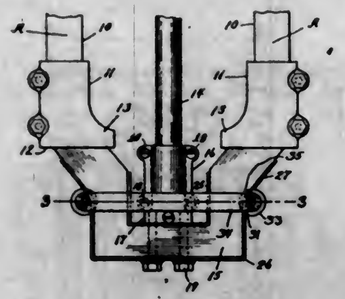
1. In combination with a vehicle having an electrically operated audible signal, a normally open circuit for the signal including a secondary battery and a relay, an operating circuit for the relay including said secondary battery and a normally open switch, the operating circuit of the relay opening exteriorly to said switch upon a predetermined lowering of the level of the electrolyte of the secondary battery.

---



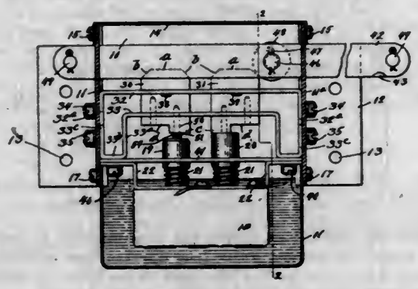
1,694,610. PUMP. JEAN ZWICKY, London, England. Filed Aug. 11, 1923, Serial No. 656,934, and in Great Britain Apr. 3, 1923. 5 Claims. (Cl. 108—175.)

1. In a pump a cylinder body, comprising a cylinder proper, inlet and outlet fittings, and seatings for tappet valves, the machined surfaces of said seatings being at right angles to lines meeting in a common point on the cylinder axis.



1,694,611. AUXILIARY SWITCH. CHESTER D. AINSWORTH, Wollaston, Mass., assignor, by mesne assignments, to Condit Electrical Manufacturing Corporation, Boston, Mass., a Corporation of Massachusetts. Filed Feb. 26, 1925. Serial No. 11,887. 22 Claims. (Cl. 200—15.)

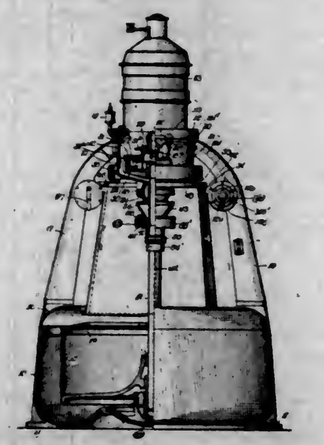
1. An electric switch having the combination of a pivoted switch arm, operating mechanism therefor including a toggle connected with said arm, means including a spring arranged to hold said toggle releasably in overshot position, an operating member for said operating mechanism arranged to move said toggle positively both into and out of overshot position, and means providing a movement of said switch arm independently of said operating member including a lost-motion connection between said operating member and one of the members of said toggle.



---

1,694,612. CONTACT STRUCTURE FOR ELECTRIC SWITCHES. CHESTER D. AINSWORTH, Wollaston, Mass., assignor, by mesne assignments, to Condit Electrical Manufacturing Corporation, Boston, Mass., a Corporation of Massachusetts. Filed May 29, 1925. Serial No. 33,812. 9 Claims. (Cl. 200—165.)

8. A brush member for an electric switch, said brush member having a bottom connecting and separating portion, opposed and substantially vertical legs rising from said connecting and separating portion, said legs having divergent contact terminals, a brush-supporting member connected with said brush member intermediate said legs, a strain member floating on and connecting said legs to restrain them against divergent movement, and means carried by said brush-supporting member arranged to engage said strain member and limit the movement thereof.

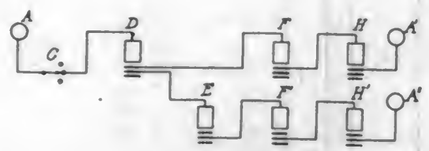


1,649,613. MOTOR-CONTROL SWITCH. CHESTER D. AINSWORTH, Wollaston, Mass., assignor, by mesne assignments, to Condit Electrical Manufacturing Corporation, Boston, Mass., a Corporation of Massachusetts. Filed Mar. 28, 1921. Serial No. 456,318. 25 Claims. (Cl. 200—50.)

1. An electric switch comprising a switch assembly having self-supported depressible switch-operating members, a support located above said depressible members, and operating mechanism having independently operable plungers slidable in said support above and arranged to depress said depressible members one at a time.

---

1,694,614. CENTRIFUGAL EXTRACTOR. FRITZ BALZER, Moline, Ill., assignor, by mesne assignments, to Troy Laundry Machinery Company, Inc., Dover, Del., a Corporation of Delaware. Filed Feb. 13, 1925. Serial No. 8,891. 8 Claims. (Cl. 192—136.)

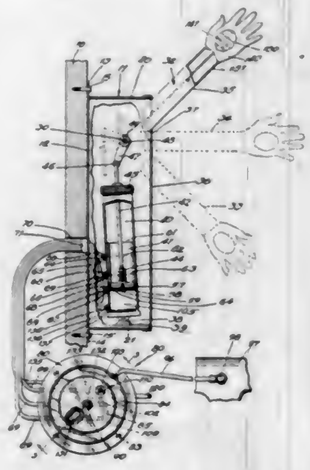


1. In a centrifugal extractor, in combination, a motor whose rotor has a fixed axis of rotation, a whirling basket, a centrifugal clutch between said rotor and said basket, and electrical connections for causing the reversal of rotation of said rotor for applying a braking action to said basket.

---

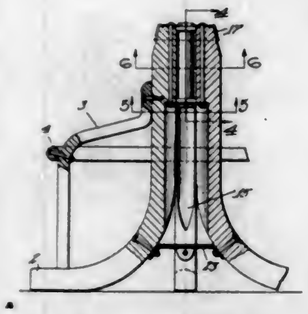
1,694,615. AUTOMATIC TELEPHONE SYSTEM. JOHN I. BELLAMY, Chicago, Ill., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed July 22, 1921, Serial No. 486,763. Renewed May 19, 1928. 15 Claims. (Cl. 179—18.)

1. In a telephone system, a subscriber's line, means including a first selector, a second selector, and a connector



for connecting the said first line with a second line, means including said first selector, another second selector, a third selector, and another connector for connecting said first line with a third line, telephone numbers for said

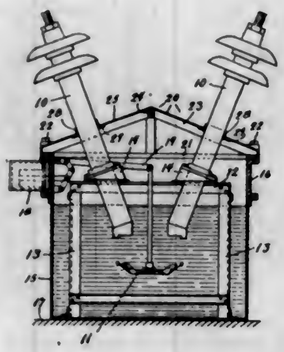
second and third lines having the same number of digits, and means for automatically releasing the first mentioned second selector whenever the said second line is called in order to cancel one of the digits in the number.



---

1,694,616. AUTO SIGNAL DEVICE. THOMAS B. BLEVINS and JIM C. PHILLIPS, Long Beach, Calif. Filed Sept. 21, 1925. Serial No. 57,638. 1 Claim. (Cl. 116—39.)

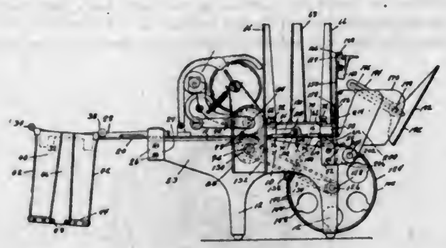
In a semaphore direction signal, the combination of: a housing adapted to be applied to an exterior surface of the body of an automotive vehicle; a shaft journalled in the upper portion of said housing substantially parallel with the normal direction of travel of said vehicle; a semaphore arm rigidly secured to said shaft, there being an opening in said housing to permit said arm to swing upon said shaft to extend from said housing in a plurality of signalling positions; a crank fixed upon said shaft in spaced relation to said arm; a cylinder pivotally mounted at its lower end within said housing so as to lie substantially in a plane with said arm, when said arm is at rest, said plane being substantially parallel to said direction; a piston slidably operable within said cylinder and having a rod pivotally connected to said crank; and a control valve for controlling different pressures introduced into said cylinder to move said arm between said position of rest and one of said signalling positions.



1,694,617. CHAIR. CHARLES A. BROWN, Gardner, Mass., assignor to Heywood-Wakefield Company, Boston, Mass., a Corporation of Massachusetts. Filed Feb. 2, 1927. Serial No. 165,464. 1 Claim. (Cl. 155—138.)

In a chair of the class described, a tubular member having an internally threaded bore, for the reception of a threaded seat spindle, said tubular member being formed near each end with a polygonal collar, and beyond each collar with a short tubular extension of circular cross section, chair legs radiating from the axis of said tubular member, and each having a plane inner surface for abutment against the corresponding sides of said polygonal collars, clamping devices to hold said legs against endwise and lateral movement relative to said tubular member, said clamping devices being centered on said short tubular sections of said member, and held in spaced relation thereon by said polygonal collars, and bolts connecting said clamping devices and extending longitudinally through the interposed portions of each leg.

---



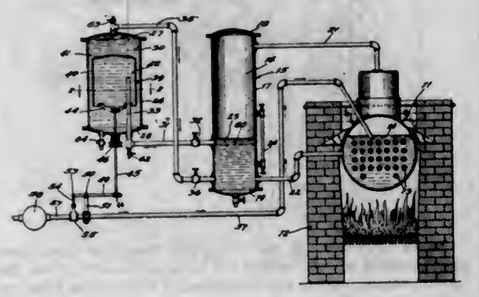
1,694,618. ELECTRICAL APPARATUS AND SWITCH. GEORGE A. BURNHAM, Saugus, Mass., assignor, by mesne assignments, to Condit Electrical Manufacturing Corporation, Boston, Mass., a Corporation of Massachusetts. Filed Apr. 29, 1924. Serial No. 709,921. 14 Claims. (Cl. 200—150.)

1. An electrical apparatus having an enclosing casing adapted to contain an insulating fluid, circuit terminals extended into the fluid, and a cover for the casing which is fragile and is adapted to be disrupted when an abnormal pressure occurs within the casing and uncover the casing and relieve the pressure.

1,694,619. ADDRESSING MACHINE. HARMON P. ELLIOTT, Watertown, Mass. Filed July 2, 1926. Serial No. 120,206. 55 Claims. (Cl. 101—49.)

1. In an addressing machine, printing means defining a printing position, means to move successive stencils and successive envelopes in approximately parallel paths in the same direction to the printing position.

40. In an addressing machine, printing mechanism, a stencil track, a stencil holder disposed at one end of said track, means to remove successive stencils from said holder and move them along said track to said printing mechanism, an envelope holder disposed at the rear of said stencil holder, an envelope feeding drum disposed beneath said envelope holder and operable to remove successive envelopes from the holder and move them to the printing mechanism, means to press the forward edges of the envelopes in the holder against the periphery of said drum, a roller disposed beneath said stencil track ahead of said pressing means and having means urging it against the envelopes on said drum, a support for the removed envelopes disposed between said drum and printing mechanism and beneath said stencil track, and means operable to press the envelopes against said support and hold them releasably without motion with their rear edges at the bight of said roller and drum.

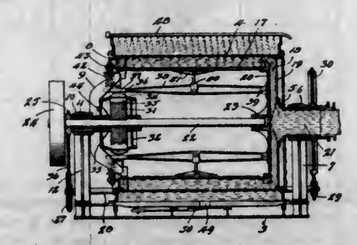


---

1,694,620. BASE-EXCHANGE BODY. ALPHONS O. JAEGER, Crafton, Pa., assignor, by mesne assignments, to The Selden Research & Engineering Corporation, Pittsburgh, Pa., a Corporation of Delaware. Filed Feb. 28, 1927. Serial No. 171,727. 14 Claims. (Cl. 23—234.)

1. Catalysts comprising base exchange bodies free from chemically combined silicon containing catalytically active elements combined in non-exchangeable form.

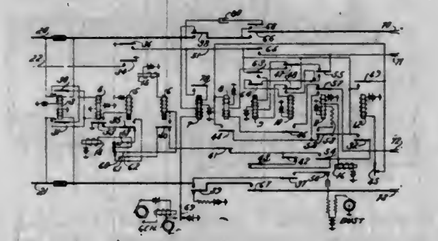
---



1,694,621. LIQUID-FEED CONTROL. RICHARD GIRARD JONES, Hynes, Calif. Filed Dec. 14, 1925. Serial No. 75,289. 7 Claims. (Cl. 137—101.)

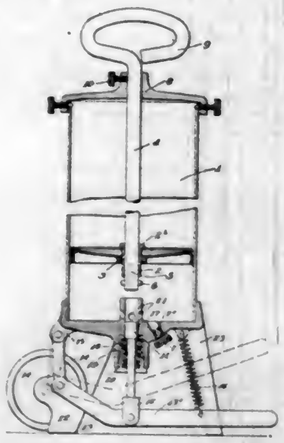
1. In a liquid feed control, the combination of walls forming a closed space, the lower portion of said space being filled with liquid and the upper portion of said space being filled with vapor; walls forming a closed float chamber: a float chamber inlet pipe connected to said closed space below the level of liquid therein and extending to a point within said float chamber; a return pipe connected to said float chamber and to said closed space near the lower end thereof; a normally non-buoyant float situated in said float chamber, said float having the lower end thereof open, said float chamber inlet pipe extending so as to introduce liquid into a space inside said float and to introduce vapor into said space inside said float to render said float buoyant when the liquid level in said closed space falls below the intake end of said float chamber inlet pipe, said vapor raising said float in said float chamber; and means operated by said float when it is raised, for raising the liquid level in said closed space.

---



1,694,622. ROTARY SCREEN FOR SCREENING PULP AND PAPER STOCK. ERNEST W. LINDQUIST, Helsingfors, Finland. Filed Jan. 6, 1928. Serial No. 244,812. 9 Claims. (Cl. 92—36.)

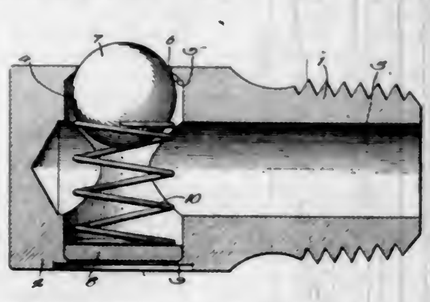
1. In an apparatus of the character described, a screen drum circumferentially divided to form a series of circumferentially positioned suction chambers, each of which is provided with a diaphragm adapted to be flexed to produce suction in said chambers, a cam mounted coaxially of the drum, a plurality of shoes engaging with said cam, leverage connections between each shoe and one of the diaphragms, and means for producing relative rotation between the drum and the cam for the purpose of operating the diaphragm through the shoe and leverage connections.



---

1,694,623. TELEPHONE SYSTEM. JOHN E. OSTLINE, Liverpool, England, assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed Dec. 31, 1924, Serial No. 758,998, and in Great Britain Jan. 24, 1924. Renewed May 3, 1928. 25 Claims. (Cl. 179—18.)

1. In a telephone system, a switch, groups of lines terminating in said switch, each group including more than two lines, means for directively operating said switch to select any line in any group, means effective only in case the first line in a group is selected and is found busy for automatically causing the switch to hunt for an idle line, a set of test contacts for each line, and suitable circuit connections to said test contacts, the contacts of some of said sets being connected together and other contacts being connected to the battery, for controlling the hunting operation of said switch.

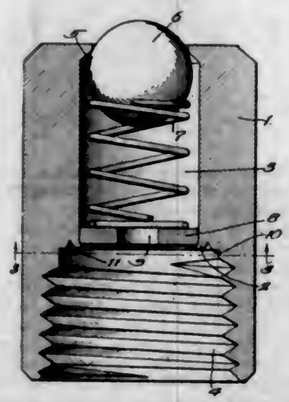


1,694,624. LUBRICANT COMPRESSOR. EMILE PIQUEREZ, Paris, France, assignor to Alemite Manufacturing Corporation, Chicago, Ill., a Corporation of Delaware. Filed Apr. 15, 1925, Serial No. 23,283, and in France Oct. 14, 1924. 8 Claims. (Cl. 221—47.1.)

8. A lubricant compressor comprising a reservoir, high pressure compressing means supplied from said reservoir, a piston in said reservoir, an axially slidable rod extending out through an end of said reservoir, a quick detachable connection between said piston and said rod, said piston normally detached from said rod, and an air vent plug for placing that part of the reservoir on the discharge side of said piston in communication with the atmosphere, said rod and detachable connection constituting means for operating said piston to expel air from said reservoir through said vent plug.

---

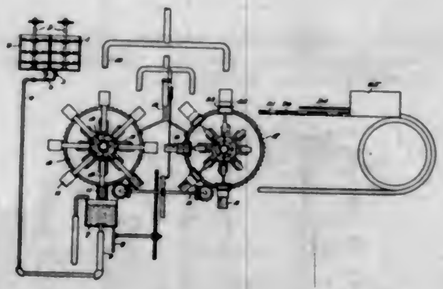
1,694,625. VALVE. HENRY T. ROBERTS, Chicago, Ill., assignor to Alemite Manufacturing Corporation, Chicago, Ill., a Corporation of Delaware. Filed Aug. 23, 1922. Serial No. 583,773. 1 Claim. (Cl. 251—121.)



A valve comprising a nipple threaded at one end, the other end being polygonal for engagement by a tool for screwing the device into place, a lateral facing inlet opening in one of the faces of said polygonal end, and a spring-pressed check valve closing said inlet opening.

---

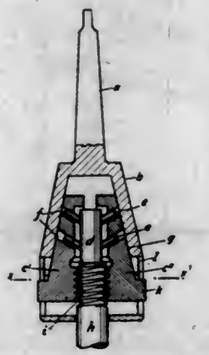
1,694,626. VALVE. HENRY T. ROBERTS, Chicago, Ill., assignor to Alemite Manufacturing Corporation, Chicago, Ill., a Corporation of Delaware. Filed Aug. 23, 1922. Serial No. 583,774. 2 Claims. (Cl. 257—121.)



1. A valve comprising a one-piece body portion axially bored, the bore being of reduced diameter throughout a portion of the length of the body, the enlarged portion of the bore being screwthreaded and defining an annular shoulder between the enlarged and restricted portions of the bore, a valve retaining plug adapted to be received within the restricted portion of the bore, such plug having its peripheral edge inwardly tapered in the direction of its insertion into the restricted portion of the bore, the metal

of the aforesaid shoulder being upset to provide permanent retaining means for said plug, an inwardly directed annular flange at the outer end of the restricted portion of the bore, a valve member retained within said bore by the said shoulder, and a valve spring compressed between said plug and valve member for normally seating the said valve member against the annular flange.

---



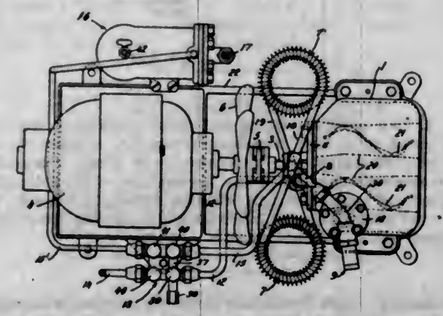
1,694,627. APPARATUS FOR MANUFACTURING CONTAINERS. CLARENCE R. ROBINSON, Brooklyn, N. Y., assignor to Robinson Fibre Corporation, Wilmington, Del., a Corporation of Delaware. Filed Mar. 22, 1924. Serial No. 701,108. 4 Claims. (Cl. 92—56.)

3. An apparatus of the character described comprising synchronized wheels, means for forming an article on dies on one wheel, means for transferring the article from the die on the first wheel to a die on the second wheel, a carrier adapted to receive the said second wheel die and article thereon, and means for whirling said die and article, while on the carrier, for drying, calendering and smoothing the article.

1,694,628. TOOL FOR INSERTING STUD BOLTS. HARRY SAUVEUR, Berlin, Germany. Filed Feb. 11, 1927, Serial No. 167,562, and in Germany Feb. 13, 1926. 3 Claims. (Cl. 81—53.)

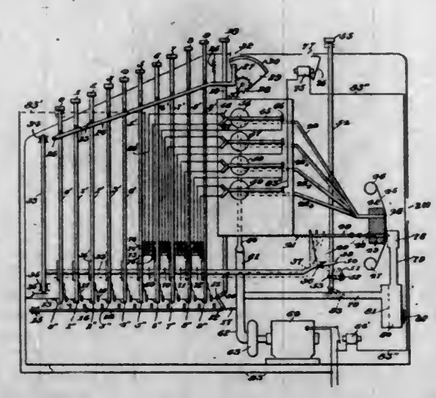
2. A tool for inserting stud bolts, comprising a casing having a tapered bore, tapered jaws adapted to engage a bolt fitting in said tapered bore, a slide, and means positively engaging said slide with said jaws inclined at approximately the angle of the bolt threads.

---



1,694,629. PROCESS AND APPARATUS FOR WELDING PLATES. CHARLES SCHAER, Langenthal, Switzerland, assignor to the Firm Sulzer Freres, Societe Anonyme, Winterthur, Switzerland. Filed Feb. 16, 1928, Serial No. 254,727, and in Switzerland Feb. 28, 1927. 7 Claims. (Cl. 78—92.)

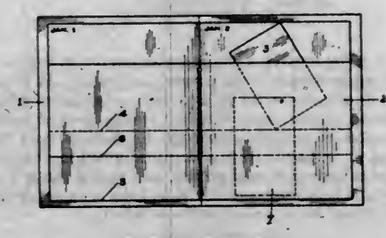
1. Process for welding plates, which consists in bevelling the meeting edges of the plates, laying a rod like bridge member along the joint above the sharp or nearest edges of the plates, heating the edges and the rod and then welding them together by bending or turning over the edges of the plates.



---

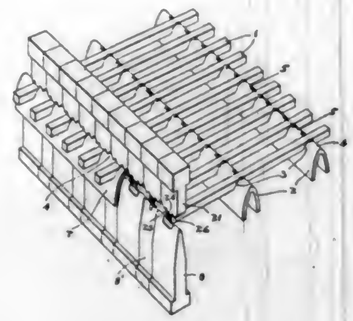
1,694,630. REFRIGERATING APPARATUS. ALFRED MORRIS THOMSON, Newark, N. J., assignor to Joseph Mercadante, New York, N. Y. Original application filed Oct. 20, 1926, Serial No. 142,846. Divided and this application filed May 12, 1927. Serial No. 190,743. 13 Claims. (Cl. 230—205.)

1. In a refrigerating apparatus, the combination of a gas-tight casing having an air passage extending therethrough, a rotary pump in said casing for compressing the gasified refrigerant, means for operating the pump, and means for causing air to flow through the said passage.



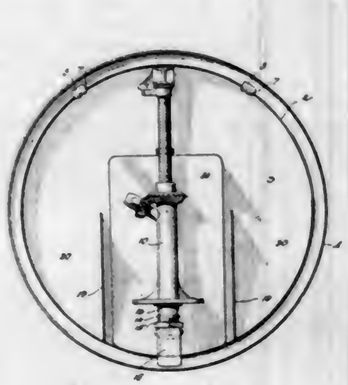
1,694,631. ELECTROMECHANICAL RECORDING AND CONTROLLING MACHINE. PIETRO TROJANI and CORRADINO D'ASCANIO, Rome, Italy. Filed Aug. 23, 1926, Serial No. 131,094, and in Italy July 30, 1926. 9 Claims. (Cl. 164—112.)

1. An electro-mechanical machine for recording and identifying documents through perforated symbols on a registration strip, comprising a circuit provided in a plurality of places serially located with respect to said circuit with pairs of parallel limbs forming alternative current paths, two groups of independently movable switch elements connected to the circuit terminals adjacent the ends of said pairs, adapted to make contact with one or the other of said limbs, to close said circuit when both switch elements associated with a pair of limbs are in contact with the same limb, a plurality of punches for perforating said registration strip, a key board having keys selectively manipulable to set certain switch elements of one group in their operative position, and simultaneously to set corresponding punches in preliminary position, means for actuating such punches as are in preliminary position, and means selectively responsive to perforation combinations on said strip for setting switch elements of the second group which correspond with the set switch elements of the first group, into circuit-closing relation.



---

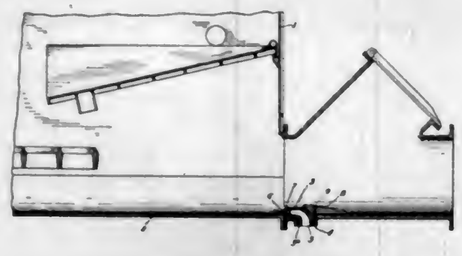
1,694,632. DIARY MEMORANDUM BOOK, ETC. MARTIN J. WADE, Iowa City, Iowa. Filed Nov. 25, 1927. Serial No. 235,533. 1 Claim. (Cl. 281—38.)



A book comprising a plurality of leaves suitably bound together, each leaf comprising a pocket formed by folding upwardly a portion of the leaf and an additional pocket formed by folding downwardly such folded portion of the leaf, and with the lower portion refolded upwardly and in the opposite direction from the last mentioned fold.

1,694,633. TOOL FOR MAKING GRATINGS. ARTHUR E. WELLS, Toronto, Ontario, Canada. Filed Mar. 18, 1927. Serial No. 176,443. 5 Claims. (Cl. 78—60.)

3. A tool for making gratings of the type having a plurality of straight parallelly arranged bars rigidly secured by parallel cross bars, comprising die blocks adapted to engage and deform portions only of said sets of bars at their intersections into overlapped interlocked relation to secure said bars together leaving the same in their straight form.

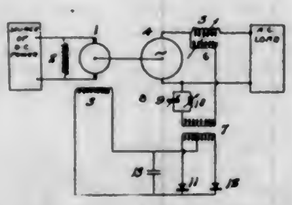


1,694,634. TOOL CONTAINER FOR TIRE CARRIERS. PHINEAS S. WHITING, Royal Oak, Mich. Filed Dec. 14, 1925. Serial No. 75,312. 2 Claims. (Cl. 224—29.)

2. In a tire carrier, a container supported in said carrier, spaced apart means on the upper portion of said container engaging opposite sides of said carrier for preventing displacement of said container, and spring pressed means in said container extending through the bottom wall thereof adapted to cooperate with said spaced apart means in holding said container in said carrier, said spring pressed means including a retaining member on which a tool may be seated and held against a wall of said container.

1,694,635. SLUICEWAY NOZZLE. FRANK B. ALLEN, Lower Merion Township, Montgomery County, Pa., assignor, by mesne assignments, to Frank H. Dunbar, Cleveland, Ohio. Filed Nov. 12, 1925. Serial No. 68,638. 6 Claims. (Cl. 302—15.)

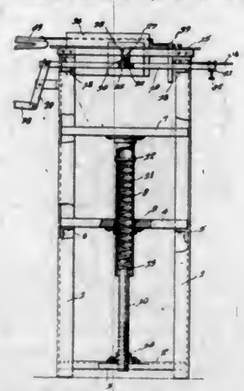
1. In combination with a solid material carrying sluiceway, a nozzle in the sluiceway having an outlet opening inside of the sluiceway, and disposed adjacent and parallel to a wall of the sluiceway, a nose piece for the outlet opening of the nozzle provided with a substantially round



tubular perforation, and a wear plate in the sluiceway disposed rearwardly of and in wear protecting position with respect to the nozzle.

1,694,636. DENTAL DEVICE. HORACE E. BARKER, Brooklyn, N. Y. Filed Dec. 10, 1926. Serial No. 153,786. 6 Claims. (Cl. 32—10.)

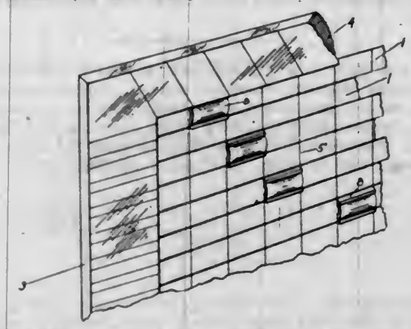
1. A dental device comprising a tube of soft resilient substance having resilient elongated spine-like serrations at and around one end thereof, which form massaging fingers, the opposite end of said tube being adapted to be applied to a suitable holder.



1,694,637. SPEED REGULATOR. JOSEPH BETHENOD, Paris, France. Filed June 2, 1923, Serial No. 642,948, and in France June 27, 1922. 5 Claims. (Cl. 171—119.)

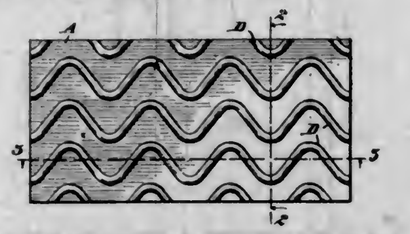
1. In a speed regulating system for alternators, the combination of a high frequency alternator, a shunt circuit connected across said alternator, said circuit comprising an element whose impedance is a function of the alternator frequency and said circuit being inductively linked with the output circuit of said alternator and a rectifier inductively coupled to said shunt circuit.

1,694,638. ATTACHMENT FOR PRINTING PRESSES. RUSSELL WIER BORROWDALE, Chicago, Ill., assignor to John Toman, Chicago, Ill. Filed May 28, 1927. Serial No. 195,050. 3 Claims. (Cl. 271—89.)

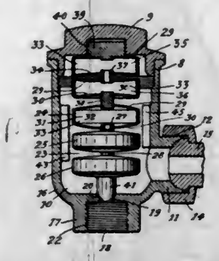


1. A device of the class described including a frame, a yieldably mounted movable platform in the frame, reciprocating bars on the frame, angle plates on the bars having slots, jogger plates, having arms movable in guides on the frame, and means carried by the arms and movable in

the slots for moving the plates toward and away from the central portion of the platform upon reciprocation of said bars.

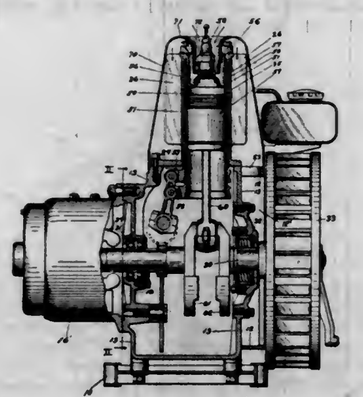


1,694,639. INDICATOR BOARD. DAVIS BROWN, Bucyrus, Ohio, assignor of one-half to W. A. Riddell, Bucyrus, Ohio. Filed July 23, 1927. Serial No. 207,843. 6 Claims. (Cl. 116—135.)



1. In an indicator board, a magnetic sheet metal material distributed over the surface of the board, the sheet material having guiding parts, slidable indicia members of magnetic material magnetically secured in their relative positions on the sheet metal along the guiding parts.

1,694,640. LATH BOARD. GEORGE A. BUTTRESS, Los Angeles, Calif. Filed Mar. 15, 1926. Serial No. 94,731. 3 Claims. (Cl. 72—124.)

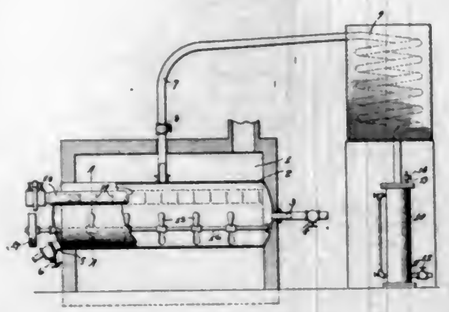


1. A lath board comprising a facing sheet, a backing sheet, and a layer of plaster interposed between said sheets; said facing sheet being formed with a series of ribs of arcuate cross section projecting from flat areas, said ribs being arranged to afford interruptions between the flat areas of the sheet in all directions crossing the sheet.

1,694,641. RADIATOR RETURN TRAP. ARTHUR P. CROSBY, Minneapolis, Minn., assignor of one-half to William T. Price, Minneapolis, Minn. Filed May 2, 1927. Serial No. 188,192. 9 Claims. (Cl. 236—56.)

1. The combination with a trap casing having a passage therethrough and a removable cap opposite said passage, of an assembly of axially expansible and contractible cells co-axially connected, a valve carried at one end of the assembly adapted to close said passage, and means at the other end of said assembly for securing the same to said cap, certain of said cells containing a medium adapted to cause the same to expand under increasing temperatures and move said valve to close said passage through the consequent elongation of said assembly, other of said cells being adapted yieldingly to contract under the expanding force of said first cells after the valve becomes seated.

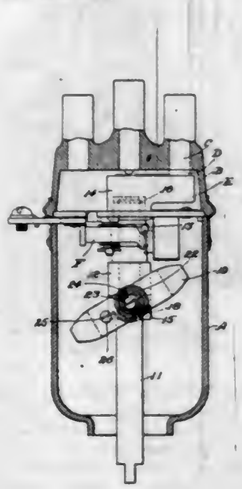
1,694,642. INTERNAL-COMBUSTION ENGINE. HENRY J. EDWARDS, Toledo, Ohio, assignor to Industrial Research Corporation, Toledo, Ohio, a Corporation of Delaware. Filed Nov. 25, 1918, Serial No. 264,064. Renewed Nov. 15, 1924. 5 Claims. (Cl. 123—171.)



1. In an engine, the combination of a cylinder, a cup-shaped head therefor, radiating fins on said cylinder, and a casing surrounding and spaced therefrom, said casing being provided with an inwardly directed open end located within said cup-shaped head and substantially parallel to the sides thereof operative to direct air into said cup shaped head to cool the wall thereof and against the external wall of the cylinder.

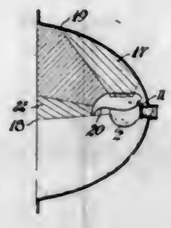
1,694,643. APPARATUS FOR TREATING EMULSIFIED OIL. GUSTAV EGLOFF and HARRY P. BENNER, Chicago, Ill., assignors to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Aug. 21, 1920, Serial No. 405,103. Renewed May 28, 1928. 4 Claims. (Cl. 196—5.)

3. An apparatus for simultaneously dehydrating and fractionating emulsified oils, comprising a furnace, an



elongated cylindrical shell located in said furnace, a pair of burners co-extensive with said still and arranged to admit the flames adjacent the wall of said still in a plane above the highest liquid level in said still to distill the oil only from the surface thereof, a rotary shaft mounted

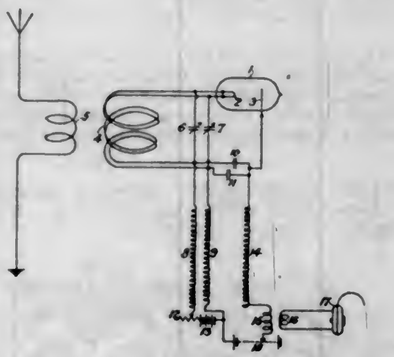
in the lower portion of said still and substantially co-extensive therewith, agitating fan members carried by said shafts and means to rotate said shafts to successively force different portions of the oil body to the surface to be distilled therefrom.



---

1,694,644. GOVERNOR FOR IGNITION SYSTEMS. STEPHEN I. FEKETE, Detroit, Mich., assignor to Hudson Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Jan. 23, 1924. Serial No. 688,075. 4 Claims. (Cl. 200—22.)

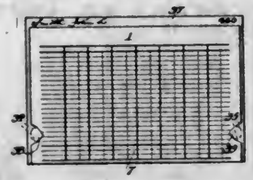
2. In a distributor unit, a distributor shaft, a cam sleeve and cam rotatable on said shaft about its axis, a cross shaft extending through said shaft and fixed thereto, said cross shaft being slotted at one end, a governor weight pivotally mounted on said cross shaft and having a finger engaging a groove in said cam sleeve, a spring surrounding the end of the cross shaft and having one end in the slot of said cross shaft and the other connected to a post fixed in the governor.



1,694,645. GLARE SHIELD. LOUIS G. FINNICUM, St. Paul, Minn. Filed Nov. 8, 1926. Serial No. 147,142. 5 Claims. (Cl. 240—48.6.)

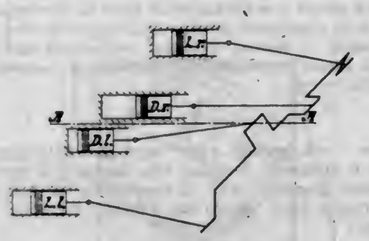
1. A glare shield for automobile headlight lamps, comprising a wire support member having an annular portion closely embracing the base of a headlight lamp with a pair of arms extending angularly outward therefrom, a concave shield member pivotally supported on said arms, and having a plurality of notches engageable with said arms to adjustably hold said shield member in position on said arms.

---



1,694,646. WIRELESS TELEGRAPH RECEIVER. CHARLES SAMUEL FRANKLIN, London, England, assignor, by mesne assignments, to Radio Corporation of America, a Corporation of Delaware. Filed June 25, 1919, Serial No. 306,608, and in Great Britain June 28, 1928. Renewed Oct. 5, 1927. 16 Claims. (Cl. 250—27.)

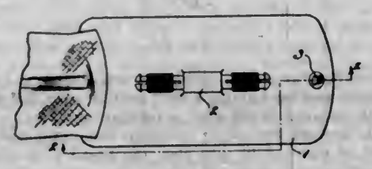
1. A circuit comprising a transformer having a coil consisting of two conductors wound together and insulated from each other, a thermionic valve having a filament and a cold electrode, each conductor of the coil being connected at one end of the coil to opposite leads respectively of the filament, and a battery connected to the filament through said conductors.



1,694,647. BILLING DEVICE. JAMES L. GARFIELD, Drexel Hill, Pa. Filed Aug. 6, 1926. Serial No. 127,544. 11 Claims. (Cl. 129—16.7.)

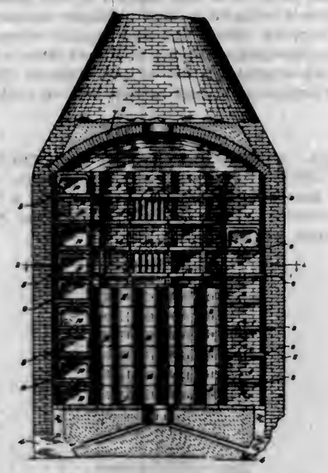
1. A rectangular sheet, having pairs of V-shaped notches, in opposite edges thereof, each pair adapted to contemporaneously engage, between them, the same projecting element of filing means, and thus wedgingly engage said element at opposite edges thereof and prevent displacement of said sheet in any direction with reference to such filing means.

---



1,694,648. LOCOMOTIVE. JOSEF GEIGER, Augsburg, Germany, assignor to Maschinenfabrik Augsburg-Nuernberg Aktiengesellschaft, Augsburg, Germany, a Corporation of Germany. Filed Sept. 16, 1926, Serial No. 135,861, and in Germany Sept. 28, 1925. 7 Claims. (Cl. 105—62.)

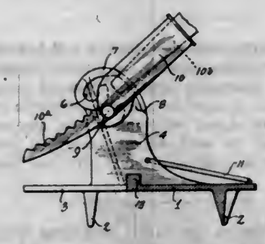
1. A locomotive driven by both Diesel and compressed-air-type engines acting directly upon the same driving axle, an engine of one of the types having heavier moving parts being arranged between a pair of engines of the other type having lighter moving parts.



---

1,694,649. APPLICATOR-SECURING MEANS. EDWIN R. GOLDFIELD and CAPERTON HORSLEY, Cleveland, Ohio, assignors to The Engeln Electric Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 14, 1927. Serial No. 168,050. 3 Claims. (Cl. 174—89.)

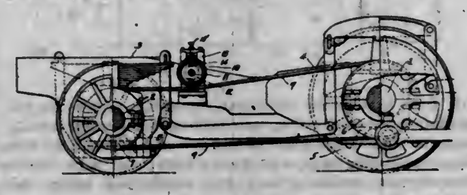
1. In an applicator having a body portion, a projection upstanding therefrom and having an undercut base portion and a nib portion, the projection portions forming therebetween an edge overhanging the base portion and adapted for engagement with a securing band of elastic webbing applied flatwise to said body portion.



1,694,650. KILN. BARTHOLOMEW H. GREENE, Sebring, Ohio. Filed Dec. 30, 1927. Serial No. 243,571. 4 Claims. (Cl. 25—153.)

1. A kiln having a floor, side walls and a crown, and refractory shelves adjacent to the side walls and extending from the floor to the crown, for supporting articles to be fired, the shelves being spaced at their rear edges from the side walls.

---

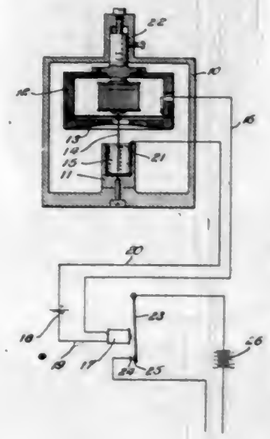


1,694,651. TRACK LINER. FREDERICK HACKMANN, Chicago, Ill.; Ida R. Hackmann administratrix of said Frederick Hackmann, deceased. Filed Nov. 26, 1926. Serial No. 150,801. 3 Claims. (Cl. 254—44.)

1. In a rail aliner, a base having spaced standards, each standard having inwardly projecting means overhanging the space between the standards, and each having a socket opening upwardly beneath its overhanging means, and a lever having trunnions fitting said sockets and adapted for engaging said overhanging means when the same is elevated.

---

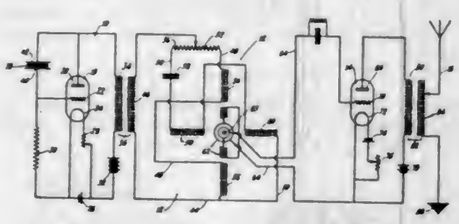
1,694,652. LOCOMOTIVE GOVERNOR. ALMIRON A. HAGER, Wellington, Wash. Filed June 3, 1925. Serial No. 34,577. 1 Claim. (Cl. 105—101.)



In a railway locomotive, the combination with the axle of a pair of drivers and the axle of a pair of wheels of a

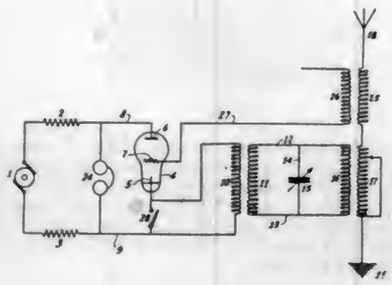
trailer, engine or tender truck, of sheave wheels fixed on said axles in operative alinement; each being provided with a plurality of circumferential V-shaped grooves, cable belts operating about said sheaves in said grooves and an idler sheave mounted to bear yieldably against said cable belts to retain them taut and against slippage on the sheaves; the diameters of said sheave wheels bearing the same proportional relation to each other as the diameters of said drivers and truck wheels bear to each other.

---



1,694,653. ELECTROLYTE AND ELECTROLYTIC APPARATUS. RAY E. HALL, Evanston, Ill., assignor to Hall Research Corporation, Chicago, Ill., a Corporation of Delaware. Filed Oct. 14, 1922. Serial No. 594,486. 2 Claims. (Cl. 177—352.)

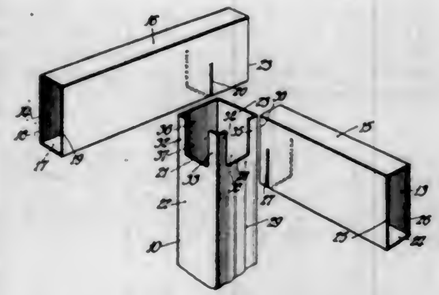
2. A device of the class described, a cell having an electrolyte and electrodes therein, a circuit including said electrolyte and electrodes and a source of current, said source of current adapted to cause electrolytic convection in said electrolyte, signal receiving means, and mechanical means connected to said signal receiving means and adapted to disturb said electrolyte, for the purpose set forth.



---

1,694,654. METHOD OF AND SYSTEM FOR ELECTRICAL SIGNALING. JOHN HAYS HAMMOND, Jr., Gloucester, Mass. Filed Feb. 12, 1925. Serial No. 8,644. 8 Claims. (Cl. 250—8.)

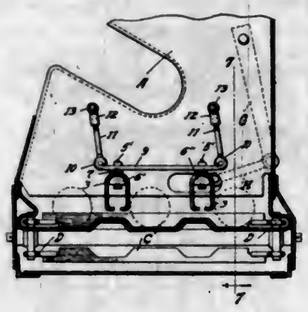
1. In a system for electrical signaling, a piezo-electric oscillator for generating oscillations of a substantially constant high frequency, means for amplifying the high frequency oscillations, and means interposed between the piezo-electric oscillator and the amplifying means for changing the phase of the amplified oscillations by equal amounts and in alternately opposite senses in accordance with signals.



1,694,655. SYSTEM AND METHOD OF PRODUCTION AND RECEPTION OF CONTINUOUS OSCILLATIONS. JOHN HAYS HAMMOND, Jr., Gloucester, Mass. Original application filed Mar. 31, 1914, Serial No. 828,605. Renewed July 1, 1921, Serial No. 481,930. Divided and this application filed Jan. 9, 1926. Serial No. 80,162. 11 Claims. (Cl. 250—13.)

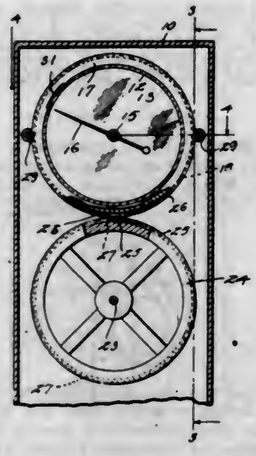
1. A system for transmitting or receiving electroradiant oscillations, comprising an aerial circuit, a detector, and means operatively connecting said aerial circuit to said detector and adjustable to render said detector either operative to cause said aerial circuit to generate a continuous series of undamped electroradiant oscillations while said circuit is not being acted upon by electroradiant energy, or to render said detector inoperative to cause said aerial circuit to radiate electrical oscillations but operative to detect electroradiant oscillations received by said aerial circuit.

---



1,694,656. FRAMING FOR METAL FURNITURE. PETER E. HUETTEN, Kenosha, Wis., assignor to Simmons Company, Kenosha, Wis., a Corporation of Delaware. Filed Oct. 1, 1923. Serial No. 665,752. 5 Claims. (Cl. 45—58.)

1. Framing for metal furniture comprising a tubular metal post member having a wall portion provided at one end with an open ended slot, a tubular metal bar of considerable breadth extending laterally from said post, and disposed at one end in said slot, the breadth of said bar being such as will snugly fit in said slot, said bar having a flat side portion engaging the edge of said wall portion at said notch, and being of sufficient extent to prevent turning of the bar in the notch, and said bar being provided with a transversely extending kerf adapted to snugly receive a portion of the wall of said post at the bottom of said notch so as to prevent lateral movement of the bar relative to the post.

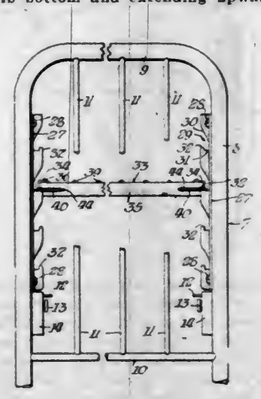


1,694,657. DISTRIBUTOR. GEORGE C. JETT, Milwaukee, Wis., assignor to Runge Corn Harvester Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Dec. 10, 1923. Serial No. 679,816. 7 Claims. (Cl. 198—33.)

6. The combination of a feedway for ears of corn having a plurality of feed channels, means for advancing the ears along said channels, and a laterally vibrating bar disposed lengthwise between adjacent channels for arranging the ears lengthwise therein.

---

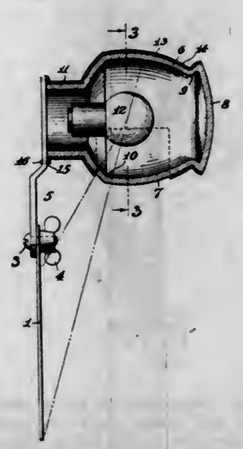
1,694,658. SCALE INDICATOR. OLAF A. JOHNSON, Minneapolis, Minn. Filed Mar. 24, 1928. Serial No. 264,483. 2 Claims. (Cl. 116—129.)



1. An indicating device for a weighing scale comprising a casing, a wheel in the casing having means for operative connection with a scale mechanism, a ring supported on the upper portion of the wheel, driving connections between the wheel and ring, transparent plates secured in opposite sides of the casing and having a series of graduations thereon, an indicating hand between the plates and having its shaft journaled in said plates, a second ring within the first ring and supporting the latter, and guiding means in the casing engaged with the periphery of the first ring.

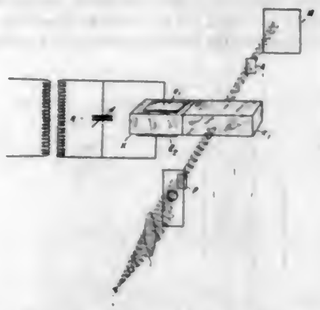
---

1,694,659. CRIB AND ADJUSTABLE SPRING-BOTTOM SUPPORT THEREFOR. FRANK KUSTERLE, Kenosha, Wis., assignor to Simmons Company, New York, N. Y., a Corporation of Delaware. Filed Dec. 2, 1925. Serial No. 72,658. 1 Claim. (Cl. 5—11.)



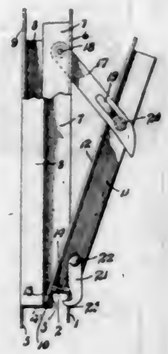
In a crib, the combination of a pair of spaced end frames rigidly supported relative to each other and having corner posts, a series of supports having upwardly projecting portions on each of said corner posts, a crib bottom adapted to be supported in various positions of adjustment on said supports and comprising side members and end members extending therebetween, said end members being provided with horizontal slots at their ends, adjacent the respective side members, supporting members pivotally mounted on the side members at each corner of the crib bottom and extending upwardly through

said slots, capable of horizontal movement therein about their respective pivots and terminating in substantially the plane of the outside face of the adjacent end frame, said supporting members being adapted to engage said supports and provided with slots extending lengthwise of the crib bottom and capable of receiving said upwardly projecting portions in the various positions of inclination in which the crib bottom may be placed, and grasping means on each of said supporting members inside of said plane.



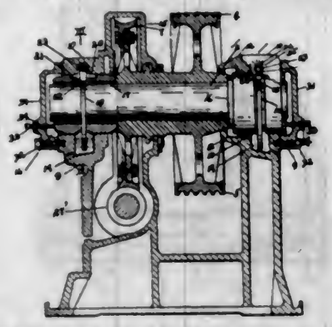
---

1,694,660. TAIL LIGHT FOR AUTOMOBILES. WILLIAM F. LITTLE, Nepperhan Heights, N. Y. Filed Nov. 23, 1922. Serial No. 602,811. 2 Claims. (Cl. 240—8.3.)



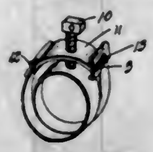
1. An improved tail light comprising a glass body having an elliptical reflector at its front and a colored glass window at its rear through which will be projected an intense beam from said reflector, said body having a clear glass window at its bottom and a parabolic reflector at its top to project a fan shaped beam through said latter window, substantially as set forth.

1,694,661. MEANS TO INFLUENCE LUMINOUS RAYS. ALEXANDER MEISSNER, Berlin, Germany, assignor to Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany, a Corporation of Germany. Filed Feb. 28, 1927, Serial No. 171,583, and in Germany Mar. 1, 1926. 3 Claims. (Cl. 178—7.)



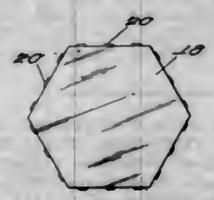
1. An arrangement for controlling luminous rays which comprises, an electro-mechanical vibrator, means for supplying variations in potentials corresponding to variations in light intensities to said electro-mechanical vibrator, a crystalline substance rigidly associated with said vibrator, a light source, means for polarizing the light issuing from such source and passing said polarized beam of light through said crystalline substance, means provided by said electro-mechanical vibrator rigidly associated with said crystalline substance for producing a physical change in said crystalline substance, whereby the light beam passing therethrough is doubly refracted in accordance with the variation in potential applied to said vibrator, and means for recording the variations in said doubly refracted polarized beam of light as passed through said crystalline substance.

1,694,662. WINDOW FASTENER. HIRAM W. NICLES, Muskegon Heights, Mich., assignor to Vento Steel Sash Company, Muskegon Heights, Mich., a Corporation of Michigan. Filed Oct. 11, 1926. Serial No. 140,700. 6 Claims. (Cl. 189—69.)



1. A window comprising an outer casing, a window sash located in said casing and at its lower side bearing against the lower side of the casing whereby it may be tilted away from the casing at its upper portion or may be bodily removed at its lower side from said casing, links pivotally connected to the casing at one end and having slidable and pivotal connection to the sash at the other end adjacent the upper portion of said sash, and means carried by said sash adjacent its lower side detachably connecting with the lower side of the casing, substantially as and for the purposes described.

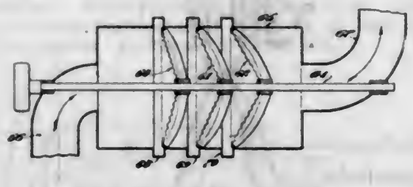
1,694,663. ELEVATOR-GEARING ADJUSTMENT. FRANK L. OHLER, Toledo, Ohio, assignor to The Haughton Elevator and Machine Co., Toledo, Ohio, a Corporation of Ohio. Continuation of application Serial No. 587,114, filed Sept. 9, 1922. This application filed Nov. 12, 1925. Serial No. 68,955. 2 Claims. (Cl. 254—186.)



1. In a structure embodying a hoist line, a load and a counterweight connected to said line, a drum for actuating said line, a worm wheel for shifting the drum, a shaft for the worm wheel and drum and having oppositely disposed radially extending faces, a worm for actuating the worm wheel, and sets of bearings, one for the shaft and one for the worm, the set of shaft bearings being one adjacent one of said radially extending faces and another adjacent the other of said radially extending faces, the combination of eccentrics for mounting the shaft bearings, the said eccentrics each including a pin, a yoke for engaging each pin, threaded means operable for angularly shifting the yokes of said assembled operative structure, and additional means coacting between the eccentrics and the shaft for maintaining the eccentrics positioned as to the radially extending faces.

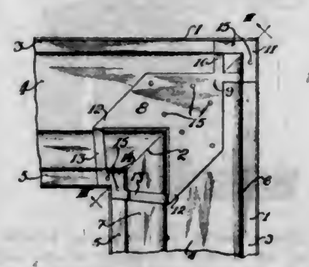
1,694,664. HOSE CLAMP. CHARLES A. PARKER, Haugan, Mont., assignor of one-half to William H. Logan, St. Regis, Mont. Filed Sept. 2, 1927. Serial No. 217,066. 2 Claims. (Cl. 24—19.)

1. The combination in a hose clamp fashioned as a circular band having a double turn and free ends, of a spaced clamp plate permanently secured to one end of the band, means for detachably securing the clamp plate to the other free end of the band, and a clamp secured in the clamp plate for reducing the diameter of the circular band.



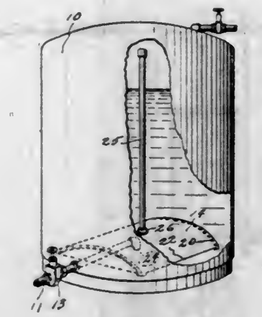
1,694,665. TILE. EUGENE PARKER, Los Angeles, Calif. Filed Feb. 9, 1927. Serial No. 166,855. 1 Claim. (Cl. 72—25.)

As a new article of manufacture, an hexagonal tile having integral interfitting and spacing lugs along the edges thereof, said interfitting lugs being spaced alternately for juxtaposed tiles, the said interfitting lugs also adapted to be completely surrounded by mortar when the tiles are laid.

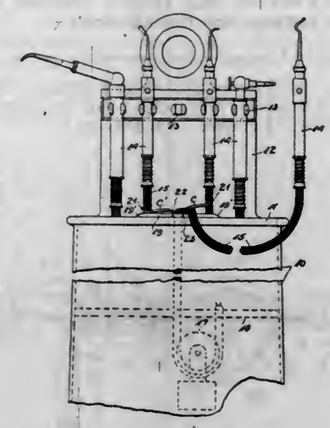


1,694,666. SEPARATING APPARATUS. FRED FORREST PEASE, East Braintree, Mass., assignor to F. F. Pease Inc., Boston, Mass., a Corporation of Massachusetts. Filed Dec. 2, 1922. Serial No. 604,483. 2 Claims. (Cl. 183—63.)

1. An apparatus for the separation of suspended matter from gas comprising a duct or chamber for the passage of gas therethrough, a plurality of screen surfaces disposed within the duct, means for supporting the screen surfaces at different inclinations with respect to the direction f flow of the gas, and means for moving the screen surfaces transversely of the direction of flow of the gas.



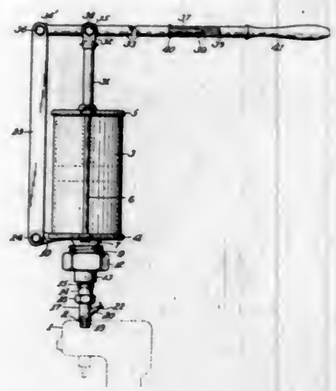
1,694,667. MITERED-JOINT BRACKET. PERCY E. PECK and WINGATE S. THOMAS, Chicago, Ill., assignors to Knapp Brothers Manufacturing Co., Chicago, Ill., a Corporation of Illinois. Filed May 23, 1927. Serial No. 193,498. 5 Claims. (Cl. 189—36.)



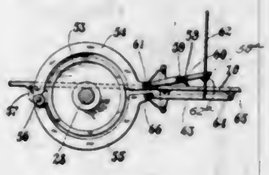
1. A mitered joint bracket comprising a flat intermediate angle plate, a flat angle toe plate, curved arms integrally connecting said toe plate with said intermediate angle plate, a flat angled heel plate disposed in a plane parallel to the intermediate angle plate, and curved arms integrally connecting said heel plate with said intermediate angle plate.

1,694,668. OIL-TANK BAFFLE. ARCHIE R. PETERS, Winfield, Kans., assignor of one-half to The Guiberson Corporation, Dallas, Tex., a Corporation of Delaware. Filed Feb. 28, 1928. Serial No. 257,618. 9 Claims. (Cl. 210—51.)

1. In combination with a tank, a baffle in spaced relationship to the bottom of the tank defining an extended area for the accumulation of that portion of the tank contents having greatest specific gravity, a discharge pipe line extending outwardly through the tank and from beneath the baffle for the withdrawal of the precipitate, and a vent pipe communicating with the under side of the baffle and terminating at a point spaced from and above the intake of said discharge pipe line and extending upwardly to a point above the oil level of the tank, said pipe being open at both ends to air and liquid.



1,694,669. CORD-HOLDING STRUCTURE. OSCAR H. PIEPER, Rochester, N. Y. Filed Apr. 2, 1926. Serial No. 99,297. 5 Claims. (Cl. 32—5.)

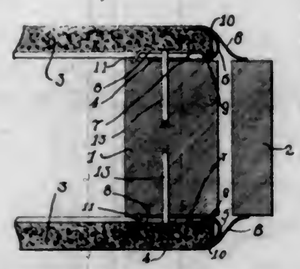


1. In a dental unit, the combination of a supporting body, instruments supported thereon, cords extending from said instruments to the interior of the body, means exerting tension on said cords tending to prevent withdrawal of said cords from said body, and a clip placed on said body and under which any one of said cords may be slipped when in use to be held against the force of its tension means to thereby relieve its instrument from the tension.

1,694,670. ENGINE-TROUBLE DIAGNOSER. JAMES HENRY RICHARDS, Glendale, Calif. Filed Apr. 29, 1926. Serial No. 105,513. 3 Claims. (Cl. 73—51.)

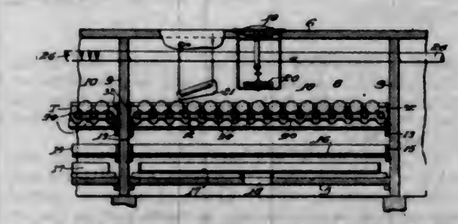
1. In an instrument of the character described, the combination of a hollow cylinder, a bottom head and a top head detachably secured to the cylinder, the bottom head having a lateral fulcrum arm and also a neck integral therewith, the neck and head having an unobstructed duct therethrough and the neck being externally screw-threaded for a pipe-union nut, a pair of link bars pivoted to said arm, a double-action piston in the cylinder, a solid piston rod secured to the piston and guided in said top head, and a sectional lever pivotally connected with the piston rod and also with the link bars.

1,694,671. MOTOR-ROLLER-SKATE BRAKE. MICHELE RODELLI, Brooklyn, N. Y. Filed Jan. 10, 1927. Serial No. 160,057. 2 Claims. (Cl. 188—74.)



1. A brake of the class described comprising, a brake drum, a plate, brake shoes pivotally attached to the plate, said brake shoes adapted to encircle the said brake drum, a lever pivotally attached, intermediate thereto, to the plate, said lever pivotally attached to the said brake shoe, a flexible member attached to the said lever, a second lever pivotally attached at one extremity to the plate, said second lever pivotally attached to the second brake shoe, the flexible member attached intermediate to the second lever, said flexible member extended upwardly therefrom.

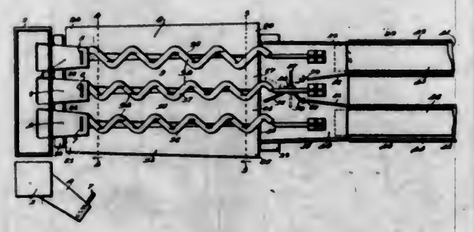
1,694,672. HAIR-CURLING MEANS. MAX ROGLER, Duesseldorf, Germany. Filed July 27, 1925, Serial No. 46,233, and in Germany Feb. 23, 1925. 6 Claims. (Cl. 132—32.)



1. A hair curling or crimping device, comprising tongs adapted to be heated, and a vapor generator on one of the members of the tongs adapted for generating vapor under the heat of the tongs and having vapor outlets opening through its surface.

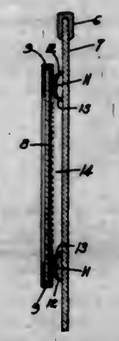
1,694,673. PLASTER CASING. WINGATE SPIES THOMAS, Chicago, Ill., assignor to Knapp Brothers Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 11, 1926. Serial No. 87,525. 10 Claims. (Cl. 72—98.)

1. In a plaster casing, a sheet metal member having a base portion, an arcuate abutment at one edge of said base portion, and an integral vibration absorbing wing extending from said arcuate abutment.



1,694,674. INCUBATOR. HAROLD L. WATSON, Highland Park, N. J., assignor, by mesne assignments, to American Incubators, Inc., New Brunswick, N. J., a Corporation of New Jersey. Filed Jan. 10, 1925. Serial No. 1,551. 15 Claims. (Cl. 119—44.)

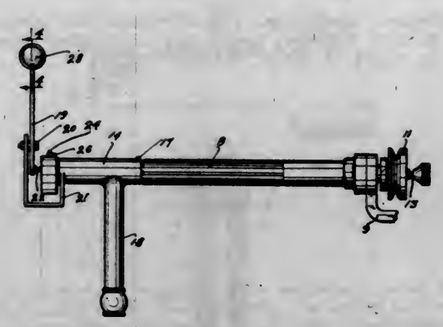
1. A tray for an incubator comprising a frame, a plurality of laterally spaced rollers rotatably supported in the frame, a removable floor having a main section, a movable section hinged to the main section, and means for holding the movable section in alignment with the main section, and means comprising slides carried by the frame and provided with cam surfaces operative to raise or lower the floor with respect to the rollers to arrange the floor below and out of contact with the rollers to permit rotary movement of the same and to elevate the floor to a position adjacent the rollers to support the eggs and chicks during the hatching period.



1,694,675. FRUIT-CLEANING MECHANISM. EDWARD A. WHITE, Lewiston, Idaho. Filed Oct. 23, 1926. Serial No. 143,655. 12 Claims. (Cl. 146—202.)

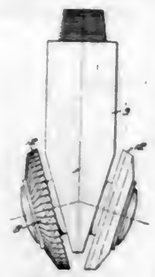
3. In a fruit cleaning machine, cone-shaped cleaning rollers rotating about parallel axes and the larger ends being in relatively close adjacency whereby the fruit path formed thereby will be angular to the axes of said rollers, and means rotating about an axis parallel with respect to said fruit path and angular to the axes of said rollers for advancing the fruit therebetween and therealong.

1,694,676. ANTIFROSTING DEVICE FOR WINDOWS. CARL H. WILL, Minneapolis, Minn., assignor to C. H. Will Motors Corporation, Minneapolis, Minn., a Corporation of Minnesota. Filed Mar. 21, 1925. Serial No. 17,285. 5 Claims. (Cl. 20—40.5.)



1. A frame of elastic material having a transparent window sealingly secured therein, and further having a continuous semi-tubular suction channel connected by its central portion only and having opposite support-engaging edges in a plane parallel with the face of the frame, and defining and surrounding a central inner space, and non-communicating with said space, during and after application to a support, and forming with the window an interior non-suction chamber.

1,694,677. ANTIFROSTING DEVICE FOR WINDOWS. CARL H. WILL, Minneapolis, Minn., assignor to C. H. Will Motors Corporation, Minneapolis, Minn., a Corporation of Minnesota. Original application filed Mar. 21, 1925, Serial No. 17,285. Divided and this application filed June 4, 1928. Serial No. 282,679. 3 Claims. (Cl. 20—40.5.)



1. An attachment for windshields comprising a transparent plate, removable suction cups attached thereto for connecting the plate with the windshield, a strip of resilient material extending around the edge of the plate and having a groove for receiving the edges of the plate and said strip extending at right angles to the body of the plate and formed with an opening extending longitudinally through the strip adjacent its outer edge so that this edge which engages the windshield will flex to provide a tight joint between the strip and windshield.

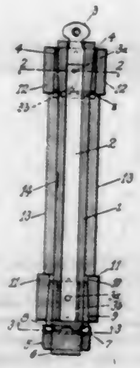
1,694,678. AMALGAMATOR ATTACHMENT. INGVALD G. BERGH and LAWRENCE NELSEN, Watertown, S. Dak. Filed Oct. 25, 1926. Serial No. 143,991. 3 Claims. (Cl. 259—75.)

1. An amalgamator attachment for the hand piece of a dental engine comprising a body member applicable to said hand piece, an arm intermediately pivoted to the body member, a capsule rigidly secured to the long end of the arm and having a displaceable cup, and a rotor operative on the short end of the arm for imparting long quick intermittent oscillatory movements thereto, said rotor being arranged to be operated by the driven chuck of such a hand piece for rotation therewith.

1,694,679. WELL-DRILLING TOOL. LESTER C. BLACK, Los Angeles, Calif. Filed Oct. 20, 1924. Serial No. 744,565. 7 Claims. (Cl. 255—71.)

1. A self sharpening rotary cutter for boring drills comprising a disc having an annular marginal portion inclined to a plane normal to the axis of rotation of the disc, a circumferential contact surface, a plurality of spaced ribs on the rear surface of the marginal portion extending across the marginal portion to said contact surface and causing said surface to have a toothed rear edge, one side of each rib being substantially perpendicular to the plane of the marginal portion.

---

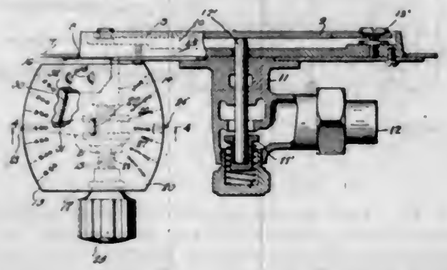


1,694,680. FOOD PRODUCT AND PROCESS OF PRODUCING THE SAME. EDWARD F. BURTON and JAY H. MONTGOMERY, Los Angeles, Calif., assignors to Honey-Butter Company, Los Angeles, Calif., a Corporation of California. Filed July 12, 1926, Serial No. 122,036. Renewed Aug. 8, 1928. 3 Claims. (Cl. 99—11.)

1. A process of making a homogeneous emulsion of butter and honey, which comprises admixing butter and honey in syrup form together, adding a blending agent, and agitating the ingredients together until a homogeneous solid mass is obtained, the ingredients being maintained at a temperature below the melting point of the butter throughout the process.

2. A food product comprising butter, honey in syrup form, and egg albumen emulsified together to form a product of substantially the consistency of butter.

---



1,694,681. PIVOT BOLT FOR AUTOMOBILES. ARTHUR G. BUSH, Davenport, Iowa. Filed Jan. 16, 1926. Serial No. 81,819. 6 Claims. (Cl. 287—100.)

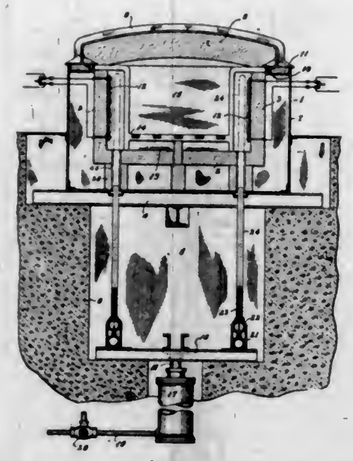
1. A pivot bolt having a tapered head and straight body and mounting therefor comprising a central knuckle firmly secured to the bolt, a yoke pivoted upon the ends of the bolt, a tapered bushing mounted upon the tapered head of the bolt and within the upper end of the yoke, the lower end of the yoke being tapered internally and forming a seat for an externally tapered bushing which is mounted upon the lower end of the bolt, and means which exert pressure upon the tapered bushings to secure them in close contact with the tapered head and tapered seat respectively.

---

1,694,682. OVEN-HEAT-REGULATING DEVICE. EMIL I. CLAUS and WALTER E. CLAUS, Milwaukee, Wis., assignors, by direct and mesne assignments, to Claus Manufacturing Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Oct. 14, 1922. Serial No. 594,606. 7 Claims. (Cl. 116—124.)

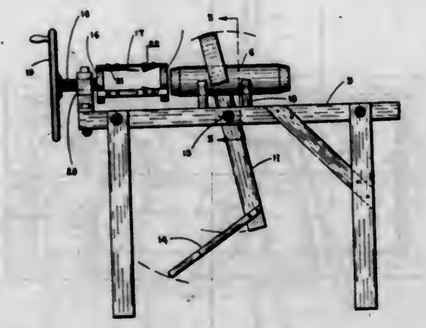
1. In a device of the character described, a fuel control valve, thermo-actuated means for operating the control valve, an indicating dial, an indicator pivotally connected with the dial to traverse the same and indicate the adjustment of the thermo-actuated means, and means connecting the indicator with the thermo-actusted means, said indicator being connected with the thermo-actuated means to one side of its point of pivot.

---



1,694,683. CABLE CLAMP. ELMER K. COLE, Winterset, Iowa. Filed Feb. 1, 1927, Serial No. 165,186. Renewed Sept. 4, 1928. 5 Claims. (Cl. 24—126.)

1. A cable clamp comprising a body portion having a screw threaded opening, a clamp portion having a conical recess, the base of the clamp portion being connected to said body portion, the interior of said clamp portion being formed with helical grooves, a conical wedge member having its outer surface provided with helical grooves, and a screw threaded bolt for said opening, said grooves being substantially of the same diameter and pitch as the strands of the cable to be clamped.

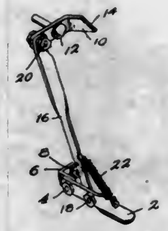


1,694,684. ANNEALING FURNACE. FRANK T. COPE, Salem, Ohio, assignor to The Electrical Furnace Company, Salem, Ohio, a Corporation of Ohio. Filed Nov. 9, 1925. Serial No. 67,811. 7 Claims. (Cl. 263—44.)

1. An annealing furnace including a heating chamber, heating means at the side of the heating chamber, means for supporting material spaced from the heating means, a cooling pipe between the heating means and material and means for circulating a cooling fluid through said pipe.

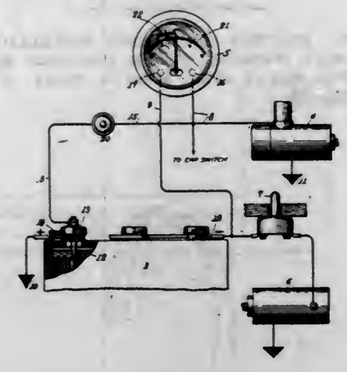
---

1,694,685. MACHINE FOR SHAPING THE ENDS OF HOLLOW DUCTS. JULIUS HEIN, Lakewood, Ohio. Filed Sept. 29, 1927. Serial No. 222,924. 1 Claim. (Cl. 144—205.)



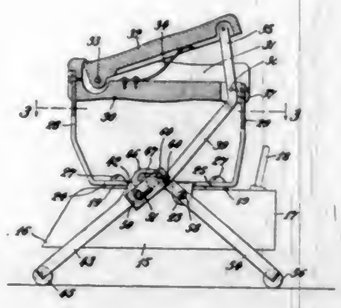
The combination with a work clamp, of a hollow head into which the end of the work may enter and having a set of longitudinal bars, sets of inside and outside scarfing cutters attachable to the inner side of said bars, and means to rotate and advance the head.

---



1,694,686. FURNACE-DOOR OPENER. ARTHUR W. HUNT, Kansas City, Mo. Filed Jan. 13, 1925. Serial No. 2,124. 1 Claim. (Cl. 110—178.)

The combination with a furnace having a door mounted thereon to swing horizontally and provided at one end with a catch, said furnace having a hook mounted on the front thereof arranged to engage said catch, of a door opening mechanism comprising a lever pivotally mounted between its ends and having at one end an inclined portion arranged to release said catch from said hook and open the door, a pedal, a link operatively connecting said pedal with the other end of said lever, and a spring tending to hold the pedal in inoperative position.



---

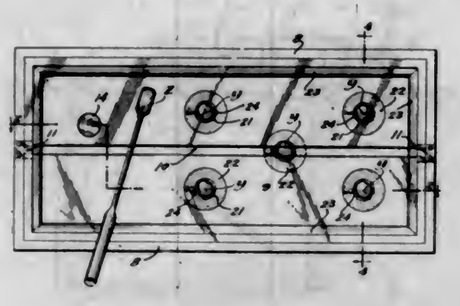
1,694,687. ELECTROLYTE-LEVEL GAUGE. THOMAS MCCARTIE, Newark, N. J. Filed Oct. 7, 1926. Serial No. 140,056. 2 Claims. (Cl. 177—311.)

1. In an electrical system of the character disclosed, the combination with a storage-battery, a generator for keeping said battery charged, an ammeter and connections by which said ammeter is normally connected in service relation with said battery and generator to give a continuing reading of the battery-generator conditions, of an electrolyte measuring electrode supported to dip into the electrolyte of the storage battery, and a local circuit for said electrolyte measuring electrode and by which the electrode may be connected into the same ammeter and battery circuit previously mentioned to thereby enable said ammeter to give a battery electrolyte level reading, in addition to the reading which it normally furnishes of the battery-generator conditions.

1,694,688. SUPPORT ATTACHMENT FOR FLATIRONS. JOSEPH PANDOLFO, New York, N. Y., assignor of one-third to Max D. Ordmann, New York, N. Y. Filed Dec. 3, 1924. Serial No. 753,628. 5 Claims. (Cl. 68—26.)

1. In a device of the character described, a body having a handle, a movable member carried by and normally impelled upwardly from said handle so as to be automatically actuated when said handle is grasped, means pivoted to said body and serving to support the latter in front and at the rear at an elevation when not in use, a connection between said member and said supporting means to raise the latter into non-supporting position and a connection between said supporting means preventing the front supporting means from accidentally dropping below the body when said handle is released.

1,694,689. PROCESS OF MAKING METALLIC RIMS FOR BULL WHEELS. CARL B. PRITCHARD, Scottdale, Pa. Filed May 13, 1925. Serial No. 29,913. 3 Claims. (Cl. 153—2.)

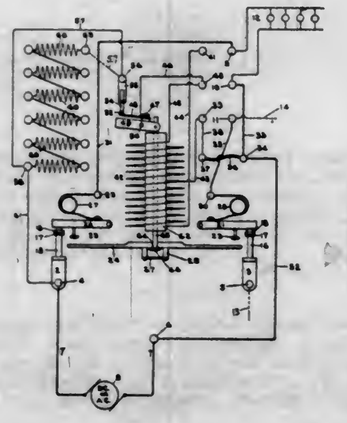


1. The method of forming a one-piece bull wheel rim which consists in providing a continuous annular metallic blank, locking said blank against axial movement while displacing the region centrally of and spaced from its edges radially to produce a corrugated surface, then subjecting a marginal edge of the partially formed rim beyond the corrugated surface to a bending force without disturbing the previously formed corrugations to displace said marginal edge radially inward to produce an inturned flange.

1,694,690. SECTIONAL PARTITION. WILLIAM J. REINHOLD, San Francisco, Calif., assignor to Pacific Manufacturing Company, San Francisco, Calif., a Corporation of California. Filed June 27, 1927. Serial No. 201,612. 14 Claims. (Cl. 20—4.)

9. In a sectional partition, a pilaster comprising a post having a groove formed in one side thereof for receiving metal wiring conduit, a finishing strip adapted to cover said groove, and spring clips for detachably retaining said strip upon the post.

1,694,691. GOLF GAME APPARATUS. FRANK RENTZ, Yankton, S. Dak. Filed Nov. 28, 1927. Serial No. 236,163. 17 Claims. (Cl. 273—87.)

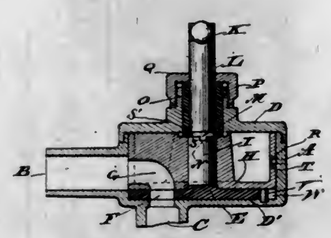


1. A golf game apparatus comprising a deck affording a fairway having holes extending through the deck, gate mechanism normally closing the holes for holding balls therein, means for operating the gate mechanism to release the held balls and means for returning the released balls to the fairway.

1,694,692. MAGNETIC CIRCUIT-CONTROL APPARATUS. SEVERIN SEABERG and HARRY W. ANDERSON, Moline, Ill. Filed Oct. 28, 1924. Serial No. 746,360. 10 Claims. (Cl. 175—375.)

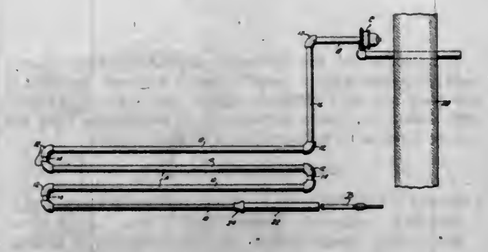
1. In a magnetic circuit control apparatus for controlling the flow of current through a load circuit, a pair

of switches having magnetic means connected therewith for opening both switches, in combination with means for timing the reclosing of the switches, comprising means for



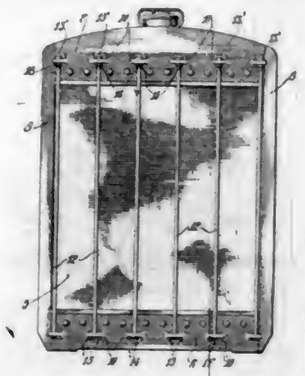
simultaneously varying the times the switches are open and closed and means for relatively varying the open and closed periods.

1,694,693. COMBINATION CORSET AND BRASSIÈRE. ROSANNA DU FORA ULMAN, Aurora, Ill., assignor to International Corset Company, Aurora, Ill., a Corporation of Illinois. Filed June 22, 1927. Serial No. 200,680. 1 Claim. (Cl. 2—30.)



A combination garment, comprising a corset, and brassière permanently connected to the corset at the front in line with the upper edge thereof for a substantial circumferential extent, said brassière having its lower edge inclined upwardly and rearwardly from its connection with the upper front edge of the corset adjacent each side of the garment to the center of the back, whereby bulging out of the wearer's body above the upper front line of the corset is prevented and freedom of body movement between the sides and back of the corset and brassière portions of the garment is permitted.

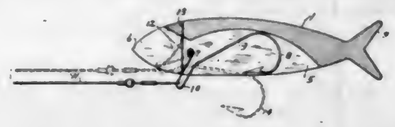
1,694,694. DRAFT FAUCET. HARRY E. WALKER, Elyria, Ohio. Filed Oct. 5, 1925. Serial No. 60,651. 5 Claims. (Cl. 25—184.)



1. In a dispensing valve, a casing closed at one end and having a valve seat in said closed end, a rotatable valve on said seat and an adjustable valve seat mounted upon said valve in said casing, said casing being provided with a lateral inlet opening and with a longitudinal outlet opening, and said valve and adjustable seat provided with outlet openings registering with said casing outlet.

1,694,695. HEATER. JAMES W. SLADE, New York, N. Y. Filed July 5, 1927. Serial No. 203,390. 1 Claim. (Cl. 126—84.)

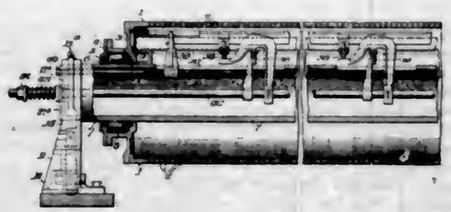
A heat generator comprising a relatively long tubular member of substantially uniform diameter, a second tubular member relatively shorter, and of larger diameter than said first-mentioned tubular member, said second-mentioned tubular member being secured to one end of the first-mentioned tubular member and having communication therewith, said second mentioned tubular member constituting a flame chamber having an open end, a fuel burner arranged adjacent the open end of the second-mentioned tubular member and adapted to project its flame in the direction of the open end of the second mentioned tubular member, and into the interior thereof said burner being spaced with respect to the open end of the second-mentioned tubular member, and a blower for creating a draft of air through the tubular members and for drawing the flame of the burner into the open end of said second-mentioned tubular member substantially as described.



1,694,696. RADIATOR. FRED M. YOUNG, Racine, Wis. Filed July 27, 1928. Serial No. 295,695. 4 Claims. (Cl. 293—54.)

1. In a radiator construction including end members having aligned apertured lugs and a guard rod passed through the apertures of the aligned lugs, a flared head on one end of the rod, and a nut threaded on the other end of the rod and placing a strain thereon.

---



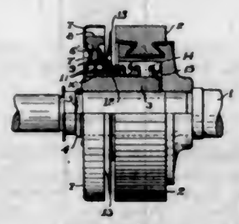
1,694,697. WEEDLESS FISH BAIT. FRED W. BELDATSCH, Milwaukee, Wis. Filed July 18, 1927. Serial No. 206,459. 8 Claims. (Cl. 43—35.)

1. A device of the character described, comprising a body provided with a longitudinally disposed slot and a fish hook pivotally mounted within the slot and provided with a shank having a curved portion protruding from the slot to form an attachment for a leader.

---

1,694,698. SUCTION ROLL FOR PAPER-MAKING MACHINES. EARL E. BERRY, Beloit, Wis., assignor to Beloit Iron Works, Beloit, Wis., a Corporation of Wisconsin. Filed May 5, 1923, Serial No. 636,863. Renewed Mar. 9, 1925. 37 Claims. (Cl. 92—53.)

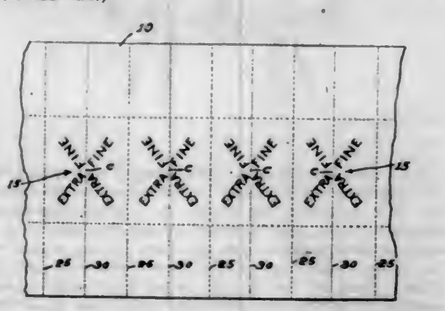
1. The combination with a suction roll of a suction chamber arranged therein and having side walls contacting with and extending inwardly from the interior surface of the roll, said side walls having flexible buckled or bow-shaped portions permitting spring-like contact between said walls and said roll.



1,694,699. TOOL FOR ROTATING VALVE HEADS. RICHARD E. BISSELL, Cleveland Heights, Ohio, assignor to Thompson Products Inc., Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 2, 1926. Serial No. 126,352. 3 Claims. (Cl. 51—29.)

1. A valve grinding tool comprising a flat spring member looped at its center portion with its ends curved downwardly and outwardly from the central loop to provide spring gripping members, a pin loosely connected with the loop for pivotal and sliding motion, and a plate mounted on the pin for pivotal and lateral motion in respect thereto.

---

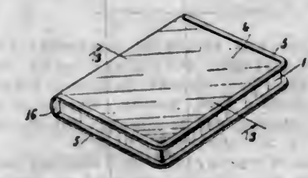


1,694,700. CENTRIFUGAL OPERATING MECHANISM. WALTER J. BRANSON, Springfield, Ohio., assignor, by mesne assignments, to Robbins & Myers, Inc., Springfield, Ohio, a Corporation of Ohio. Filed Sept. 28, 1926. Serial No. 138,305. 4 Claims. (Cl. 172—279.)

1. In a centrifugal operating mechanism, a rotatable member, a plurality of freely-floating weights rotatable therewith and movable radially outwardly by centrifugal force, each of said weights having a pair of anti-friction balls in rolling contact with each other, a member having a surface on one side of said weights co-operating with one of the balls of each pair, and a spring pressed axially movable member on the opposite side of said weights having a surface in contact with the other ball of each pair, each of said surfaces being inclined with the surfaces converging outwardly and extending uniformly about the entire faces of said members.

---

1,694,701. ADVERTISING WRAPPING FOR PACKAGES. NATHAN EDWIN COVEL, Newtonville, Mass. Filed July 19, 1926. Serial No. 123,322. 3 Claims. (Cl. 283—21.)

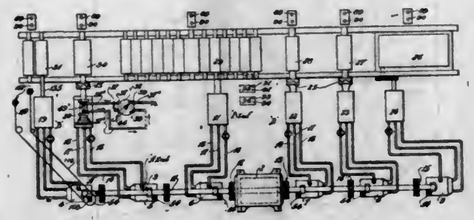


1. An advertising wrapper for parallel epipedal packages having side faces of equal area comprising a wrapping strip on which advertising matter is displayed in successive sets of indicia lengthwise the strip, each set of indicia being arranged in the form of a cross comprising words or symbols which are duplicated on each side of a transverse line through the intersection of the bars of the cross, said crosses being spaced from center to center a distance equal to the width of a side face of the package to be wrapped whereby said strip may be folded about the package on either one of two series of transverse lines and yet present the complete advertisement on each side face of said package.

---

1,694,702. VANITY CASE. BENJAMIN BERNARD DEITEL, Brooklyn, N. Y. Filed July 11, 1928. Serial No. 291,809. 3 Claims. (Cl. 132—83.)

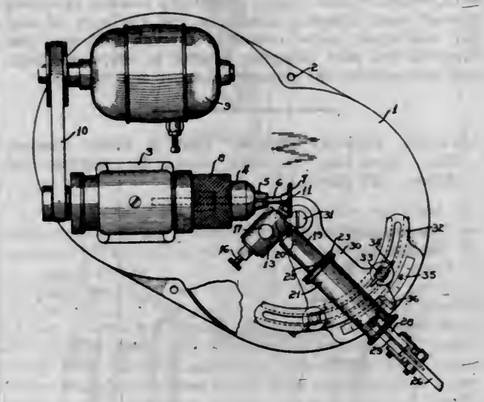
1. A container made of two parts, one of said parts comprising an open frame constituting the walls of said container, and the other part comprising a flat open frame hinged to said first mentioned frame, outwardly projecting flanges on said first mentioned frame at one of its peripheries, a cover plate conforming to the shape of said first mentioned frame and constituting the bottom of said container, a cover plate conforming to the shape of said flat open frame and constituting the top of said container, a facing extending over said cover plates and over the hinged portions of said frames, a separate channel member clamping said facing and said bottom cover plate to said flanges, and a separate channel member clamping said facing and said top cover plate to the edges of said flat open frame.



---

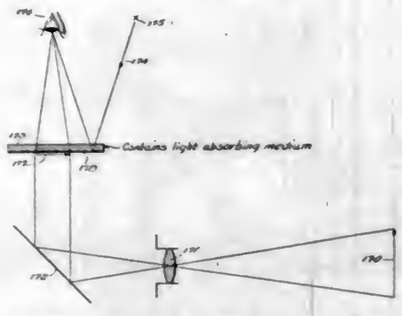
1,694,703. BEADED ARTICLE OF JEWELRY. FRIEDRICH DÖPPENSCHMITT, Pforzheim, Germany. Filed Dec. 4, 1923, Serial No. 678,481, and in Germany Jan. 22, 1923. 1 Claim. (Cl. 63—11.)

A form-sustaining resilient beaded article of jewelry comprising a spring steel core, a tubular covering of flexible, close-mesh wire fabric enveloping the core, and a string of beads surrounding the covering from end to end thereof in abutting contact with each other, said covering presenting a supplemental display surface of complementary character with respect to the display surfaces of the beads for maintaining a generally uniform appearance of the article in the event of the gapping of the beads and the exposure of the covering therethrough.



1,694,704. VARIABLE-SPEED CONTROL FOR PAPER-MAKING MACHINES. HAROLD F. DUNBAR, Turners Falls, Mass. Filed Oct. 12, 1926. Serial No. 141,227. 12 Claims. (Cl. 92—38.)

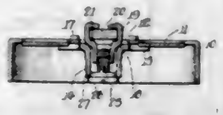
1. In a paper making machine, the combination with the several sectional units, means for controlling the rate of rotation of each section, and means for simultaneously controlling the rate of rotation of all of the units, comprising a main motor, a plurality of hydraulically operated and smaller motors operated from the main motor, and means for individually operating the units of the machine from the said smaller motors.



---

1,694,705. VALVE HONE. ERNEST A. HALL, Toledo, Ohio, assignor to The Hall Manufacturing Company, Toledo, Ohio, a Corporation of Ohio. Filed Sept. 16, 1927. Serial No. 219,843. 2 Claims. (Cl. 51—67.)

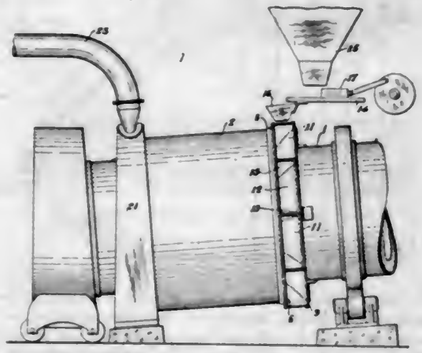
1. In a valve grinding tool, a base, a valve holder on the base, a grinding support on the base mounted so that its axis is parallel to the surface of the valve to be ground, a shaft slidable in said support, a housing having a bore to receive an abrading element adjustable therethrough normal to the surface to be ground, means to mount said housing on the shaft so as to lie at right angles thereto, and lever mechanism connected to the support and to said shaft for effecting reciprocation of the shaft.



1,694,706. SCREEN. ALFRED HERZ, Chicago, Ill. Original application filed Jan. 22, 1917, Serial No. 143,613. Divided and this application filed Dec. 16, 1926. Serial No. 155,135. 4 Claims. (Cl. 88—24.)

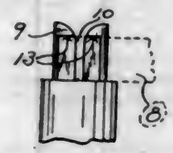
1. In a screen of the class described, a plate of transparent material having embodied therein a light obstructing substance, one surface of said plate being ground or matted.

---



1,694,707. OUTLET BOX. CHESTER A. JOHNSON, Chicago, Ill., assignor to Chicago Jefferson Fuse & Electric Company, Chicago, Ill., a Corporation of Illinois. Filed June 13, 1924. Serial No. 719,708. 13 Claims. (Cl. 247—22.)

3. An outlet box comprising, in combination, a box, a removable stud positioned inside said box having an unvarying relation therewith, a clamping member extending through the back of said box into said stud and movable with respect to said stud, a supporting member extending through said clamping member across the back of said box, and screw means extending through said stud and threaded into said clamping member to effect said relative movement of the clamping member and the stud.



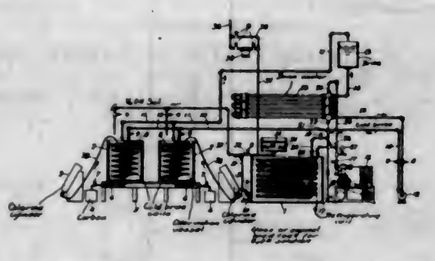
---

1,694,708. ROTARY DRIER. FRED A. JONES, Canton, Ohio. Filed Mar. 24, 1928. Serial No. 264,548. 16 Claims. (Cl. 34—6.)

1. In combination with an inclined rotary kiln, longitudinal pockets surrounding the kiln, means for charging material to be dried into the upper ends of the pockets and for discharging the material from the lower ends of the pockets.

1,694,709. BRUSH HOLDER FOR ELECTRIC GENERATORS OR MOTORS. ROGER G. LAFITE, Kansas City, Mo. Filed Dec. 15, 1926. Serial No. 154,906. 2 Claims. (Cl. 171—324.)

1. In a device of the character described, a brush holding spring, a spring supporting post having a slot therein adapted to receive one end of said spring and an abutting shoulder adjacent said slot adapted to engage the spring at a point where said spring leaves said slot to curl about said post.



---

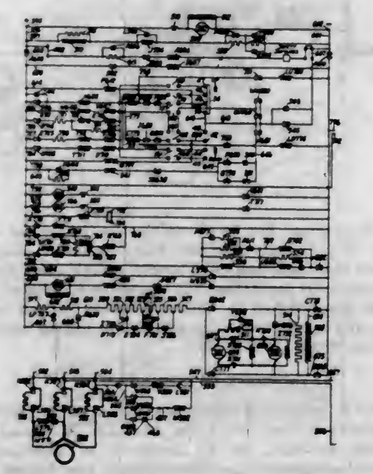
1,694,710. PROCESS FOR THE RECOVERY OF ZINC FROM ZINC-BEARING SOLUTIONS. NILS ERIK LENANDER, Lokken Verk, Norway, assignor to Orkla Grubeaktiebolag, Lokken Verk, Norway. Filed June 9, 1926. Serial No. 114,828, and in Norway May 22, 1925. 3 Claims. (Cl. 23—147.)

1. A process of treating metal salt solutions containing in addition to zinc chloride also some magnesium salt, comprising in combination the steps of adding to the solution an amount of lime less than that required to convert the zinc contents into zinc hydroxide, removing the resulting precipitate comprising basic zinc chlorides from the mother lye, mixing the precipitate with an amount of lime which is not greater than that equivalent to the basic zinc chlorides, and heating the mixture at atmospheric pressure to a temperature not above about 70° C., whereby the zinc hydrate of the reaction product is converted into zinc oxide.

---

1,694,711. METHOD FOR THE MANUFACTURE OF JAVELLE WATER. HARRY D. LEVINE, Philadelphia, Pa. Filed May 7, 1925. Serial No. 28,661. 2 Claims. (Cl. 23—86.)

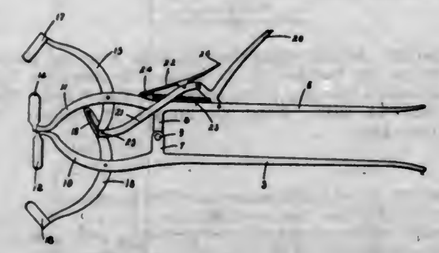
2. The process of forming Javelle water consisting of rapidly refrigerating a caustic soda solution to bring the same to a temperature substantially that of the freezing point of water, and maintaining the refrigerated solution at substantially said temperature constantly while discharging chlorine gas thereinto.



---

1,694,712. ELEVATOR SYSTEM. DAVID L. LINDQUIST, Hartsdale, N. Y.; EDWARD L. DUNN, East Orange, N. J.; and DAVID C. LARSON, Yonkers, N. Y., assignors to Otis Elevator Company, Jersey City, N. J., a Corporation of New Jersey. Original application filed May 21, 1925, Serial No. 31,953. Divided and this application filed Nov. 7, 1925. Serial No. 67,589. 10 Claims. (Cl. 172—152.)

1. An electric elevator system comprising, a motor, a generator for supplying current to said motor at a variable

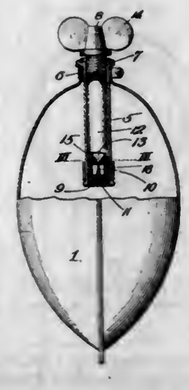


voltage, a field winding for said generator, a source of current for said winding, a resistance in circuit with said winding, means for short-circuiting the resistance in pre-

determined steps during acceleration of said motor, and means for increasing the amount of resistance in the last step, after it is short-circuited during acceleration, for reinsertion during retardation of said motor.

---

1,694,713. ANIMAL-MOUTH TONGS. WILLIAM GEORGE MACLEAN, Jr., Arnprior, Ontario, Canada. Filed Mar. 5, 1928. Serial No. 259,286, and in Canada Feb. 13, 1928. 11 Claims. (Cl. 128—14.)



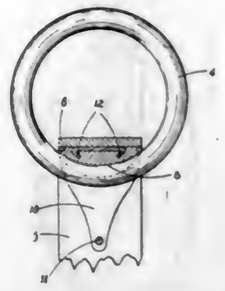
1. Animal mouth tongs comprising a pair of co-operating handles fulcrumed together; the forward ends of said handles converging and each provided at its outer extremity with a bit; a clamping member pivotally carried by each forward end and each provided at its outer extremity with a clamping jaw and a lever for operating said clamping members.

---

1,694,714. INFLATABLE LIFE PRESERVER. PETER MARKUS, Kansas City, Mo. Filed July 15, 1927. Serial No. 205,975. 1 Claim. (Cl. 9—19.)

The combination with an inflatable waterproof member having a filling neck, a tube projecting into the member through said filling neck and having a waterproof joint therewith, a piercing point at one end of said tube, a cartridge opposed to said piercing point, and means closing

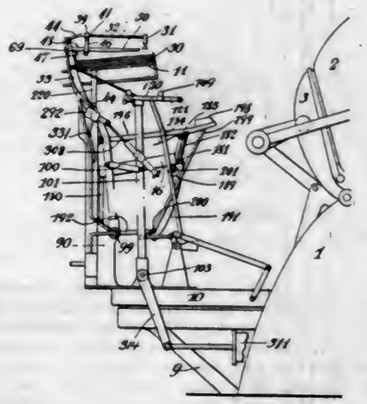
the other end of said tube with an air-tight joint and longitudinally adjustable thereof to force the cartridge against the piercing point.



---

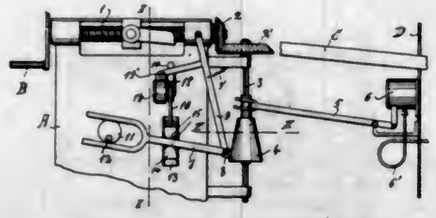
1,694,715. CONTACT DEVICE FOR ELECTRICALLY-ENERGIZED IMPLEMENTS. MICHAEL W. MCARDLE, Chicago, Ill. Filed Mar. 18, 1927. Serial No. 176,376. 4 Claims. (Cl. 173—338.)

1. A contact member for an electrically energized implement comprising a mounting member adapted for securement to the frame structure of the implement to be served and having its surface for receiving the contact of the posts provided with insulated area; a plate having a pair of apertures for contact posts; insulations applied on the opposite surfaces of said plate having apertures of less diameter than those of the plate, positioned for registering with the plate apertures respectively, and means for holding the insulations with their apertures thus registered; a pair of headed contact posts diametered for fitting the lesser diametered holes of the insulations and inserted through the registered apertures of the insulations and plate, with their heads stopped by the insulation at one side of the plate; said plate being applied on the mounting member with the side at which the heads of the posts stand facing the said receiving surface of the mounting member and with said heads lodged on the insulated area of the latter; a clamping bolt extending through the plate insulated therefrom into the mounting member for clamping the plate to the mounting member and clamping the heads of the contact posts between the insulations carried by the plate and mounting member respectively, and means for securing circuit wires to the posts respectively.



1,694,716. HARNESS FERRULE. MELCHER MILLER, Leipzig, Saskatchewan, Canada, assignor of one-half to Ludwig Stiefel, Leipzig, Saskatchewan, Canada. Filed Apr. 30, 1928, Serial No. 274,115, and in Canada Mar. 28, 1928. 2 Claims. (Cl. 24—183.)

1. A harness ferrule comprising a wearing member, one face of which is of curved, convexed formation, the other face being of rounded formation and a retainer member engageable over the rounded face and adapted to be suitably connected in a strap loop.



---

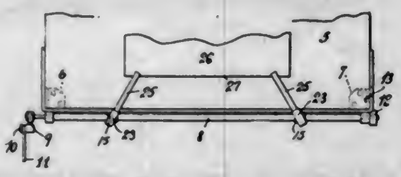
1,694,717. SHEET-FEEDING MECHANISM. LEWIS E. MORRISON, Newark, N. J., assignor to American Type Founders Company, a Corporation of New Jersey. Original application filed Apr. 9, 1925, Serial No. 21,777. Divided and this application filed Feb. 6, 1926. Serial No. 86,371. 1 Claim. (Cl. 271—62.)

The combination with means for separating and removing the top sheet from a pile of sheets, of a platform, a paper elevator comprising supports for said platform, a shaft, cables between the latter and the said supports to raise the same, a ratchet for rotating said shaft, a pawl for operating the ratchet, a feeler member for causing said pawl to engage the ratchet, means for supporting said feeler member to contact with the top sheet of the pile, devices for maintaining said feeler member out of contact with the paper while the top sheet is being separated and removed therefrom, means mounted on the said separating and removing means for operating said maintaining means away from the feeler member and other means on said separating and removing means for operating the said ratchet.

1,694,718. DYNAMIC AND EFFICIENCY METER. EMIL PETERS, Crefeld, Germany. Filed Nov. 1, 1922, Serial No. 598,451, and in Germany Nov. 8, 1921. 2 Claims. (Cl. 73—187.)

1. A counter for ascertaining the performance of a steam engine comprising indicating means, a rotary cam element for operating said means, means connected with the means for regulating the degree of admission of said engine and adapted to impart rotation to said cam element, and a pressure gauge adapted to impart axial reciprocation to said element.

---

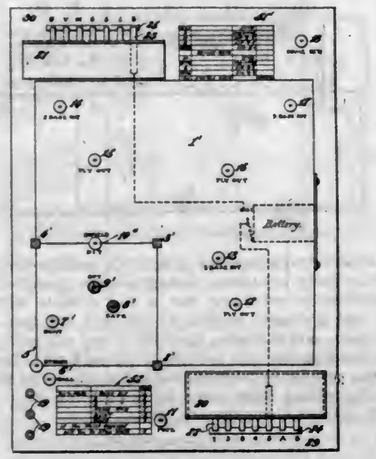


1,694,719. SUCTION NOZZLE FOR PRINTING PRESSES. STEPHEN HAINES PLUM, 2d., Madison, N. J., and HARRY DUFF, Brooklyn, N. Y., assignors to American Type Founders Company, a Corporation of New Jersey. Original application filed Aug. 14, 1924, Serial No. 731,910. Divided and this application filed June 23, 1926. Serial No. 117,919. 4 Claims. (Cl. 271—27.)

1. A suction nozzle of the character described comprising a nozzle support, a suction nozzle head, a shaft for pivoting the latter on said support and a spring secured to said nozzle head for removably securing the said shaft to the said nozzle head.

---

1,694,720. SHEET-HOLDING DEVICE. STEPHEN HAINES PLUM, 2d, Madison, N. J., assignor to American Type Founders Company, a Corporation of New Jersey. Filed Sept. 14, 1927. Serial No. 219,411. 7 Claims. (Cl. 101—408.)

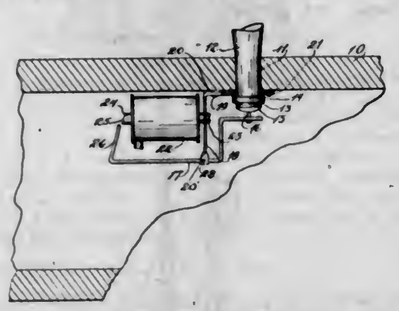


1. The combination with the platen of a press, of sheet holding resilient fingers pivoted on said platen for momentarily holding the delivery edge of the printed sheet against the platen and means for adjusting said fingers vertically with respect to the platen.

---

1,694,721. ELECTRIC BASEBALL GAME. JAMES M. PRENTICE, Holyoke, Mass. Filed Dec. 14, 1927. Serial No. 239,898. 7 Claims. (Cl. 273—88.)

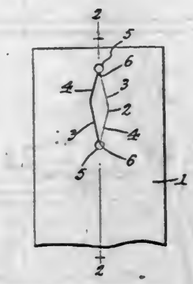
1. A baseball game comprising in combination, a game board, electric bulbs located thereon and designated to indicate different plays of the game, a diamond field represented on the game board, electrical connections connected to the electric bulbs, two series of player switches located



at the opposite ends of the board and with which the said connections are made, a shield for each series of switches for concealing the operation of the switches from the players.

---

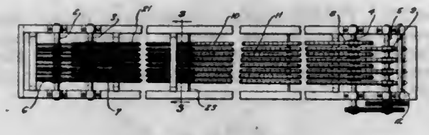
1,694,722. ELECTRICALLY-OPERATED ORGAN-VALVE CONTROL. CHARLES FLOYD REDMAN, Evansville, Ind. Filed Mar. 27, 1928. Serial No. 265,025. 4 Claims. (Cl. 84—339.)



1. An electro-magnetic valve actuating device including a support, a magnet carried by the support and having a core projecting from one end, a fulcrum member at the opposite end of the magnet, an armature lever pivoted intermediate its ends to said fulcrum member and having a long arm and a short arm, the long arm of the lever extending longitudinally of the magnet and having its extremity bent to lie adjacent said core, and a pipe controlling valve mounted on the short arm of said lever.

---

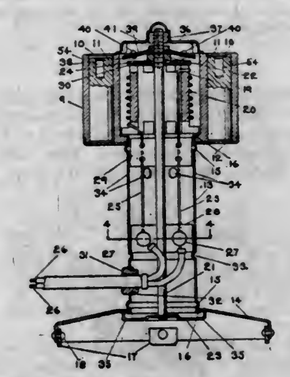
1,694,723. TAG. O. C. RICHARDSON, Chicago, Ill. Filed Apr. 22, 1925. Serial No. 25,086. 1 Claim. (Cl. 40—26.)



A tag of greater length than width and provided with spaced apertures and with an opening which is elongated in the direction of the length of the tag, the apertures being located in a line parallel to the length of the tag, the opening being diamond shaped and being in communication at its acute angles with the apertures, the slant edges that define the aforesaid acute angles converging toward the apertures at opposite ends of the opening, thereby to direct a button fastening into one of the apertures when the tag is moved in one direction parallel to its length, and to

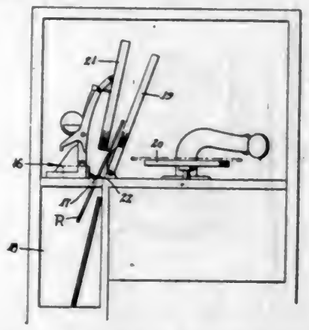
direct the button fastening into the other of the apertures when the tag is moved in an opposite direction parallel to its length.

---



1,694,724. SEPARATOR. ARTHUR R. ROGERS, Jonesport, Me. Filed July 18, 1927. Serial No. 206,589. 3 Claims. (Cl. 209—102.)

1. A separator including a plurality of endless belts arranged side by side, said belts diverging toward one end to provide spaces therebetween gradually increasing in width toward one end, each belt including an endless rope and a plurality of separate pieces strung upon the rope and arranged end to end.



---

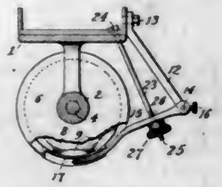
1,694,725. HEATING APPARATUS. WARNER T. TABB, Mahwah, N. J. Filed Apr. 28, 1927. Serial No. 187,208. 4 Claims. (Cl. 219—19.)

1. A heating device comprising a tubular shell and longitudinally extending cylindrical recesses in the wall of said shell, said recesses being open at one end and otherwise substantially closed, and a tubular pedestal for said shell and a base for said pedestal and a heating means for said shell centrally positioned therein, and supply connections for said means internal of said pedestal.

1,694,726. COIN CONTROL FOR AUTOMATIC SOUND REPRODUCERS. GEORGE W. WERNER, Easton, Pa. Filed Aug. 5, 1927. Serial No. 210,916. 14 Claims. (Cl. 194—6.)

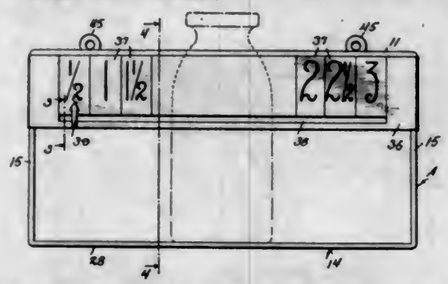
1. The combination with an automatic record changing sound reproducer, of coin controlled means for operating said sound reproducer, and record-operated means operable by the change of records by said sound reproducer and controlling said means to stop said sound reproducer.

---



1,694,727. VANITY CASE. HARRISON L. ALLEN, Sherbrooke, Quebec, Canada, assignor to Canadian Sturdy Chain Company Limited, Sherbrooke, Canada. Filed Sept. 13, 1926. Serial No. 135,217. 4 Claims. (Cl. 132—82.)

1. In a vanity case, a powder receptacle having a top wall provided with perforations for the discharge of powder contained in said receptacle, a strap positioned beneath the perforations and provided with upwardly directed terminals supported from the top wall, a movable valve plate, and a spring confined between the central portion of the strap and the movable valve plate and normally holding the latter against the underside of the top wall in position to close the perforations.



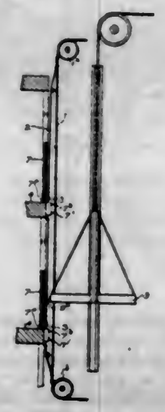
---

1,694,728. RESTRAINING DEVICE FOR LENS-GRINDING MACHINES. CHARLES A. ADAMS, Davenport, Iowa, assignor to Optical Industries Corporation, Davenport, Iowa, a Corporation of Delaware. Filed Aug. 2, 1926. Serial No. 126,652. 4 Claims. (Cl. 51—111.)

1. In a machine of the character described a support, a pair of lens grinding tools carried by the support and adapted to operate in opposite directions, a lens carrying blocker adapted to be positioned between the tools, a bracket carried by the support, a vertically adjustable and horizontally swinging arm carried by the bracket, and means carried by the arm and engageable with the blocked for restraining the movement thereof.

1,694,729. MILK-BOTTLE HOLDER. ROSCOE C. BACON, Port Norris, N. J. Filed Feb. 2, 1926. Serial No. 85,566. 1 Claim. (Cl. 116—135.)

An indicating device for milk bottle holders comprising a longitudinally extending graduated plate provided with a longitudinally extending slot, a rod slidable within said slot, and a pointer carried by the said rod forwardly of said plate, said rod being provided at one end with a spring arm engaging the rear surface of the said plate for retaining the pointer in position while the other end thereof is provided with a finger piece for facilitating the movement of the pointer along the said plate.

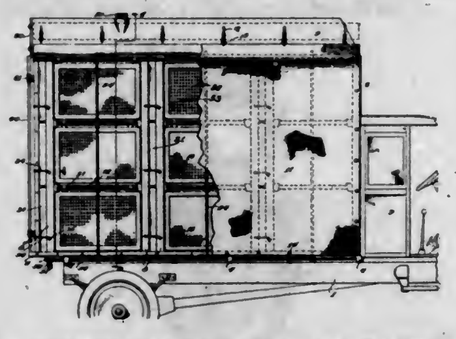


---

1,694,730. IMPERVIOUS MATERIAL. WARREN F. BLEECKER, Boulder, Colo. Filed May 3, 1923. Serial No. 636,493. 2 Claims. (Cl. 106—9.)

1. An article of manufacture consisting of a solid body of artificial graphite, the voids of which are closed with sulfur.

---



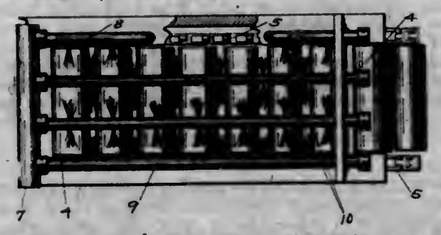
1,694,731. SAFETY DEVICE FOR ELEVATORS. JAMES ALEXANDER CARLTON, Toronto, Ontario, Canada, assignor to Massey-Harris Company, Limited, Toronto, Canada. Filed Aug. 18, 1927. Serial No. 213,817. 5 Claims. (Cl. 187—47.)

3. In a device of the character described the combination with an elevator, an elevator control cable and a gate, of a casing having two chambers arranged side by side in spaced relationship to one another, the sides of one chamber being cut away, the casing being provided with slots; cable and gate locking latches pivotally carried within the casing and having their upper ends received in the chambers, each latch having an end projecting through one of the slots; an arm carried by the gate adapted to engage the projecting end of the cable locking latch to move it to release the cable, the arm being bent intermediate its ends to lie in the said cut away portion of one of the chambers for engagement by the gate locking latch; and a shoe carried by the elevator for engaging the projecting end of the gate locking latch to release it when the elevator is at a landing.

1,694,732. TRUCK FOR TRANSPORTING POULTRY. LOUIS A. COHEN, Central City, Ky. Filed Mar. 12, 1926. Serial No. 94,257. 5 Claims. (Cl. 119—12.)

1. A vehicle for transporting poultry and the like comprising a supporting frame, spaced uprights secured upon said frame along the sides and transverse center thereof, transverse and longitudinal shelves detachably engaged with the uprights to be supported thereby, feed boxes resting upon the transverse shelves and forming partitions between adjoining compartments, floors supported at their edges by the several shelves and means on the uprights for preventing release of the feed boxes.

---



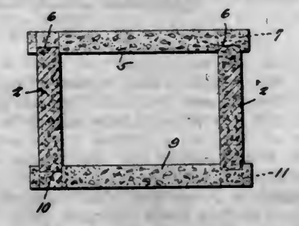
1,694,733. AUTOMOBILE CLEANING BRUSH. ROY M. CUMMINS, Barberton, Ohio. Filed Oct. 19, 1927. Serial No. 227,238. 3 Claims. (Cl. 15—29.)

1. A device of the class described comprising a brush head, a plate fixed to the head and having a series of impact blades carried thereby, a disk having inner and outer flanges carried thereby and defining a fluid receiving channel, a cover plate connected with the disk, the outer flange having nozzles therein, means for conducting water to the channel for discharge through the nozzles upon the blades to impart rotary movement to the plate and thus the brush head.

---

1,694,734. SPRAY WASHER. FRANK W. CUTLER, Portland, Oreg. Filed Jan. 25, 1927. Serial No. 163,530. 4 Claims. (Cl. 146—194.)

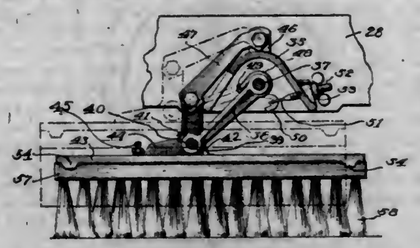
2. In a spray washer: a cross roll conveyor; a pair of spray pipes, one disposed at each end of said rolls and orificed to impinge jets of spray longitudinally along said rolls; spray pipes intermediate said former pipes and orificed to impinge jets of spray longitudinally along said rolls, the orifice in each of said pipes being staggered relatively to the orifices in an adjacent pipe.



1,694,735. SUPPORTER FOR WEARING APPAREL. JAMES THOMAS ESKRIDGE, La Jara, Colo. Filed May 16, 1927. Serial No. 191,857. 1 Claim. (Cl. 241—4.)

A supporter for wearing apparel, comprising a pair of non-elastic straps, each strap having its ends secured together to form a loop, said loops being crossed in the front and the back of the wearer and the ends of the loops being disposed at the wearer's sides, a back band secured to the loop ends, and a pendant resilient supporting member secured to the loops at the junction of the back band with the latter.

---

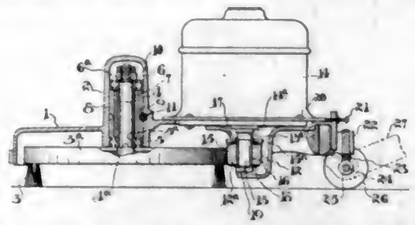


1,694,736. CONCRETE CULVERT. JOHN BROWN FENDER, Kaufman, Tex. Filed Mar. 29, 1928. Serial No. 265,639. 2 Claims. (Cl. 72—52.)

1. A culvert the side walls of which are made up of slabs disposed end to end, the slabs being provided with upstanding lugs at their meeting ends, the top of the culvert being formed of cross plates provided near to their ends with transverse grooves in which the upper edges of the side-forming slabs are received, certain of the cross plates having openings communicating with the grooves and receiving the lugs of adjoining slabs.

---

1,694,737. SCRUBBING MACHINE. WALTER S. FINNELL, Hannibal, Mo. Filed Feb. 21, 1927. Serial No. 169,777. 11 Claims. (Cl. 15—50.)

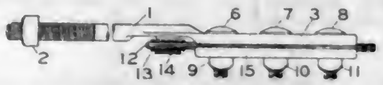


1. In a scrubbing machine, a brush-ring, brush-holders, and parallel motion devices between and supporting the brush holders from the ring.

---

1,694,738. FLOOR-FINISHING APPARATUS. GEORGE GEARY, Toronto, Ontario, Canada. Filed Feb. 14, 1927. Serial No. 168,030. 2 Claims. (Cl. 15—49.)

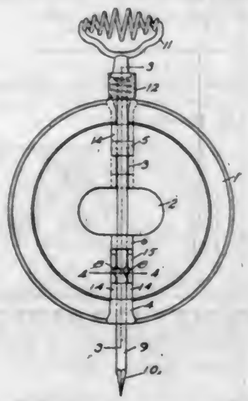
1. In floor finishing apparatus the combination of a frame provided with slots; a motor provided with a de-



pending armature shaft; a finishing tool journalled on the frame; a friction disk carried on the shaft and adapted to drive the tool; bolts passed through the slots for adjust-

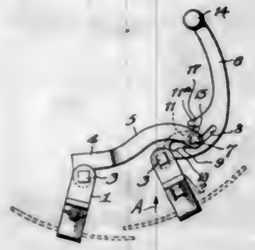
ably securing the motor to the frame; and a screw threaded through the frame for moving the motor towards the tool when the bolts are loosened.

---



1,694,739. ANCHOR ROD. RUFUS GOULD, New York, N. Y., assignor of one-half to Postal Telegraph-Cable Company, New York, N. Y., a Corporation of Connecticut. Filed Feb. 24, 1927. Serial No. 170,722. 2 Claims. (Cl. 24—135.)

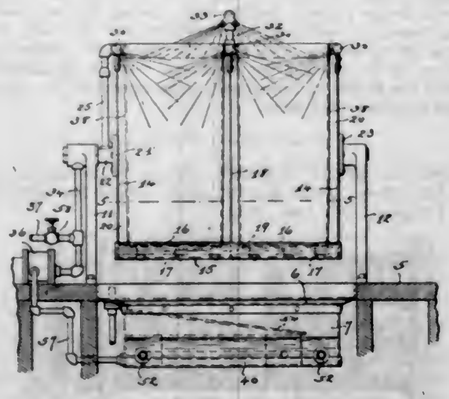
1. An anchor rod, one extremity of which is formed to have a flattened portion, a stud carried by said flattened portion and located near the cylindrical portion of said rod with its axis substantially perpendicular to the longitudinal axis of said rod, a thimble carried and retained by said stud, strand guiding and constraining means provided in the flattened portion of said rod, and a detachable member adapted to be secured to said guiding means to form with said guiding means a strand clamp.



---

1,694,740. STOVE DAMPER. ROGER W. GRISWOLD, Erie, Pa., assignor to The Griswold Manufacturing Company, Erie, Pa., a Corporation of Pennsylvania. Filed Jan. 28, 1926. Serial No. 84,314. 1 Claim. (Cl. 126—292.)

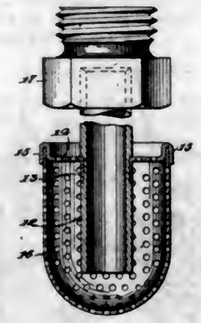
In a stove damper, the combination of a damper rod having a point, a handle and a laterally projecting shoulder more nearly adjacent to the point than to the handle; and a damper plate having a rod opening shaped to receive the rod from either end of the opening and having a locking surface with an adjacent open space at each end of the rod opening, the open space permitting the turning of the inserted rod in the opening to bring the shoulder into position to engage with the locking surface upon a reciprocative movement of the rod.



1,694,741. RIM CONTRACTOR. LEWIS HAGNER, Jr., Norristown, Pa. Filed July 6, 1925. Serial No. 41,786. 1 Claim. (Cl. 157—1.)

In a rim contractor, the combination with a pair of clamps for clamping engagement with a rim adjacent its separable ends, of a fulcruming link operatively pivoted to one of the clamps and provided with spaced arms, a pivot bolt passing transversely of the ends of the arms, an operating lever operatively pivoted on the other clamp and having a slot adjacent its pivot and extending in a direction with the lever, said slot being of angular formation, one edge of the operating lever having a recess through which an implement may transversely engage and rest on the edges of said arms, whereby upon moving the lever, the lever may pull upon one clamp and cause pressure in direction of the other clamp and thereby separate the adjacent ends of the rim, one edge of the slot having a recess to receive the transverse bolt after removing the implement whereby upon moving the operating lever further, the rim may be contracted.

---



1,694,742. APPARATUS FOR HARVESTING ARTIFICIAL ICE. EDWARD A. HALL, Baltimore, Md. Filed Aug. 6, 1927. Serial No. 211,076. 8 Claims. (Cl. 62—113.)

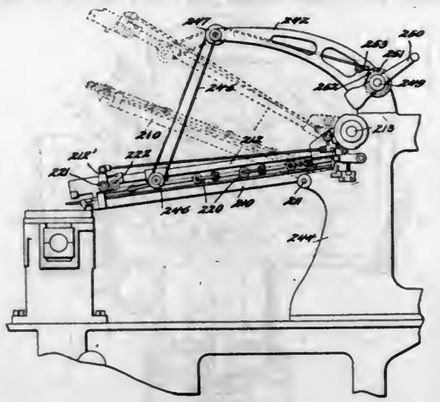
1. In an apparatus for harvesting artificial ice the combination with a dumping means to hold the cans with the ice therein, of means for directing water against the can while held by the dump whereby such directed water will be chilled, means for accumulating the chilled water running from the cans and connections between the chilled water accumulating means and the means for directing the water against the cans.

1,694,743. STRAINER. GEORGE I. HINMAN, New Haven, Conn., assignor to The Greist Manufacturing Company, a Corporation of Connecticut. Filed Oct. 17, 1927. Serial No. 226,627. 5 Claims. (Cl. 210—171.)

1. The combination with a pump tube, of a strainer fixed thereto and consisting of a disk-like cap having an inverted U-shaped periphery, and an inverted foraminous thimble-like strainer body the upper end of which is entered into and suitably attached to said U-shaped periphery of said cap.

---

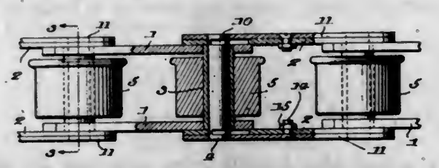
1,694,744. AIR AND STEAM LINE COUPLER. FRANK JACOBS, Prairie, Idaho. Filed Jan. 27, 1923, Serial No. 615,290. Renewed May 5, 1928. 1 Claim. (Cl. 284—6.)



Mating coupling heads each consisting of a body portion and a transverse end portion, the body portion having a chamber and a valve in said chamber, the transverse portion having passages leading into said chamber, a tube projecting from the transverse portion in concentric relation to one of said passages, a hollow stem extending from said passage and beyond the tube for engagement in one of the passages of the mating head, a spring pressed sleeve slidable on the stem and adapted to seat within said passage of said mating head, a cap on the inner end of said sleeve, a packing disk on the stem between the cap and tube, and a spring in the tube for normally urging the packing disk into engagement with said cap, said packing disk being adapted to be pressed against the mouth of the tube, when said sleeve is moved inwardly, whereby to prevent escape of air between the tube and stem.

---

1,694,745. SHEET FEEDER. WILLIAM M. KELLY, Westfield, N. J., assignor to American Type Founders Company, Jersey City, N. J., a Corporation of New Jersey. Original application filed Aug. 6, 1921, Serial No. 490,290, and in Great Britain July 27, 1922. Divided and this application filed Apr. 15, 1927. Serial No. 184,116. 2 Claims. (Cl. 271—8.)

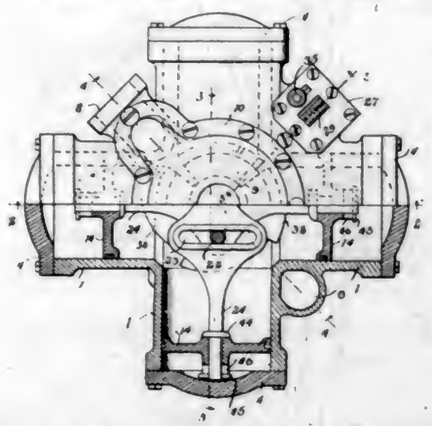


1. In a sheet feeder, in combination, a pivoted frame, sheet manipulating mechanism mounted thereon, a pair of davits extending over said frame, and means carried by said davits for elevating said frame comprising two drums at the base of the davits and a cord extending from each side of the frame over a pulley at the tip of the adjacent davit and thence to one of said drums, and friction means

associated with the drums to hold the frame in any raised position comprising a brake shoe in a recess in the drums and spring means forcing said shoe into frictional engagement with the drums.

---

1,694,746. DRIVE AND CONVEYER CHAIN. EUGENE E. LANDAHL, Chicago, Ill. Filed Nov. 19, 1923. Serial No. 675,761. 5 Claims. (Cl. 74—32.)



3. A separable drive or conveyer chain comprising, in combination, central and side links alternating throughout the chain and with said side links in pairs with the links of each pair disposed at opposite sides of said center links, pintles pivotally connecting said side links to said center links, said pintles being formed with reduced neck portions and each of said side links being formed with a pair of key hole slots receiving the end portions of a pair of pintles and permitting the spread of the pintles of each pair to the ends of said slots in the working assembly of the parts of said chain and the approach of the pintles of each pair to separate said chain, and a pair of rigid outer links for each pair of side links removably secured against the outer sides of said side links and closely engaging entirely around the end portions of said pintles in a manner to provide a close bearing surface for said pintles entirely around their said end portions, to maintain said pintles in spread position in bearing contact with said side links at the ends of the slots therein, and whereby stress in the use of said chain is divided between said side links and said outer links.

---

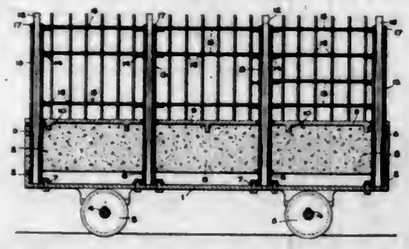
1,694,747. LIQUID METER. DONALD H. MCGOGY, McMinnville, Oreg., assignor to McGogy Pump Co., Inc., McMinnville, Oreg., a Corporation of Oregon. Filed Apr. 26, 1927. Serial No. 186,717. 4 Claims. (Cl. 73—30.)

1. A meter comprising oppositely and angularly disposed cylinders, pistons therein, crossing rods connecting opposite pistons which have a limited movement thereon and having their intermediate portions widened and transversely slotted, a rotary valve regulating the inflow and outflow of liquid to and from the cylinders, a crank pin

carried by the rotary valve and engaging the slots of the piston connecting rods at their points of crossing, manually operable means for regulating the flow through the meter

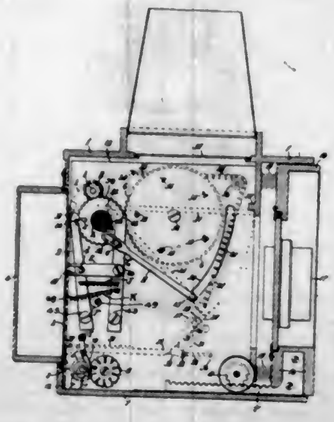
by varying the movement of the pistons on their inward travel, and means actuated by the valve for registering the volume flowing through the meter.

---



1,694,748. MOTION-PICTURE CARD GAME. JOSEPHINE OWEN MIRANDA, Los Angeles, Calif. Filed Oct. 21, 1927. Serial No. 227,785. 3 Claims. (Cl. 273—152.)

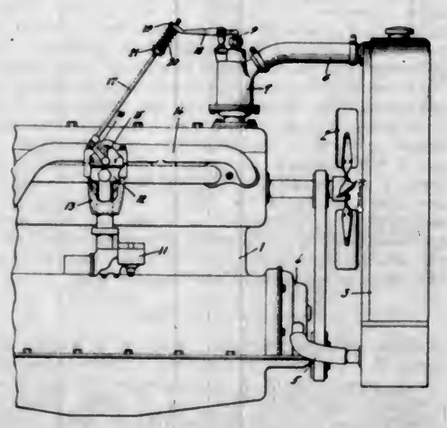
1. A card game consisting of five suits, each suit composed of twelve cards, each suit having a uniform symbol of the same color to distinguish it from the cards of other suits, the symbols being a triangle, a square, a circle, a dollar mark sign, and a star, the cards of each suit having five of them inscribed with a portrait, the portraits being that of a producer, a star, a director, an author and a hero, being motion picture personalities.



---

1,694,749. TRUCK. BERNARD JOSEPH MOORE, Stoke-on-Trent, and ARTHUR JOHN CAMPBELL, Stone, England, assignors of one-half to Gibbons Brothers Limited, Dudley, England, a Company of Great Britain. Filed Nov. 11, 1927, Serial No. 232,687, and in Great Britain Nov. 19, 1926. 10 Claims. (Cl. 25—142.)

1. A truck comprising a truck base, provided with axles and supporting wheels, pillars on said base and projecting upwardly therefrom, distance tubes removably mounted on said pillars and trays having notches at their edges engaged and supported by the said distance tubes.

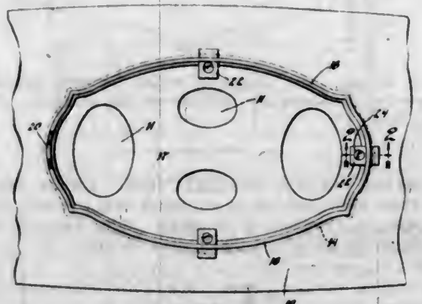


1,694,750. PHOTOGRAPHIC CAMERA. RAFAEL FERNANDEZ MORRJON, Habana, Cuba. Filed May 27, 1926, Serial No. 112,100, and in Cuba May 18, 1926. 4 Claims. (Cl. 95—42.)

1. In a photographic camera, an automatic exposing mechanism comprising a curtain, winding reels for the curtain, a gear wheel rotatorily supported at a side of the camera and having two projections in diametral substantially opposite position, a pair of arms rockingly mounted in symmetrical position at opposite sides of the gear wheel and having opposite grooves designed to respectively engage the projections on the gear wheel, a gear pinion fixed at the end of one of said winding reels and meshing with the gear wheel, elastic means connecting together the said first mentioned arms, a reflecting mirror pivotally mounted, and a link of sliding connection which connects one of said arms to the reflecting mirror.

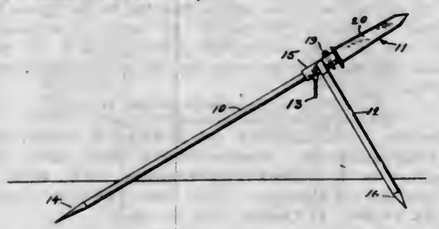
---

1,694,751. AUTOMATIC HEAT-CONTROL DEVICE. FRANK N. NUTT, Flint, Mich., assignor to A C Spark Plug Company, Flint, Mich., a Company of Michigan. Filed Oct. 21, 1926. Serial No. 143,191. 3 Claims. (Cl. 123—178.)



1. In combination, a hollow casing member adapted to be inserted in the circulatory cooling system of an internal combustion engine, a thermo-sensitive element located within said casing, a valve carried by said element to control fluid flow thru the circulatory system in accordance with the temperature conditions therein, a housing surrounding the engine intake conduit and having constant communication with the engine exhaust conduit, a movable deflector plate in said housing, and an operable connection between said thermo-sensitive element and said deflector plate whereby the deflection of exhaust gases into the housing is controlled in accordance with temperature conditions within said cooling system.

---



1,694,752. INSTRUMENT-PANEL BEZEL. FRANK N. NUTT, Flint, Mich., assignor to A C Spark Plug Company, Flint, Mich., a Company of Michigan. Filed Sept. 17, 1927. Serial No. 220,265. 3 Claims. (Cl. 180—90.)

1. In an assembly for mounting instruments, a supporting element provided with an aperture, and a bezel element fitting in said aperture, an instrument panel fitting within said bezel, fastening means arranged at spaced intervals about said bezel, each fastening means comprising a clip engaging against two of said elements and a screw so connecting said clip and the third of said elements that a tightening of said screw simultaneously increases the inward pressure of said bezel element on said supporting element and said panel element.

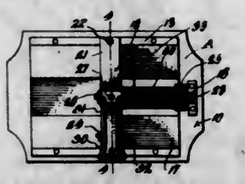
---

1,694,753. PORTABLE GUARD FENCE. JOSEPH PEPPIN, Sciota, N. Y. Filed Nov. 11, 1927. Serial No. 232,565. 8 Claims. (Cl. 89—36.)

1. A weapon of defence, comprising a staff, a socket provided at one end of the staff, a bayonet having a handle and a hand guard, the handle being adapted to fit detachably in the socket, the hand guard forming a stop, means for securing the handle in the socket, bored lugs on the staff, and legs detachably mounted in the bores of said lugs in such a manner that a tripod is formed of the staff and legs.

---

1,694,754. AUTOMATIC VENT FOR BOTTLES AND OTHER LIQUID CONTAINERS. OMER PORTER, Evansville, Ind. Filed Aug. 25, 1927. Serial No. 215,455. 1 Claim. (Cl. 215—1.)



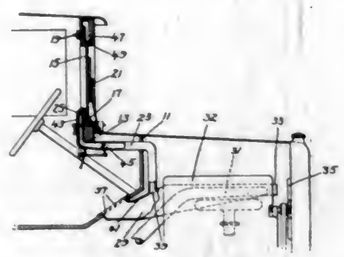
The combination with a liquid container having an upwardly dished bottom provided with an internally screw threaded part integral therewith, of an externally screw threaded, one-piece, plug directly screwed into said screw threaded part and having its head housed by the dished part of the container, said plug having an air vent extending through its head and provided with a hollow interior communicating with said air vent, a loose ball valve wholly contained within said hollow interior and adapted

normally to seat on and close the vent when the container is in upright position, and a limiting cross wire whose ends are received in holes in the plug below the top thereof, said wire serving to limit the unseating movement of the ball valve.

---

1,694,755. PICTURE FRAME. CONSTANTINOS G. RENTOS, Brooklyn, N. Y. Filed Mar. 6, 1928. Serial No. 259,493. 6 Claims. (Cl. 40—148.)

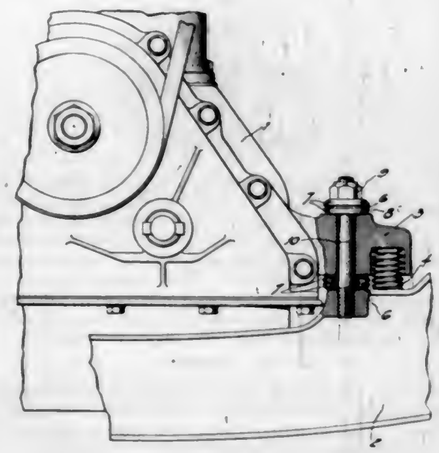
1. A picture frame comprising a flat plate having a picture exhibiting opening, spaced longitudinally extending cleats secured to the rear face of the plate on each side of the picture exhibiting opening in slightly spaced relation to the longitudinal edges thereof, a transverse cleat secured to the rear face of the plate in spaced relation to one transverse edge of the picture opening, and a T-shaped member having its arms connected with the longitudinal cleats and its leg connected with the transverse cleat.



---

1,694,756. SUPPORT FOR INTERNAL-COMBUSTION ENGINES WITH RUBBER CUSHIONS. CHARLES R. SHORT, Dayton, Ohio, assignor to General Motors Research Corporation, Detroit, Mich., a Corporation of Delaware. Filed June 12, 1926. Serial No. 115,549. 7 Claims. (Cl. 180—64.)

1. The combination with a supporting member and a supported member, of a cushioned support therebetween including a spiral course of compressible material, and a like course of fabric wound upon and alternating with succeeding convolutions and partially compressing the material of the first mentioned course.

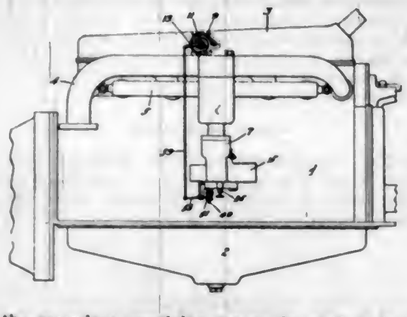


1,694,757. MEANS FOR REMOVING SNOW AND ICE FROM WINDSHIELDS. LOUIS M. SPENCER, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Oct. 10, 1925. Serial No. 61,827. 5 Claims. (Cl. 20—40.5.)

1. In a device of the class described, the combination with an automobile having a cowl support, a panel spaced therefrom, a windshield, a heater, a conduit having one end in communication with said heater and the opposite end extending between said support and said panel adapted to direct heated air against the internal surface of said windshield.

---

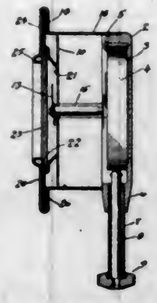
1,694,758. MOTOR MOUNTING. CALEB E. SUMMERS and ROGER KENNETH LEE, Detroit, Mich., assignors to General Motors Research Corporation, Detroit, Mich., a Corporation of Delaware. Filed July 17, 1926. Serial No. 123,107. 8 Claims. (Cl. 180—64.)



1. In a device of the character described, the combination of a support, a body to be supported, a flexible mounting therebetween permitting floating of the body, and a vibration absorbing element for the body consisting of compressible elements and means to limit their deflection.

---

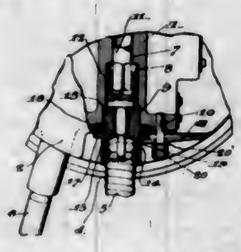
1,694,759. THERMOSTATIC CONTROL OF CARBURETORS. ALEX TAUB, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed May 29, 1926. Serial No. 112,681. 2 Claims. (Cl. 123—106.)



1. In a constant temperature engine, a chamber for cooling medium therefor, a thermostat therein, a carburetor having primary and secondary means to supply fuel mixture to said engine, mechanism connecting said thermostat

and the secondary supplying means for said carburetor whereby the thermostat determines the character of the mixture.

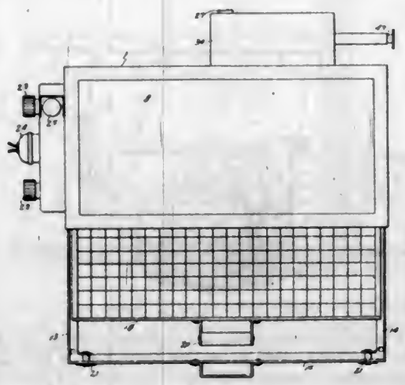
---



1,694,760. CLOCK CONSTRUCTION. JOSEPH ZUBATY, Flint, Mich., assignor to A C Spark Plug Company, Flint, Mich., a Company of Michigan. Filed Jan. 22, 1926. Serial No. 83,027. 1 Claim. (Cl. 58—56.)

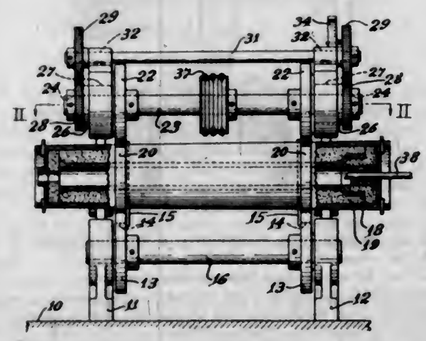
In combination, a clock movement having a frame, a removable coaxial casing in extension of the frame, a dial in the end of the casing remote from the frame, means for fixing the dial to the frame and casing, a removable extension shaft connecting the movement with the dial hands, and means for securing the casing to an instrument board.

---



1,694,761. CONNECTION OF FLEXIBLE SHAFT TO SPEEDOMETER. JOSEPH ZUBATY, Flint, Mich., assignor to A C Spark Plug Company, Flint, Mich., a Company of Michigan. Filed Mar. 11, 1926. Serial No. 94,100. 11 Claims. (Cl. 64—30.)

1. An instrument frame, a rotor shaft therein, a casing formed with a recess having a flattened surface above the lower edge of the casing and means for connecting an external driving shaft with the internal rotor shaft at the flat surface.

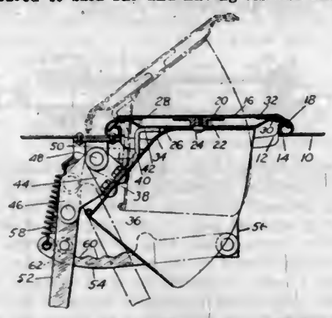


1,694,762. ELECTRIC COOKER. PETER ACKERMAN, Washington County, Oreg., assignor of one-half to John A. Susbauer, Portland, Oreg. Filed Apr. 19, 1927. Serial No. 184,984. 6 Claims. (Cl. 219—35.)

1. An electric cooker, consisting of the combination with a frame, and electric heating means operatively carried thereby, of rails extending from within the frame to the outside thereof, a movable supporting member carried on said rails, and automatic means for driving said member from the frame along the rails after a predetermined period of time.

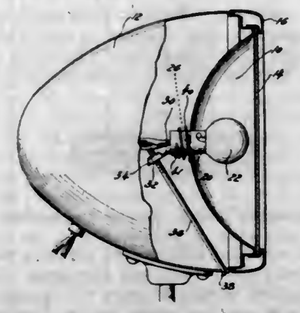
---

1,694,763. CENTRIFUGAL MOLDING APPARATUS. WILLIAM H. BEATTY, Birmingham, Ala., assignor to Beatty, Palmer and Beatty, a Copartnership composed of W. Henry Beatty, Clarence J. Palmer, and William H. Beatty. Filed Aug. 24, 1927. Serial No. 215,066. 8 Claims. (Cl. 22—65.)



1. In a centrifugal molding machine, a pair of idler rollers for supporting a flask, a driving roller, means for imparting rotary movement through the driving roller to the flask and means for raising and lowering the driving roller to permit the mounting and removal of the flask from said supporting rollers.

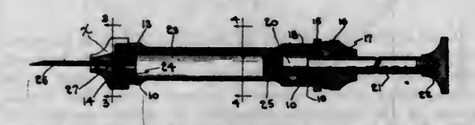
---



1,694,764. COWL VENTILATOR. ROSCOE BERINGER, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Jan. 23, 1925. Serial No. 4,263. 5 Claims. (Cl. 220—46.)

1. In a device of the character described, a cowl having an opening, a web at the rim of the opening terminating in an outwardly extending flange, an outer door plate having its rim formed with a curved bead to enclose said flange, a spacing bar fixed to said outer door plate, an inner door plate secured to said bar and having its rim inclined upwardly and terminating adjacent to said bead, and a strip of fibrous material clamped between said inner and outer plates and extending outwardly over said flange.

---

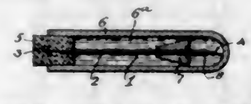


1,694,765. LAMP-FOCUSING DEVICE. SUMNER E. BROWN, Dedham, Mass. Filed Dec. 13, 1926. Serial No. 154,353. 2 Claims. (Cl. 240—44.)

1. An automobile headlamp comprising a housing, a reflector in the housing, said reflector being provided with an aperture at its apex and with oppositely disposed sockets, a lamp socket provided with oppositely disposed trunnions received in the sockets in the reflector to permit tilting adjustment thereof, a coiled spring surrounding the socket and bearing at one end against the rear of the reflector and at the other end against one side of the socket to tilt it in one direction about the axis of said trunnions, and means having an operating part projecting through the wall of the housing for tilting the lamp in opposition to its spring.

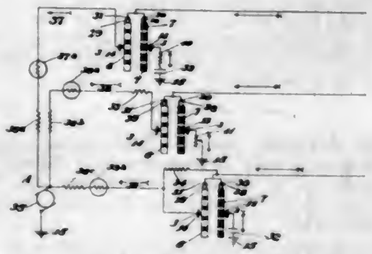
---

1,694,766. SYRINGE. HENRY KINSEY BROWN, Chicago, Ill., assignor to Cook Laboratories, Inc., Chicago, Ill., a Corporation of Delaware. Filed Nov. 23, 1921, Serial No. 517,318. Renewed Jan. 20, 1928. 13 Claims. (Cl. 128—218.)



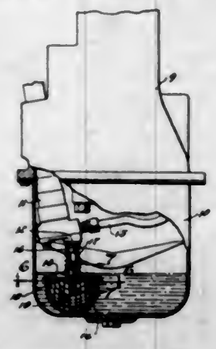
2. A hypodermic syringe comprising, in combination, a cartridge holder constructed and arranged for endwise insertion of the cartridge; a screw-threaded needle-securing head on one end of said holder having a longitudinal slot constructed and arranged for lateral insertion of the needle; and a double pointed needle having an intermediate enlargement by which the head may clamp it.

1,694,767. HYPODERMIC SYRINGE. HARVEY S. COOK, Valparaiso, Ind., assignor to Cook Laboratories, Inc., Chicago, Ill., a Corporation of Delaware. Filed Aug. 5, 1922. Serial No. 579,924. 6 Claims. (Cl. 128—218.)



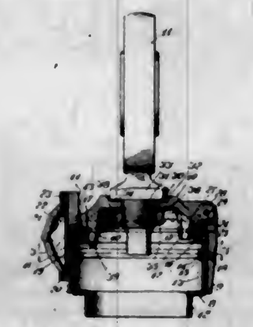
1. A hypodermic syringe comprising, in combination, a body; a medicament dispensing package insertible in said body; said package including a glass tube, and resilient plugs sealing opposite ends of the tube, one of said plugs being slidable through the tube to dispense the medicament; a canula carried by the body and directed inwardly and having a point to pierce the plug which is opposite the slidable plug; and a plunger movable into contact with said slidable plug and having its inner end provided with a cavity into which the slidable plug may expand to minimize breakage of the glass tube by radial expansion of the plug caused by the plunger; said cavity also permitting the canula to pierce the slidable plug, when it has been thrust hard against the initially pierced plug, without breaking the point off.

1,694,768. ASEPTIC NEEDLE HOLDER. HARVEY S. COOK, Valparaiso, Ind., assignor to Cook Laboratories, Inc., Chicago, Ill., a Corporation of Delaware. Filed Mar. 2, 1922. Serial No. 540,628. 5 Claims. (Cl. 128—22.)



1. A hypodermic needle carrier comprising, in combination, a cork plug; a wire secured at one end within the plug and extending substantially coaxially thereof and having its outer end curled; said wire being of sufficient fineness to extend through the bore of a hypodermic needle and to retain such a needle thereon by means of its curled outer end.

1,694,769. TELEGRAPH TRANSMISSION OF SIGNALS. LOUIS CASPER, Brooklyn, N. Y. Filed Aug. 1, 1921. Serial No. 488,914. 13 Claims. (Cl. 178—69.)

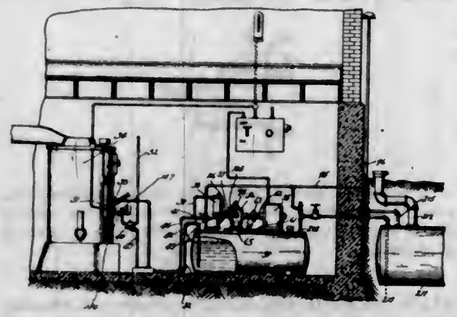


1. In a telegraph circuit or the like to which is included one or more arrangements for draining currents induced upon said telegraph circuit by parallel wires, said drain arrangement or arrangements located on the line circuit ahead of the operating apparatus at either terminal of said telegraph circuit; said drain arrangement or arrangements consisting of a circuit interrupter connected directly into the line together with means for grounding the circuit simultaneously with the opening thereof; said combined interrupting and grounding arrangements operating independently of either the transmission or reception of the regular line signals.

1,694,770. OIL-PUMP SCREEN. LEROY V. CRAM, Flint, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Oct. 5, 1927. Serial No. 224,180. 5 Claims. (Cl. 210—170.)

1. A strainer comprising a disc-shaped screen support having a tubular guide extending therefrom, a fine mesh filtering screen semispherical in form, and the free edge of which is secured to said support along the periphery thereof; and a perforated protecting shield arranged outside said screen and secured to the periphery of said disc-shaped screen support.

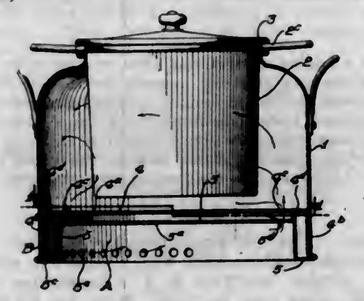
1,694,771. AUTOMOBILE RADIATOR CAP. WILLIAM P. DALRYMPLE, Chicago, Ill., assignor, by mesne assignments, to Gorlen Company, Inc., Chicago, Ill., a Corporation of Illinois. Filed Sept. 20, 1924. Serial No. 738,938. 21 Claims. (Cl. 220—24.)



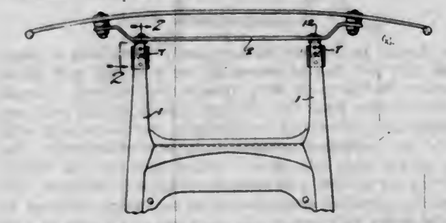
1. A radiator cap comprising a base adapted to be mounted over the filling opening of a radiator, a sleeve rotatably fitted on said base, means preventing separation of said sleeve and base, a lid hinged to said sleeve to swing vertically, and means carried by the lid and operating by rotation of said sleeve in one direction for locking said lid to the base.

1,694,772. LIQUID-FUEL-BURNING SYSTEM. WILLIAM T. DEAN, Glencoe, Ill., assignor, by mesne assignments, to John R. Ball, Milwaukee, Wis. Filed May 20, 1922. Serial No. 562,346. 1 Claim. (Cl. 158—36.)

The combination with the heating plant of a building, of an oil burning nozzle inserted therein, a supply tank outside the building, a service tank inside the building, a source of air under pressure associated with the latter tank, pipe connections from said source to said nozzle and said tanks and from said source to the atmosphere exterior of said building, and a valve for controlling said connections, said valve when in one position connecting said source with the atmosphere through said last-named connection and with said nozzle and said service tank whereby



to feed oil and air to said nozzle under pressure, and said valve when in another position closing said first-named connections and connecting said source to said service tank and the connection communicating with the atmosphere

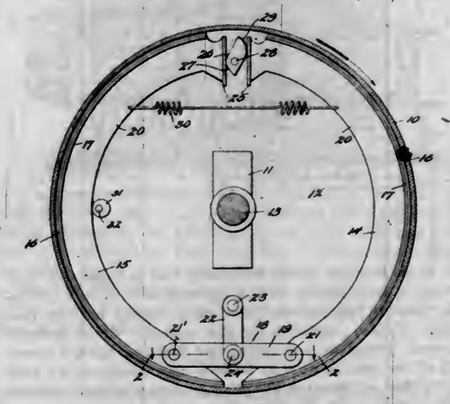


exterior of the building for reverse operation whereby air is drawn from the service tank and exhausted into the atmosphere, causing fuel to be drawn from said supply tank into the service tank.

1,694,773. INTERNAL-HEAT-CIRCULATING COOKING UTENSIL. WILLIAM R. DICK, San Diego, Calif. Filed Jan. 3, 1927. Serial No. 158,564. 13 Claims. (Cl. 53—1.)

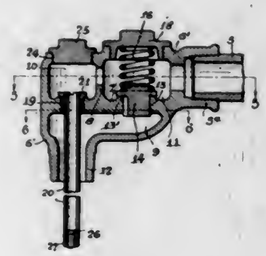
1. In a utensil of the class described, a receptacle having a raised bottom means adapted to receive heat from a heating means and provided with ports at its upper portion communicating upwardly with the open interior portion of said receptacle adapted to permit the flow of hot gases from the lower to the upper side of said receptacle, and said bottom means also provided with other ports adapted to permit the return of gases from its upper side to its lower side at the lateral portion of the bottom means.

1,694,774. SPRING HANGER AND BUMPER SUPPORT. JAMES DYKSTRA, Lansing, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Feb. 17, 1928. Serial No. 255,036. 7 Claims. (Cl. 293—55.)



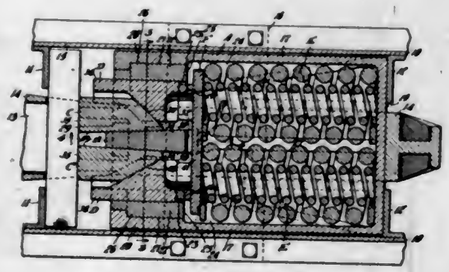
1. A fitting formed from sheet metal and adapted to be permanently carried by a frame member, comprising a substantially vertical web for the attachment of a bumper, a pair of feet projecting laterally from opposite ends of the web adapted to extend below and be secured to the upper and lower flange of a channelled frame member, and a pair of spaced dependent ears carried by the lowermost foot between which the end of a vehicle load supporting spring is pivotally secured.

1,694,775. BAIL EAR AND METHOD OF ATTACHING SAME. JOHN RICHARD EDWARDS, Vancouver, British Columbia, Canada, assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Apr. 23, 1924. Serial No. 708,361. 2 Claims. (Cl. 220—91.)



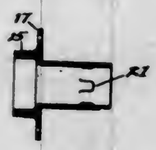
1. The method of forming sheet metal bail ears and attaching the same to sheet metal vessels, which consists in forming the wall of the vessel with an out-standing bossed portion, pressing the bail ear to concave shape with an outwardly extending marginal flange, pressing the bail ear to form therein an inwardly projecting bead at the inner part of said flange, applying the bail ear over the said bossed portion of the vessel, and expanding the outer part of the bossed portion within the bail ear so as to conform with and overlie said bead of the bail ear.

1,694,776. VEHICLE BRAKE. EDWIN B. FLANIGAN, Wilkes-Barre, Pa., assignor to E. B. Flanigan, Incorporated, Wilkes-Barre, Pa., a Corporation of Pennsylvania. Filed June 16, 1926. Serial No. 116,451. 5 Claims. (Cl. 188—78.)



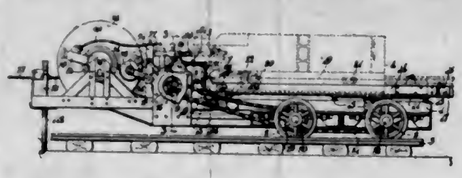
5. In a vehicle brake, in combination, a brake drum rotatively mounted, a relatively stationary brake spider, a pair of brake shoes concentric with said drum, a link pivoted to adjacent ends of said shoes and connecting the same together, a second link pivoted to said spider and to an intermediate portion of said first link, and expanding means to actuate the opposite ends of said shoes.

1,694,777. VALVE. PAUL H. HAMILTON, Cleveland, Ohio, assignor to The Sands Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 7, 1926. Serial No. 100,309. 10 Claims. (Cl. 137—53.)



8. In a combined pressure relief and safety blow off device, a casing provided with inlet and outlet portions and walls formed with openings to provide separate chambers inter-communicating with each other and with said portions, a check valve arranged in the opening between said inlet portion and one chamber for normally closing communication into said chamber, and a pipe mounted in the opening between a second chamber and said inlet portion and carrying a fusible plug for closing the passage through said pipe.

1,694,778. FRICTION SHOCK-ABSORBING MECHANISM. STACY B. HASELTINE, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed Aug. 26, 1927. Serial No. 215,563. 5 Claims. (Cl. 213—32.)



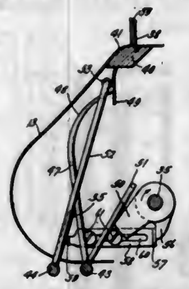
4. In a friction shock absorbing mechanism, the combination with a casing having opposed side walls provided with interior friction surfaces; of a central friction post having friction surfaces on the opposite sides thereof; abutment means on the casing for limiting inward movement of the post; a pair of friction shoes cooperating with the friction surfaces of the casing; wedge members interposed between the friction shoes and the friction post, said wedge members having wedging engagement with the shoes and frictional engagement with the post; retaining lugs on the top and bottom walls of the casing engaging abutment means on the post for limiting outward movement thereof, said lugs also overlapping the wedge members and limiting outward movement of the latter; and spring resistance means opposing inward movement of the friction shoes.

1,694,779. METHOD OF MAKING PRESSED-STEEL HUBS. HARLIE H. HICKS, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Oct. 10, 1925. Serial No. 61,794. 2 Claims. (Cl. 29—174.)

1. A method of making hubs from tubular material consisting in expanding the middle portion of the tubular material and cutting the tube at mid-length to make a pair of hubs.

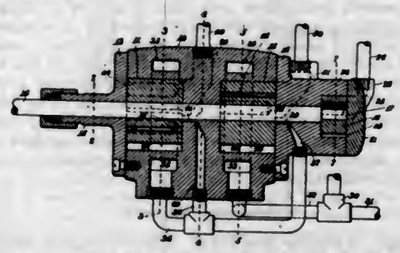
1,694,780. MINING APPARATUS. MORRIS P. HOLMES, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed June 1, 1920. Serial No. 385,650. 73 Claims. (Cl. 262—28.)

1. In a mining apparatus, a rigid wheeled truck frame, a rigid machine receiving member thereon tiltably and horizontally swiveled at points substantially midway between its ends and on the front of said frame, truck wheel driving mechanism including a member rotatable by a mining machine on said receiving member, and a feed member abutment carried by the rear end of said frame.

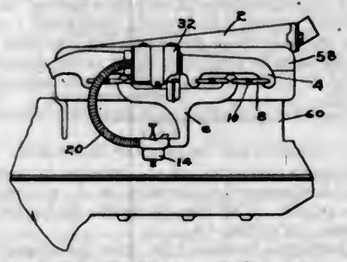


1,694,781. CLOSURE FOR SIFTER-TOP CANS. JOHN M. HOTHERSALL, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Nov. 10, 1923. Serial No. 674,064. 1 Claim. (Cl. 221—64.)

A closure for talcum powder cans, comprising a sheet metal neck part having a rounded top provided with sifter openings therein and with interrupted inclined threads bent outwardly from the cylindrical wall of said neck, an imperforate cap having a rounded top conforming with said top of the neck and rounded downward closely over the edge of the neck and thence bulged outward and thence bent inward to form a securing flange close to the neck, and inwardly extending embossments on said flange adapted to engage under said threads of the neck, and a sealing disk tightly and permanently confined in the cap under the top thereof.

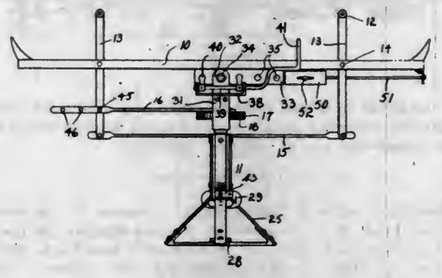


1,694,782. FILING MECHANISM FOR AUTOGRAPHIC REGISTERS. LOUIS JENSEN, Chicago, Ill., assignor to United Autographic Register Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 1, 1926. Serial No. 145,526. 6 Claims. (Cl. 282—16.)



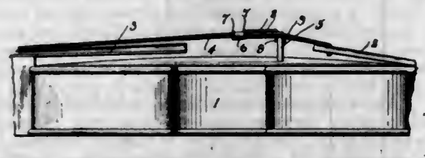
3. In combination with an autographic register in which a paper strip is intermittently advanced, impaled on a filing-pin, and separated into tickets, a pivoted arm that engages the impaled ticket and inverts the same, a reciprocating slide for actuating said arm, and a cam for moving said slide in the working stroke thereof.

1,694,783. PUMP. LAWRENCE E. JOHNSON, Melrose, SINIUS M. HANSEN, Lynn, and JOHN T. MCTARNAHAN, Brighton, Mass.; said Hansen and said Johnson assignors, by mesne assignments, to Victor Shoe Machinery Company, Lynn, Mass., a Corporation of Massachusetts. Filed Aug. 1, 1924. Serial No. 729,461. 5 Claims. (Cl. 230—158.)



1. In a compressor, the combination of a cylindrical chamber; a revoluble shaft; a piston in said chamber on said shaft and having slots therein and pockets parallel with and offset from the axis of said shaft and extending inwardly from one end thereof; blades in said slots; means for admitting material to said chamber and through holes extending to the inner ends of said slots from said pockets and against the inner ends of said blades to force said blades outwardly.

1,694,784. AIR CLEANER. HERBERT G. KAMRATH, Flint, Mich., assignor to A C Spark Plug Company, Flint, Mich., a Company of Michigan. Filed Jan. 8, 1926. Serial No. 80,004. 5 Claims. (Cl. 123—122.)

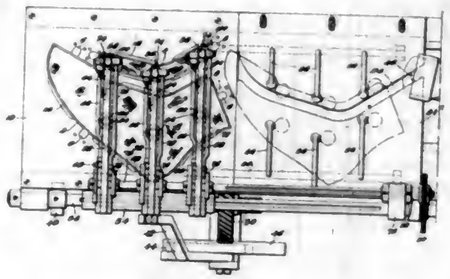


1. An air cleaner comprising a cylindrical casing, closures for the ends of the casing, an air discharge conduit extending through one of said closures and projecting into the casing, spiral blades surrounding said conduit and arranged adjacent but slightly spaced from the said closure, an air entrance opening in said casing arranged between said blades and the said closure and an aperture for the discharge of dust by the centrifugal action produced by said spiral blades, said aperture being arranged at a point radially distant from the center of the casing.

1,694,785. REVOLVING TEETER. OTTO LANGE, Chicago, Ill. Filed Sept. 24, 1925. Serial No. 58,244. 2 Claims. (Cl. 272—30.)

1. A teeter comprising a support, a board mounted on said support for vertical oscillations and for horizontal rotations, and means for locking said board to prevent oscillations thereof, said means comprising a bearing mounted on said support, and a member journaled in said bearing, said member being adapted to coact with said board to prevent oscillations thereof when said member is rotated to its locking position.

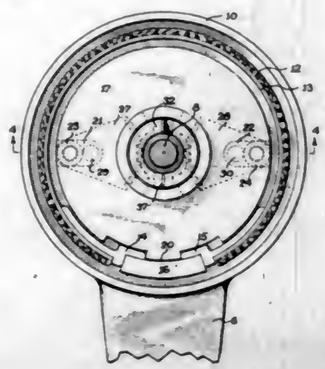
1,694,786. ATTACHMENT FOR STRINGED INSTRUMENTS. JOHN EDWIN LARSEN, Millis, Mass. Filed Feb. 5, 1927. Serial No. 166,120. 1 Claim. (Cl. 84—283.)



An attachment for stringed musical instruments having a bridge, consisting of an arcuate strip conforming to the arch defined by the strings of the instrument and having guide flanges along its side edges, resilient fingers spaced in lateral relation to one side edge of the said strip and provided with depending ends adapted to detachably engage the bridge of the instrument whereby to support the strip in front of the bridge close to and extending across the strings, and means connecting said fingers to the said side edge of said strip.

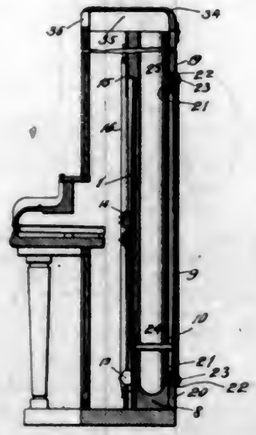
1,694,787. MACHINE FOR OPERATING ON PIECES OF SHEET MATERIAL. GEORGE E. MOLYNEUX, Bayonne, N. J., assignor to United Shoe Machinery Corporation, Boston, Mass., a Corporation of New Jersey. Original application filed Aug. 28, 1917, Serial No. 188,589. Divided and this application filed Sept. 16, 1921. Serial No. 501,125. 24 Claims. (Cl. 112—2.)

1. A machine for operating on pieces of limp and flexible sheet material having, in combination, mechanism acting to automatically pick up and place a plurality of such



pieces in position to be secured together, means for holding the pieces extended in such relation during the securing operation, means acting progressively along the surface

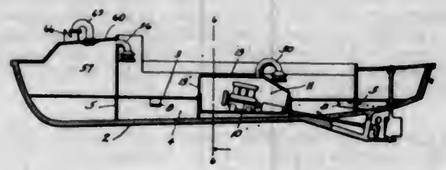
of the pieces to secure them together, and means for automatically releasing the material from the holding means at the completion of the securing operation.



---

1,694,788. SHOCK ABSORBER. PORTER S. MORGAN, New York, N. Y., assignor to Morgan Blodgett Morgan, Inc., New York, N. Y., a Corporation of New York. Filed Apr. 7, 1923. Serial No. 630,441. 45 Claims. (Cl. 188—130.)

1. A shock absorber comprising in combination a pair of arms, casing members respectively integral therewith and adapted to be pivoted together to form an enclosure for other operative parts, a circular frictional surface provided by the inner periphery of one of said casing members, an arcuate brake member positioned within and concentrically with said periphery and provided at its ends with chocks, an abutment integral with the other casing member located between the ends of said arcuate brake member and against which said chocks abut, a weight wheel journalled in said casing members and adapted for oscillatory movement therebetween, a projection upon said weight wheel extending between said chocks whereby motion or stress may be imparted to the same and to said brake member upon oscillation of said weight wheel, radial slots in the weight wheel, toothed sectors pivoted to the last-named casing member and provided with roller-bearings to engage said slots, a toothed pinion rotatably mounted between and in mesh with the toothed arcs of said sectors, a helical spring connected at one end with said pinion and at the other with an adjusting collar, teeth upon said adjusting collar, similar teeth upon the first-named casing member adapted to engage the teeth on said adjusting collar to hold the same in fixed relation to said first-named casing member, and a central bolt passing through said collar and through said casing members to hold the same and their contained parts in operative position.

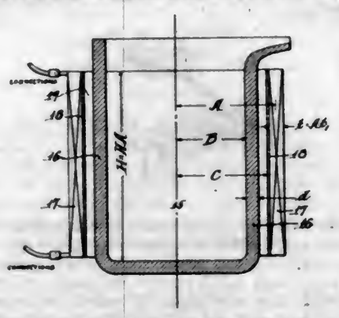


1,694,789. PIANO. FLOYD S. MUCKEY, New York, N. Y., assignor, by direct and mesne assignments, of one-tenth to Joseph F. O'Brien, West New York, N. J., three-tenths to Joseph W. Goodwin, Richmond Hill, N. Y., and six-tenths to Muckey Patents Corporation, a Corporation of New York. Filed Apr. 15, 1919. Serial No. 290,189. 12 Claims. (Cl. 84—194.)

7. In a piano, the combination with strings and means for supporting and vibrating the same, of a primary sounding board comprising a sounding board having a substantially smooth and ribless rear surface and of a thinness and rigidity to segment for the reproduction of composite tones having a predominance of low partial tones; means for transmitting the vibrations of the strings to the said sounding board; means for supporting said primary sounding board at its edges, an elastic secondary sounding board independently supported at the rear of said primary board and spaced therefrom and sound posts connecting said secondary sounding board and said primary sounding board to support the latter.

---

1,694,790. ENGINE HOUSING. FRED N. NELSON, Seattle, Wash. Filed Sept. 10, 1924. Serial No. 736,852. 8 Claims. (Cl. 115—34.)

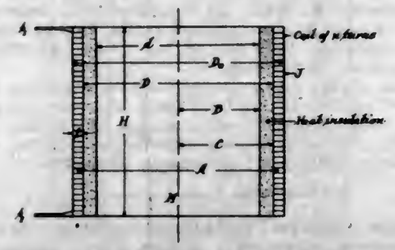


1. In a boat comprising a deck and having an engine for propelling the boat mounted on said deck, a coaming secured to the deck about the engine and a housing for the engine adapted to be removably fitted to the coaming in a water tight joint, and means for detachably securing it in such position.

---

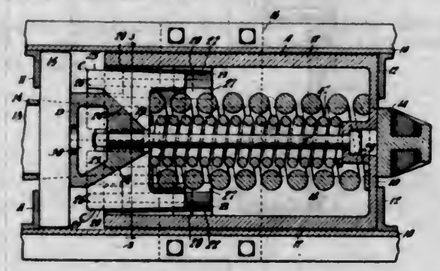
1,694,791. INDUCTION ELECTRIC FURNACE. EDWIN F. NORTHRUP, Princeton, N. J., assignor to Ajax Electrothermic Corporation, Trenton, N. J., a Corporation of New Jersey. Filed Feb. 14, 1925. Serial No. 9,312. 25 Claims. (Cl. 266—1.5.)

1. In inductive heating free from interthreading by transformer iron, the process of efficiently using alternating currents within the range of frequency of generation by rotary multipolar generators which consists in confining the current path to a single layer of turns about the charge and in maintaining such a relation of frequency



to diameter of the charge that the induced electromagnetic energy shall not penetrate substantially beyond the axis of the charge.

---

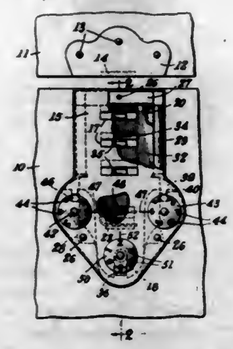


1,694,792. HIGH-FREQUENCY INDUCTION FURNACE. EDWIN F. NORTHRUP, Princeton, N. J., assignor to Ajax Electrothermic Corporation, Trenton, N. J., a Corporation of New Jersey. Filed Nov. 29, 1924, Serial No. 752,885. Renewed July 28, 1928. 15 Claims. (Cl. 266—15.)

1. In inductive heating free from transformer iron, the novelty which consists in providing a single layer of inductor of greater conductor depth than thickness having a depth radially bearing a definite proportion to the diameter of the charge to make the loss of power in the inductor substantially independent of the size of the inductor.

---

1,694,793. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed Apr. 22, 1927. Serial No. 185,889. 4 Claims. (Cl. 213—32.)

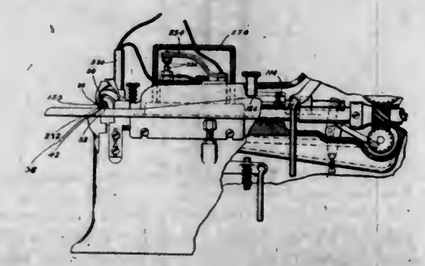


1. In a friction shock absorbing mechanism, the combination with a rectangular spring cage open at one end; of liners disposed in diagonally opposed corners of the cage at the open end thereof; sets of opposed friction shoes co-operating with the liners; a wedge block having a plurality of wedge faces, one of which co-operates with each shoe; and spring resistance means within the cage opposing inward movement of the shoes.

1,694,794. METHOD OF ROASTING SULPHIDE MINERALS. JOHN BURNS READ and MELVILLE F. COOLBAUGH, Golden, Colo. Filed May 25, 1926. Serial No. 111,652. 7 Claims. (Cl. 75—18.)

1. The process comprising subjecting sulphide minerals to an oxidizing roast while causing the minerals and gases to travel in the same direction through the furnace, thereby forming sulphates and then toward the end of the roast, charging a predetermined amount of sulphide mineral to react with sulphates already formed, whereby any portion of the said sulphates may be decomposed to produce oxides and retain regulated amounts of sulphates.

---

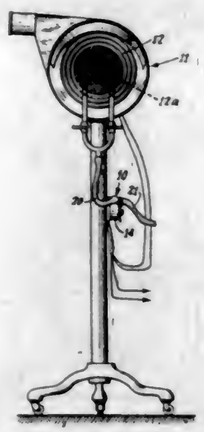


1,694,795. KEYLESS LOCK. JOHN RECKER, Newark, N. J. Filed Sept. 10, 1927. Serial No. 218,651. 5 Claims. (Cl. 70—55.)

1. A lock comprising a casing having a plurality of transverse openings in its face, a keeper having a loop to pass selectively into the openings, a bolt plate slidable in said casing to engage the keeper, a lug raised from said casing, a second lug on the back of said plate, a spring disposed between said lugs urging the bolt plate into engagement, a lug on the base of said casing to extend therein, rotatable means slidable on the face of said casing and operably fixed in said bolt plate to convey lineal motion thereto, said means including a slotted disc receptive of said base lug when in a predetermined position to permit movement of the bolt plate and prevent movement when in any other position and auxiliary means in said casing to control the movement of said slide.

---

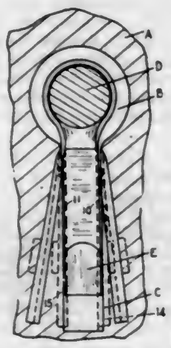
1,694,796. FOLDING METHOD AND ARTICLE PRODUCED THEREBY. ANDREW R. RIDDERSTROM, Nahant, Mass., assignor to Beacon Folding Machine Company, Lynn, Mass., a Corporation of Massachusetts. Original application filed June 24, 1921, Serial No. 480,177. Divided and this application filed Dec. 7, 1922, Serial No. 605,374. Renewed Mar. 24, 1926. 17 Claims. (Cl. 12—55.)



1. The method of folding a dry-cemented strip around the edge of a sheet of material to one face of which, along

said edge, an edge of the strip is secured so that the sheet and the strip extend from the secured-together edges at an angle to each other, said method comprising moving the dry-cemented strip across and around said secured-together edges, pressing the strip into even contact with the other face of the sheet, and heating the strip while pressing it to liquefy the cement.

---



1,694,797. CONTROL DEVICE. LOUIS RUFFIO, New York, N. Y. Filed July 16, 1925. Serial No. 44,134. 6 Claims. (Cl. 34—26.)

1. In combination with apparatus for supplying a drying fluid having means for producing a flow of said fluid and means for heating said fluid, said heating means comprising apparatus for using a fluid power medium, a device having a single operating means controlling the flows of said drying fluid and of said power medium, said means including a disc having a cut out portion and a tension member cooperating with said disc.

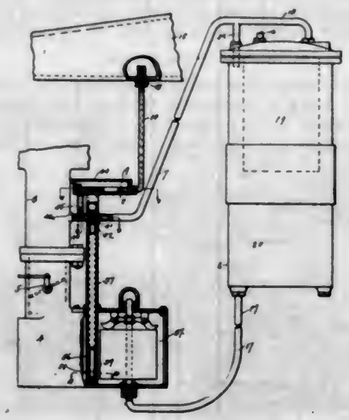
---

1,694,798. KEYHOLE GUARD. RALPH V. SAVAGE, Los Angeles, Calif. Filed Oct. 21, 1927. Serial No. 227,802. 6 Claims. (Cl. 70—65.)

1. A device for the purpose described consisting of a collapsible member having a part for entering the round hole of a key-hole, a part entering the stem of the key-hole and a part catching in back of the key-hole plate.

1,694,799. MATCH BOOK AND METHOD OF MAKING THE SAME. JOHN O. SEIFERT, Auburndale-Flushing, N. Y. Filed Oct. 16, 1925. Serial No. 62,732. 10 Claims. (Cl. 93—2.)

1. As an article of manufacture a match book embodying a match card including splints arranged with ignitible heads extending from a connecting margin strip, and a cover to which said match card is attached with the edge of the margin strip contiguous to and in alinement with one edge thereof and the splints extending inward from said edge of the cover and the cover being of a length to fold over the match heads with the free end to extend over and substantially to the edge of the margin strip of the match card and having a coating of igniting composition applied to the outer surface of the end marginal portion thereof to extend over the margin strip of the match card and of a width substantially the width of said margin strip.



---

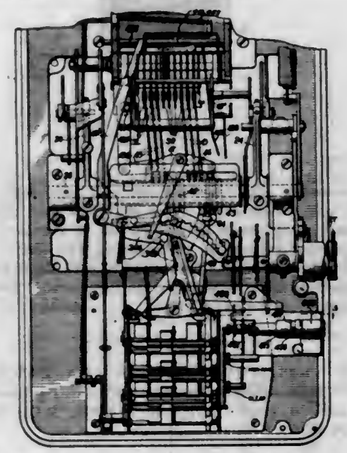
1,694,800. PITCH-COKING PROCESS AND PRODUCT. FREDERICK W. SPERR, Jr., Pittsburgh, Pa., assignor to The Koppers Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Nov. 10, 1919. Serial No. 337,013. 10 Claims. (Cl. 202—8.)

1. In a pitch coking process: forming a primary mixture of proportions of pitch, bauxite and coke breeze derived from the carbonization of coal and making coke directly from such primary mixture, by subjecting such mixture to coking heat; substantially as specified.

---

1,694,801. AUTOMATIC FUEL REGULATOR. CHARLES LAWRENCE STOKES, Los Angeles, Calif., assignor to Curtis B. Camp, trustee, Glencoe, Ill. Filed Mar. 22, 1923. Serial No. 626,990. 15 Claims. (Cl. 123—180.)

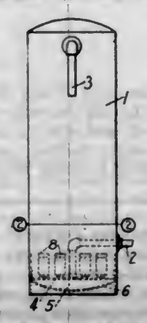
5. The combination with an internal combustion engine having an exhaust pipe, an intake manifold for fuel and air and a fluid cooling system of a reservoir for liquid fuel, means to supply liquid fuel from the reservoir to the intake manifold and means connected with both the exhaust pipe and the cooling system for governing the ratio of fuel to air passing through the intake manifold.



1,694,802. BUTTON. CLYDE W. STUART, Brooklyn, N. Y. Filed Feb. 27, 1928. Serial No. 257,152. 5 Claims. (Cl. 24—90.)

1. A button adapted to be sewed on cloth comprising a head having a flat oval neck with concave sides and ends for receiving a button hole substantially without spreading it, said neck terminating in an enlarged base and having holes through which the sewing thread passes, said base being substantially flat so as to lie firmly against the fabric and thereby hold the button from sagging.

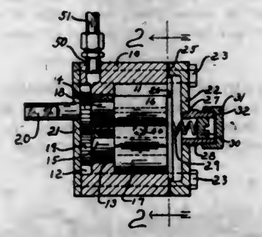
---



1,694,803. ADDING AND LISTING MACHINE. OSCAR J. SUNDSTRAND, Rockford, Ill., assignor, by mesne assignments, to Sundstrand Corporation, Wilmington, Del., a Corporation of Delaware. Filed Aug. 15, 1921. Serial No. 492,242. 7 Claims. (Cl. 235—60.)

1. An adding and listing machine having, in combination, two groups of type bars, each type bar having a movable stop portion, two stationary groups of stops arranged in series representing numerical orders, a single keyboard and connections for simultaneously setting stops in both groups of stops, and means for moving said movable stop portions transversely of the series of stops into operative alinement with the said stops.

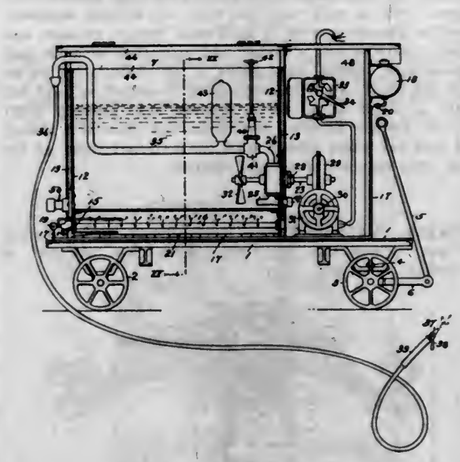
---



1,694,804. WATER-SOFTENING APPARATUS. EDWARD T. TURNER, Dayton, Ohio. Filed June 13, 1925. Serial No. 36,839. 15 Claims. (Cl. 210—24.)

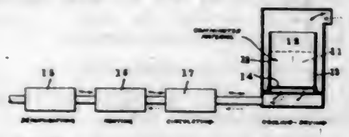
1. In a water softening apparatus, a container for water softening material having an outlet for softened water, and means for delivering water to be softened to said container comprising a supply pipe and a plurality of discharge heads supported in the lower portion of said container and extending into said water softening material, each of said discharge heads having a relatively small inlet communicating with said supply pipe and an outlet arranged to discharge the water to be softened directly into said water softening material.

---



1,694,805. FUEL-SUPPLY SYSTEM FOR INTERNAL-COMBUSTION ENGINES. SUMNER WILTSE, Detroit, Mich., assignor to Wiltse Appliance Company, a Corporation of Michigan. Filed Apr. 1, 1927. Serial No. 180,176. 5 Claims. (Cl. 103—42.)

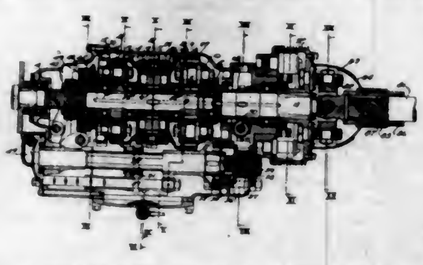
1. In combination, a pump housing having fluid inlet and outlet passages, a pump element in the housing, a movable diaphragm forming one wall of the housing, an extension of the housing positioned beyond the diaphragm, an adjustable member in the extension and yielding means positioned between the diaphragm and adjustable means, whereby adjustable pressure may be exerted on the diaphragm from without the housing proper.



---

1,694,806. SPRAYING MACHINE. FRANK H. YALE, Alameda, Calif., assignor of one-half to Conrad B. Sovig, San Francisco, Calif. Filed June 14, 1926. Serial No. 115,857. 1 Claim. (Cl. 299—35.)

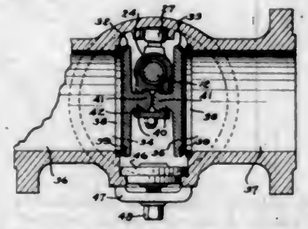
A spraying machine comprising a vat having surrounding heating spaces; a burner beneath said vat and heating spaces; a pump submerged in said vat and having a shaft protruding within and without the walls of said vat; an agitator mounted upon said pump shaft within the vat; a motor connected with said pump shaft without said vat; a pressure regulator, an air chamber, a flexible tube and a spray nozzle in the discharge pipe of said pump.



1,694,807. METHOD OF COOLING AND DRYING MATERIALS. ELMER B. BROWN, New York, N. Y., assignor to The Fleischmann Company, New York, N. Y., a Corporation of Ohio. Filed June 1, 1925. Serial No. 33,927. 8 Claims. (Cl. 99—10.)

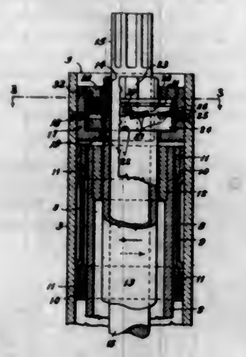
8. The method of cooling and drying yeast, which comprises passing a current of air, having a temperature of approximately 60° F., and containing approximately 1.25 grains of moisture per cubic foot through a thick comminuted mass of moist yeast at a rate of approximately two cubic feet per minute per pound of yeast.

---



1,694,808. VARIABLE-SPEED GEARING. WESTGARTH STANHOPE FORSTER BROWN and JOSEPH MAINA, London, England. Filed Oct. 28, 1926, Serial No. 144,728, and in Great Britain Nov. 3, 1925. 9 Claims. (Cl. 74—34.)

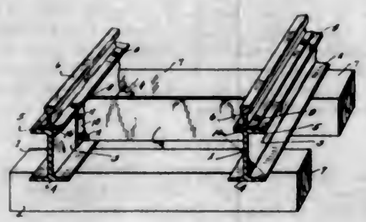
1. In variable speed gearing, a primary shaft, a secondary shaft, a plurality of pinions fast on said primary shaft, a planetary cage, internal spur gears on said cage, a ring member carried by and adapted to revolve on said cage, an internal spur gear on said ring member, a flanged element on said secondary shaft, a reverse member, external teeth on said cage and ring and reverse members, satellite pinions carried by said cage, flanged element and reverse member and situated and operating between said pinions and internal spur gears, a lay shaft, a pinion on said lay shaft, an auxiliary clutch mounted on said lay shaft, a direct drive clutch between said primary shaft and the reverse member, and means for selectively engaging said lay shaft pinion with the external teeth of the cage, ring member, or reverse member.



---

1,694,809. VALVE. PETER PAYNE DEAN, New Canaan, Conn. Filed Apr. 27, 1927. Serial No. 187,018. 8 Claims. (Cl. 251—62.)

1. A valve, comprising a casing forming a valve chamber having valve ports and valve disks cooperating therewith, an actuating member movable in the casing, a nut connected with the valve disks, oscillatable on the actuating member to permit a disk to seal its port, and means to guide and control the extent of oscillation of said nut.



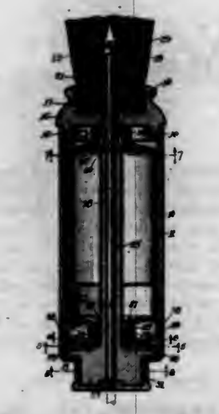
1,694,810. AUTOMATIC CLUTCH ARRANGEMENT FOR LAUNDRY MACHINES. GEORGE W. DUNHAM, New Haven, Conn., assignor to Whirldry Corporation, Utica, N. Y., a Corporation of New York. Filed July 28, 1925, Serial No. 46,551. Renewed Apr. 20, 1928. 11 Claims. (Cl. 192—41.)

2. A laundry machine comprising a receptacle, a support for said receptacle, a drive shaft for said receptacle, and means operative by the direction of rotation of said shaft for simultaneously transferring the entire weight of said receptacle from said support to said shaft to relieve said support of said weight and for operatively connecting said receptacle to said shaft.

---

1,694,811. RAILWAY ROADBED AND TRACK CONSTRUCTION. ELMER ROCKWOOD EDSON, Portland, Oreg. Filed Apr. 30, 1928. Serial No. 273,060. 9 Claims. (Cl. 238—26.)

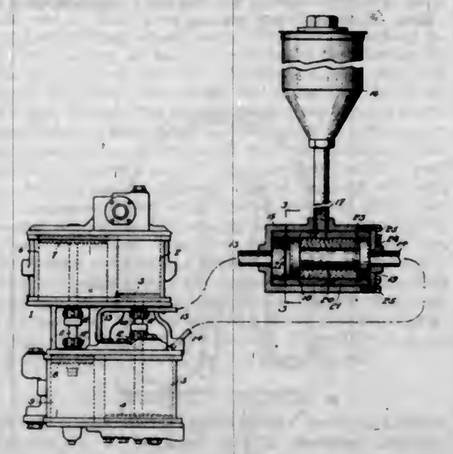
8. The combination of a T-rail and a girder support therefor, said girder having a member projecting outwardly from the top thereof, and said projecting member being provided with an under surface portion constituting a tread for the travel of a safety wheel.



---

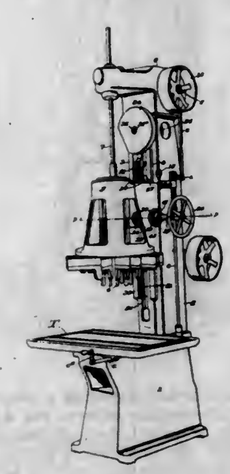
1,694,812. DISPENSING DEVICE. GEORGE G. FLOYD, Riverside, Ill. Filed July 23, 1924. Serial No. 727,634. 2 Claims. (Cl. 221—79.)

1. In a dispensing appliance, the combination of a hollow handle adapted to accommodate a supply-tube, a discharge-pipe connected to said tube and having a delivery-port, a reciprocatory valve in said pipe controlling said port, a



stem for said valve, a cover on said stem, means to cause said tube to deliver its contents into said pipe, and a handle by which said delivery means may be actuated, said cover

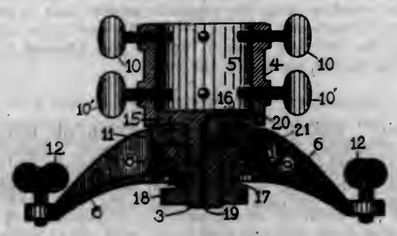
enclosing said delivery-means handle in the port-closing position of said valve, whereby said port must be opened before said delivery means can be operated.



---

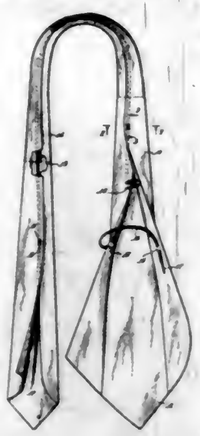
1,694,813. LUBRICATOR. MACK J. FOWLER, Roanoke, Va. Filed May 28, 1923. Serial No. 641,957. 7 Claims. (Cl. 184—18.)

3. In a lubricating device of the class described, the combination with a casing, of a valve member having a plurality of pistons between which and the walls of the casing is formed an intermediate oil chamber adapted to have constant communication with a source of supply, means for receiving predetermined quantities of oil upon each reciprocation of the valve member, said means including an annular groove provided near each end of the casing adapted to be periodically brought into communication with said intermediate oil chamber through the operation of the said pistons.



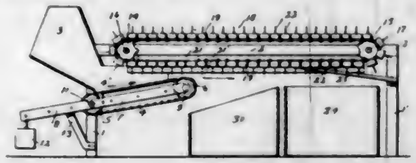
1,694,814. HEAD MOUNT FOR MULTIPLE DRILLS. ROBERT M. GALLOWAY, Richmond, Ind., assignor to The National Automatic Tool Company, Richmond, Ind., a Corporation of Indiana. Filed Nov. 19, 1924. Serial No. 750,811. 6 Claims. (Cl. 77—32.)

1. A drilling machine combining a box-type frame provided with spaced guides; a drill-head fitted to said guides and adapted to be moved thereon; a slide-bar movable on said frame and slidingly fitted to a guideway provided by the face of said frame adjacent the drill head and intermediate said guides; a rotary cam operatively connected to said slide-bar to reciprocate the latter; and an extensible gear connection between said slide-bar and said drill-head to cause the latter to reciprocate with the former and to permit of adjustment between the two.



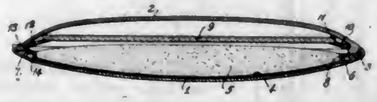
---

1,694,815. CHRISTMAS-TREE STAND. RALPH GARLICK, Totowa, N. J. Substitute for application Serial No. 569,750, filed June 20, 1922. This application filed Oct. 29, 1924. Serial No. 746,712. 1 Claim. (Cl. 248—38.)



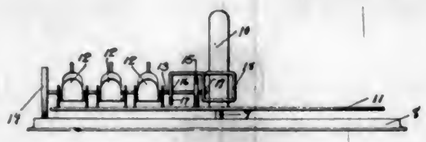
In a tree stand having a butt socket and legs to support the stand, a unitary intermediate casting including a hollow casing having integral vertically arranged parallel peripheral projections thereon for said legs, the top of said hollow casing having a reduced opening communicating with an open bottom in the casing, and a retaining member associated with said butt socket and protected by projecting into said casing from the open bottom thereof.

1,694,816. NECKTIE. SAMUEL GOLDBERG, New York, N. Y., assignor to Goldberg & Squire, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 8, 1927. Serial No. 231,823. 9 Claims. (Cl. 2—146.)



1. A four-in-hand necktie including a relatively narrow collar encircling intermediate portion, and a pair of flaring tying ends, the side edges of one of said tying ends being folded back upon the intermediate portion thereof and overlapped, said overlapping edge portions having a longitudinal series of aligned openings therein, and a flexible securing device removably laced through the openings.

1,694,817. BEET CLEANER. ABRAHAM GUDMUNDSEN, American Fork, and AUSTIN GUDMUNDSEN, Salt Lake City, Utah. Filed June 26, 1926. Serial No. 118,670. 4 Claims. (Cl. 209—109.)

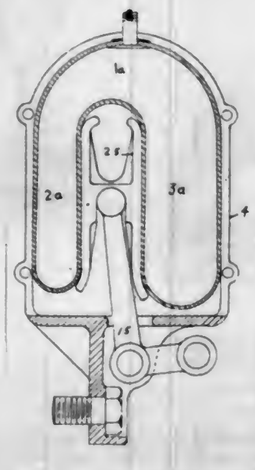


1. A separator comprising a longitudinally sectionalized yieldable member the sections of which are yieldable independently of each other, a conveyor disposed above the yieldable member, pins projectable beyond the same to enter objects traveling along the yieldable member and to carry the objects therewith, fingers located adjacent to the underside of the conveyor between rows of pins adapted to release the objects carried on the pins.

1,694,818. RECEPTACLE FOR POWDER OR ROUGE. PAUL MARCEL GUILLAUME, Paris, France, assignor to Bourjois, Inc., New York, N. Y., a Corporation of New York. Filed Nov. 3, 1927, Serial No. 230,857, and in France Aug. 23, 1927. 10 Claims. (Cl. 132—83.)

1. An ultra-thin lenticular box of the type described comprising in combination, two hingedly connected box members of complementary form and a tongue carried by each of said box members and adapted to snap over the edge of its opposite box member when said box is closed.

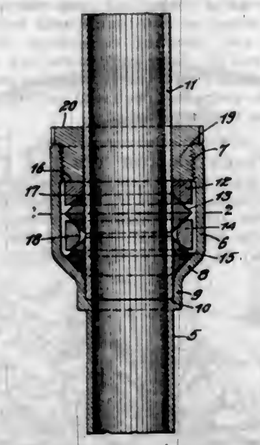
1,694,819. GAME. LESTER S. GUNDERMAN, Pittsburgh, Pa. Filed Dec. 29, 1924. Serial No. 758,533. 2 Claims. (Cl. 273—86.)



1. A game comprising a circular track pivotally mounted on a base, a horizontal shaft having a wheel on each end thereof, one wheel resting on the said track the other wheel resting on the said base thereby constituting means to carry objects in a reverse direction to the track, a guide yoke journaled on a pivot bearing, constituting means for guiding the horizontal shaft around the track, a pivot shaft having a groove therein, the said pivot bearing carrying a retaining pin which passes through the said groove in the pivot shaft constituting means for preventing the removal thereof.

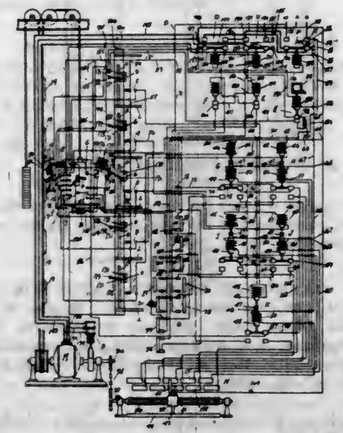
1,694,820. RUST-RESISTING CAN. NEAL HARRIS, San Francisco, Calif. Filed Dec. 21, 1925. Serial No. 76,895. 3 Claims. (Cl. 91—70.3.)

2. The method of protecting iron and steel which comprises chemical treatment of the same to produce a black continuous hard film of rust resistant oxide thereon and covering said oxide coating with a film of adherent relatively easily fusible metal.



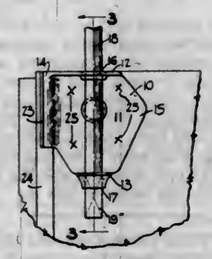
1,694,821. AIR SPRING. JOHN ALLEN HEANY, New Haven, Conn., assignor to Heany Laboratories, Inc., New Haven, Conn., a Corporation of Connecticut. Filed Dec. 31, 1921. Serial No. 526,443. Renewed May 23, 1928. 6 Claims. (Cl. 267—35.)

1. A shock absorber device consisting of an enclosing case and a lever arm adapted to be connected to two relatively movable parts of an automobile and a resilient member interposed between said case and arm; said resilient member being a U-shaped pneumatic tube with means for inflation and constructed with one side larger in diameter than the other.



1,694,822. PIPE JOINT. EDWARD KENNEDY, New York, N. Y. Filed Sept. 9, 1926. Serial No. 134,867. 1 Claim. (Cl. 285—166.)

The combination with two rigid metal pipe sections, of a plain cylindrical end on one of the sections; a bell formed on one end of and integral with the other section, and telescopically fitted over the plain, pipe end, said bell having inner and outer cylindrical recesses of different diameters, the inner recess being adapted to snugly fit the plain, pipe end, and terminating in a shoulder adapted to abut the rim thereof, and the outer recess being of greater diameter than the inner one, to provide a chamber for packing, and terminating at its inner end in an annular inclined bearing face, the outer end of the packing recess being provided with screw threads; an adjusting nut snugly fitted around the plain, pipe end, and having external screw threads engaging the threads in the packing recess, and an inner pressure transmitting rim; a plurality of packing rings of soft metal fitted in the packing recess, each having an internal cylindrical face intimately contacting the external face of the plain, pipe end, and inclined outwardly converging side faces, the inner inclined face of one of the packing rings being opposed to the inclined bearing face of the packing recess; a compression ring of relatively harder metal than the packing rings, interposed between a pair of the same and having convex faces bearing on the opposed inclined faces of the pair, said compression ring being spaced from the inner surrounding face of the bell and the outer face of the plain, pipe end, a sufficient distance to permit the packing rings to be readily deformed to effect an efficient seal; and a second compression ring of relatively harder metal than the packing rings, having an inner convex side face bearing on the outer inclined side face of the outermost packing ring, and an outer, side bearing face adapted to receive the pressure exerted by the clamping nut.

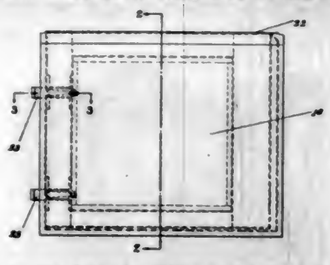


1,694,823. AUTOMATIC ELEVATOR. DAVID C. LARSON, Yonkers, N. Y., assignor to Otis Elevator Company, Jersey City, N. J., a Corporation of New Jersey. Filed May 24, 1922. Serial No. 563,186. 40 Claims. (Cl. 187—29.)

28. A control system for an elevator car comprising; a plurality of switches, one for each of a plurality of floors; means responsive to the operation of any one of said switches, provided no other of said switches is operated, for causing the car to move in a direction toward the floor corresponding to said one switch operated; means responsive to the operation of said one switch and to the operation of other of said switches for floors in said direction from said car when said other switches are operated for causing the car to stop at the floors corresponding to these specified switches operated; and means responsive to the operation of said switches for floors in the other direction from the car when these second specified switches

are operated for causing the car to travel in said other direction, after its last stop in the first specified direction, and to stop at the floors corresponding to said second specified switches operated.

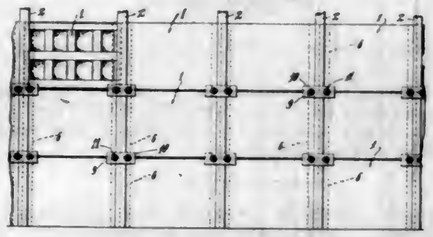
1,694,824. CURTAIN SUPPORT FOR AUTOMOBILE DOORS. JOSEPH LEDWINKA, Philadelphia, Pa., assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 29, 1925. Serial No. 5,421. 6 Claims. (Cl. 296—139.)



1. In a curtain rod socket member, a substantially flat body portion adapted to be welded to the inner side of an automobile door panel, an upper portion having an aperture therein for passage of the curtain rod therethrough, a lower portion having an irregularly shaped seat therein for reception of the bottom end of the curtain rod, and a side portion adapted to be welded to the inner side of the end panel of the door, all of said portions being integrally united.

1,694,825. AUTOMOBILE DOOR. JOSEPH LEDWINKA, Philadelphia, Pa., assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed May 3, 1922. Serial No. 558,169. 13 Claims. (Cl. 296—44.)

1. A metal door comprising a main frame of perimetral dimensions closely approximating those of the door at

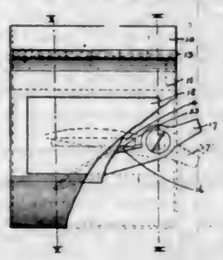


large, a plurality of panel supporting members rigidly secured to said frame and so shaped as to form therewith

relatively narrow channel portions at the edges of the door, and a door panel having its edge portions rigidly secured to said members.

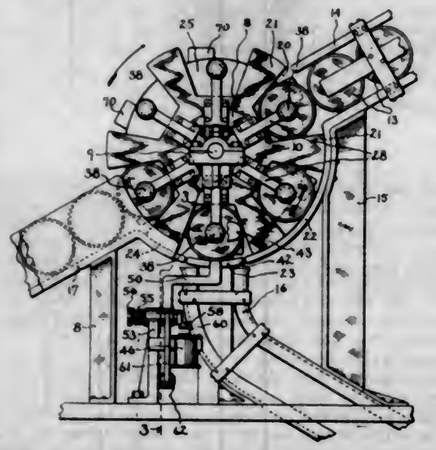
---

1,694,826. METHOD OF AND APPARATUS FOR FORMING HOLLOW-CONCRETE WALLS. ELMER W. MARTEN, San Diego, Calif., assignor to Monolith Hollow Wall Company, Los Angeles, Calif., a Corporation of California. Filed Mar. 4, 1926. Serial No. 92,145. 8 Claims. (Cl. 25—131.)



2. A method of forming hollow concrete walls of story height which comprises positioning internally reinforced collapsible core members of substantially story height in spaced relation along the said wall to form cored sections and spaced columns, of substantially story height, building up outside forms in position spaced from and on opposite sides of the said cores, pouring concrete in the space provided around the said cores, removing the internal reinforcements from the core members and the collapsed cores from the wall after the concrete has set.

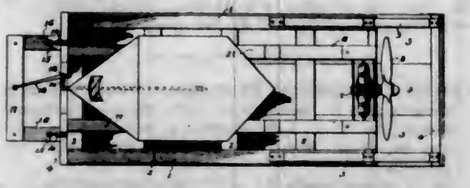
---



1,694,827. SAFETY MEANS FOR FLUID-DISPENSING PUMPS. ARTHUR R. MASON and OTTO C. FAILING, Medford, Oreg., assignors to Accurate Gasoline Recording Company, a Corporation of Oregon. Filed Aug. 17, 1927. Serial No. 213,689. 3 Claims. (Cl. 164—44.)

1. Safety means for fluid dispensing pumps, comprising a box and mechanism within said box adapted to operate synchronously with said pump and adapted to advance a plurality of paper strip records of each dispensing transaction, a compartment into which said strips are advanced, a hinged cover normally closing said compartment, hand operated cutting means on said box adapted to cut the advanced strips, and operating connections between the cutting means and the cover constructed and adapted to hold the cover closed except when the cutting means is employed to cut the strips and upon said cutting to open the cover and deliver the strips.

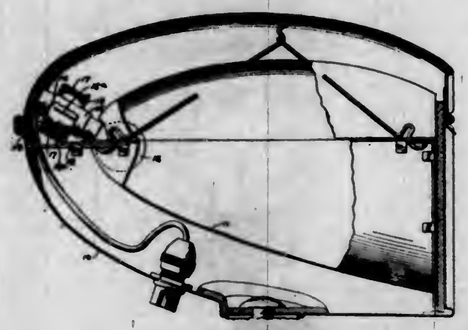
---



1,694,828. APPARATUS FOR TESTING CANS FOR LEAKAGE. JOHN M. MCCLATCHIE, New York, N. Y., assignor to The Borden Company, New York, N. Y., a Corporation of New Jersey. Original application filed June 15, 1926, Serial No. 116,141. Divided and this application filed May 20, 1927. Serial No. 192,843. 9 Claims. (Cl. 209—88.)

1. An apparatus for testing cans having end walls comprising, a can runway on which the cans rest and along which they are advanced, a movable section in the can runway, means for advancing a can along the runway, a feeler traveling in unison with the can and arranged to be moved into contact with an end wall thereof, means for moving the feeler into contact with the end wall of the can, and means controlled by the feeler for actuating the movable section of the can runway to permit the can to fall through the runway if the end wall of the can is in a predetermined position as determined by the feeler.

---



1,694,829. MOTOR-DRIVEN SLEIGH. WALTER A. OLSON, Twin Valley, Minn. Filed July 19, 1927. Serial No. 206,955. 2 Claims. (Cl. 180—3.)

1. A sleigh comprising side sills, cross bars connecting the side sills, bottom boards connected to the cross bars, said bottom boards having their forward ends turned upwardly, and brace bars connecting the forward ends of the bottom boards and side sills to maintain them in their upturned position, a frame supported by the side sills, a motor supported by the frame and having a propeller fixed to its shaft, front and rear runners supported beneath the bottom boards, and means for guiding the rear runners.

1,694,830. UNIVERSAL FOCUSING DEVICE. JOHN F. PAGENDARM, Oakland, Calif., assignor to American Woodlite Corporation, San Francisco, Calif., a Corporation of Arizona. Filed Nov. 25, 1925. Serial No. 71,278. 2 Claims. (Cl. 240—44.)

1. A focusing device comprising a base, a seat thereon screw-threaded on its exterior, a spherical member to fit against said seat and having an opening to receive a lamp socket slidably, said spherical member being provided with slits extending from each end past the middle thereof and terminating short of the opposite end, and a clamping ring threaded onto said seat and having a flange to engage the end of the spherical member opposite the seat, for clamping the spherical member tightly against the seat, whereby both ends of the spherical member are contracted to grip the lamp socket.

---

1,694,831. PROCESS FOR THE MANUFACTURE OF GLASS CONTAINING BARIUM. FRITZ ROTHE and HANS BRENEK, Berlin, Germany, assignors to the Firm of Rhenania-Kunheim Verein Chemischer Fabriken Aktiengesellschaft, Berlin, Germany, a Society of Germany. Filed Oct. 11, 1926, Serial No. 141,029, and in Germany Oct. 16, 1925. 5 Claims. (Cl. 106—36.1.)

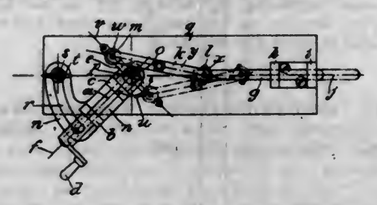
1. Process for the manufacture of barium glass which consists in melting barium silicate with glass-forming ingredients.

---

1,694,832. LICENSE-PLATE HOLDER. EDWARD LACY SHELTON, Memphis, Tenn. Filed Mar. 24, 1928. Serial No. 264,376. 3 Claims. (Cl. 40—131.)

1. A license plate holder comprising a rectangular metallic sheet having at its lower end an extension, said sheet at its central portion being concavely depressed and the depression extending into said extension to produce therefrom a semi-circular neck, the lower end of said neck having a flange adapted to seat upon a vehicle, the sheet having openings for the passage of securing elements for attaching a license plate thereto.

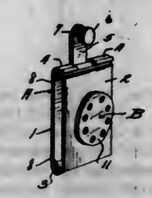
---



1,694,833. ADJUSTABLE REFLECTOR FRAME. LOUIS S. SHIVELY, St. Louis, Mo., assignor to The Weightograph Company, St. Louis, Mo., a Corporation of Missouri. Filed Mar. 4, 1926. Serial No. 92,159. 4 Claims. (Cl. 45—97.)

2. A device of the class described comprising a rectangular support, lugs carried by said support in oblique alinement and offset from an oblique angle of the axis of the support, a leaf spring carried by said lugs, a rectangular frame, a reflector in said frame, a bearing support carried by said frame and arranged to connect with said spring, and three adjusting screws being in triangular arrangement operable effectively to rock the frame in respect of said support to effect any desired angular adjustment thereof.

---

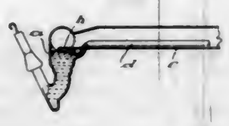


1,694,834. MECHANISM FOR TRANSMITTING MOVEMENT. GEORGE WILLIAM SINCLAIR, Eton, England. Filed May 8, 1925, Serial No. 28,903, and in Switzerland June 1, 1924. 3 Claims. (Cl. 74—14.)

1. In a mechanism for transmitting movement, in combination, a driving member, a driven member, said members being adapted for rotation around different geometrical axes, a connecting link between said members secured to each by a joint at least one of which is a universal joint, the point of intersection of the two geometrical axes of rotation of the one joint being at a distance from the axis of rotation of its member and the point of intersection of the geometrical axes of rotation of the other joint being in the axis of rotation of its member.

---

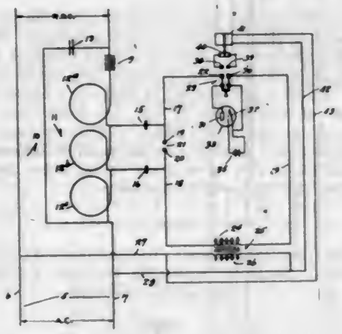
1,694,835. SUSPENDERS. ADOLF THIES, St. Louis, Mo. Filed Mar. 10, 1927. Serial No. 174,324. 1 Claim. (Cl. 241—7.)



A suspender comprising in combination two members, one of said members being adapted for clamping engage-

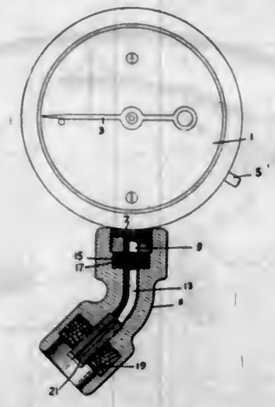
ment with a body garment and the second of said members being adapted for securement to a nether garment, said members being provided with coacting means to effect a coupling therebetween, the first member consisting of two sections, one of said sections having an outstanding arm at one end thereof, said section having flanges at said end at opposite sides of the arm and another flange extending across the opposite end of the section, the second section having flanges extending across opposite ends thereof, the flanges of one section slipping over the flanges of the second section, said sections being adapted to be arranged at opposite sides of the body garment with portions of said garment clamped between the flanges, said arm being provided with a securing means.

---



1,694,836. MERCURY VAPOR LAMP. WILHELM ULBRICH, Jena, Germany. Filed Mar. 23, 1927, Serial No. 177,710, and in Germany Mar. 29, 1926. 3 Claims. (Cl. 176—42.)

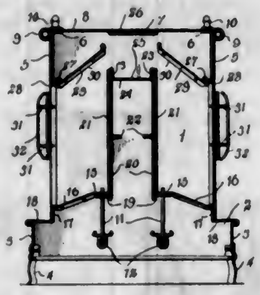
1. A mercury vapor lamp comprising in combination an illuminating tube capable of being tilted, anode and cathode bodies on the said illuminating tube, constituting the poles, at least one container in the said anode and catbode bodies for containing mercury, fine tubes extending longitudinally of the said illuminating tube from the pole vessel containing the mercury to the vicinity of the other pole, and means at the junction of the fine tubes and the pole vessel containing the mercury for obstructing the flow of the mercury, on the lamp being tilted, and allowing it only to enter the fine tubes.



---

1,694,837. RECTIFYING SYSTEM. FLETCHER L. WALKER, Jr., Westwood, Calif. Filed Feb. 23, 1926. Serial No. 90,203. 1 Claim. (Cl. 175—363.)

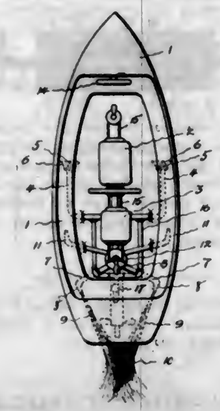
A rectifying system comprising an alternating current line having a gap, a plurality of turns of wire in series with the gap and a condenser across the gap and the turns, an oscillating circuit across one of the turns, and means for producing an oscillating high frequency current in the latter circuit in synchronism with one set of alternations in the line whereby the gap is ionized and allows the alternations of the said set to pass for producing a unidirectional current.



1,694,838. GAUGE. WILLIAM G. BAYHA, Perkasie, Pa., assignor to United States Gauge Company, New York, N. Y., a Corporation of Pennsylvania. Filed Apr. 14, 1927. Serial No. 183,654. 3 Claims. (Cl. 73—31.)

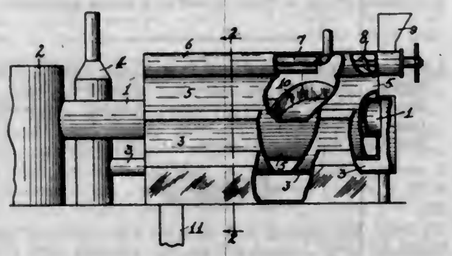
1. A wire tester gauge provided with a watch-shaped body and dial, a manual reset button at the edge thereof, a threaded boss at the bottom of the gauge provided with a passage whereby pressure may enter the gauge, a fitting having a central passage throughout its length, small at the middle and enlarged at each end and provided with a thread at the end of the upper enlargement, screwed onto the boss, a continuation of the enlargement in the fitting below the threaded portion, a porous decelerator therein engaging said threaded boss, a bend in the median portion of the fitting whereby the convenience of operating the gauge may be increased, an enlargement of the passage in the lower end of the fitting provided with a tubular release pin pressed thereinto, a further enlargement of greater diameter and an elastic washer therein around the release pin to seal the fitting to a valve when pressed thereon.

---



1,694,839. GAS STOVE. WILLIAM L. BROOKS, Ardmore, Okla. Filed Feb. 21, 1928. Serial No. 256,025. 4 Claims. (Cl. 126—87.)

1. A heater comprising an open bottom casing having lower side strips extending from end to end, partitions attached at their outer edges to the upper edges of said side strips and extending upwardly and inwardly therefrom, the inner edges of said partitions being stepped and spaced transversely of the casing, backing plates extending from end to end of the casing and abutting the stepped inner edges of the partitions, heat-radiating mats seated at their lower edges in the stepped edges of the partitions and supported by said plates, and burners mounted in the casing below the partitions and rising through the inner edge portions of the partitions at the outer sides of the radiating mats.

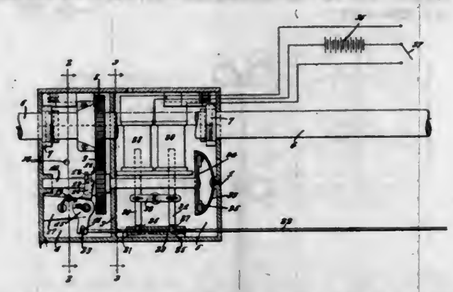


1,694,840. HYDRAULIC SYSTEM AND MEANS FOR PROPELLING VESSELS. GEORGE R. BROWN, New Haven, Conn. Filed Mar. 22, 1926. Serial No. 96,525. 1 Claim. (Cl. 115—14.)

In a system of hydraulic propulsion of vessels, means comprising intake nozzles and ejecting nozzles, said latter nozzles being arranged to eject converging streams meeting at a point behind and adjacent to the stern of the vessel and means comprising additional ejecting nozzles for diverting said streams whereby reversing and stopping of the vessel is effected.

---

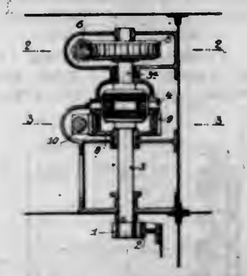
1,694,841. RECOVERING VALUES BY EVAPORATION. HENRY W. CARR, San Francisco, Calif. Filed Apr. 30, 1927. Serial No. 188,050. 4 Claims. (Cl. 159—47.)



3. The method of recovering crystallizable residual values from liquid-containing materials which comprises dropping said material upon a hot bed of previously obtained residues of like nature with those to be recovered, said hot bed being of such temperature as to evaporate the liquid content of said material.

---

1,694,842. ALARM FOR AUTOMOBILES. ZENAS ALBERT CURTIS, Cimarron, N. Mex., assignor of one-eighth to Merlin S. Cook, Lansdowne, Pa. Filed Aug. 16, 1921. Serial No. 492,826. 1 Claim. (Cl. 116—60.)



The combination with the drive shaft of a vehicle, a gear secured to and rotatable with the shaft, and spaced collars secured to the shaft, said gear interposed between the collars, of a housing supported by the shaft and held against longitudinal movement relative thereto by the collars, a second shaft journaled within the housing, an alarm element supported within the housing, means operated by said second shaft for sounding the alarm element, a gear in the housing feathered on said second shaft, a spring controlled lever, a connection between the lever and the feathered gear for holding said gear normally out of mesh with the gear on the drive shaft, and a shifting strip connected to the lever and guided by and extending outwardly from the housing for actuating the lever to move the feathered gear into mesh with the gear on the drive

shaft, the gear and collars on the drive shaft and the housing being operatively connected to the drive shaft at any desired point thereon.

---

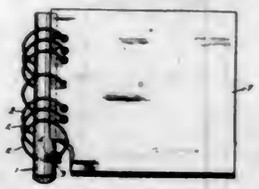
1,694,843. DEVICE FOR THE HORIZONTAL AIMING OF TURRETS COMPRISING SEVERAL GUNS. ROBERT DE COURSEULLES, Paris, France, assignor to Société Schneider & Co. and Compagnie des Forges & Acieries de la Marine & d'Homecourt, Paris, France. Filed Aug. 1, 1927, Serial No. 209,892, and in France Aug. 6, 1926. 4 Claims. (Cl. 89—37.)

1. Device for the horizontal aiming of turrets with several guns comprising a differential gear arranged upon the means for controlling this aiming, a ring of planetary wheels in this differential gear, a rack meshing with teeth carried by this ring, means for braking the longitudinal displacement of this rack, and means for automatically returning the said rack to the firing position.

---

1,694,844. PROCESS FOR THE MANUFACTURE OF ARTIFICIAL FLOWERS. RAESFELD JEANNE DE GERSON, born Berthier, Paris, France. Filed Oct. 12, 1925, Serial No. 62,163, and in Germany Aug. 5, 1925. 5 Claims. (Cl. 41—13.)

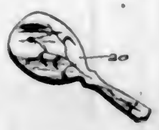
1. In an artificial flower, a central pocket of lenticular shape, a powder within the said pocket for permitting the passage of the assembling threads for the petals, an armature constituted by a wire forming a circular handle and two unequal parallel branches, and means for securing the said pocket in the circular handle of the armature.



1,694,845. KNEADING DEVICE. EMANUEL DE TREY, Zurich, Switzerland. Filed Oct. 31, 1927, Serial No. 229,977, and in Switzerland Mar. 16, 1927. 4 Claims. (Cl. 259—112.)

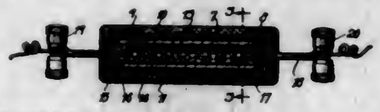
1. A device of the type described, comprising in combination, a barrel, two pistons co-axially arranged in said barrel, one of said pistons being solid and the other perforated, and means adapted to reciprocate either of said pistons and independently or simultaneously of the other.

---



1,694,846. LOOSE-LEAF BINDER. FREDERICK A. DIESTELKAMP, Lowell, Oreg. Filed June 25, 1927. Serial No. 201,444. 2 Claims. (Cl. 129—23.)

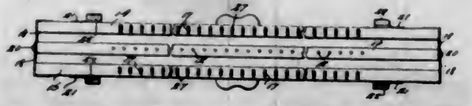
2. In a loose leaf binder, a support, split rings carried by said support, one end of each ring being fashioned into an eyelet, the end of the eyelet being embedded in said support, whereby said support forms a part of the eyelet, the other end of each ring being removably receivable in the eyelet associated therewith.



---

1,694,847. DECORATED CELLULOSE ESTER ARTICLE AND METHOD OF MAKING SAME. ALFRED S. DONALDSON, Newark, N. J., assignor to Du Pont Viscoloid Company, Wilmington, Del., a Corporation of Delaware. Filed Oct. 7, 1927. Serial No. 224,730. 11 Claims. (Cl. 41—22.)

2. The process of producing decorated machinable articles which comprises decorating one side of a composition sheet, and compositing the decorated sheet with a second sheet of similar composition material by means of a binder, with the decoration between the two sheets.



1,694,848. SOUND CLARIFIER. EDWARD H. FREEBORN, New York, N. Y., assignor to Cornelius C. Freeborn, Sr., New Milford, N. J. Filed Sept. 27, 1924. Serial No. 740,328. 3 Claims. (Cl. 201—76.)

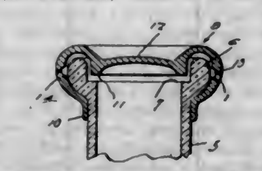
1. A resistance element for use in a radio circuit comprising a tube, an insulator lining on the interior and exterior surfaces of said tube, a closure for each end of said tube, a metallic liquid solution in the tube consisting of mercury, ether and camphor and an electrode extending thru each of said closures and having its inner end disposed in said solution.

---

1,694,849. KNITTING DEVICE. SUNAO FUJII, Honolulu, Territory of Hawaii. Filed Jan. 5, 1928. Serial No. 244,688. 7 Claims. (Cl. 66—4.)

1. A knitting device of the character described including three longitudinally extending bars disposed in parallel relation and adjustable toward or from each other, the middle bar having a longitudinally extending series of upstanding pins, the laterally disposed bars each having a vertically movable pin-carrying bar mounted thereon, the pin-carrying bar being shiftable to a lifted position with its pins on the same plane as the pins of the middle bar or to a lowered position with its pins below the level of the upper face of the middle bar, and means for holding the pin-carrying bars in their raised or lowered positions.

---

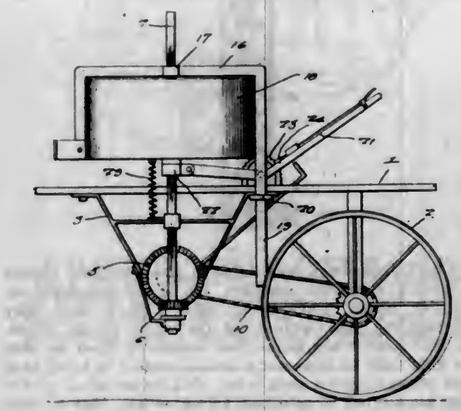


1,694,850. STRAIGHTEDGE FOR WALL-PAPER TRIMMERS. CHARLES E. GALVIN, Springfield, Ohio, assignor to The Ridgely Trimmer Company, Springfield, Ohio, a Corporation of Ohio. Filed Aug. 18, 1927. Serial No. 213,931. 3 Claims. (Cl. 33—107.)

1. The combination in a straight edge for wall paper trimmers, of a non-metallic member provided with a longitudinal groove on its upper surface adjacent one side edge thereof, a channel-shaped metallic strip applied to said adjacent edge of said non-metallic member with the legs of said channel embracing the surfaces of said member, with the lower leg of said channel strip bent inwardly toward the other leg so as to imbed it in said member, and the upper leg arranged in parallel relation to the adjacent surface of said member and extending part way over said groove.

---

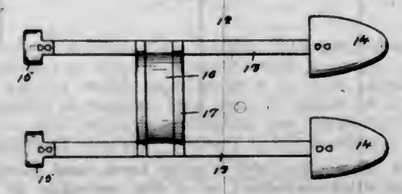
1,694,851. BOTTLE CAP. WILLIAM GLASS, Campbell, Ohio. Filed Sept. 14, 1927. Serial No. 219,461. 1 Claim. (Cl. 215—41.)



As a new product of manufacture, a bottle cap comprising a body composed of rubber including a concavo-convex

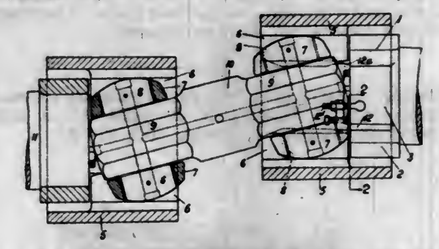
diaphragm merging at its marginal portion into an annular rib and formed beyond said rib with a surrounding rim portion of general channel-shaped cross section, said rim portion terminating in a ring-like band, and said rim portion being provided between its upper and lower ends and on its internal surface with an endless channel and circumferentially spaced openings communicating therewith and extending thru the exterior surface, said openings being inclined outwardly and downwardly.

---



1,694,852. KAFIR-CORN HEADER. WALTER A. HARRELL, Richland, Kans. Filed Aug. 28, 1925. Serial No. 53,104. 1 Claim. (Cl. 56—57.)

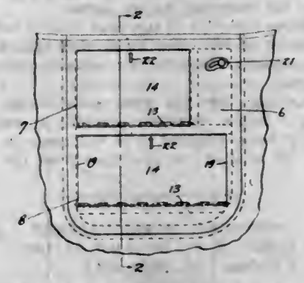
In a structure of the class described, in combination, a pair of spaced parallel hangers, a horizontal shaft journaled in bearings in said hangers, a rotatable wheel axle, an operating connection between the axle and shaft, a vertically disposed driven shaft, an operating connection between the vertical shaft and the horizontal shaft, a unit slidable upon said shaft, said unit comprising a rectangular frame having a depending leg, a guide through which said leg extends, a shield mounted upon said frame, a cutter embodying a disk carrying cutting knives, a beater embodying a disk carrying beating fingers, a chute located for cooperation with the beater, a lever pivotally mounted upon a support, one end of said lever being engaged with said unit for raising it, and retaining means for the lever.



---

1,694,853. SHOE PROTECTING AND HANDLING DEVICE. EDWARD C. HESS, Pittsburgh, Pa., assignor of one-half to Arthur L. Mass, Baltimore, Md. Filed May 26, 1928. Serial No. 280,889. 10 Claims. (Cl. 12—128.)

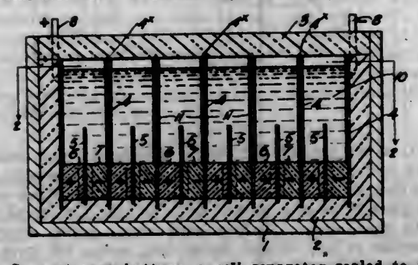
1. In combination, a pair of shoe trees each including a toe member, a heel member and a shank connecting said members, a relatively wide transversely flat bridge having its opposite ends connected with the shanks, and combined reinforcing and card retaining flanges extending along opposite edges of the bridge.



1,694,854. ROLLING MILL. THOMAS EDMUND HOLMES, Glasgow, Scotland. Filed Jan. 13, 1928, Serial No. 246,624, and in Great Britain Jan. 8, 1927. 3 Claims. (Cl. 80—1.)

1. In a rolling mill, in combination, a roll member, a pinion shaft member, one of said members having a pair of diametrally opposed projections, a universal spindle between said members, a trunnion projecting diametrally from said spindle, swivel blocks fitted to said trunnion, and a coupling box presenting a pair of opposed internal sockets to accommodate said swivel blocks and also presenting a pair of internal sockets to engage said diametrally opposed projections, said second pair of sockets being on a diameter transverse to the diameter passing through said first mentioned pair of sockets.

---

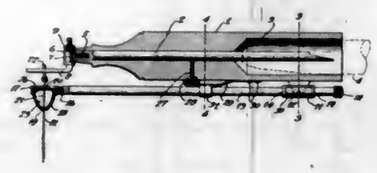


1,694,855. AUTOMOBILE DOOR POCKET. GEORGE C. IRONS, La Verne, Calif. Filed Dec. 1, 1926. Serial No. 152,023. 2 Claims. (Cl. 296—44.)

1. The combination with an automobile door, of a pocket hingedly secured to said door and being entirely receivable within the door when said pocket is in inoperative position, said pocket having an opening in one side thereof, this opening being disposed adjacent to the end of the pocket furthest removed from the hinge, said pocket being swingable into a position that inclines downwardly from the horizontal for causing articles to move toward the open end of said pocket.

---

1,694,856. STORAGE BATTERY. JOHN GRANT JACKSON, Chatham, Ontario, Canada. Filed Jan. 2, 1925. Serial No. 254. 3 Claims. (Cl. 136—6.)

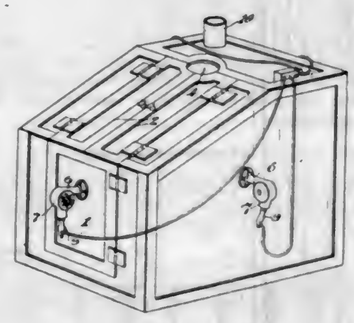


1. In a storage battery, a cell separator sealed to the insulating bottom and side cell walls and extending above

the positive and negative elements, said positive and negative elements abutting against opposed faces of said separator, substantially vertical open ducts being formed within the positive and negative elements at such separator faces in such a manner as to facilitate access of electrolyte into such positive and negative elements.

---

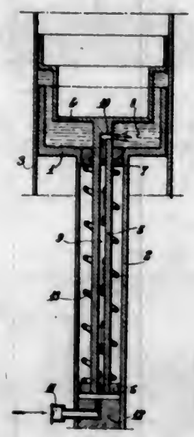
1,694,857. APPARATUS FOR FILLING ROOT CANALS. IRVING KULIK, Brooklyn, N. Y. Filed Dec. 3, 1924. Serial No. 753,591. 20 Claims. (Cl. 32—7.)



1. An apparatus for filling root canals embodying a receptacle adapted to be juxtaposed with a tooth to be filled and to contain material for filling the root canal of such tooth, an implement mounted to move into and out of the root canal, while in contact with the material in the reservoir for the purpose of transferring the material from the reservoir into the root canal, and means for operatively connecting said implement to a dental engine hand piece for operation by the latter.

13. A filling reservoir of constant volume for tooth filling apparatus, having rigid walls with openings at both ends, and a perforatable seal for normally sealing one of said openings.

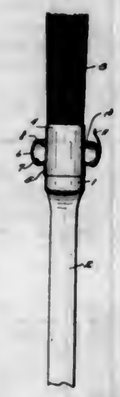
18. A cartridge for use with tooth filling apparatus, comprising a hollow container provided at one end with a projecting flange adapted to be cut away to disconnect a part of the wall of the container from the remainder thereof.



---

1,694,858. DRY-HEAT BATH CABINET. ARCHER A. LANDON, Buffalo, N. Y. Filed Oct. 21, 1925. Serial No. 63,885. 4 Claims. (Cl. 128—256.)

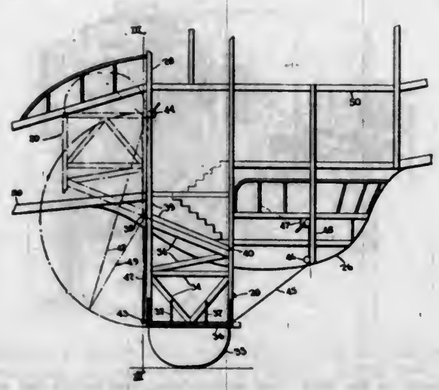
1. A dry heat bath cabinet providing a closed chamber and having a source of heat to maintain a suitable high temperature in said chamber in combination with a nozzle dirigibly fitted in a wall of said chamber and discharging into the interior thereof, said nozzle being manually movable to any desired angle, and means for forcing a stream of heated dry air through said nozzle and into said chamber.



1,694,859. FLUID-TIGHT PISTON. EUGÈNE JULES LAUGAUDIN, Paris, France. Filed Dec. 23, 1927, Serial No. 242,190, and in France Dec. 23, 1926. 1 Claim. (Cl. 74—109.)

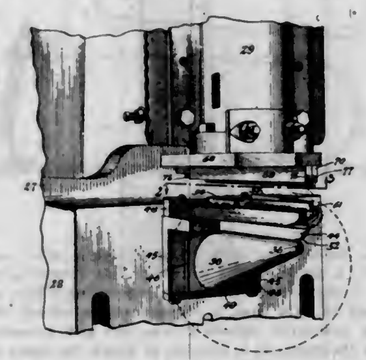
A fluid-tight piston constituted by two associated pistons resiliently connected together, the space comprised by the two piston heads being filled with a fluid body ensuring the fluid-tightness of the whole of the piston, the said space being maintained constantly filled up with the fluid body by means of a device tending to bring back both pistons against each other, this device being preferably constituted by a spring acting on the rods of both pistons, one of the said rods being hollow and the other being fitted in the first one, the fluid body being injected by means of a pressure lubricating device.

---



1,694,860. PAINTBRUSH. CHARLES C. LESIAK, Fullerton, Nebr. Filed May 3, 1928. Serial No. 274,923. 1 Claim. (Cl. 15—248.)

The combination with a paint brush head having a ferrule fitted thereabout, of a drip receptacle of substantially C-shaped cross-sectional design surrounding said ferrule with the open face directed toward the same, and a sleeve depending from the lower edge of the receptacle and snugly engaging about the ferrule, the top edge of the receptacle being directed downwardly toward and spaced slightly from the ferrule, said receptacle having a recess cut down through the top to form a drain opening.

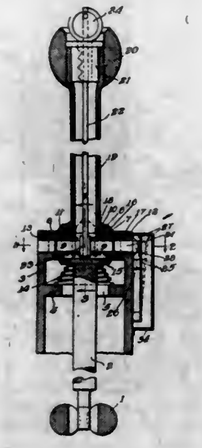


1,694,861. LANDING EQUIPMENT FOR AIRSHIPS. HERMAN RICHARD LIEBERT and WILHELM FISCHER, Akron, Ohio, assignors to Goodyear Zeppelin Corporation, Akron, Ohio, a Corporation of Delaware. Filed Apr. 11, 1927. Serial No. 182,559. 6 Claims. (Cl. 244—3.)

3. In an airship having a fin secured to its lower portion, a two part landing bumper secured to the fin, means for drawing the parts of the bumper inwardly within the surface contour of the fin, and means for securing the parts of the bumper together in its operative position.

---

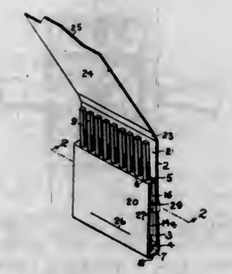
1,694,862. SIDE-SEAMING PRESS. BROR J. LINDGREN, Buffalo, N. Y., assignor to Niagara Machine & Tool Works, Buffalo, N. Y., a Corporation of New York. Filed Apr. 4, 1927. Serial No. 180,652. 3 Claims. (Cl. 113—34.)



1. In a machine of the character described, the combination of two supports movable relatively to one another, a pair of tool holders mounted on each support and adapted to cooperate with the tool holders of the other pair, and means for changing the angularity of the holders of each pair relatively to one another.

---

1,694,863. AUTOMOBILE LOCKING DEVICE. HUGH G. PRIGGE, Springfield, Ill.; Beatrice M. Prigge, administratrix of said Hugh G. Prigge, deceased, assignor to Beatrice M. Prigge. Filed Dec. 9, 1926. Serial No. 153,604. 5 Claims. (Cl. 70—127.)

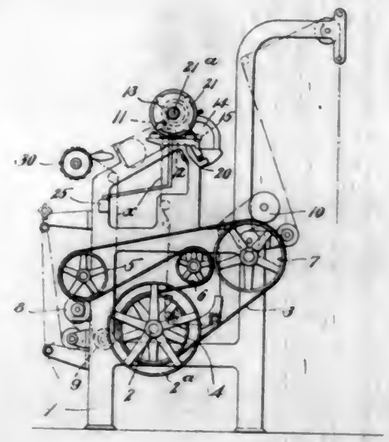


1. A device of the character described including gear shifting means, a housing having opposed openings therein, locking means carried by the gear shifting means and adapted to be projected into said openings for locking said

gear shifting means against movement, and means actuated by the locking means for breaking the circuit of the ignition system of a motor vehicle.

---

1,694,864. MATCH BOOK. RODNEY S. PULLEN, Atlantic City, N. J., assignor to Pullenlite Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 23, 1927. Serial No. 186,097. 21 Claims. (Cl. 206—34.)

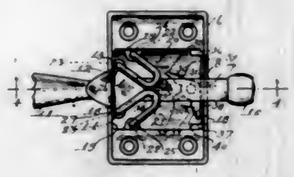


21. A match package comprising side walls and transverse walls forming a head compartment and a striking compartment containing striking material adjacent to the match sticks and in which the machines are spaced within apertures in the walls at the two ends of the striking compartment, the apertures at the head end of the compartment being a relatively tight fit upon the matches to retard the movement of the match heads and the apertures at the opposite end of the striking compartment being large enough to pass the match heads without objectionable retardation.

---

1,694,865. CLOTH-FINISHING MACHINE. CHARLES G. RICHARDSON, Springfield, Vt., assignor to Parks & Woolson Machine Company, Springfield, Vt., a Corporation of Vermont. Filed Apr. 23, 1927. Serial No. 186,010. 5 Claims. (Cl. 26—15.)

1. In a cloth-finishing machine, the combination with cloth-guiding and cloth-feeding means, of a pivotal head,

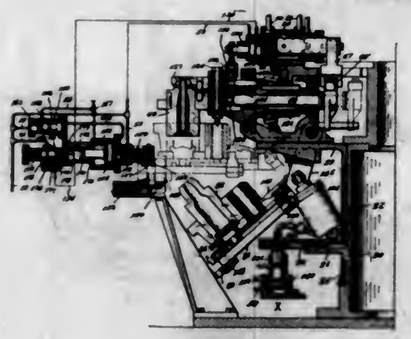


a rotary finishing element mounted in said head to permit its movement toward and away from the cloth-guiding means, a driving motor carried by said head and having

driving connection with the rotary finishing element, and means for controlling the starting and stopping of said motor independently of the cloth-feeding mechanism.

---

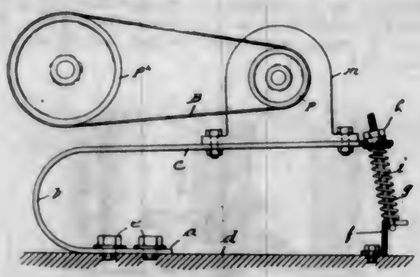
1,694,866. LATCH. GORDON E. ROEDDING, Grand Rapids, Mich., assignor to Grand Rapids Brass Company, Grand Rapids, Mich., a Corporation of Michigan. Filed July 28, 1926. Serial No. 125,406. 6 Claims. (Cl. 292—332.)



1. In combination with a keeper therefor, a latch comprising: a bolt carried by a door member swingably to latching position and to retracted position and having portions spaced apart in the bolt's transverse direction, said member having a surface on which one of said portions turns in the bolt's swinging movement; a pair of springs pressing said portions respectively to yieldingly hold the bolt in its latching position, at least one of the springs at a point in the bolt's movement toward any one of its said positions urging the same to that position, and at least one of the springs urging one of said portions into turning engagement with said surface in the bolt's swinging movement.

---

1,694,867. GLASSWORKING MACHINE. ALEXANDER SAMUELSON, Terre Haute, Ind., assignor to Chapman J. Root, Terre Haute, Ind. Filed July 29, 1921. Serial No. 488,391. 9 Claims. (Cl. 49—9.)



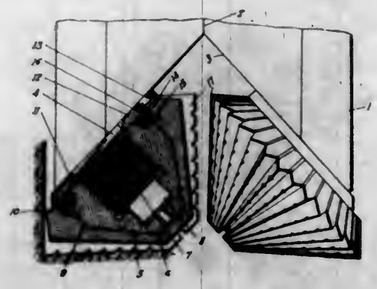
2. In a glass working machine, the combination of a manipulator for a blank mold, a manipulator for a neck ring, a manipulator for a blow mold, a blow mold carrier, means for moving said blow mold carrier to shift a blow mold into and out of blowing position, means controlled by the movement of the blow mold carrier for controlling the application of motive power to the blow mold manipulator, means controlled by the movement of the blow mold manipulator for controlling the application of motive

power to the neck ring manipulator and means for controlling application of motive power to the blank mold manipulator.

---

1,694,868. MOTOR SUPPORT. ALBERT F. SAWYER, Haverhill, Mass., assignor to Irving L. Keith, Haverhill, Mass. Filed Feb. 12, 1927. Serial No. 167,661. 6 Claims. (Cl. 308—11.)

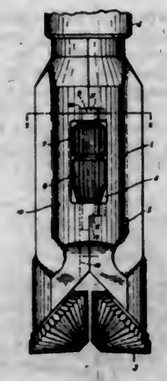
1. In combination with a base having a pulley mounted thereon, a motor having a driving belt extending to said pulley, a support for said motor comprising a base portion mounted on said base, a semi-circularly curved resilient portion connected thereto at one end and extending upwardly therefrom to a position in which its upper portion is approximately directly over its lower portion, and an elongated supporting portion for said motor, connected at one end to the upper end of said resilient portion and extending horizontally at the opposite side thereof from said pulley, and means for adjustably connecting the free end of said supporting portion to the base, to vary the distance between the pulley and the motor.



---

1,694,869. CUTTER CONE FOR WELL DRILLS. FLOYD L. SCOTT and LOUIS H. WELLENSIEK, Houston, Tex., assignors to Hughes Tool Company, Houston, Tex., a Corporation of Texas. Filed Aug. 14, 1926. Serial No. 129,272. 3 Claims. (Cl. 255—71.)

3. In a rock drill including a head and a downwardly inclined cutter pin thereon, the combination of an approximately frusto-conical shaped bushing fixed to the

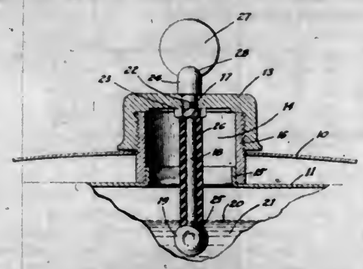


said pin, a forward tapered surface on said bushing, a materially extensive cylindrical surface of largest diameter, and a constricted neck on the upper end of said

bushing, a cutter fitting rotatably on said bushing and presenting an approximately horizontal cutting face to the bottom of the hole.

---

1,694,870. SUPPORT FOR REAMER CUTTERS. FLOYD L. SCOTT, Houston, Tex., assignor to Hughes Tool Company, Houston, Tex., a Corporation of Texas. Filed Feb. 4, 1928. Serial No. 251,817. 4 Claims. (Cl. 255—73.)



1. A reamer including a head longitudinally divided into a plurality of sections, said sections being formed with cutter pockets in their meeting faces, laterally projecting bosses formed on one of said sections interfitting within recesses on the adjacent section at the upper and lower ends of said pockets, cutter pin bearings in said bosses, pins in said bearings, and cutters on said pins.

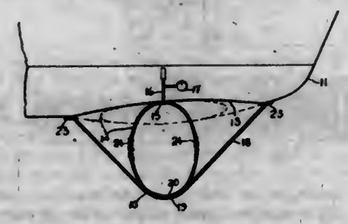
---

1,694,871. HEAT INDICATOR FOR INTERNAL-COMBUSTION ENGINES. LOUIS M. SPENCER, Detroit, and JOSEPH ZUBATY, Flint, Mich., assignors to A C Spark Plug Company, Flint, Mich., a Corporation of Michigan. Filed July 23, 1927. Serial No. 208,020. 5 Claims. (Cl. 116—114.)

1. In combination with the radiator of an automotive vehicle, a means for indicating temperature changes in the radiator comprising a rod extending through the cap thereof, an enlarged end on said rod extending below the surface of the water in the radiator, means for insulat-

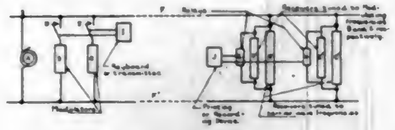
ing the shank portion of said rod, and means at the opposite end of said rod for indicating temperature changes.

---



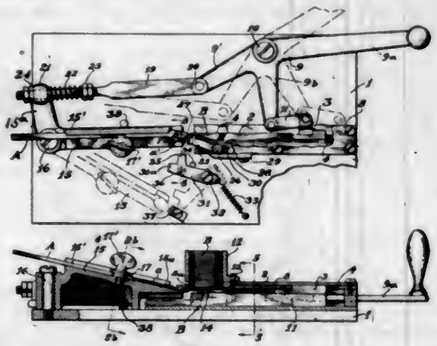
1,694,872. AIR-BAG VALVE. CORNELIS VAN RENNES, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Dec. 19, 1927. Serial No. 240,952. 8 Claims. (Cl. 18—45.)

1. An airbag comprising a hollow body and a tube traversing the wall of the body and terminating within the body an appreciable distance from the wall thereof, the portion of the tube disposed within the body being flexible.



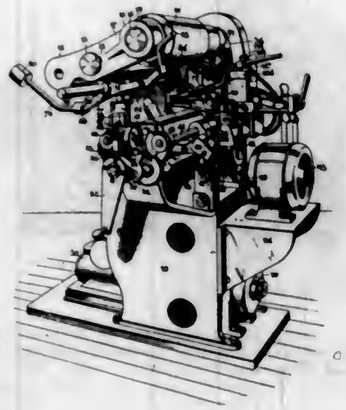
---

1,694,873. LANDING BUMPER FOR AIRSHIPS. EUGEN BRUNNER, Akron, Ohio, assignor to Goodyear-Zeppelin Corporation, Akron, Ohio, a Corporation of Delaware. Filed Sept. 3, 1926. Serial No. 133,398. 15 Claims. (Cl. 244—2.)



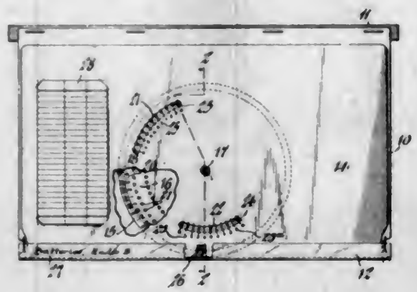
1. An airship landing bumper comprising an inherently elastic inflatable member and an elastic anchoring shield secured thereto.

1,694,874. METHOD OF ELECTRICAL SIGNALING. WILLIAM F. FRIEDMAN, Washington, D. C. Filed July 10, 1922. Serial No. 573,981. 2 Claims. (Cl. 178—51.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928, 370 O. G., 757.)



1. In a printing telegraph system, a source of high frequency electrical oscillations constituting a carrier wave, a set of modulators of different modulating frequencies which can be impressed upon said carrier wave, each of said modulators being associated with a make and break key which determines whether the modulating frequency controlled thereby will or will not be impressed upon the said carrier wave, said keys together comprising a single set of keys acting as a single unit associated with a keyboard mechanism, said keyboard mechanism being so constituted as to control said set of keys permutatively as a unit according to a plural-unit code suitable for the representation of message characters, means for transmitting the permutatively modulated carrier wave representing the message characters, a receiving station, means at said receiving station for detecting said transmitted permutatively modulated carrier wave, means for detecting the presence of and for isolating each modulating frequency of said permutatively modulated carrier wave, said latter means comprising a set of resonant circuits appropriate for the purpose, each of said resonant circuits being associated with and adapted to control a relay which is operative when the modulating frequency to which the respective resonant circuit is responsive is present, and is inoperative when the modulating frequency to which said resonant circuits is responsive is not present, a plurality of relays acting as a single unit associated with a printing mechanism, said printing mechanism being controlled as a unit by the joint and permutative action of said set of relays in such a manner as to print the message characters represented by the permutatively modulated transmitted and received carrier wave.

1,694,875. CARPET-WIRE BLADE-INSERTING MACHINE. HENRY J. GAISMAN, New York, N. Y., assignor to Autostrop Patents Corporation, Dover, Del., a Corporation of Delaware. Filed May 28, 1927. Serial No. 194,895. 13 Claims. (Cl. 29—84.)

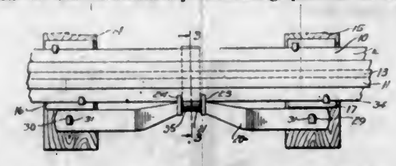


1. A machine of the character described comprising supporting means for carpet wires, means to insert blades in the wires, means to move said supporting means to and from blade receiving position, and means to eject blades from the carpet wires before the latter are brought to blade receiving position.

1,694,876. MACHINE FOR MANUFACTURING SOLID TIRES. JORGEN I. HAASE, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Oct. 29, 1925. Serial No. 65,576. 21 Claims. (Cl. 154—9.)

1. A solid tire building machine comprising a frame having a rim supporting member rotatably mounted thereon, a rotatable rod having a guide roller secured thereto mounted adjacent the member, and means to rotate the rod and thereby the guide roller.

1,694,877. STOCK-INDICATING DEVICE. LE ROI E. HUTCHINGS, Tonawanda, N. Y., assignor, by mesne assignments, to Remington Rand, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 8, 1926. Serial No. 93,107. 9 Claims. (Cl. 235—78.)

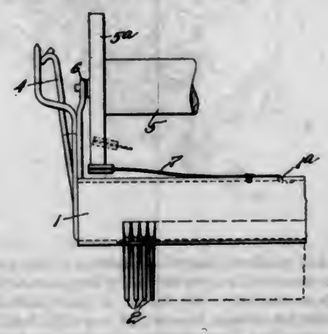


1. A stock indicator, comprising a support, and movable adding and subtracting members mounted thereon and bearing consecutively-arranged indicating characters, the characters of one member being arranged to read reversely to those of the other member when said members are moved in unison in the same direction, said members having registering openings for the reception of an actuating member.

1,694,878. RAIL ANCHOR. ROBERT EMMET KEOUGH, Montreal, Quebec, Canada, assignor to The American Fork & Hoe Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 2, 1927. Serial No. 171,953. 7 Claims. (Cl. 238—315.)

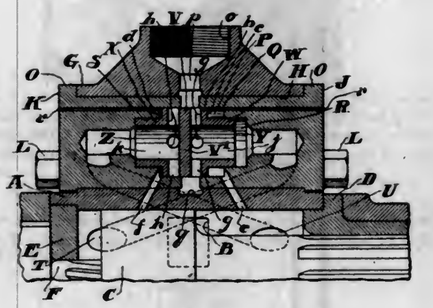
1. In a rail anchor, the combination with a rail gripping mechanism disposed below the rail base flanges and gripping the rail in the lateral portions of the flanges and comprising a downwardly extending portion below one of the rail base flanges and laterally extending wings rigidly joined to the downwardly extending portion at a substantial distance below the rail base flange, adapted to be secured to the adjoining pair of rail supporting ties to prevent lateral movement of the anchor in its lowermost portion.

1,694,879. METHOD OF TREATING AIR BAGS. STEWART S. KURTZ, Jr., Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Nov. 21, 1927. Serial No. 234,924. 9 Claims. (Cl. 18—50.)



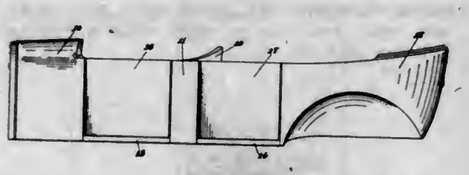
1. A method of preserving the interior surfaces of air-bags which comprises introducing into the bag a solution containing glycerine and a drying oil.

1,694,880. AIRSHIP. JESSE D. LANGDON, Los Angeles, Calif. Filed Mar. 31, 1927. Serial No. 179,909. 6 Claims. (Cl. 244—15.)



1. An airship having a propeller for forward propulsion, a helicopter helix comprising a blade extending through substantially a complete circle and disk shaped in plan with a radial split portion at the ends of the blade, means for mounting said helix for angular adjustment forwardly and rearwardly, and means for locking the helix against rotation with the split portion thereof at the rear.

1,694,881. SPOOL-RETARDING DEVICE FOR TUBE FRAMES. CHARLES LEA, Milton, Mass., assignor to Shawmut Engineering Company, Boston, Mass., a Corporation of Massachusetts. Filed Apr. 1, 1927. Serial No. 180,152. 4 Claims. (Cl. 139—10.)



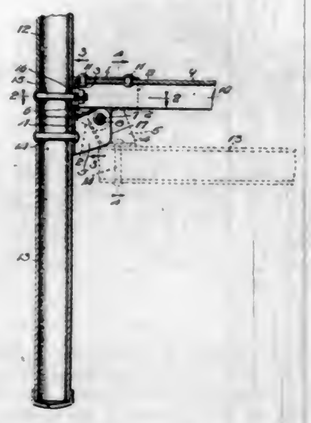
1. A spool-retarding device for a tube-frame embracing a flexible arm adapted to be secured to a tube-frame with its free end normally pressed toward a yarn-spool therein, said arm being slotted inwardly from its free end to form a pad-receiving recess having serrated sides, a non-metallic friction pad having oppositely disposed external grooves for engagement with the serrated interior edges of said recess to retain the pad in its operative position while allowing it to be withdrawn therefrom.

1,694,882. VALVE FOR ROCK DRILLS. EARL B. LEAR, Phillipsburg, N. J., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Aug. 30, 1927. Serial No. 216,403. 4 Claims. (Cl. 121—19.)

1. In a fluid actuated rock drill, the combination of a cylinder and piston, a valve chest having a valve chamber and a supply chamber, inlet passages leading from the valve chamber to the cylinder, a distributing valve in the valve chamber, said valve having bores in its ends and admission passages opening into the bores for admitting pressure fluid from the supply chamber into the inlet passages, and kicker passages conveying pressure fluid from the cylinder to the valve chamber for actuating the valve.

1,694,883. AUTOMOBILE BODY. JOSEPH LEDWINKA, Philadelphia, Pa., assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 28, 1923. Serial No. 683,145. 20 Claims. (Cl. 296—28.)

1. In an automobile body, the combination of a pair of metal sills disposed at opposite sides of the body and extending longitudinally thereof, each of said sills including a horizontal body portion and a vertical flange at the inner edge thereof, comprising front and rear portions, which are longitudinally straight and in line with each other, and an intermediate portion offset outwardly of the sill, and a plurality of sheet metal panels rigidly secured to said sills and forming the body shell.

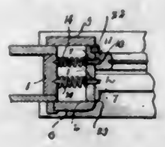


20. A pressed metal side sill stamping for vehicle bodies extending from the front of the cowl to the rear of the body and having its outer edge offset, in the vicinity of the front of the wheel housing, inwardly and upwardly.

1,694,884. MANUFACTURING OF DYESTUFFS FROM NAPHTHIDINE. GEORGES LE FLOCH, Paris France. Filed Dec. 13, 1923, Serial No. 680,349, and in France Dec. 21, 1922. 1 Claim. (Cl. 260—56.)

The method of manufacturing 3-10 perylene quinone which includes causing a reaction of a ring-forming agent upon a substance containing the naphthidine radical, and energetically oxidizing the product thereby obtained.

---



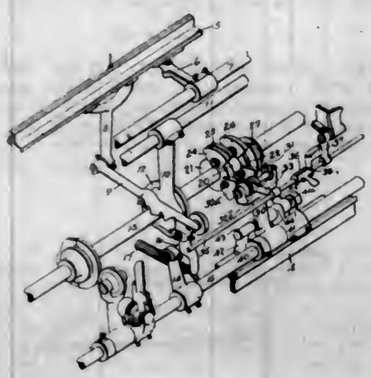
1,694,885. HINGE. WILLIAM A. MATHESON, Chicago, Ill., assignor to Roll-a-Way Bed Corporation Chicago, Ill., a Corporation of Illinois. Filed May 11, 1923. Serial No. 638,179. 7 Claims. (Cl. 5—312.)

1. In a bed construction, a post comprising a pair of sections arranged end to end, a rail, and a hinge comprising a pair of members, one of which connects said rail to one of said post sections and the other of which is secured to the first-mentioned hinge part and to the other post section, said hinge members adapted to abut against one another when the post sections are arranged end to end, and one of said hinged members abutting against said rail when said post sections are swung substantially perpendicular to each other.

---

1,694,886. WINDOW. SAMUEL A. MCCLELLAN, Salineville, Ohio. Filed Dec. 27, 1927. Serial No. 242,020. 2 Claims. (Cl. 20—12.)

1. In a window, the combination with the frame and sliding sash, of a guide carried by the frame, and adapted to engage a groove of the sash, and a spring normally exerting a pressure upon the guide to hold it in frictional engagement with the sash, whereby to hold the latter in an adjusted position, and means for varying the tension of the spring to regulate the frictional engagement between the guide and sash.



1,694,887. SHORE-BRACE CLIP. CHARLES LOUIS MEYER, Omaha, Nebr., assignor to Concrete Engineering Company, Omaha, Nebr., a Corporation of Nebraska. Filed May 4, 1927. Serial No. 188,788. 3 Claims. (Cl. 304—40.)

1. A clip of the character described comprising, a substantially V-shaped element the angle included between the legs of the element being less than 90 degrees, one of the legs having an aperture therethrough, said aperture being of greater dimensions in one direction than the corresponding transverse dimension of a shore adapted to be passed therethrough, whereby certain of the edges of the said leg about said aperture will be engaged with said shore on substantially opposite sides thereof when the other said leg of said element extends substantially parallel with the side of the shore.

---

1,694,888. UNIVERSAL LOOP-REGULATING MECHANISM FOR FULL-FASHIONED-KNITTING MACHINES. CHRISTIAN F. MEYER, Wyomissing, Pa., assignor to Textile Machine Works, Wyomissing, Pa., a Corporation of Pennsylvania. Filed Dec. 24, 1927. Serial No. 242,416. 15 Claims. (Cl. 66—82.)

9. In a full-fashioned knitting machine, a loop regulating mechanism comprising a needle-bar, a loop-regulating shaft operatively connected to the latter, a longitudinally shiftable cam shaft having a loop-regulating cam fixed thereto, and a cam-actuated lever mounted on said loop-regulating shaft; said lever being rotatably locked to said loop regulating shaft by longitudinal shift of the cam shaft.

1,694,889. RETRACTABLE LIGHT FOR AIRCRAFT. CHARLES NORTON MONTEITH, Seattle, Wash., assignor to Boeing Airplane Company, Seattle, Wash. Filed May 14, 1928. Serial No. 277,531. 1 Claim. (Cl. 240—7.1.)

An airplane wing of usual streamline formation, a compartment formed therein adjacent to the wing beam near the leading edge of said wing, an apertured and rigid cover plate for said compartment, a light swingably mounted to said wing beam, means for causing radial movement of said light through said cover plate, said means including a worm gear and gear segment, said worm gear being rotatable by means of control cables extending therefrom to the cock-pit of the airplane, said gear segment being mounted to a hollow shaft and carrying said light by means of a bracket, an electrical circuit embracing said light and extending thru said hollow shaft thence to an electric source of energy.

---

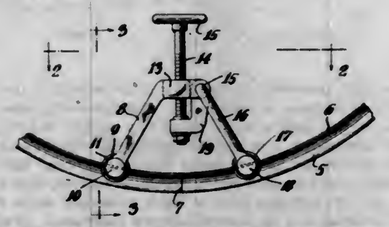
1,694,890. PRIMING MIXTURE FOR SMALL-ARMS AMMUNITION. HARLEY T. PECK, Lebanon, Ohio, assignor to The Peters Cartridge Company, Cincinnati, Ohio, a Corporation of Ohio. Filed June 27, 1927. Serial No. 201,976. 4 Claims. (Cl. 52—3.)

1. A priming mixture containing mercury fulminate, barium nitrate, lead chromate, and lead sulphocyanate.

---

1,694,891. DUST-MOP CLEANER. ADOLPH RADO and ADELAIDE D. W. RADO, East Orange, N. J. Filed Apr. 6, 1927. Serial No. 181,392. 3 Claims. (Cl. 15—142.)

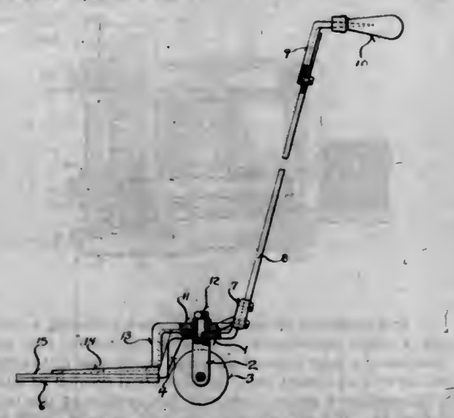
1. A device of the class described comprising a receptacle having an open upper end and formed with an inwardly extending bead adjacent its upper end to form a seat, a plate insertable in the upper end of said receptacle and adapted to rest on said bead, a foraminous basket depending from said plate and extending within said receptacle for the purpose set forth, said plate having an opening over said basket, and movable cover members for closing said opening in said plate.



1,694,892. BOX COVER. FRANK J. SCHLEICHER, St. Louis, Mo. Filed Feb. 7, 1927. Serial No. 166,402. 4 Claims. (Cl. 229—8.)

1. An element of a mercantile package comprising a box lid having an outside sheet of lustrous material, and a lace handkerchief detachably secured to said sheet and extending flatly over the same so that its lace is set off by said sheet.

---

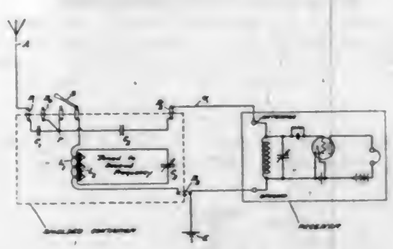


1,694,893. TIRE-RIM TOOL. XAVER SCHNEIDER, Yonkers, N. Y. Filed Aug. 31, 1927. Serial No. 216,520. 1 Claim. (Cl. 157—1.)

A tool for separating the section of a tire rim comprising a block, a pair of arms fixed to said block, a second pair of arms rotatable in said block, collars on the lower ends of said arms, screws engaged in said collars, disc heads on the inner ends of said screws, said heads being provided with a transverse groove adapted to grip the side edges of the rim, a lever fixed to said second pair of arms, and means rotatable in said block adapted to move said lever in an arcuate path to separate said arms.

---

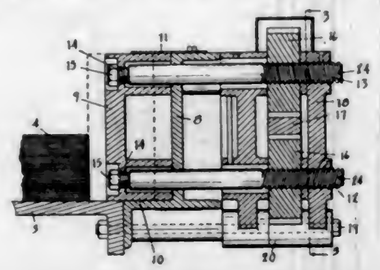
1,694,894. LAWN TRIMMER. REUBEN ST. CLAIR, Milwaukee, Wis. Filed Sept. 2, 1926. Serial No. 133,227. 1 Claim. (Cl. 56—241.)



A lawn trimmer comprising a body portion provided with a horizontal elongated laterally extending roller, an up-

wardly and rearwardly extending arm rigid with said body portion, a shear blade rigid with said body portion and carried in front of said roller, a member pivoted to said body portion at a point directly over the center of said roller, a second shear blade cooperating with said first mentioned shear blade and rigid with said member and an upwardly and rearwardly extending arm rigid with said member, each of said upwardly and rearwardly extending arms having horizontal rearwardly directed handles rigid therewith and located at their upper ends, whereby said rearwardly directed handles control the direction of motion of translation of the device and whereby relative motion between said handles causes relative motion between said shear blades.

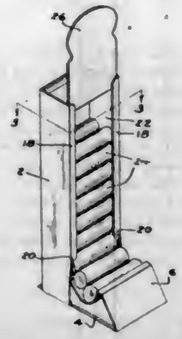
---



1,694,895. HIGH-FREQUENCY ELECTRICAL SYSTEM. ALBERT HOYT TAYLOR and LEO C. YOUNG, Washington, D. C. Filed May 15, 1924. Serial No. 713,546. 2 Claims. (Cl. 250—20.)

2. A high frequency electrical current selective unit for connection between the input of a high frequency signal receiving circuit and a radio frequency energy distribution circuit comprising a casing, an apparatus unit having terminals interposed in said radio frequency energy distribution circuit and in said signal receiving circuit, said apparatus unit including a pair of fixed condenser units interposed in series and connected between individual terminals on said casing, a coupled rejector within said casing connected with terminals thereon, and switching means carried by said casing for connecting said coupled rejector with a point intermediate said fixed condensers for preventing transfer of high frequency signaling energy from said high frequency signal receiving circuit to said high frequency energy distribution circuit.

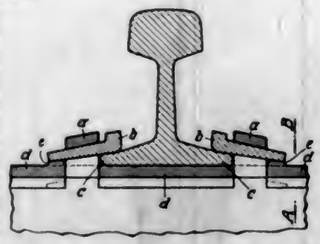
---



1,694,896. PAPER CUTTER. CLARENCE O. THORNE, Watervliet, Mich. Filed Apr. 9, 1927. Serial No. 182,340. 6 Claims. (Cl. 164—59.)

1. In a structure of the class described including a cutter and a table operatively associated therewith, the combination of a gage support mounted at the side of the table and having an angled face, the horizontal portion of which is disposed in a plane flush with the surface of the table, a gage bar slidably mounted on said support, adjusting screws slidable in said support and adjustably connected to said gage bar, adjusting pinions having threaded engagement with said screws, a rack bar coacting with said pinions whereby they are simultaneously rotated as the rack bar is reciprocated, and a second gage adjustably mounted on said table at right angles to said gage and in parallel relation to said cutter.

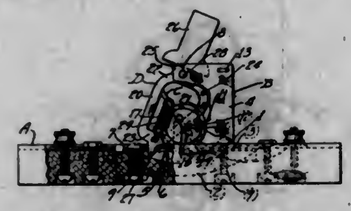
---



1,694,897. DISTRIBUTING DEVICE. WALTER BAILEY CHAFFIN WASHBURN, Canajoharie, N. Y., assignor to Beech-Nut Packing Company, Canajoharie, N. Y., a Corporation of New York. Filed Aug. 19, 1927. Serial No. 214,026. 2 Claims. (Cl. 312—42.)

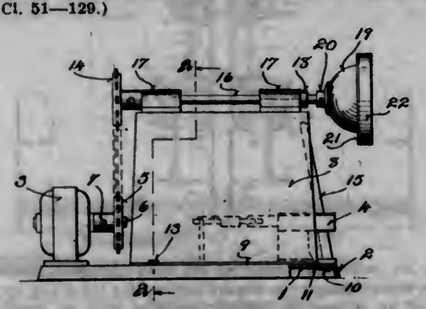
1. In a distributing device, the combination of a vertical chute having inwardly turned forward edges and adapted to hold two columns of cylindrical packages, a discharge opening below the lower ends of said edges having a width less than the depth of said chute and greater than one-half of said depth, a floor for said chute having a sloping portion extending beyond the front of said chute, and an abutment coacting with said floor and located in front of said chute at a distance approximately equal to its depth, the rear portion of said floor being substantially horizontal.

---



1,694,898. DEVICE FOR FASTENING RAILS. FRIEDRICH WILHELM WEBER, Bochum, Germany, assignor to the Firm: Vereinigte Stahlwerke Aktiengesellschaft, Dusseldorf, Germany. Filed Feb. 9, 1927, Serial No. 166,991, and in Germany Feb. 9, 1926. 3 Claims. (Cl. 238—331.)

1. Means for securing railway and like rails to sleepers comprising a bridge rigidly secured to the sleeper at each side of the rails, a wedge-shaped member to be inserted under each bridge, and characterized by the fact that the under side of the bridge, the wedge counterpart embossed on the sleeper and the top face of the rail base constitute a wedge-shaped seat which tapers in a direction away from the rail web, in such a way so that after the rail is placed between said bridges each wedge may be introduced into said seat, the upper surface of said wedge frictionally engaging the under side of the bridge and the lower surface thereof frictionally engaging said rail base and said wedge counterpart.

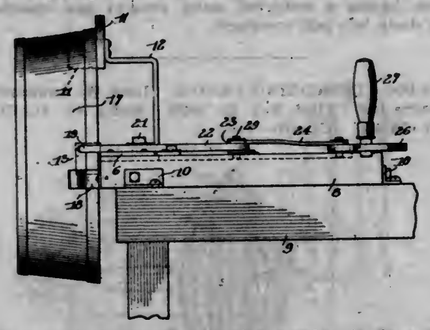


1,694,899. ELECTRIC SNAP SWITCH. WILLIAM WURDACK, Jr., St. Louis, Mo., assignor to Wurdack Electric Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed June 3, 1925. Serial No. 34,559. 14 Claims. (Cl. 200—67.)

1. An electric snap switch including, in combination, a pair of spaced rigid walls having a pair of aligned bearings, a member mounted upon said bearings for oscillatory movement relatively to the walls, contact-blades carried by said member, a manipulating member supported for oscillation by said walls and comprising a skeleton frame embracing a portion of the blade-carrying member, the manipulating member being adapted for impinging engagement at a side of its frame with the blade-carrying member when said blades are in circuit-closing position, and a coil spring having attachment at its ends with said portion of the blade-carrying member and with the manipulating member for imparting rocking movement to the blade-carrying member upon oscillation of the manipulating member.

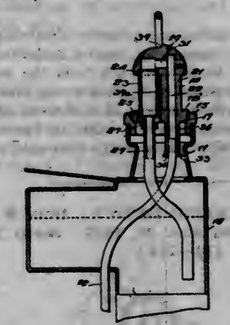
---

1,694,900. BOWLING-BALL-POLISHING ATTACHMENT FOR PIN TRIMMING AND POLISHING MACHINES. OTTO E. ZIMMERLING, Wauwatosa, Wis. Filed Nov. 10, 1927. Serial No. 232,376. 2 Claims. (Cl. 51—129.)



1. The combination of a pin trimming and polishing machine for bowling pins and an attachment therefor, said machine comprising a base plate having apertures adjacent its front end and apertures adjacent its rear end, a driving motor carried by said base plate, a sprocket wheel removably carried by said driving motor, said attachment having a support provided with prongs adapted to fit into the first mentioned apertures and having means for engaging within the second mentioned apertures, an elongated shaft carried by the upper portion of said attachment, a sprocket wheel carried by the rear end of said shaft and adapted for operative driving from said first mentioned sprocket wheel, and a ball polishing head carried by the forward end of said shaft.

---



1,694,901. MECHANISM FOR ATTACHING WIRE HANDLES TO BASKETS. CHARLES H. ALLEN, Penn Yan, N. Y., assignor to Yates Lumber Company, Penn Yan, N. Y., a Corporation of New York. Filed Jan. 14, 1927. Serial No. 161,103. 6 Claims. (Cl. 140—93.)

1. A machine for attaching a wire handle to a basket comprising a handle engaging block loosely mounted for slight movement relatively to the handle and positionable interiorly of the handle with opposite portions of the block engaging opposite portions of the handle, jaws movable toward the handle engaging member to force the handle attaching devices through the basket, and means for effecting simultaneous movement of the jaws.

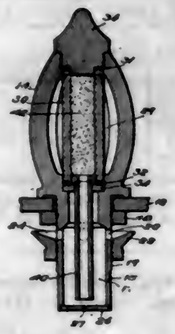
---

1,694,902. INDICATOR. JOHN W. ANDERSON, Gary, Ind. Filed May 24, 1926. Serial No. 111,345. 12 Claims. (Cl. 116—114.)

1. A method of indicating thermal conditions in an automobile radiator having an overflow tube therein, which method comprises utilizing the pressure caused by a rise in temperature of the liquid in the radiator to raise a column of fluid above the radiator so that it may be observed by the driver of the automobile, and discharging said fluid through said overflow tube.

---

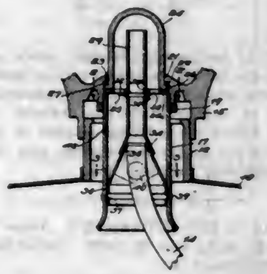
1,694,903. INDICATING APPARATUS. JOHN W. ANDERSON, Gary, Ind. Filed May 29, 1926. Serial No. 112,712. 8 Claims. (Cl. 116—114.)



1. A device for indicating the thermal conditions in a receptacle holding liquid, said device comprising a chamber

for accumulating the condensate of vapor rising from said liquid, and means through which the amount of accumulated condensate in said chamber may be observed, said device having a restricted outlet whereby said chamber may drain into said receptacle.

---

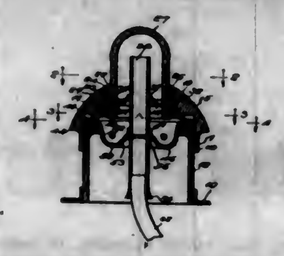


1,694,904. INDICATING DEVICE. JOHN W. ANDERSON, Gary, Ind. Filed May 29, 1926. Serial No. 112,718. 11 Claims. (Cl. 116—114.)

1. A device for indicating pressure obtaining in a receptacle, said device comprising means including a tubular glass for utilizing liquid obtained from the receptacle for indicating said pressure, said glass being provided with a roughened surface arranged to be contacted by said liquid and said device being provided with an aperture through which all of said liquid may drain into said receptacle.

---

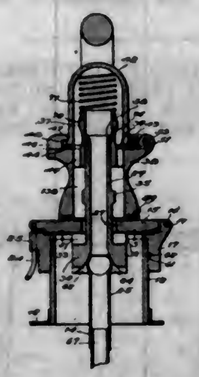
1,694,905. INDICATING DEVICE. JOHN W. ANDERSON, Gary, Ind. Filed Mar. 28, 1927. Serial No. 178,991. 9 Claims. (Cl. 116—114.)



1. The combination with an automobile radiator having a filling opening, and an overflow tube, the upper end of the overflow tube being centrally disposed in said filling opening, a cap for said filling opening, a transparent hollow member carried by said cap and concentrically disposed with said upper end of said overflow tube, said hollow member communicating with the interior of said radiator, means for retarding the flow of fluid into said hollow member, and tubular means projecting into said hollow member and communicating with said overflow tube, said tubular means being carried by said cap.

---

1,694,906. INDICATOR FOR COOLING SYSTEMS. JOHN W. ANDERSON, Gary, Ind. Filed Mar. 28, 1927. Serial No. 178,992. 4 Claims. (Cl. 116—114.)



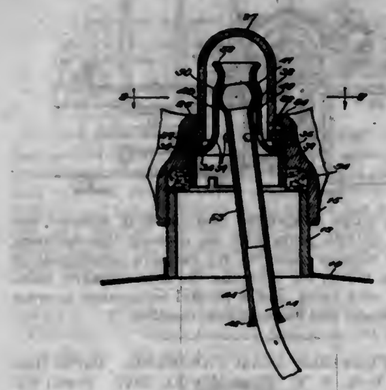
1. An indicating device of the kind described comprising an apertured closure member for the filling opening of an automobile radiator provided with an overflow pipe, a substantially transparent hollow member mounted on said closure member and arranged to communicate with the interior of said radiator, means whereby vapor and liquid

may flow from said hollow member into said overflow pipe, and means forming a pocket for collecting condensate from said hollow member, said pocket being so positioned that vapor passing upwardly through said hollow member will carry a portion of the condensate with it.

---

1,694,907. INDICATING MEANS. JOHN W. ANDERSON, Gary, Ind. Filed Mar. 28, 1927. Serial No. 178,993. 21 Claims. (Cl. 116—114.)

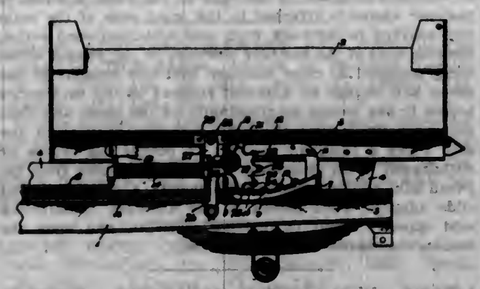
1. An indicating device of the kind described adapted to be mounted upon the closure member for the filling opening of an automobile radiator provided with an overflow pipe, said indicating device comprising a tube arranged to project through an aperture in said closure member, a tubular member having a tubular extension engageable with the upper end of said tube, a transparent hollow member communicating with the interior of said radiator through said tubular member and said aperture, said hollow member communicating with said tube through said tubular extension, and a second tube whereby the first tube communicates with said overflow pipe.



---

1,694,908. INDICATING DEVICE FOR COOLING SYSTEMS. JOHN W. ANDERSON, Gary, Ind. Filed Apr. 25, 1927. Serial No. 186,547. 9 Claims. (Cl. 116—114.)

1. An indicating device of the kind described comprising an apertured closure member for the filling opening of an automobile radiator provided with an overflow pipe, a hollow member in which the presence of vapor or liquid may be observed, said hollow member being carried by said closure member and being positioned thereabove to receive vapor and liquid from said radiator through said aperture in said closure member, a tubular member carried by said closure member having an aperture for the

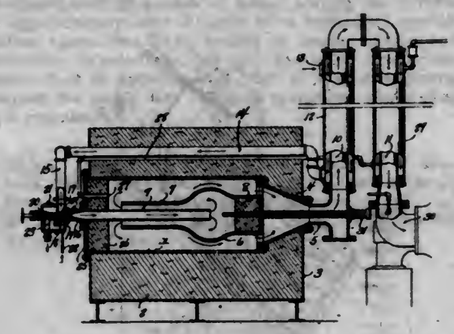


passage of fluid from said closure member to said hollow member, and a tube adapted to be positioned upon said overflow pipe and arranged to form a ball and socket joint

with said tubular member, said tube being adapted to discharge vapor and liquid from said hollow member into said overflow pipe.

---

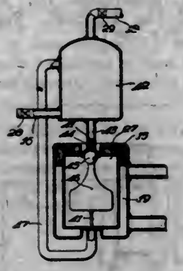
1,694,909. HYDRAULIC DUMPING-BODY HOIST. EDWARD R. BARNETT, Detroit, Mich., assignor to Wood Hydraulic Hoist & Body Company, Detroit, Mich., a Corporation of Michigan. Filed July 25, 1927. Serial No. 208,074. 12 Claims. (Cl. 298—22.)



8. In combination with a truck frame having a dumping body tiltably mounted thereon, a hoisting device comprising, a rack associated with said frame, a gear segment mounted to traverse said rack, a link eccentrically connected to said gear segment and also connected to said body, and means for traversing said gear segment on said rack.

---

1,694,910. OIL-GAS APPARATUS. ALVIN J. BASSETT, Milwaukee, Wis., assignor to The Bruce MacBeth Engine Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 31, 1924. Serial No. 717,071. 4 Claims. (Cl. 48—107.)

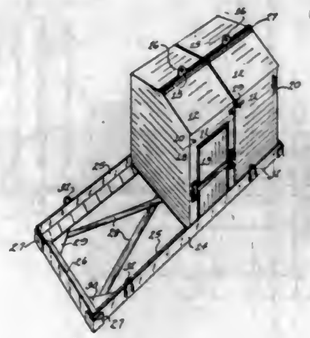


1. An oil gas apparatus comprising a closed retort, a retort tube having a closed end fixed to the forward end of said retort and spaced to the rear wall thereof, and having a rear open end in proximity to said rear wall of the retort, a partial combustion oil vaporising feed tube extended through the rear wall of the retort into the open end of the retort tube and to a point within said retort tube such as to effect the desired partial combustion of the

oil in said feed tube, means for feeding oil and air into the partial combustion oil vaporizing feed tube, and a gas outlet from said retort.

---

1,694,911. METHOD OF AND MEANS FOR FEEDING FUEL BY WASTE HEAT. JOHN A. DIENNER, Chicago, Ill., assignor to Stromberg Motor Devices Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 31, 1921. Serial No. 511,877. 7 Claims. (Cl. 158—36.4.)

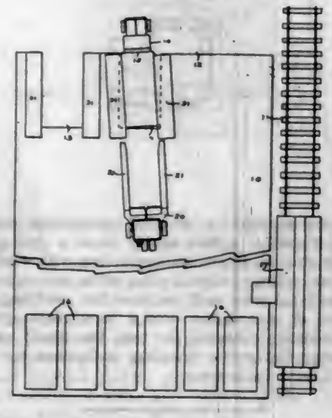


1. In combination, an internal combustion engine, a carbureter therefor, a fuel supply tank, a fuel pumping chamber having an inlet communicating with said supply tank and an outlet communicating with said carbueter, a jacket associated with said chamber for receiving the exhaust gases of said engine, and a level responsive valve for said chamber operating to trap the liquid vapors in said chamber and create pumping pulsations for feeding the fuel to said carbureter.

---

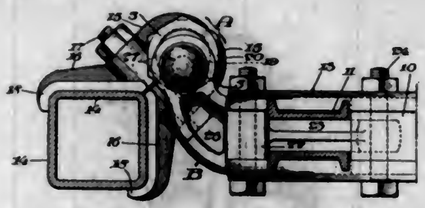
1,694,912. MEANS FOR HANDLING FREIGHT. BENJAMIN F. FITCH, Evanston, Ill., assignor to Motor Terminals Company, Wilmington, Del., a Corporation of Delaware. Filed Dec. 27, 1920. Serial No. 433,252. 15 Claims. (Cl. 214—38.)

1. The method of handling freight consisting of loading it into containers, placing a number of such containers



side by side on a portable frame, lifting the frame and containers as a unit and depositing it in coaction with positioning means on a transportation device.

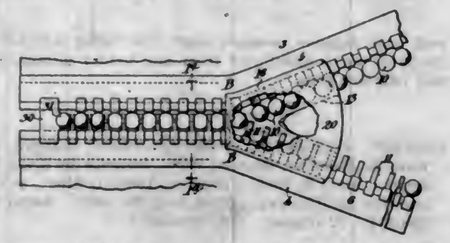
14. An apparatus for handling freight consisting of a plurality of doored containers, a portable carrier having obstructing means adapted to extend across the doors of the containers to prevent opening the doors when the containers are placed side by side on the carrier, and mechanism for moving the carrier with the containers as a unit and positioning the same on a vehicle.



---

1,694,913. FREIGHT-HANDLING APPARATUS. BENJAMIN F. FITCH, New York, N. Y., assignor to Motor Terminals Company, Wilmington, Del., a Corporation of Delaware. Filed Aug. 16, 1926. Serial No. 129,470. 12 Claims. (Cl. 214—38.)

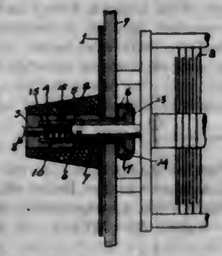
1. In combination, a freight platform, a truck runway adjacent thereto, and means associated with the platform and movable with reference thereto for providing an extension of the platform along opposite sides of a truck positioned on the runway.



1,694,914. GATE HINGE. LOUIS A. HAWTHORNE, Hillside, N. J., assignor to Anchor Post Fence Company, Garwood, N. J., a Corporation of New Jersey. Filed May 7, 1927. Serial No. 189,474. 4 Claims. (Cl. 16—131.)

1. A gate hinge comprising two elements whereof one is composed of two parts with an opening therebetween, an eccentric member mounted for rotative adjustment in said opening, means for clamping the said eccentric member between said parts, and a pivotal connection between the other element and the eccentric member.

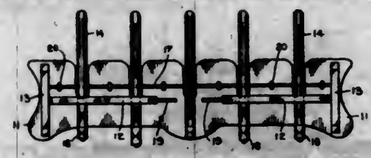
---



1,694,915. FLEXIBLE SEAM FASTENER. DAVID HELLER, New York, N. Y. Filed May 11, 1927. Serial No. 190,438. 11 Claims. (Cl. 24—205.)

1. A seam-fastening device comprising a series of fastener elements attached to one edge of the seam, a series of fastener elements attached to the other edge of the seam and adapted to interlock with said first-mentioned series, the free ends of the fastener elements in one of said series being disposed so close together that one element in the series will engage an adjacent element in the said series before it has swung longitudinally of the seam and thus separated itself from the other adjacent element in the said series a sufficient distance to permit the escape or withdrawal of an element of the opposite series from between said two last-mentioned elements, and an actuating slide adapted when moved in one direction to interlock said opposite series of fastener elements, and upon the reverse movement to separate them.

---



1,694,916. DUAL-CONTROL APPARATUS. JOSEPH T. HICKMAN, Washington, D. C. Filed June 30, 1924. Serial No. 723,271. 2 Claims. (Cl. 74—7.)

1. A mechanism of the class described including, in combination, a plurality of rotatable members, pulleys rotatably mounted with the members, cables trained over the pulleys, elements for operating the rotatable members, and clutches controllable by the elements for rotating the pulleys.

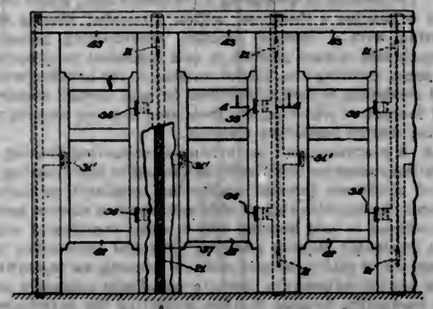
1,694,917. TOY. HENRY GOWER HOSE, Brooklyn, N. Y. Filed Jan. 7, 1928. Serial No. 245,240. 3 Claims. (Cl. 273—100.)

1. In a game device, the combination with a supporting frame, of a plurality of arms pivotally supported on said frame, said arms being balanced upon said frame so that each arm will normally lie at a predetermined angle to the vertical and being adapted to be moved out of said angle and into another position, said arms being balanced respectively in such manner that one of said arms is more easily depressed than another of said arms.

---

1,694,918. FOUNTAIN-PEN DESK SET. CARL HORIX, Chicago, Ill. Filed June 11, 1927. Serial No. 198,020. 11 Claims. (Cl. 40—111.)

1. In combination, a receptacle, an arched cover for said receptacle, a frame removably held within said cover, a shaft mounted in said frame, character wheels separately journaled on said shaft, spindles geared to said character wheels and extending through said cover to points outside of said cover, and finger-pieces mounted on the outer ends of said spindles for rotating said character wheels.



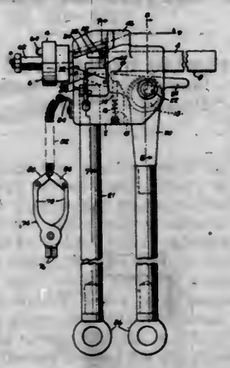
---

1,694,919. DRY-CELL ELEMENT AND METHOD OF MAKING THE SAME. LESLIE G. JENNESS, Leonia, N. J. Filed Feb. 18, 1927. Serial No. 169,419. 14 Claims. (Cl. 136—124.)

1. The method of producing bobbins which comprises adding substances, which will cause precipitation of a substance that will give hardness to the bobbin, to the bobbin ingredients and molding said sustances with the bobbin ingredients.

---

1,694,920. BOOTH CONSTRUCTION. WILLIAM S. KAPNEK, Philadelphia, Pa. Filed Mar. 27, 1928. Serial No. 265,113. 9 Claims. (Cl. 72—16.)

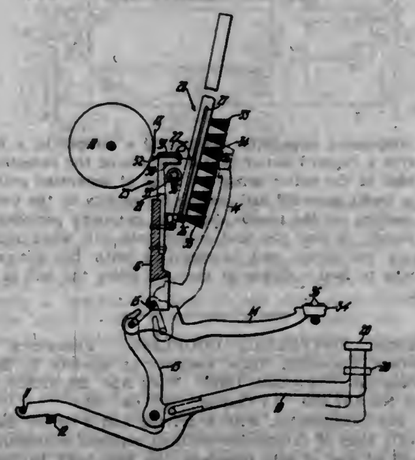


1. In a booth compartment structure, the combination of wall plates, tie-bars secured thereto and extending horizontally therefrom in spaced relationship, vertical T-bars adjustably secured to the outer ends of the tie-bars, and panel plates secured in vertical planes flanking the tie-bars.

1,694,921. CHEESE FORMULA. HERMAN H. KAUFMANN and AUGUST H. KAUFMANN, Cascade, Wis. Filed Sept. 27, 1926. Serial No. 138,118. 2 Claims. (Cl. 99—11.)

2. The process of making curd cheese which comprises grinding approximately 100 pounds of standard curd to a fluffy mass, adding approximately 3 pounds of sodium phosphate, and 25 pounds of water, heating the mixture to approximately 160° F. until it is thoroughly melted, adding approximatelp 98 pounds of ground cheese and thoroughly stirring the mixture, thereafter raising the temperature to approximately 160° F. and subsequently running the liquid into foil-lined containers and sealing such containers.

---



1,694,922. DRAWING APPARATUS. DELAMAR C. KINNEAR, Waterbury, Conn., assignor to The American Brass Company, Waterbury, Conn., a Corporation of Connecticut. Filed Feb. 24, 1928. Serial No. 256,683. 7 Claims. (Cl. 140—123.5.)

1. In an apparatus for drawing connectors, the combination of a tool head having laterally opening clamping jaws on each side, a draw bar lying in a plane separating said jaws, a die carried by said draw bar, a pawl for propelling said draw bar, and pawl operating handles extending parallel to said separating plane, one of said handles being rigidly connected to said base and the other pivoted thereto and pivotally connected to said pawl.

---

1,694,923. TYPEWRITING MACHINE. ALFRED G. F. KUBOWSKI, Brooklyn, N. Y., assignor to Underwood Elliott Fisher Company, New York, N. Y., a Corporation of Delaware. Filed May 4, 1927. Serial No. 188,643. 4 Claims. (Cl. 197—185.)

1. In a type-cleaning attachment for a typewriting machine, having a type-guide, a bracket having side elements

engaging against the sides of said type-guide, extensions on said side elements formed into clamps, a type-cleaning brush having grooves to receive said clamps for mounting the brush on the bracket, and means including a spring-pressed detent engaging behind said type-guide for fastening said bracket on said type-guide.

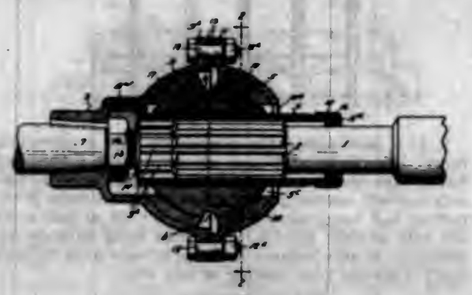
---

1,694,924. BONDED REFRACTORY. RUSSELL EDMUND LOWE, New York, N. Y., assignor to Doherty Research Company, New York, N. Y., a Corporation of Delaware. Filed Apr. 28, 1925. Serial No. 26,532. 32 Claims. (Cl. 106-9.)

1. An article of manufacture comprising a graded refractory aggregate bonded by less than one percent of a highly adherent bond formed by the chemical precipitation of a hydrate in intimate adhering contact with the particles of the aggregate, and substantially free from other substances formed at the time of precipitating said material.

---

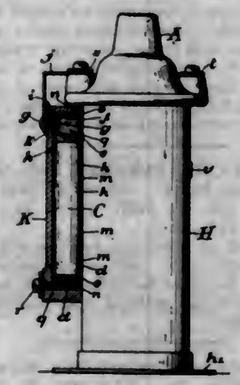
1,694,925. DISPENSING DEVICE. FRED S. MORRISON, Newark, N. J. Filed Oct. 8, 1926. Serial No. 140,223. 1 Claim. (Cl. 221—13.)



A dispensing apparatus comprising a receptacle, a nozzle with a tapered outlet on the bottom of the receptacle, the edge of the outlet being cut away at separated points, and a freely movable ball resting by gravity in the outlet and bearing on the nozzle above the cut-away portions of the nozzle, to seal the said outlet, said ball when raised opening the outlet and co-operating with the cut-away portions to feed a ribbon of material when the ball is rotated.

---

1,694,926. UNIVERSAL COUPLING. FREDERICK W. PETERS, Cleveland, Ohio, assignor of one-half to Emil Gruenfeldt, Cleveland, Ohio. Filed Apr. 29, 1927. Serial No. 187,469. 13 Claims. (Cl. 64—96.)

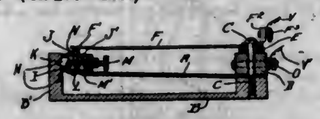


1. The combination, with a driving and a driven member, of a body of deformable resilient material surrounding an end of one of said members, the said body having a spherical outer surface and a groove extending therearound, and a cup carried by the other of said members, the said cup comprising two sections adapted to receive the outer surface of the said body therewithin, and means

for drawing the said cup sections toward each other thereby to increase the frictional engagement between the same and the outer surface of said body.

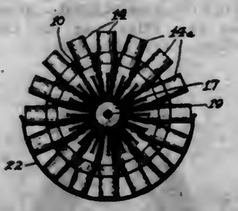
---

1,694,927. CONDENSER STRUCTURE. HORACE E. RICE and ROBERT C. DA COSTA, Philadelphia, Pa.; said Da Costa assignor to Atwater Kent Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania; Kathleen F. Rice administratrix of said Horace E. Rice, deceased. Filed Mar. 16, 1921. Serial No. 452,888. 12 Claims. (Cl. 175—41.)



1. The method of producing a condenser unit, which consists in placing a condenser within a housing, closing the housing with a closure member, transmitting pressure through said closure member to said condenser to compress the same, securing the closure member to the housing while said condenser is held compressed by said closure member, and thereafter removing air from said housing and introducing molten insulating material.

12. A condenser unit comprising a conducting housing, a terminal connector electrically connected to said housing, a rolled condenser therein, conducting terminals extending beyond the opposite ends of said condenser, a closure member secured to said housing and in close engagement with said condenser thereby effecting electrical connection between one of said terminals and said housing, an insulating strip located between the opposite end of said condenser and the conducting housing thereby insulating the corresponding terminal from the housing, a terminal connector insulated from the housing and connected with said terminal, and an integral mass of insulating material extending into said condenser and filling the space around said condenser within said housing.



1,694,928. THERMOSTAT. HERBERT E. RIDER, Lynbrook, N. Y., assignor to Beaver Machine & Tool Co. Inc., Newark, N. J. Filed June 11, 1925. Serial No. 36,296. 9 Claims. (Cl. 200—139.)

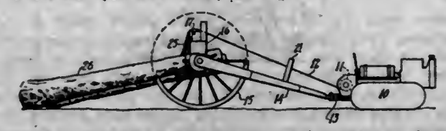
1. A thermostat control device comprising a base portion, a thermostat element connected rigidly to said base portion at one end and extending across the same, and means comprising a wall having an abutment located adjacent the movable end of said thermostat element adapted to contact therewith and retard the movement thereof until the thermostat element has flexed a predetermined degree due to heating thereof at which time it is suddenly released and moves quickly from its normal position to a predetermined position of rest, an electrical contact point carried by the thermostat element, a spring arm rigidly connected to one end of said base portion the free end of which has a contact point adapted to contact the point carried by the thermostat element to close an electric circuit when in contact therewith.

---

1,694,929. CARRIER FOR BOTTLE COOLERS. JOHN M. SCHILLING and WILLARD G. SCHILLING, Lima, Ohio. Filed Nov. 7, 1927. Serial No. 231,530. 14 Claims. (Cl. 312—36.)

1. In a bottle carrier of the class described, the combination of two similar disks of sheet metal having outwardly distended portions radially disposed and converging towards the axis of said disks, said disks being held together in reversed relation with said distended portions in alignment with each other to form bottle compartments, a central bearing member, and devices supported by said member and secured to said disks to support them.

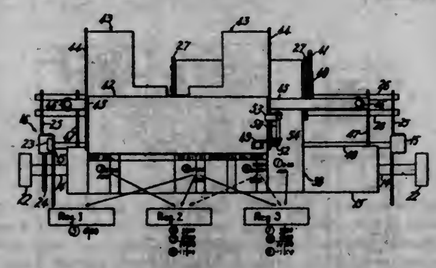
---



1,694,930. DISPENSING DEVICE FOR SAFETY MATCHES. REIDAR G. SEEL, Chicago, Ill. Filed Sept. 7, 1926. Serial No. 133,740. 2 Claims. (Cl. 312—42.)

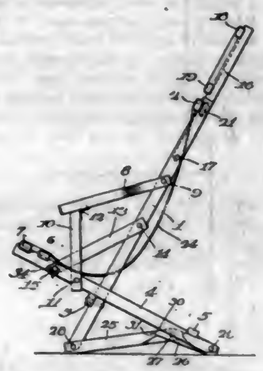
1. A match dispensing device comprising two strips of pressed or stamped sheet material, one of said strips being substantially flat or plane, the other said strip being generally U-shaped in cross section, tongues formed on the edge of the said U-shaped strip adapted to be received by slots in the plane strip whereby the said strips are secured together to form a channel therebetween, the face of said U-shaped strip being cut away adjacent to the lower end thereof for a distance substantially equal to the width of a match box, a portion of said cut away portion being turned inwardly to form a bottom for the channel, and an upwardly directed resilient tongue pressed from the face of said U-shaped member above the cut away portion adapted to be received by the shell or casing of a match box, whereby the said box may be secured to the face of said U-shaped member.

---



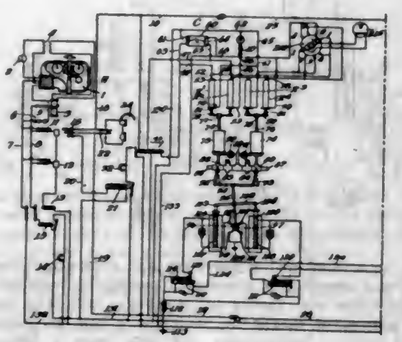
1,694,931. METHOD OF AND APPARATUS FOR TRANSPORTING LOGS. GAIL E. SPAIN, Portland, Oreg., assignor to Willamette Iron and Steel Works, Portland, Oreg. Filed May 4, 1927. Serial No. 188,792. 1 Claim. (Cl. 212—142.)

A log transporting vehicle consisting of a pair of high wheels; a high arched frame joining said wheels; a fairlead on said high arched frame consisting of a rearward horizontal roller and a pair of spaced vertical rollers in front of said horizontal roller; a bridle for hingedly connecting said vehicle to a tractor and for rigidly supporting said frame, said bridle having a guard placed over the forward end thereof; and a cable winding drum having a line passing under said guard between said vertical rolls and over said horizontal rolls, said line having a plurality of hooks at the end thereof for the attachment of separate choker members.



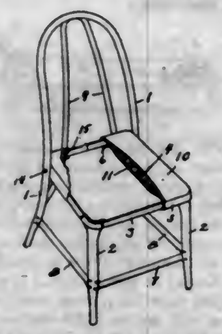
---

1,694,932. COMBINED TYPEWRITING AND COMPUTING MACHINE. HARRY H. VICKERS, Corona, N. Y., assignor, by mesne assignments, to Elliott-Fisher Company, New York, N. Y., a Corporation of Delaware. Original application filed Sept. 8, 1923, Serial No. 661,540. Divided and this application filed Mar. 29, 1926. Serial No. 98,130. 4 Claims. (Cl. 235—60.)



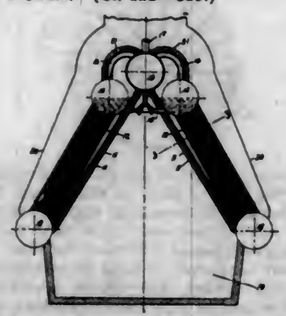
1. In a combined typewriting and computing machine having a platen and a series of computing registers, the combination with means for guiding a tally-strip around the platen, of means for collating a bill or statement sheet upon a ledger-sheet and both upon a tally-strip with a computing zone of the tally-strip exposed at one side of the bill and ledger sheets, for receiving the type-impressions of the old balances, said collating means including a bill and ledger-sheet collating table mounted at the delivery side of the platen over the tally-strip and offset relatively to the tally-strip-guiding mechanism to permit the typing of each line of items at the combined typing and computing operation without having the old-balance items appear twice upon the bill and ledger sheets.

1,694,933. FOLDING ROCKING-CHAIR. LEWIS P. WALKER, Hartford, and LEO O. BERGMANN, Coloma, Mich. Filed Nov. 30, 1925. Serial No. 72,211. 5 Claims. (Cl. 155—56.)



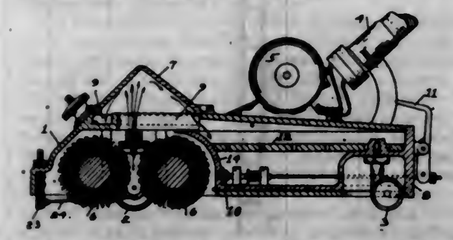
1. In a folding rocking chair, the combination of means forming a seat and back and front and rear legs, and means forming two stationary supports on the floor upon which the front and rear legs are pivoted, each support comprising two laterally overlapping sections forming a toggle joint between them, said joint having a pivot extending through the overlap, these supports each having its front end pivoted to a front leg and its rear end pivoted to a rear leg, with a stop between each front support and the front end of the rear support, serving to limit the downward movement of the toggle joints and hold them in raised position a distance above the floor, the chair back being rigid with the front legs, and the rear legs being rigid with the front edge portion of the seat.

1,694,934. TELEPHONE SYSTEM. GARRISON BABCOCK, Seattle, Wash., assignor to American Telechronometer Company, Seattle, Wash., a Corporation of Washington. Filed Mar. 6, 1926. Serial No. 92,768. 16 Claims. (Cl. 179—11.)



1. In combination, a calling line having a telephone set, a called line having a telephone set, a connecting circuit for interconnecting the lines for telephonic communication, means for reversing the polarity of current over said lines, a single registering device operated by reversals of current for registering the talking intervals over the talking line, and means for increasing said intervals during the idle parts of the day.

1,694,935. CHAIR. JULIUS L. CABLE, Boston, Mass. Filed July 11, 1925. Serial No. 42,937. 5 Claims. (Cl. 155—184.)

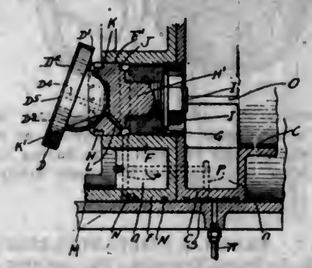


1. In a chair, a seat comprising a sheet metal plate having a depending edge flange extending about the same, a seat covering extending over the upper surface thereof and about said flange onto its inner side, a metal clamping strip arranged beneath said plate and having means to clamp the same against the inner side of said flange, to clamp said covering between said flange and strip, and supporting legs having means for securing the same to said clamping strip

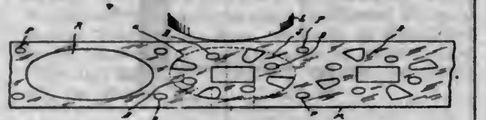
1,694,936. LIQUID VAPORIZER. HARRY G. DONALD, Philadelphia, Pa. Filed Aug. 19, 1925. Serial No. 51,122. 1 Claim. (Cl. 122—325.)

In a water tube boiler, a mud drum, a set of tubes exposed to heat of radiation and extending from said drum, a vapor collector for said tubes, a second set of tubes exposed to heat of convection and also extending from the drum, a vapor collector for said second set of tubes, the first collector being above the water level of the second collector, and a common vapor take-off for the collectors.

1,694,937. FLOOR-SCRUBBING MACHINE. FREDERICK S. FLORER, Saginaw, Mich. Filed Feb. 14, 1925. Serial No. 9,134. 3 Claims. (Cl. 15—50.)

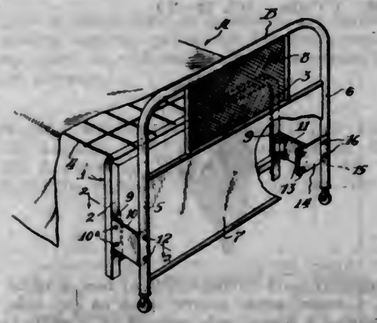


3. In a floor scrubbing machine including a casing, cylindrical scrubbing brushes, means for revolving them,



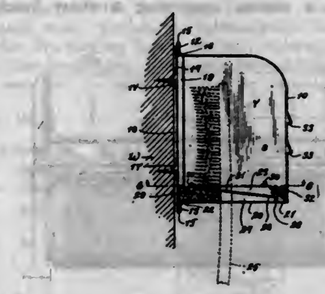
side wheels vertically adjustable on the casing, a removable drawer for said casing, said drawer carrying a castor, a transverse wiper hinged to the front of said casing, an annular ring in frictional engagement with one of said wheels, and a link connecting the hinged wiper to said ring.

1,694,938. APPARATUS FOR POWER TRANSMISSION. LEONARD B. HARRIS, New York, N. Y. Filed June 26, 1926. Serial No. 118,749. 7 Claims. (Cl. 74—14.)



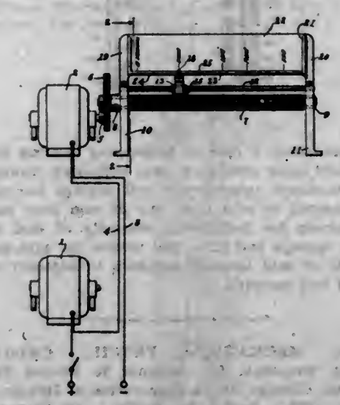
1. A power transmission device comprising a shaft; a wobble-plate carried thereby; a freely rotatable slipper bearing against the wobble-plate, and means for conducting a lubricant thru said slipper to said wobble plate.

1,694,939. PROCESS OF ASSEMBLING FILTER-STACK UNITS. VICTOR R. HEFTLER, Detroit, Mich. Filed Dec. 30, 1927. Serial No. 243,602. 10 Claims. (Cl. 164—17.)



1. The process of assembling the alternated laminary elements of a filtering stack, which consists in first partially stamping out the diverse members in alternating relation from a ribbon, and thereafter successively subjecting each partially cut portion of the ribbon to the action of a cutting die positioned in coaxial relation over a receiving element.

1,694,940. BED. GENE HERZ, Chicago, Ill., assignor to Hers Bed Company, Chicago, Ill., a Corporation of Illinois. Filed June 16, 1926. Serial No. 116,890. 9 Claims. (Cl. 5—53.)

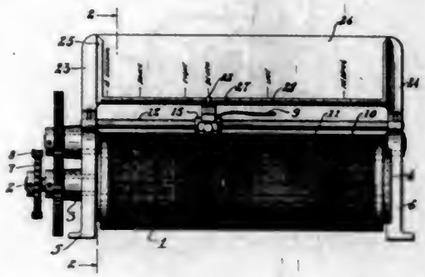


1. In a bed having a bed section and detachable bed ends, longitudinally projecting brackets secured to said bed section at each end thereof, and a laterally projecting bracket detachably secured to one of said first named brackets and to the respective bed ends, said last named bracket having slotted openings therein for adjustably securing the same to said bed ends.

1,694,941. TOOTHBRUSH HOLDER. GEORGE E. C. HILL, Niagara Falls, N. Y. Filed Dec. 20, 1926. Serial No. 155,994. 7 Claims. (Cl. 248—63.)

1. A tooth brush holder comprising an open sided body portion, a supporting member for said body portion, a floor portion removably confined in said body portion and retained therein by said supporting member, said floor portion being slidable through the open side of said body portion, and means carried by said floor portion for removably supporting the bristled end of a tooth brush within said body portion.

1,694,942. INDICATOR FOR MOTION-PICTURE-PROJECTION APPARATUS. MICHAEL HOFFMAN, Brooklyn, N. Y. Filed Mar. 30, 1927. Serial No. 179,522. 8 Claims. (Cl. 88—16.2.)



1. In apparatus of the class described, in combination, means for visually indicating features of a film being moved past the lens of a projecting apparatus, comprising a chart having characters indicative of illustrative or descriptive features of the film being screened, and an indicator for operating with said chart, means for synchronously operating said indicating means with projecting apparatus so that said indicating means will give a visual indication of the part of the film being screened and means for independently adjusting the indicating means, with respect to the features of the film being screened.

1,694,943. INDICATOR FOR MOTION-PICTURE PROJECTION APPARATUS. MICHAEL HOFFMAN, Brooklyn, N. Y. Filed Mar. 30, 1927. Serial No. 179,528. 5 Claims. (Cl. 88—16.2.)

1. In apparatus of the class described, in combination, sound reproducing apparatus operated synchronously with

apparatus adapted to project motion pictures upon a screen, means associated with said sound reproducing apparatus and synchronously operated thereby adapted to give a visual indication of the pictorial features being projected upon a screen, comprising a chart bearing

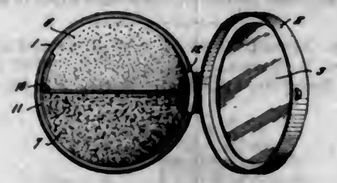
indicia of the features of said motion pictures and an indicator cooperating with said chart, and means for simultaneously adjusting the indicating means and said sound reproducing apparatus with respect to the pictorial features of screened production.

---

1,694,944. EXPANSION BELT. CARL HORIX, Chicago, Ill. Filed July 10, 1926. Serial No. 121,631. 1 Claim. (Cl. 267—73.)

In combination, a pair of telescoping housing members having their inner ends open, pins extending through said housing members respectively, coil springs having their ends connected to said pins, one of said pins having a sleeve thereon for facilitating assembly of said housing members, springs and pins, and means for attaching the outer ends of said housing members to adjacent ends of connected belt sections.

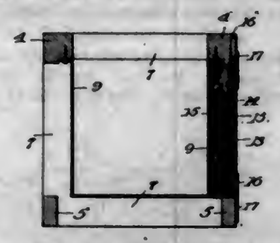
---



1,694,945. MECHANICAL PENCIL. CHARLES R. KEERAN, Evanston, Ill., assignor to Keeran Products Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 3, 1925. Serial No. 60,230. 16 Claims. (Cl. 120—18.)

6. A pencil, comprising in combination a tubular body, a removable tip and a spiral attached to said tip, a pair of division plates, frictionally held within the said body and jointly providing a coaxial tube and a communicating undercut guideway, and a plunger having a head slidably mounted in said guideway.

9. In a pencil, the combination of a metallic body portion, a tip removably mounted on the lower end thereof, lead advancing means adapted to be actuated by the rotation of said tip and a decorative shell surrounding said body, the lower extremity of said shell constituting a shoulder or abutment for the upper end of the tip.



1,694,946. VANITY CASE ADAPTED TO SEPARATE COMPACTS OF CONTRASTING SHADES. LESSING L. KOLB, Milwaukee, Wis. Filed Jan. 15, 1927. Serial No. 161,441. 3 Claims. (Cl. 132—38.)

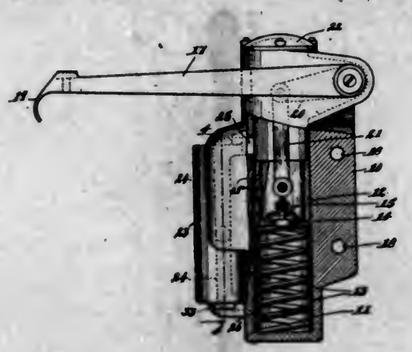
1. In a vanity case of the class described, the combination of a base plate, cakes of powder or rouge of contrasting shades, and the said plate having apertures adapted to cause the compacts to adhere firmly to the plate.

---

1,694,947. THERMAL INSULATING STRUCTURE. HARVEY B. LINDSAY, Evanston, Ill., assignor to Dry Zero Corporation Wilmington, Del., a Corporation of Delaware. Filed Dec. 6, 1926. Serial No. 152,842. 8 Claims. (Cl. 20—4.)

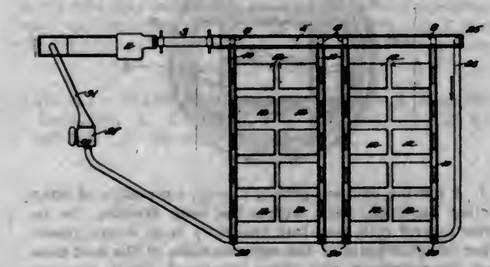
1. As an article of manufacture, an insulating unit comprising a body of insulating material and sheet material relatively impervious to the passage of air therethrough extending across a face of said body and extending laterally throughout said body beyond the marginal edges of the latter to present flange portions extending entirely around said marginal edges, the inner face of said sheet throughout the area thereof opposing said body of insulating material being coated with an adhesive adhered to said body.

---



1,694,948. ARTIFICIAL TOOTH. SIMON MYERSON, Cambridge, Mass. Filed Mar. 5, 1925. Serial No. 13,108. 1 Claim. (Cl. 32—9.)

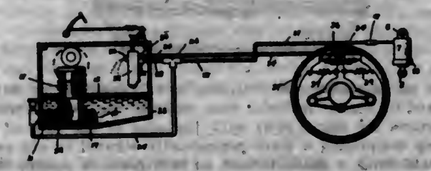
An artificial tooth having a lingual face, a labial face, a base, a recess whose mouth opens on the base, said recess having a lingual side inclined as a whole inward from the base toward the lingual face of the tooth, and a labial wall that extends continuously from the inner end of said lingual wall to the base of the tooth adjacent the labial face of the tooth, so that said lingual side of the recess is undercut to engage a plate material, and a pin projecting from the labial wall of the recess and having its outer end within the recess.



1,694,949. SHOCK ABSORBER. WILLIAM J. PAVEK, Cicero, Ill. Filed Dec. 20, 1926. Serial No. 155,791. 17 Claims. (Cl. 267—8.)

1. In a shock absorber having a casing containing liquid, a piston in the casing adapted to displace the liquid and means to allow movement of the liquid when so displaced; an inertia operated valve associated with said means whereby upward movement of the casing will cause said valve to retard the return movement of the displaced oil and rollers on the valve to insure ease of movement.

---



1,694,950. COTTON-WORKING APPARATUS. LOREN W. PENNEY, Newton Highlands, and HERBERT E. CHILD, Newton Upper Falls, Mass., assignors to Saco-Lowell Shops, Boston, Mass., a Corporation of Massachusetts. Filed July 26, 1924. Serial No. 728,496. 16 Claims. (Cl. 19—78.)

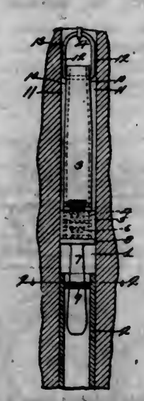
1. In a cotton working apparatus, the combination of a carding machine, and means for continuously feeding loose cotton to said machine under a substantially constant pressure.

---

1,694,951. MEANS FOR MAINTAINING PRESSURE ON LIQUID FOR USE IN VEHICLE BRAKING. JOY S. REYNOLDS, Detroit, Mich. Filed Feb. 16, 1926. Serial No. 88,514. 6 Claims. (Cl. 188—152.)

3. An automatic means for maintaining pressure on liquid operated brake systems for vehicles comprising a cylinder interposed between the frame of said vehicle and resilient support therefor, a piston reciprocable in said cylinder and secured to one of said members, a pipe connecting said cylinder with a brake operating mechanism, a reservoir interposed in said pipe line, control valve means associated with said pipe line for, selectively, applying said brake mechanism hydraulically from said cylinder for discharging liquid to said reservoir to release said brake mechanism, and means for returning liquid from said reservoir to said cylinder for repeated operation.

---

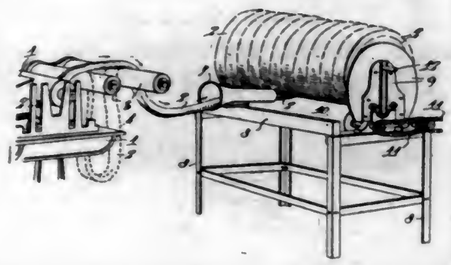


1,694,952. EAR PLUG FOR BATHERS. LOUIS SANTI, Marseille, France. Filed Mar. 1, 1928, Serial No. 258,351, and in France Mar. 2, 1927. 1 Claim. (Cl. 128—151.)

Ear plug for bathers comprising a trumpet member closed at one end, a small collar formed at the other end of said trumpet, a cylindro-conical casing of resilient runner surrounding said trumpet member, said casing being open at both ends, the smaller end being provided with a small flange, the spaces formed between the trumpet member and the outer casing serving as resonance chambers whose vibrations convey the external sounds to the ear nerve.

---

1,694,953. PIPE-PULLING DEVICE. SAMUEL K. SMOOT, Flomot, Tex., assignor of one-half to W. F. Allen and Harmon Mosely, Flomot, Tex. Filed July 6, 1927. Serial No. 203,711. 2 Claims. (Cl. 294—86.)

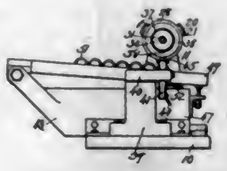


1. A pipe pulling device comprising a body member, a tapered extension carried by said body member and a contractible linked member surrounding the tapered member and having an interior diameter less than the extreme diameter of the tapered member.

---

1,694,954. METHOD OF PREPARING COTTON BATTING FOR SHIPMENT AND USE. MAURICE J. STACK, Cohoes, N. Y., assignor to Brintnall Manufacturing Company, Inc. of Delaware, Wilmington, Del., a Corporation of Delaware. Filed Oct. 7, 1926, Serial No. 140,188, and in Canada Mar. 27, 1925. 7 Claims. (Cl. 100—1.)

1. The method of preparing cotton for shipment and use, which consists in taking a sheet of cotton, folding the same lengthwise over upon itself loosely to constitute a



relatively narrow continuous bat of approximately elliptical cross section, winding the bat flatwise loosely on a core in superposed layers as a round bale, compressing the bale, while maintaining the core in place, into a square bale

while holding the bale against spreading along the axis of the core, thereby flattening the entire bat within the bale into a form approximately rectangular in cross section and retaining the compressed bale in its compressed condition until ready for use.

---

1,694,955. MARKING MACHINE. ANTON VAN VEEN, Hartford, Conn., assignor to The Fuller Brush Company, Hartford, Conn., a Corporation of Connecticut. Filed Dec. 9, 1922. Serial No. 605,803. 10 Claims. (Cl. 101—8.)

1. A marking machine including a movably mounted marking member, a table pivotally mounted to support articles to be marked for movement past said marking member, and a positioning member supported by said table to position the end article of a row of contiguously disposed articles in marking position relatively to said marking member, said member being operative to restrain movement of said row of articles with said end article in said marking position.

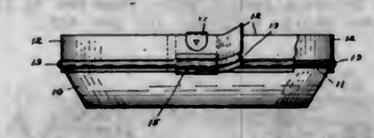
---

1,694,956. FILTER PRESS. HARRY L. WALKER, Whiting, Ind., assignor to Standard Oil Company, Whiting, Ind., a Corporation of Indiana. Filed Aug. 28, 1926. Serial No. 132,215. 12 Claims. (Cl. 210—195.)

1. The method of applying filter cloths to a filter member having an opening therethrough, which consists in forming corresponding openings in the filter cloths and a bib, securing the bib to one cloth about the opening therein, locating the bib and latter filter cloth on opposite sides of the filter member, and arranging the second filter cloth on

the filter member and bib, so that the bib has unsecured contact with the second filter cloth on a substantial surface around the opening therein.

---



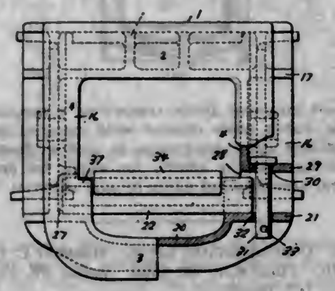
1,694,957. SERVING DISH. ESTA OMA WEIR, Chicago, Ill. Filed May 5, 1926. Serial No. 106,932. 2 Claims. (Cl. 65—15.)

1. A serving dish comprising a body, a plurality of intersecting partition walls within the body dividing the interior thereof into a central, relatively large compartment, other compartments at the opposite sides of the first mention compartment, and other relatively small compartments in the corners between the relatively adjacent ends of the second mentioned compartments, a container removably disposed in each of the several compartments, and a cover for the said body.

---

1,694,958. EXTENSION SIDE FOR PANS. ONNOLEE MAORE WILSON, Wilton, Conn. Filed Jan. 20, 1928. Serial No. 248,186. 1 Claim. (Cl. 53—6.)

In an extension side for pans, and in combination with a band of flexible material such as paper and formed with a groove for engagement with the edge of the pan, of a clamp comprising a plate permanently secured to one end of said band, a guide formed on said plate to receive the free end of said band, a tongue formed on said plate and adapted to be folded over on said free end of said band, and a spur formed on said tongue and adapted to engage said free end of said band and lock the same in place.

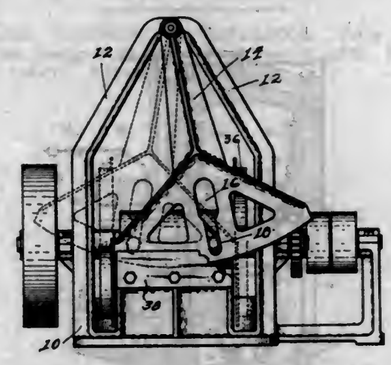


1,694,959. ATOMIZER. LUCY COTTON AMENT, New York, N. Y. Filed Sept. 15, 1927. Serial No. 219,758. 2 Claims. (Cl. 299—88.)

1. An atomizer comprising the human figure of a toe dancer standing upon the toes of one foot, the foot resting upon a hollow reservoir, said reservoir being in the form of a cushion, a vertical aspirator tube rising entirely within the leg upon which the figure stands and concealed thereby, a horizontal delivery tube concealed within the horizontal portion of the other leg which is bent, the delivery tube terminating at the knee of the bent leg and an aperture at this point through which spray from the delivery tube may escape into the air and means cooperating with the aspirator and delivery tubes to lift liquid from the reservoir and eject the same through the delivery tube.

---

1,694,960. STRIKING CASTING. DONALD S. BARROWS, Rochester, N. Y. Filed Feb. 12, 1927. Serial No. 167,700. 11 Claims. (Cl. 213—60.)



1. A combined casting comprising portions serving, respectively, as a striking casting and sill tie member, said sill tie member being bowed downwardly at its intermediate portion and adapted to support a carrier block on its end portions and a removable carrier block seated on the end portions of the sill tie member and spanning the downwardly bowed portion.

---

1,694,961. MECHANICAL MOVEMENT. GEORGE T. BAGLEY, Louisville, Ky. Filed Sept. 22, 1926. Serial No. 136,984. 1 Claim. (Cl. 74—14.)

In a machine for converting swinging into rotary motion, a pendulum, means for supporting the same, a rotatable drum also mounted in said means, and a driving connection between the pendulum and said rotary drum, said connection including a friction reducing ball bearing, said ball bearing mounted conjointly in a slot in the pendulum and a groove in the drum and guiding means to support said ball.

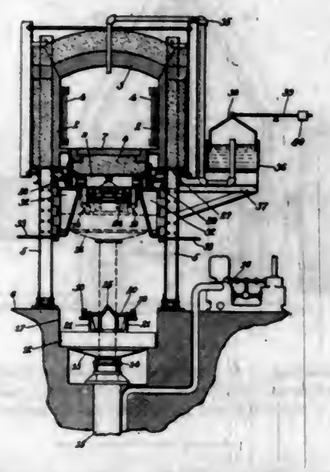
---

1,694,962. METAL TUBING. EDWARD R. BERRY, Malden, Mass., assignor to General Electric Company, a Corporation of New York. Filed June 6, 1923. Serial No. 643,786. 4 Claims. (Cl. 204—8.)

1. The method of making metal tubing which consists in electro-depositing the desired metal on a silica support and removing said support at a sufficiently high temperature to cause separation of said members due to difference in thermal expansion.

---

1,694,963. THEFTPROOF LAMP GLOBE. WILLIAM O. BODE and LAWRENCE J. HAMING, Louisville, Ky. Filed June 24, 1924. Serial No. 722,178. Renewed June 9, 1928. 3 Claims. (Cl. 176—31.)

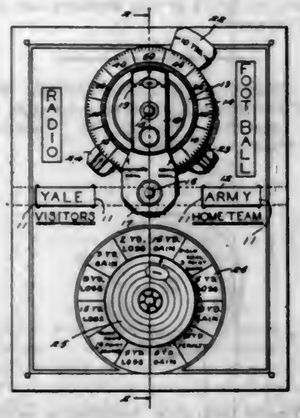


1. A theft proof lamp globe, including in combination an exhausted glass globe, a metallic base thereon, and means in the base for allowing of the projection of a portion of the globe therethrough, said projection being adapted to act to destroy the vacuum in the globe upon tampering therewith.

---

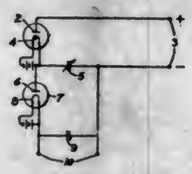
1,694,964. HEAT-TREATING FURNACE. HARRY O. BREAKER, Buffalo, N. Y. Filed Feb. 27, 1924. Serial No. 695,451. Renewed June 14, 1927. 5 Claims. (Cl. 266—5.)

1. An apparatus of the character described, comprising, in combination, an electric furnace including fixed top and



side walls and a removable bottom, an elevator for raising said bottom into its cooperative relationship to the other parts of the furnace and for lowering it out of said rela-

tionship, and means connected with said furnace for receiving gas displaced from the furnace and for subsequently returning said gas again to the furnace.



---

1,694,965. COMBINATION GAME BOARD AND SCORE COUNTER. JOSEPH B. BUCKLEY, Detroit, Mich. Filed Feb. 20, 1928. Serial No. 255,788. 3 Claims. (Cl. 116—131.)

1. A combined game-board and score-keeper comprising a base, a dial fixed on the base having duplicate marks ranging therearound representing, in one instance yards of gain and loss of the players and in the other instance as points scored in the game by the players, an indicator adapted to be moved around the dial in accordance with the readings of a spinner or the like, and separate indicators for the players movable around the periphery of the dial in connection with said marks when used as game points.

1,694,966. ELECTRICAL SYSTEM. REGINALD C. CLINKER, Bilton, near Rugby, England, assignor to General Electric Company, a Corporation of New York. Filed May 24, 1927, Serial No. 193,816, and in Great Britain July 13, 1926. 4 Claims. (Cl. 171—97.)

1. The combination of a plurality of electric valves, a low voltage circuit, a variable condenser connected to said low voltage circuit through one of said valves, and a high voltage circuit connected to said condenser through another of said valves.

---

1,694,967. VACUUM DEVICE. WILLIAM D. COOLIDGE, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Oct. 30, 1926. Serial No. 145,331. 6 Claims. (Cl. 215—13.)

1. A heat insulated device comprising a vacuum-walled receptacle, and a finely divided solid material contained in the vacuous space comprising in part at least a substance having a strong affinity for water, for preventing detrimental absorption of water by said material.

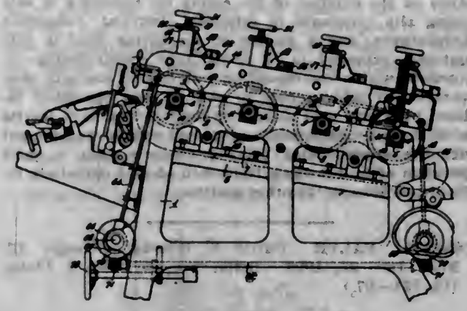
---

1,694,968. COMBINATION LOCK. HERBERT C. COY, Chicago, Ill. Filed Mar. 29, 1926. Serial No. 98,057. 8 Claims. (Cl. 70—53.)

1. In a permutation lock, the combination of a plurality of circular discs, each having a segment removed therefrom, an operating pin for rotating one of said discs, means

on the discs for imparting motion from one to the other at certain portions of their movement, a dial mounted to rotate with the disc operating means, a pointer extending radially beyond the dial, a notched indicator in which said pointer rides, spring controlled means for maintaining said dial in desired position and producing audible sounds upon movement of the pin in the notches, a combined rear support and bearing for the operating pin, and a locking nut and washer fixed on the pin bolt, said rear support to maintain all the parts in co-operative relation.

---



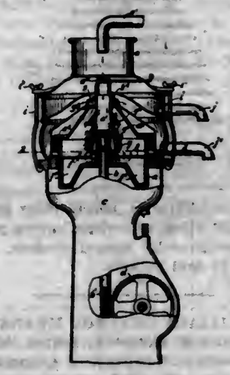
1,694,969. SHADE ROLLER. MILTON CURTIS, Beckley, W. Va. Filed July 26, 1927. Serial No. 208,494. 1 Claim. (Cl. 156—29.)

A shade roller comprising an elongated cylindrical body, said body being formed from elongated sections semicircular in vertical transverse cross section and adapted to receive therebetween a shade end, securing means extending transversely through said roller sections, pintles extending axially from the ends of the roller, the inner ends of said pintles being provided with heads disposed in registering recesses in the inner faces of the roller sections spaced from their ends.

---

1,694,970. IRONING MACHINE. HOWARD C. CURTISS, Norwood, Ohio, assignor to The American Laundry Machinery Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Aug. 3, 1923. Serial No. 655,427. 27 Claims. (Cl. 68—9.)

1. In an ironing machine, a bed, a padded ironing roll, a supporting member, yielding means carried thereby for supporting the roll, whereby the roll and said supporting member are relatively adjustable, means on said supporting member for producing variable yielding pressure of the roll toward the bed, and means governed by the relative adjustment between the roll and said supporting member for indicating the amount of compression of the padding.

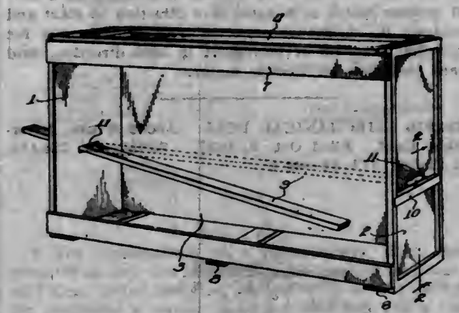


---

1,694,971. TREATMENT OF SPENT CLAYS. ROBERT A. DUNHAM, Long Beach, Calif., assignor to Union Oil Company of California, Los Angeles, Calif., a Corporation of California. Filed Oct. 30, 1926. Serial No. 145,879. 9 Claims. (Cl. 196—147.)

1. A method of de-oiling spent clay obtained from oil treating process comprising bringing the spent clay into intimate contact with an experimentally determined optimum quantity of water above or below which the separation of oil from the clay is diminished.

---

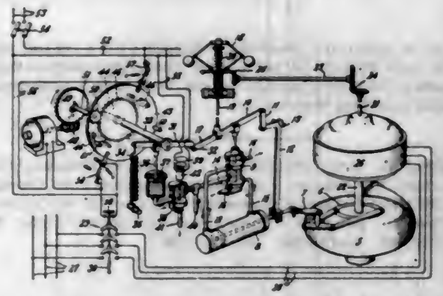


1,694,972. CENTRIFUGAL SEPARATOR. JOHN IVAN FRITZ, Geauga Lake, Ohio. Filed June 30, 1926. Serial No. 119,671. 7 Claims. (Cl. 233—2.)

1. A centrifugal separator equipped with a central supply feed beneath a perforated diaphragm substantially closing the lower portion of the bowl and a superposed axial deflecting member.

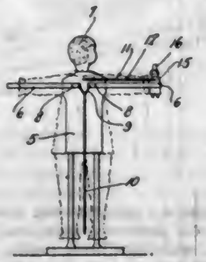
---

1,694,973. PACKING CASE. CHARLES W. GERLACH, Chicago, Ill., assignor, by mesne assignments, to Chicago Mill and Lumber Corporation, Chicago, Ill., a Corporation of Delaware. Filed Aug. 11, 1927. Serial No. 212,229. 10 Claims. (Cl. 217—36.)



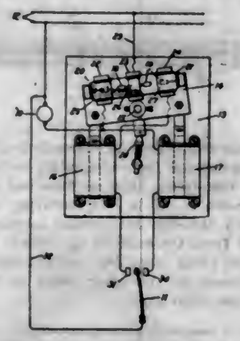
1. In combination in a packing case, a supporting rider extending across the interior of the case and projecting through the case, said rider being rigidly secured to the case entirely on the exterior thereof, whereby an article in said case will be supported in fixed position relatively thereto.

1,694,974. ARTIFICIAL CHRISTMAS TREE. CHARLES H. GLOVER, La Grange, Ill. Filed Aug. 26, 1926. Serial No. 131,558. 10 Claims. (Cl. 41—15.)



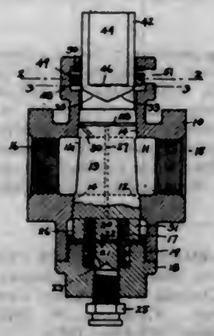
1. In a Christmas tree, a trunk, rings spaced longitudinally along said trunk, said rings having projecting portions defining peripherally spaced pockets, and branches removably fixed in said pockets.

1,694,975. AUXILIARY CONTROL MEANS FOR PRIME MOVERS. ALAN M. GOODWIN, Boston, Mass., assignor to General Electric Company, a Corporation of New York. Filed Nov. 29, 1926. Serial No. 151,369. 18 Claims. (Cl. 137—158.)



1. The combination with a prime mover having a control member which is movable in a direction to start and accelerate it, of means connected with said member for controlling its rate of movement in said direction, said means including an electric motor.

1,694,976. MECHANICAL DOLL. ADOLF GYGER, Riverside, Calif. Filed Oct. 5, 1927. Serial No. 224,116. 1 Claim. (Cl. 46—40.)



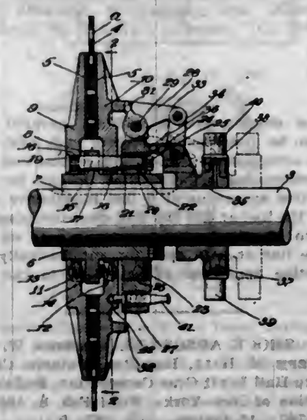
The combination of a doll having pivoted arms, a head and a trunnion pivotally connecting the head to the body of the doll, a smaller doll, a support including a trunnion for pivotally connecting the support to the large doll, said support pivotally connecting the smaller doll to the larger and disposing the smaller doll in the path of the arms of the larger doll, an offset portion on the trunnion of the support, an offset portion on the trunnion of the head, said offset portion being disposed in the path of the offset portion of the trunnion of the support and means connected to the arms whereby the arms and head operate in unison.

1,694,977. CIRCUIT-CONTROLLING DEVICE AND SYSTEM EMPLOYING THE SAME. CHESTER I. HALL, Fort Wayne, Ind., assignor to General Electric Company, a Corporation of New York. Filed June 5, 1925. Serial No. 35,265. 9 Claims. (Cl. 175—375.)

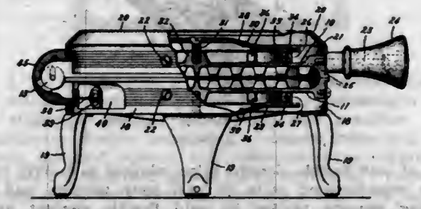
9 A time element electric circuit controlling device comprising a pivotally mounted member operable between oppositely inclined positions and having a plurality of spring clip terminals mounted thereon, a substantially cylindrical closed container having a plurality of pairs of contacts mounted in spaced alignment along the axis thereof and electrically connected with corresponding contact bands on the exterior of the casing for mounting in said spring clip terminals to establish electrical connection therebetween, and a globule of conducting fluid in said container arranged to be biased into circuit-closing engagement with a corresponding pair of said contacts upon operation of said member to each of said oppositely inclined positions, said globule of fluid having such inertia as to remain temporarily in circuit-closing engagement with the corresponding pair of contacts upon a quick operation of said member from each of said oppositely inclined positions to the other position.

1,694,978. VALVE. PHILIP S. HARPER, Chicago, Ill. Filed Dec. 27, 1926. Serial No. 157,084. 1 Claim. (Cl. 251—97.)

A valve casing with a fluid passage therethrough a rotatable closing plug member intercepting said passage, said plug member having a tapered bearing in said casing, means seating said plug in said bearing, said plug having surfaces inclined to its rotary axis, a plug head engaging said plug on said inclined surfaces, and a spring acting between said casing and said plug head, maintaining said plug head in engagement with said inclined surfaces on said plug member, and tending to rotate said plug head in a given registry with said plug member.

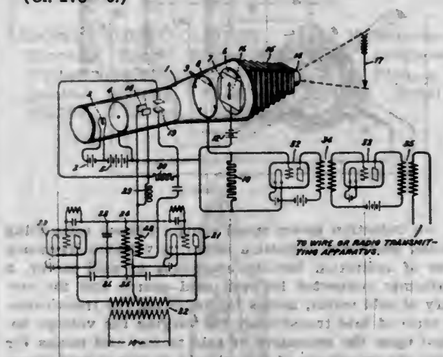


1,694,979. HIGH-VOLTAGE PRIMARY CUT-OUT. EDWARD G. NEWTON and ELMER J. WADE, Pittsfield, Mass., assignors to General Electric Company, a Corporation of New York. Filed Apr. 21, 1925. Serial No. 24,837. 7 Claims. (Cl. 200—127.)



1. A primary cut-out comprising pivotally connected housing members of insulation, fuse terminal connections mounted on one of said members, fuse holding means mounted on the other of said members, means for isolating the space about one terminal connection from the space about the other when said members are in closed relation, and a tubular expulsion fuse adapted to engage said terminal connections and extend through said isolating means and a wall of the housing formed by said members.

1,694,980. CLUTCH. WILLIAM J. PEARMAIN, Racine, Wis., assignor to Twin Disc Clutch Company, Racine, Wis., a Corporation of Wisconsin. Filed Feb. 18, 1927. Serial No. 169,346. 4 Claims. (Cl. 192—68.)

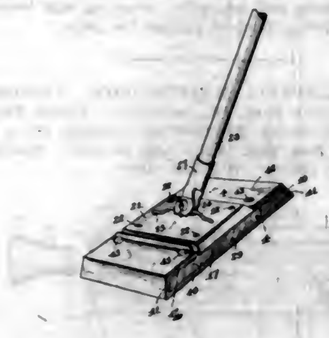


1. In a clutch, a hub adapted to be fixed upon a shaft and having an intermediate flange, a friction plate adapted to be fixed upon a rotary part, a pair of gripping members arranged respectively on opposite sides of the friction plate and both axially movable with respect to said hub but rotatable therewith, springs interposed between the respective gripping members and the flange on the hub, a fulcrum ring also movable axially of the shaft, levers on said fulcrum ring engaging one of said gripping members, a connection from said ring to the other of said gripping members and means for actuating said levers to force said gripping members against the plate.

1,694,981. ELECTRIC WAFFLE IRON. CHARLES P. RANDOLPH, Oak Park, Ill., assignor to Edison Electric Appliance Company, Incorporated, Chicago, Ill., a Corporation of New York. Filed Aug. 23, 1926. Serial No. 130,810. 7 Claims. (Cl. 219—19.)

1. An electric waffle iron comprising two metallic cooking plates, hinge lugs secured to said plates, a pivotal connection between said lugs, a sheathed electric heating unit on the back of each of said cooking plates, a plate provided with radial ribs for clamping said heating units on said cooking plates, covers secured to said cooking plates fitting over said heating units in spaced relation therewith, and supporting means secured to one of said covers.

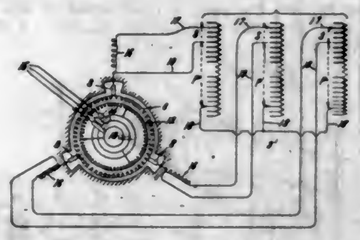
1,694,982. TRANSMISSION OF PICTURES AND VIEWS. CAMILLE A. SABBAH, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed May 27, 1925. Serial No. 33,270. 4 Claims. (Cl. 178—6.)



1. The combination of a photoelectric film, means mounted on one side of said film for forming an image on said film, means mounted on the other side of said film for projecting a cathode ray upon said film, and a transparent support for said film.

1,694,983. FLOOR POLISHER. HENRY V. SCHAEDEL, Buffalo, N. Y., assignor to Liquid Veneer Corporation, Buffalo, N. Y., a Corporation of New York. Filed Nov. 13, 1924. Serial No. 749,638. 7 Claims. (Cl. 15—209.)

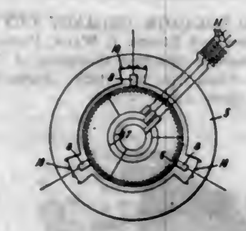
1. A floor polisher, comprising a head having a body portion provided with male snap-fastener parts on its upper



side near opposite ends thereof, a flexible element stretched over the under side of said body portion, around the ends thereof, and having its end portions lapped onto the upper side of said body portion and provided with double-ended female snap-fastener parts arranged at opposite sides of said flexible element, the ends at the inner

side of said flexible element being adapted to receive the male snap-fastener parts on said body portion, and a waxing element padded by said flexible element and stretched over the latter and provided with male snap-fastener parts at opposite ends adapted to be snapped into the outer ends of said double-ended snap fastener parts.

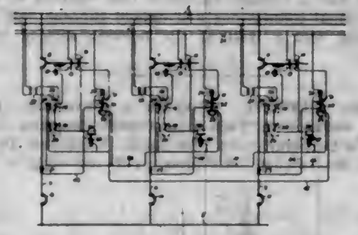
---



1,694,984. SPEED CONTROL OF INDUCTION MOTORS. HIDDE K. SCHRAGE, Paris, France, assignor to General Electric Company, a Corporation of New York. Filed Apr. 9, 1925. Serial No. 21,662, and in France June 20, 1924. Renewed Aug. 14, 1928. 8 Claims. (Cl. 172—274.)

1. An induction motor speed control system comprising a wound secondary induction motor, a variable frequency source of excitation for the secondary of said motor, a transformer connected between said source and the secondary of said motor, means for adjusting the transformation ratio of said transformer for varying the voltage impressed upon the secondary of said motor, and means for varying the impedance of the primary circuit of said transformer independently of said first mentioned adjustment.

2. An induction motor speed control system comprising an induction motor having a secondary winding, a rotor core member provided with a commutated winding for applying a regulating voltage to the secondary circuit of said motor, a stator core member provided with slots arranged to limit the flux in the commutating zone of said winding, and a transformer arranged to have its transformation ratio adjusted for controlling the magnitude of said regulating voltage and to have the number of its primary turns adjusted independently of said first mentioned adjustment for preventing change in the transformer flux due to variation in the frequency of the current transmitted therethrough.

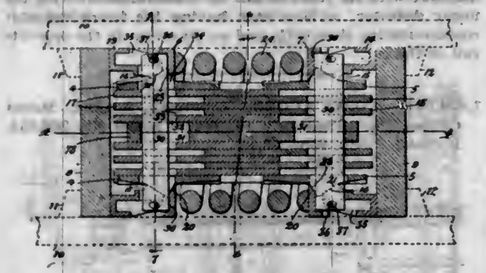


1,694,985. SPEED CONTROL OF INDUCTION MOTORS. HIDDE K. SCHRAGE, Paris, France, assignor to General Electric Company, a Corporation of New York. Original application filed Apr. 8, 1925, Serial No. 21,662, and in France June 20, 1924. Divided and this application filed Sept. 9, 1927. Serial No. 218,546. 2 Claims. (Cl. 172—274.)

1. An induction motor speed control system comprising a wound secondary induction motor, a commutator machine for supplying a regulating voltage to the secondary of said motor, said machine having a stator core member with slots opposite the commutating zones of said machine, and having commutating brushes in fixed relation with said stator member, said stator and brushes being adjustable for varying the phase of the excitation supplied to the secondary of said motor.

---

1,694,986. PROTECTIVE ARRANGEMENT. NOBUO SENSUI, Kanagawaken, Japan, assignor to General Electric Company, a Corporation of New York. Filed Feb. 1, 1927, Serial No. 165,200, and in Japan Apr. 20, 1926. 10 Claims. (Cl. 175—294.)

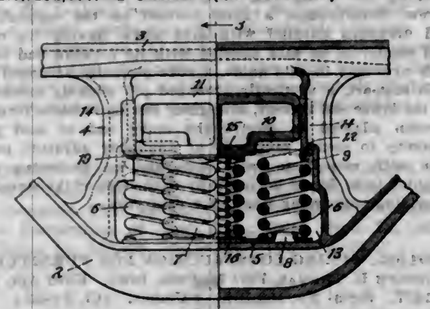


1. In an electric system wherein parallel lines are arranged to be disconnected at both ends and wherein a protective arrangement is provided at one end for selectively disconnecting a faulty line, means for rendering the protective apparatus of a line inoperative on disconnection of the line at one end and electroresponsive means arranged to be energized momentarily only on reconnection of the line at both ends for automatically restoring the protective apparatus of said line to the operative condition.

---

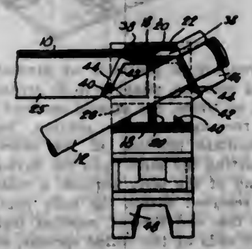
1,694,987. SHOCK ABSORBER. CLIFTON W. SHERMAN and JOSEPH M. HALL, Hamilton, Ontario, Canada, assignors to Hall Draft Gear Corporation, Buffalo, N. Y., a Corporation of New York. Filed Feb. 8, 1927. Serial No. 166,767. 15 Claims. (Cl. 267—9.)

1. A shock absorber comprising a plurality of intercalated friction plates which are adapted to slide lengthwise relatively to one another, and each plate being of curved form in cross section and engaging its convex and concave sides with corresponding concave and convex



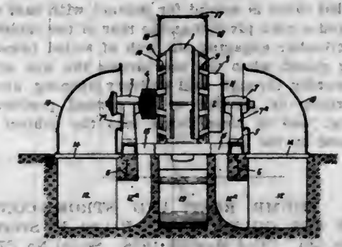
sides of adjacent plates, means for effecting relative longitudinal movement of said plates, means for pressing said plates laterally against each other, and a spring resistance.

---



1,694,988. RAILWAY-CAR TRUCK. WILLIAM C. SLEEMAN, Birmingham, Ala. Filed May 27, 1927. Serial No. 194,677. 4 Claims. (Cl. 105—197.)

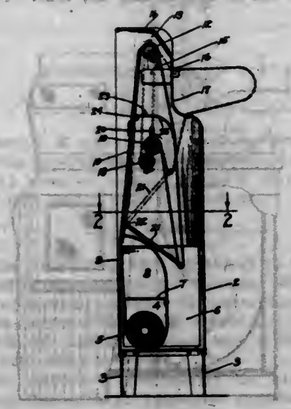
1. In a car truck, in combination, a side frame formed with a bolster opening, a bolster, a pair of springs normally out of contact with but adapted to coact with said bolster, said side frame having at least one column provided with an indentured portion bridged by a substantially horizontal abutment shoulder normally engaging said springs.



---

1,694,989. REVERSIBLE BRAKE-SHOE HEAD. WILLIAM C. SLEEMAN, Birmingham, Ala. Filed Oct. 12, 1927. Serial No. 225,673. 7 Claims. (Cl. 188—226.)

1. In combination with a brake beam having compression member, tension member and strut, a reversible brake shoe head adapted to be secured to said compression and tension members at either end of the beam, said head having seats on the opposite sides of the center line to receive the end of the compression member and also having oppositely inclined apertured portions for engagement with the tension member of the brake beam.



1,694,990. VENTILATION OF DYNAMO-ELECTRIC MACHINES. ERIK G. SOHLBERG, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Mar. 22, 1927. Serial No. 177,414. 6 Claims. (Cl. 171—252.)

1. In combination, a dynamo-electric machine having a rotatable armature provided with a commutator and a stationary member surrounding said armature, said stationary member comprising a magnet frame and field poles attached thereto, said armature being adapted to project air therefrom during its rotation, and a casing in proximity to said armature extending over said magnet frame and beyond the outer periphery thereof and into which air is projected by said armature on both sides of said magnet frame without interference by said field poles, said casing having walls terminating in spaced relation to the ends of said magnet frame, the projection of air by said armature creating vacuum areas at the ends of the armature, the velocity head of said air projected by said armature being converted into a pressure head by said casing, and a second casing for supplying air to the vacuum areas at the ends of the armature, said first mentioned casing conveying the air which flows over the surfaces of the commutator and armature and over the surface of the stationary member away from said dynamo-electric machine, said casings being spaced apart so that ready access to said commutator may be had.

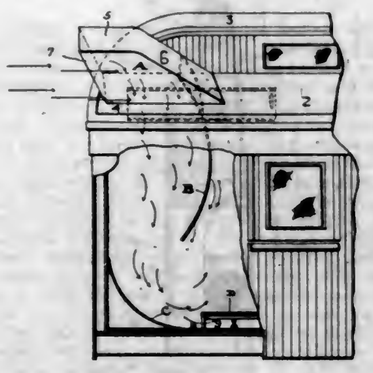
---

1,694,991. TOWEL CABINET. FRANK M. STEINER and GOTTFRID OLSON, Minneapolis, Minn., assignors to Steiner Sales Company, Salt Lake City, Utah, a Corporation of Utah. Filed Aug. 2, 1926. Serial No. 126,597. 2 Claims. (Cl. 312—38.)

1. A towel cabinet having a portion adapted to receive a supply of clean towel, a feed roll in the upper

portion of the cabinet over which the web of clean towel is stretched, the front of the cabinet adjacent said feed roll having a delivery opening through which the user may reach and grasp the web of clean towel and draw it outwardly from the cabinet, a second feed roll mounted in said cabinet and having a driving connection with said first named roll, a take-up roll around which the web of soiled towel is wound for contact with said second feed roll, and a yoke pivoted at the rear of the cabinet and having a crossbar engaging the web of soiled towel, said yoke being raised when the user draws the web of clean towel outwardly through said delivery opening, and said yoke returning by gravity to its normal position and drawing the web of clean towel into the cabinet when it is released by the user.

---



1,694,992. THUMB REST AND STROKE-CONTROL DEVICE FOR GOLF CLUBS. RALPH F. STOEFFLER, St. Louis, Mo. Filed May 10, 1928. Serial No. 276,701. 1 Claim. (Cl. 273—81.)

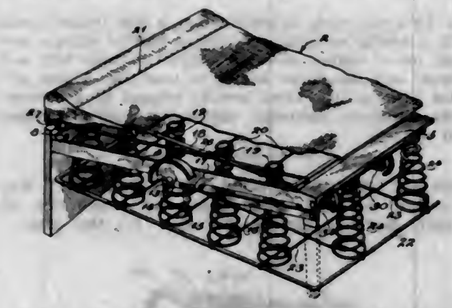
A thumb rest and stroke control device for golf clubs, comprising a concaved plate adapted to be secured to a golf club, an integral lateral projection on said plate, said projection having a concaved face and adapted for engagement by the thumb of a player, and the plate being provided with extensions in its edge having openings to receive securing members, one of said extensions being elongated and extending an appreciable distance beyond the concaved lateral projection aforesaid.

---

1,694,993. VENTILATING AND DEFLECTING OF AIR THROUGH RAILWAY CARS. ARCHIBALD STURROCK, Winnipeg, Manitoba, Canada, assignor to The Canadian Pacific Railway Company. Filed June 14, 1926, Serial No. 115,843, and in Canada May 28, 1926. 4 Claims. (Cl. 98—6.)

1. In a railway car of the type described the combination with an intake ventilator; of a pair of deflectors of curved form and located one above the other, the upper deflector being disposed with its concave side communicating with the air intake, and the lower deflector being disposed with its concave side in communication with the upper deflector; a floor rack having the lower deflector communicating therewith, and an air outlet in the opposite end of the car.

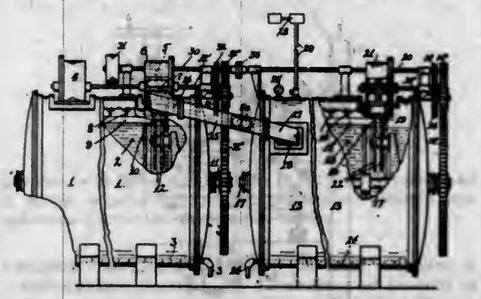
---



1,694,994. COAL AUGER. AGUILINO SUAREZ, Mount Carmel, Pa. Filed July 19, 1927. Serial No. 206,884. 1 Claim. (Cl. 255—46.)

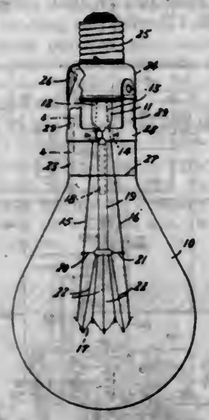
In a drilling apparatus, a screw having a drilling tool carried at one end thereof with a gear formed at its opposite end, a reduction gearing operatively connected therewith, a housing for said gearing, crank pins extending from each of said gears permitting selective operation of the screw through either thereof, a support arranged at the forward end of the screw and having a threaded opening for permitting longitudinal movement of the screw therethrough, a guide formed on the support, a rod arranged parallel with said screw having its rear end supported by said housing with its forward end slidably arranged in said guide, a yoke pivotally arranged on said support, a vertically arranged pin slidably mounted at the lower end thereof, said guide having recesses formed therein adapted to receive the upper end of said pin whereby to secure said yoke at angularly adjusted position with respect to said screw and an anchoring pin adapted to be driven horizontally in the side of the working providing supporting means for said yoke.

---



1,694,995. SPRING CONSTRUCTION FOR FURNITURE. JOSEPH R. THOMAS, Fort Madison, Iowa. Filed Apr. 14 1927. Serial No. 183,796. 4 Claims. (Cl. 5—25.)

1. In a davenport, a plurality of pivotally connected spring carrying sections, adapted to be arranged in superposed relation, at times, one of said sections comprising a substantially rectangular body portion, bearing means on the intermediate portions of the sides thereof for pivotally supporting the same upon the davenport, a panel fixed to one end of the body portion, a coiled spring engaging frame received within the body portion arranged flush with the free end thereof, another frame connected to the opposite ends of the coiled springs, certain of the coiled springs being connected to the free end of said body portion, a plurality of longitudinal rods pivoted to the panel and connected to portions of certain of the coiled springs, each of said rods having angular extensions on their free ends disposed in proximity to the free end of the body portion, auxiliary springs arranged between said extensions and said free end, and means engageable with said auxiliary springs for automatically compressing the same, upon pivotal movement of said sections.



1,694,996. COMBINED COOKER AND COOLER. ALBERT R. THOMPSON, San Jose, Calif., assignor to Anderson-Barngroover Mfg. Co., San Jose, Calif., a Corporation of California. Filed Jan. 10, 1921. Serial No. 436,065. 14 Claims. (Cl. 126—272.)

1. A combined cooker and cooler comprising a cooking member and a cooling member; a spiral canway in each member; a rotatable reel in each member for moving cans through the canway; means for independently establishing and maintaining in each member a pressure above atmospheric; means for feeding cans one at a time successively into the cooking member; means for moving said cans in a single continuous line successively through the spiral canways in the members; a conduit for passing containers from one member to the other without interchange of pressures; and means for successively discharging the cans one at a time from the cooling member.

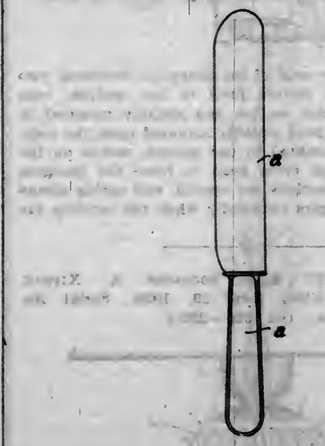
---

1,694,997. BASE FOR INCANDESCENT LAMPS OR SIMILAR ARTICLES. IRVING H. VAN HORN, East Cleveland, Ohio, assignor to General Electric Company, a Corporation of New York. Filed Sept. 20, 1926. Serial No. 136,405. 5 Claims. (Cl. 176—32.)

1. The combination of an electric incandescent lamp comprising a neck and a bowl portion and a base having the usual portion carrying the electrical terminals and engaging the end of said neck and a gripping extension comprising a split ring integral with said extension engaging an intermediate portion of said neck, and means for holding the adjacent ends of said ring together to cause said ring to grip said neck.

---

1,694,998. TAG. CONSTANT WENDELL, Dedham, Mass. Filed June 6, 1928. Serial No. 283,230. 2 Claims. (Cl. 40—20.)

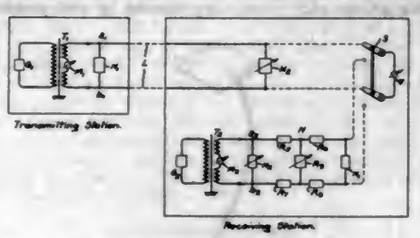


1. The combination of a tag; a staple formed of narrow ribbon metal having a back extending along a face of the tag to and slightly beyond an edge of the tag, a short prong entered through the tag and clenched against the tag, and a short prong extending over an edge of the tag and clenched against the tag adjacent said edge; and a string at the edge of the tag pinched by and positively

held between the portion of the back of the staple beyond the edge of the tag and the prong extending over said edge and clenched against the tag, said string and staple being of about the same width and said string having a short free end portion extending beyond the staple.

---

1,694,999. KNIFE. RICHARD WITTLINGER, Goppingen, Germany. Filed Dec. 16, 1925, Serial No. 75,741, and in Germany Oct. 10, 1924. 1 Claim. (Cl. 30—9.)

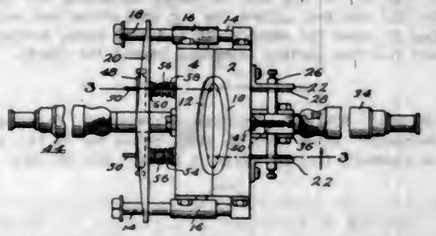


An article of manufacture having a cutting edge and made from an alloy of 47 parts copper, 37.5 parts of zinc, 10 to 12 parts of nickel, two parts of manganese, one part of iron, and .5 part of aluminum.

---

1,695,000. METHOD AND APPARATUS FOR TESTING TELEPHONE CIRCUITS. WALTHER WOLFF, Copenick, Berlin, Germany, assignor to General Electric Company, a Corporation of New York. Filed Apr. 24, 1926, Serial No. 104,492, and in Germany May 2, 1925. 5 Claims. (Cl. 179—175.)

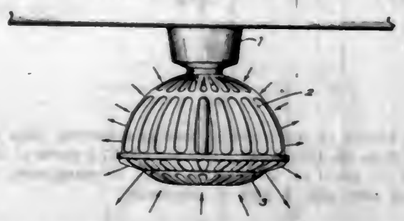
1. The method of determining the attenuation of a telephone line with an adjustable artificial network and suitable impedance elements, which consists in setting up a predetermined electrical condition across the input terminals of a telephone line, setting up the same electrical condition across the input terminals of the arti-



ficial network, terminating said telephone line and said artificial network by their respective characteristic impedances adjusting the attenuation of the artificial line to equal the attenuation of the telephone line, and ob-

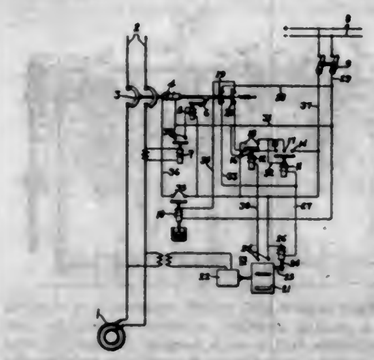
serving at the output terminals of the telephone line and at the output terminals of the artificial network when the attenuation of the artificial line equals the attenuation of the telephone line.

---



1,695,001. MOLD. CHARLES A. WOOD, Clay Center, Kans. Filed July 6, 1926. Serial No. 120,695. 2 Claims. (Cl. 22—151.)

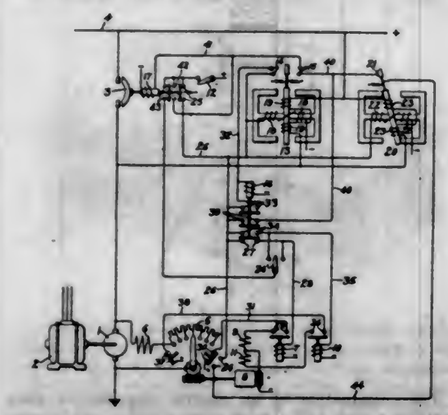
1. In an invertible mold of the character described two chambered sections, sleeves fixed to one section, rods fixed to the companion section and slidably mounted in said sleeves, a cross head slidably mounted upon the rods, plungers operably mounted in one section, means on the rods for causing said cross head to force the plungers inwardly when the sections are opened, and spring means for forcing the plungers outwardly when the sections are closed.



---

1,695,002. ELECTRIC FAN. SOCRATES A. XIPPAS, Pittsburgh, Pa. Filed Nov. 29, 1926. Serial No. 151,427. 4 Claims. (Cl. 230—259.)

1. In a device of the class described, a rotary impeller and an enclosing casing therefor, said casing having a medial zone and two polar zones of openings therein, said impeller including means whereby the air is drawn into said casing through the openings in the polar zones, and forced toward the medial zone, said impeller means serving to discharge the air through the openings in the medial zone, and including a rotatably mounted support, a series of horizontal arms carried by said support, and a plurality of blades attached to said arms and all extending in a direction to one side of said horizontal arms, the impeller being unbladed at the opposite side of said horizontal arms.

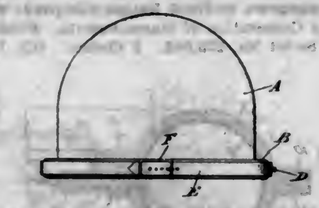


1,695,003. CONTROL OF ELECTRIC SWITCHES. ARVID E. ANDERSON, Scotia, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Mar. 19, 1927. Serial No. 176,761. 8 Claims. (Cl. 175—294.)

1. In combination, an electric circuit, interrupting means therefor, means for effecting the closing of the interrupting means including a closing relay and means for controlling the closing relay including an auxiliary relay arranged when energized to close contacts in the circuit of its winding, and a control relay arranged when energized to effect the energization of the auxiliary relay only while the interrupting means is open and on subsequent deenergization while the auxiliary relay is energized to complete the circuit of the closing relay.

---

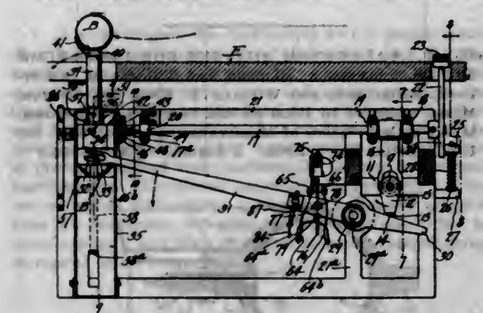
1,695,004. AUTOMATIC CONTROL SYSTEM. HERMAN BANY, Scotia, N. Y., and HAROLD T. SEELEY, Yeadon, Pa., assignors to General Electric Company, a Corporation of New York. Filed July 22, 1927. Serial No. 207,788. 12 Claims. (Cl. 171—118.)



8. In combination, a source of current, a load circuit, switching means for connecting the source to the load circuit, and means operative to effect the closing of said switching means only when the voltage of said source is greater than but does not exceed the voltage of the load circuit more than a predetermined amount.

---

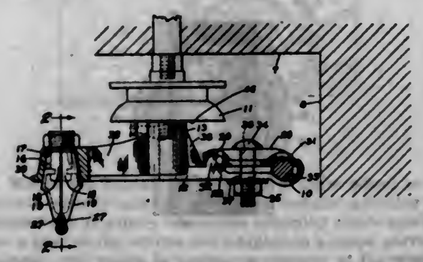
1,695,005. BATHING CAP. OSCAR A. BIGLER, Wyoming, Ohio. Filed Dec. 21, 1926. Serial No. 156,189. 2 Claims. (Cl. 2—68.)



1. A bathing cap composed of a flexible water-proof head covering, a band therefor arranged entirely on the outside of said head covering portion so as to provide a non-obstructed inner surface to said head covering portion, said band consisting of a water-proof elastic portion

adapted to be inflated to conform to the wearer's head and a flexible water-proof inelastic portion surrounding said inflatable portion on three sides thereof.

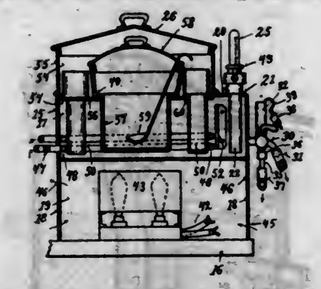
---



1,695,006. GOLF-BALL-TEEING DEVICE. GEORGE J. BROCKHAGEN, Brooklyn, N. Y., assignor of one-half to Eugene F. Brockhagen, Brooklyn, N. Y. Filed Mar. 8, 1928. Serial No. 260,162. 18 Claims. (Cl. 273—33.)

6. In an automatic golf tee, the combination with a vertical housing, of a golf tee reciprocable in said housing, means for latching said golf tee in its raised position, said golf tee being provided with means under the control of a golf ball driven therefrom for releasing said latching means, an electric motor for elevating said golf tee, and a starting and stopping switch therefor under the control of the rise and fall of said golf tee.

---

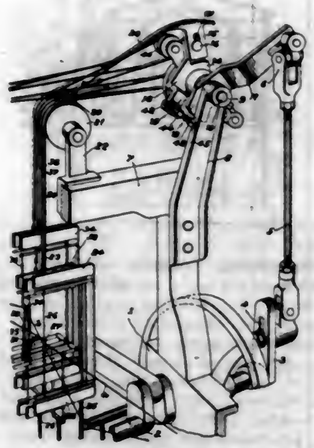


1,695,007. HANGER FOR ELECTRIC WIRES. CLARENCE A. CAWOOD, Big Stone Gap, Va., assignor to The Electric Railway Equipment Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Apr. 18, 1927. Serial No. 184,489. 12 Claims. (Cl. 197—43.)

1. In a device of the class described, the combination of a body member having a tapered bore at one end thereof and a central threaded bore for receiving a hanger stud, a feeder wire clamp at the opposite end of the body member, a pair of trolley clamp jaws associated with the tapered bore for clamping a trolley wire therebetween, and interchangeable jaw actuating means, one being adapted for suspending the body member from the hanger stud, and the other for actuating the jaws independently of the hanger stud.

1,695,008. STERILIZING AND INCUBATING APPARATUS. VALDEMAR CHRISTENSEN, Cincinnati, Ohio. Filed Mar. 2, 1926. Serial No. 91,778. 4 Claims. (Cl. 219—38.)

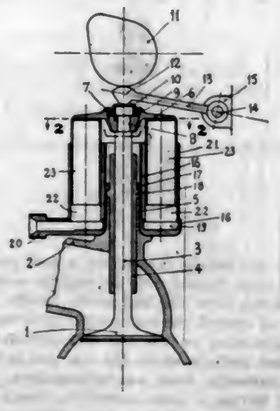
3. A bacteriological incubator comprising a container for a liquid bath having a lid giving access thereto, an electrical circuit, an electrical heating member included in said circuit and adapted to intermittently heat said bath, a thermostat partly immersed in said bath and serving to open and close said electrical circuit, means adjustable to pre-determine the temperature limits at which said thermostat will open and close said electrical circuit, a member controllable to cool said bath approximately to pre-determined temperatures lower than the room temperature, and an incubating vessel located in said container and partly immersed in said bath.



---

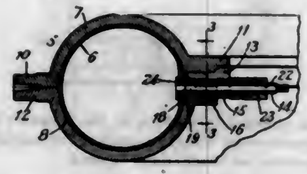
1,695,009. TOOL AND HANDLE CONNECTION. JAMES P. COCHRAN, Canyon City, Oreg. Filed May 6, 1927. Serial No. 189,278. 1 Claim. (Cl. 306—7.)

In a tool and handle connection, a tool provided with a ball-shaped head formed with an angular socket, a handle, a pin projecting from one end of the handle, said pin having a pair of spaced circumferential grooves, a sleeve for slidable disposition on the pin and provided at one end with a socket shell in which the tool end is seated, a boss projecting laterally from an intermediate point on the sleeve and having a bore extending inwardly and communicating with the interior of the sleeve, a spring urged member within the said bore adapted for selective engagement within one of the said circumferential grooves of the pin, one end of said pin being of polygonal shape for engagement with the socket of said tool head, said sleeve being movable on the pin for disengaging the polygonal shaped end of the pin from the tool head socket and resulting in the engagement of the said spring urged member in the outermost groove of the pin to permit the ball-shaped head to pivot within the socket shell of the sleeve.



1,695,010. CROSS-WEAVING LOOM. HARRY A. DAVIS, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Apr. 4, 1928. Serial No. 267,245. 8 Claims. (Cl. 139—51.)

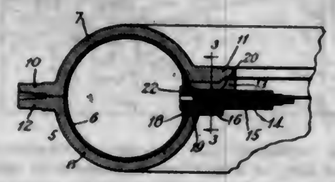
1. In a leno or cross-weaving loom, the combination of doup heddles and lifter heddles therefor, a jumper heddle, yielding means normally acting to depress the jumper heddle, a head motion for the jumper heddle, a flexible connection between the head motion and jumper heddle, and a stop for the jumper head motion acting to maintain the flexible connection taut when the jumper heddle is held raised by the crossed doup and jumper threads.



---

1,695,011. VALVE GEAR. GUIDO FORNACA, Turin, Italy. Filed Dec. 22, 1927, Serial No. 241,922, and in Italy Dec. 31, 1926. 5 Claims. (Cl. 123—90.)

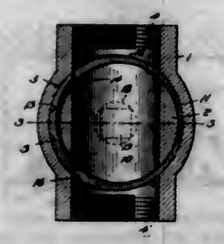
1. A valve gear comprising a valve, a guide for said valve, a part engaged with the end of the stem of said valve, a plurality of cylinders arranged around the axis of said valve, plungers each mounted to reciprocate in one of said cylinders, said cylinders and plungers being located intermediate said stem-end part and said guide, and means for supplying a pressure fluid to said cylinders to force said plungers against said stem-engaged part so as to hold said valve in closed position.



1,695,012. VALVE-STEM ADAPTER FOR INNER-TUBE MOLDS. ALFRED A. GLIDDEN and THOMAS M. KNOWLAND, Watertown, and WILLIAM T. RICH, Jr., Newton, Mass., assignors to Hood Rubber Company, Watertown, Mass., a Corporation of Massachusetts. Filed Sept. 30, 1927. Serial No. 223,082. 8 Claims. (Cl. 18—35.)

1. In combination a mold, a sleeve mounted therein and constructed and positioned to encircle the valve stem of an inner tube located within said mold, and means upon said valve stem to clamp the inner tube to the sleeve.

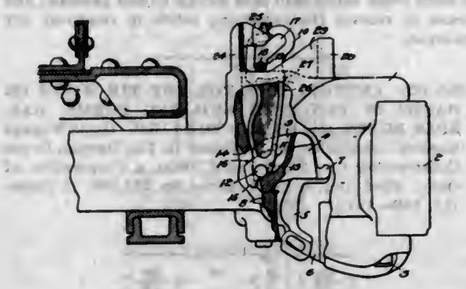
---



1,695,013. VALVE-STEM ADAPTER FOR INNER-TUBE MOLDS. ALFRED A. GLIDDEN and THOMAS M. KNOWLAND, Watertown, and WILLIAM T. RICH, Jr., Newton, Mass., assignors to Hood Rubber Company, Watertown, Mass., a Corporation of Massachusetts. Filed Sept. 30, 1927. Serial No. 223,083. 3 Claims. (Cl. 18—35.)

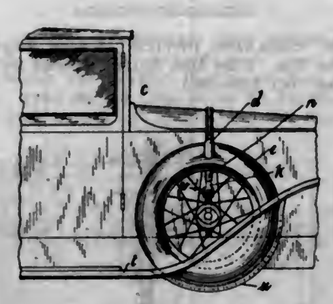
1. In combination a mold, and a sleeve rotatably mounted therein, said sleeve being constructed and arranged to encircle and to have screw-threaded engagement with the valve stem of an inner tube located within said mold to clamp said inner tube to the sleeve.

---



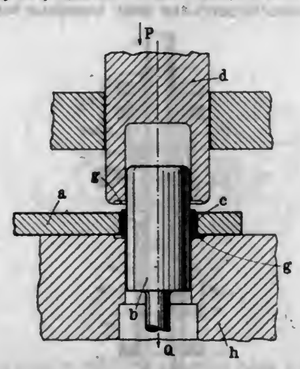
1,695,014. VALVE. ALFRED G. HEGGEM, Tulsa, Okla. Filed May 18, 1925. Serial No. 31,118. 10 Claims. (Cl. 251—91.)

1. A valve involving a body device having a passage permitting the flow of fluid therethrough and having a curved valve seat and a curved surface eccentrically disposed with respect to said seat and to said passage, and a valve member rotatably mounted in said body device and adapted to control the flow of fluid through said passage, said valve member being curved to conform to said seat and being adapted when rotated to closed position to cooperate with said eccentrically disposed curved surface of the body device so as to be pressed against said seat.



1,695,015. CAR COUPLER. WILLIAM KELSO, Pittsburgh, Pa., assignor to The McConway & Torley Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed June 20, 1927. Serial No. 199,952. 5 Claims. (Cl. 213—127.)

1. In a car coupler, the combination with a coupler head, of a knuckle pivotally mounted thereon, a lock for the knuckle, a lock lifter extending into the coupler head and movably connected to the lock, and means engaging the lifter outside of the coupler head for actuating said lifter, said lifter being adapted under the influence of gravity to move to a position in which it cooperates with said head to prevent the lock from accidentally moving to unlocked position, and said means extending transversely of the car on which the coupler is mounted and being adapted upon an accidental unlocking movement of the lifter to cooperate with said head and lifter to arrest the unlocking movement of the lifter.



---

1,695,016. MEANS FOR HOLDING AND LOCKING SPARE WHEELS AND THE LIKE ON MOTOR VEHICLES. MADS KRUSE, London, England. Filed Mar. 8, 1928, Serial No. 260,070, and in Great Britain Mar. 23, 1927. 11 Claims. (Cl. 224—29.)

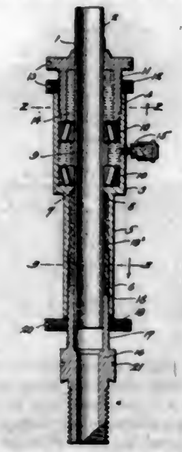
1. Means for holding and locking a spare wheel or a wheel-rim or felly and tire on a motor vehicle including in combination a relatively immovable retaining device mounted on a part of the vehicle and adapted to receive, partially embrace and retain in position a segment of the wheel-rim and tire, a link pivotally mounted at one end on a part of the vehicle, a second retaining device extending from and beyond the free end of the said link, and adapted to receive, partially embrace and retain a second segment of the wheel rim and tire approximately opposite to the first mentioned segment of the wheel rim and tire, an extensible and contractible stay, pivoted at one end to a part of the vehicle and connected at its other end to the free end of the said link and means for rendering the said stay inextensible, substantially as set forth.

1,695,017. PRECISION BORE AND METHOD OF PRODUCING SAME. HEINRICH KUCKUCK, Bremen, Germany. Filed Nov. 26, 1927, Serial No. 235,999, and in Germany May 6, 1926. 7 Claims. (Cl. 29—149.5.)

1. A method of making precision or tolerance bores or seats of a determined size in a plate or housing, characterized by making an oversized bore in the plate or housing, placing an intermediate or lining ring within said bore, inserting a gauge mandrel through said ring and axially compressing the ring to the face of the bore while forming and sizing the ring by said mandrel.

---

1,695,018. COMBINATION AIR NOZZLE AND GAUGE. AMOS S. MARCHUS, Oakland, Calif. Filed Oct. 1, 1924. Serial No. 740,954. 1 Claim. (Cl. 73—111.)



A device of the character described comprising a casing having an elongated bore with closed ends formed therein, said casing having a counterbore in one end in alignment with said bore, a tire valve fitting rotatably secured in said counterbore, an air connection adapted to be placed in communication with said counterbore, a graduated cylindrical plunger disposed in said elongated bore and having a closed end, a spring bearing against said plunger, a sight opening formed through the casing in alignment with said graduations on said plunger, said casing being formed with an air opening formed therein contiguous to one end of the bore between the end of the bore and the end of the plunger and adapted to be placed in communication with the air connection whereby air entering the bore will seek to move the plunger against the pressure of the spring and indicate the pressure at the sight opening by the calibrations on the plunger.

---

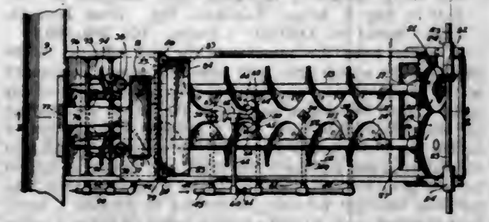
1,695,019. WATER HEAD FOR DRILLING RIGS. DAVID WEAR MCELROY, Kaufman, Tex., assignor of one-half to Guy E. Boggs, Kaufman, Tex. Filed June 14, 1926. Serial No. 116,059. 1 Claim. (Cl. 285—96.)

A water head for attachment to and adapted to be supported by a core drill, said head including a stationary water barrel having an annular enlargement between its ends, a shell housing a portion of the barrel and having an enlarged end portion and a reduced end portion, a hollow nut fitted snugly about the barrel and threaded into the enlarged end portion of the shell, said nut being spaced for the greater portion of its length from the barrel, the nut and enlarged portion cooperating to provide a lubricant compartment, spaced annular series of tapered roller bearings interposed between the annular enlargement on the barrel and the nut and between the annular enlarge-

ment and the inner end of the enlarged portion of the shell, said bearings constituting means for taking up end and side thrust and for holding the barrel against longitudinal movement relative to the shell and in position at all times concentric with the shell, a packing between the

reduced portion of the shell and the barrel, and adjustable means engaging the reduced portion of the shell for compressing the packing about the barrel, said adjustable means constituting means for engaging a core drill to support the water head thereon.

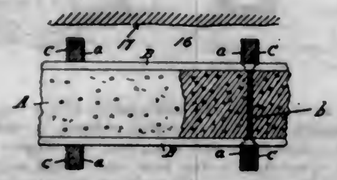
---



1,695,020. FROG FOR VIOLIN BOWS. HARRY OSTROVSKY, London, England. Filed Sept. 22, 1923, Serial No. 664,224, and in Great Britain Sept. 22, 1922. 4 Claims. (Cl. 84—282.)

1. In a bow for musical instruments, including a bow stick and bow hair, the latter having a knot in one end, a connection between the same capable of elastic movement when pressure is applied to said hair in playing, said connection comprising a frog having a body portion, means for securing said frog to said bow stick, a channel opening in the top of said body, said body being apertured to receive said knot in one end of said bow hair, means for securing said knot in said aperture, a spring member for facilitating said elastic movement, a cover of resilient material for said channel and aperture in the body, and means for securing said hair at the head end of the bow stick.

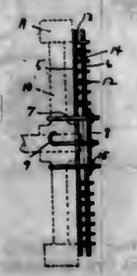
---



1,695,021. APPARATUS FOR SEPARATING SOLIDS. SAMUEL R. PURYEAR, Nashville, Tenn. Filed Apr. 17, 1926. Serial No. 102,649. 21 Claims. (Cl. 209—18.)

1. In an apparatus of the class described the combination of a passage adapted for liquids and solids and including a receiving chamber; a second passage including a washing chamber and a conductor passing through the receiving chamber; means to reduce the size of said solids while moving said material from said receiving chamber to and through said washing chamber; submerged means to force some solids into said first named passage; means to force other solids into said second named passage; and means to recover the remaining solids in relatively dry condition.

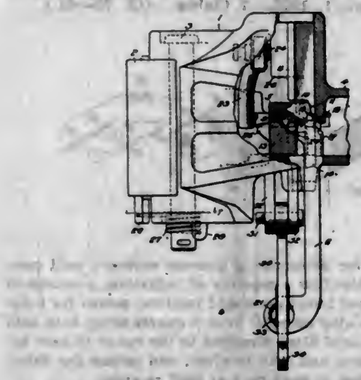
---



1,695,022. CUTTING TOOL FOR THE TIE WIRES OR BANDS OF CONCRETE BUILDING FORMS, BARRELS, BOXES, BALES, AND THE LIKE. OLLIE WARREN RANKIN, Covington, Ky., assignor to The Dawson-Evans Construction Co., St. Bernard, Ohio, a Corporation of Ohio. Filed Aug. 8, 1927. Serial No. 211,506. 1 Claim. (Cl. 140—141.)

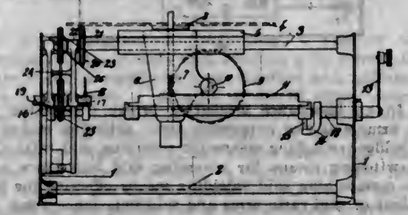
A loop open-wedging and cutting implement for use in severing the tie or binding wires or bands of concrete-building forms, boxes, barrels, cartons and bales or like containers of commodities, such wedging and cutting implement comprising an extensible shank or body-portion, a flat doubly-tapered lower or working end of the said shank having an outside-beveled laterally-broadened wedge-formation and a sharp-edged blade or nose-shaped formation the latter extending forwardly and centrally-lengthwise from the front straight or flat tapered face of said lower working-end of the implement and terminating at a point a little above and in the acting-force position that follows the entrance-action of the said wedge-formation and during its stretching or open-setting action on the clamping-loop portions of the binding wires or bands, substantially as shown and described.

---



1,695,023. CLEANING DEVICE. JOSEPH SIDNEY REED, Houston, Tex. Filed Mar. 8, 1928. Serial No. 260,105. 1 Claim. (Cl. 125—26.)

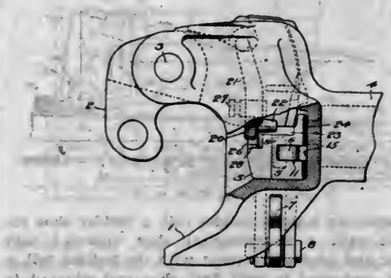
A cleaning device of the class described comprising a pair of disks, an attaching plate, wheel attaching bolts carried by said plate and adapted for securing said disks in parallel relation against one side of a supporting wheel for rotation therewith, the outermost of said disks having a series of openings formed therein, cleaning pins extended through said openings having heads formed on their inner ends in abutting relation against the innermost of said disks and a plurality of shims removably carried by the pins and disposed between the disks whereby to regulate the extent at which the pins protrude from the outermost disk.



1,695,024. CAR COUPLER. WILLIAM J. REGAN, Wilkinsburg, and WILLIAM KELSO, Pittsburgh, Pa., assignors to The McConway & Torley Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed July 24, 1925. Serial No. 45,908. 8 Claims. (Cl. 213—128.)

1. A car coupler involving a coupler head, a knuckle rotatably mounted on said head, a lock for said knuckle, and a lifter for actuating said lock, said lock and said lifter being operatively connected so as to be capable of relative sliding and swinging movements, said head being provided with a shoulder adapted to be engaged by said lifter to thereby prevent accidental unlocking of said lock, said lifter being provided with a shoulder adapted to extend under said shoulder of the coupler head when the lock is in locked position and also being provided with a plurality of faces which, when said lifter is in normal locked relation to said lock, respectively cooperate with said lock and said coupler head to thereby prevent said lifter from swinging in a direction permitting its said shoulder to move from beneath the said cooperating shoulder of the coupler head, and said lock when moved to unlocked position by said lifter being adapted to swing with respect to said lifter so as to be supported in unlocked position on the tail of said knuckle while the latter is in closed position.

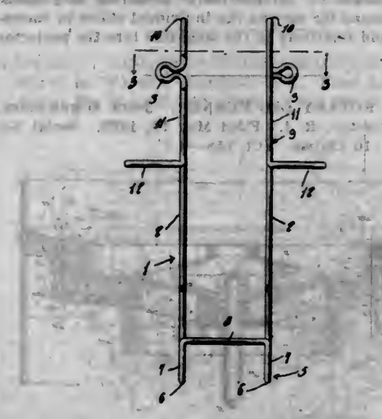
---



1,695,025. SOUND-RECORDING AND SOUND-REPRODUCING MACHINE. AUGUSTE REMY, JEAN RENAUX, JEAN DELORT, and FRANCIS DEBREBANT, Bezu St. Eloi, France. Filed May 19, 1923, Serial No. 640,081, and in France June 1, 1922. 15 Claims. (Cl. 74—26.)

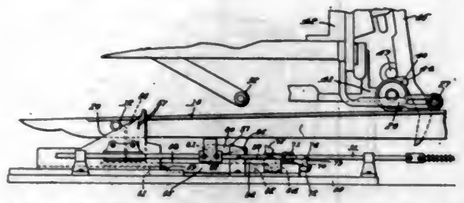
1. Sound-recording and reproducing apparatus, comprising a turntable; mechanism for rotating it; and mechanism for imparting a linear movement to the turnable during its rotation, and embodying a pinion, driving means therefor, a pivotally-mounted rack along which the pinion is adapted to travel, and means for rocking said rack about its longitudinal axis to bring it into or out of mesh with said pinion.

3. In sound-recording and reproducing apparatus, the combination of a turntable; a driving wheel movable into and out of engagement with the turntable; means for rotating said wheel; means for imparting a linear movement to the turntable during its rotation; and a common means for disengaging the wheel and positively terminating its rotation, and for interrupting the linear movement of the turntable.



1,695,026. CAR COUPLER. WILLIAM J. REGAN and WILLIAM KELSO, Pittsburgh, Pa., assignors to The McConway & Torley Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed May 28, 1927. Serial No. 194,984. 6 Claims. (Cl. 213—126.)

1. A car coupler involving a coupler head, a knuckle pivotally mounted on the head, a gravity actuated lock for the knuckle, and a lifter for operating said lock, said lock and lifter being adapted to have relative sliding and swinging movements, said head having a shoulder for cooperating with the lifter to prevent accidental unlocking of the lock, said lifter being formed with a shoulder adapted to engage the shoulder of the coupler head, one of said shoulders extending at an angle to the direction of unlocking movement of the lock, said shoulders being adapted upon a normal unlocking movement of the lifter to cooperate so as to force the shoulder upon said lifter from beneath said shoulder of the coupler head, and said lock when moved to unlocked position by the lifter being adapted to be tilted upon said lifter so as to be supported in unlocked position on the tail of said knuckle while the latter is in closed position.



---

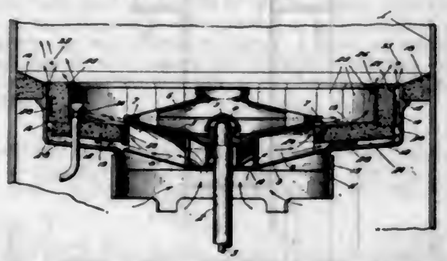
1,695,027. BAG HOLDER. KENNETH M. RIDDLE, Tulsa, Okla., assignor of one-half to Roscoe C. Mills, Tulsa, Okla. Filed July 7, 1927. Serial No. 203,990. 2 Claims. (Cl. 211—51.)

1. A bag holder comprising a back consisting of bars provided with downwardly and rearwardly inclined lower portions, a bottom support consisting of bars extending downwardly and forwardly from the lower ends of the back bars and bars extending upwardly from the front ends of the support bars and connected at their upper ends by a cross bar, and a top support consisting of top bars extending forwardly from the upper ends of the back bars, front bars extending downwardly from the front ends of the top bars and angular bars extending laterally and thence rearwardly from the lower ends of said front bars.

1,695,028. BUNCH BUILDER FOR SPINNING MULES. THOMAS H. RILEY, Skaneateles Falls, N. Y., and ALSTON H. FLINT, Worcester, Mass., assignors to Johnson & Bassett, Inc., Worcester, Mass., a Corporation of Massachusetts. Filed June 17, 1926. Serial No. 116,732. 6 Claims. (Cl. 118—28.)

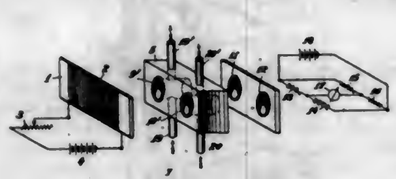
5. In a spinning mule, a builder rail, a builder shoe engaging said rail, a supplemental shoe adjacent said builder shoe and adapted to coact with the builder rail, a builder rod connected to said first shoe and adapted to move said shoe relative to the rail and means independent of said builder rod for moving said supplemental shoe.

---



1,695,029. APPARATUS FOR AUTOMATICALLY DISPLAYING LANTERN SLIDES BEARING ADVERTISEMENTS OR OTHER MATTER. SAMUEL CHARLES RYDER, Sydney, Australia. Filed July 1, 1927, Serial No. 202,951, and in Australia Oct. 12, 1926. 15 Claims. (Cl. 88—24.)

1. An improved lantern slide display apparatus comprising a translucent globe, a power unit mounted within said globe, a slide projector enclosed within said globe and rotated therein by the power unit to movably display the slides upon the globe, a slide magazine associated with said projector, means for intermittently actuating said magazine, and means for moving the individual slides in succession from and relatively to the magazine into the projector for display.



---

1,695,030. ROTARY OIL BURNER. JOHN SCHEMINGER, Jr., Providence, R. I. Filed May 10, 1926. Serial No. 108,191. 10 Claims. (Cl. 158—4.)

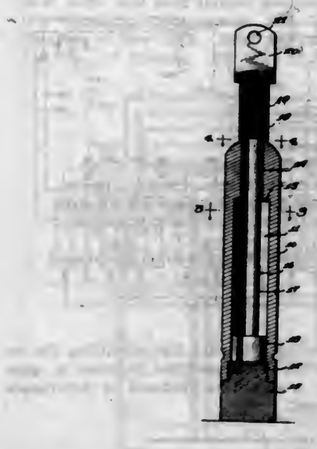
1. In combination with a fire-box, a fire-deck having a central opening therein and spaced air ducts extending outwardly thereunder and upwardly therefrom around the combustion chamber, an oil distributing device revolubly mounted within said opening and having a restricted peripheral passage for discharging atomized oil, whereby a film of oil is caused to issue from said device over the surface of said fire-deck, a feed-pipe, and means associated with said device for inducing an upwardly and outwardly moving current of air and dividing and forcing the same partly into and through said air ducts and a larger part under the film of oil issuing from said device.

1,695,031. DETERMINING GASEOUS CARBONIC ACID. HANS SCHMICK, Berlin-Charlottenburg, Germany, assignor to Siemens & Halske Aktiengesellschaft, Siemensstadt, near Berlin, Germany, a Corporation of Germany. Filed July 20, 1926, Serial No. 123,784, and in Germany Sept. 1, 1925. 7 Claims. (Cl. 73—51.)

1. A device for determining gaseous carbonic acid comprising in combination a receiver of radiation, a source of radiation adapted to act upon said receiver, means for holding a gas containing carbonic acid, a quarts filter, both said gas holder and said filter arranged in the range of rays between said source and said receiver, and means for determining the action of heat rays at said receiver.

---

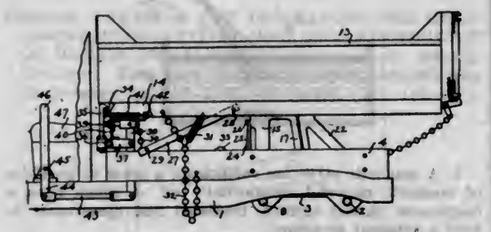
1,695,032. IMPEDANCE-MEASURING BRIDGE. WILLIAM J. SHACKELTON, Scotch Plains, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 16, 1925. Serial No. 62,816. 6 Claims. (Cl. 175—183.)



2. In an impedance measuring bridge comprising two ratio arms and two impedance arms, shielding means for said bridge, switching means for reversing said ratio arms and switching means for reversing said impedance arms while maintaining said shielding means effective for both positions of said ratio arms and said impedance arms.

---

1,695,033. DEPTH-MEASURING DEVICE. GEORGE W. SMITH, Sistersville, W. Va. Filed Aug. 16, 1927. Serial No. 213,377. 1 Claim. (Cl. 33—126.)

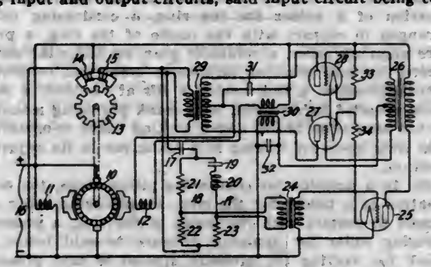


A device of the character described comprising a barrel having a relatively large bore of substantial length intermediate its ends and provided with a relatively small axial opening in its upper end communicating with said bore, a base carried by the lower end of said barrel and having an upper face forming the lower end of said bore, a shank adapted to reciprocate in said axial opening and projecting above said barrel, a relatively large head carried by the lower end of said shank and adapted to reciprocate in said bore, a connecting member secured to the projecting portion of said shank, and a flexible element secured to the upper end of said connecting member, said head being movable upwardly whereby it is adapted to contact with the upper end of said bore to support said barrel and being

movable downwardly whereby it is adapted to contact with the lower end of said bore to transmit a jarring action to said flexible element.

---

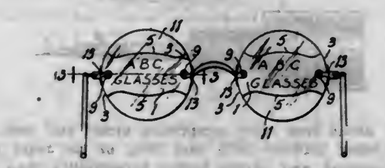
1,695,034. DUMP BODY. RALPH E. SMITH and ROY J. ARNOLD, Galion, Ohio, assignors to The Galion Metallic Vault Company, Galion, Ohio, a Corporation of Ohio. Filed Apr. 29, 1927. Serial No. 187,664. 4 Claims. (Cl. 298—10.)



1. In combination, a dump body, a pair of spaced brackets, means to brace said brackets with respect to one another and to rigidly tie them together as a unitary support for said body, a plurality of spaced support engaging jaws on said brackets, a supplementary frame, inwardly disposed depending, supporting and guarding plates mounted on either side of said frame, supporting rods connected therebetween adapted to engage with said jaws on said brackets and U bolts spaced from a pair of said jaws adapted to pass around one of said supports to prevent the brackets from being detached entirely from the supports and limiting the movement of the body with the brackets in one direction.

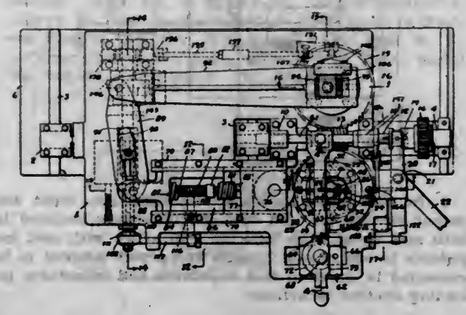
---

1,695,035. ELECTRIC REGULATOR. HUGH M. STOLLER, Mountain Lakes, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed June 21, 1927. Serial No. 200,459. 20 Claims. (Cl. 171—119.)



1. In combination, a device having a characteristic to be regulated, means for deriving a wave of frequency proportional to said characteristic, a Wheatstone bridge having one arm in the form of a resonant circuit tuned to the frequency of the wave from said means when the characteristic of said device is normal, said bridge circuit having two sets of terminals, one of said sets of terminals being connected to said means, an electric discharge device having input and output circuits, said input circuit being connected to the other of said sets of terminals, and means connected to said output circuit and responsive to the magnitude of the space current of said device to regulate said characteristic.

---



1,695,036. DISPLAY DEVICE. ARTHUR P. THURSBY, St. Louis, Mo. Filed June 28, 1924. Serial No. 722,989. Renewed Oct. 12, 1928. 4 claims. (Cl. 40—1.)

1. In an advertising device the combination of a pair of spectacles comprising a pair of lenses with nose and ear attachments screwed thereto; an advertising insert comprising a shape of material having slots cut laterally therein for engaging said attachments on one lens; and a legend on the forward or lens side of the insert, said insert conforming to the shape of the lens.

---

1,695,037. RING-TENSIONING MACHINE. ROBERT BINGHAM WASSON, Cranford, N. J. Filed Jan. 8, 1923. Serial No. 611,273. 71 Claims. (Cl. 29—1.)

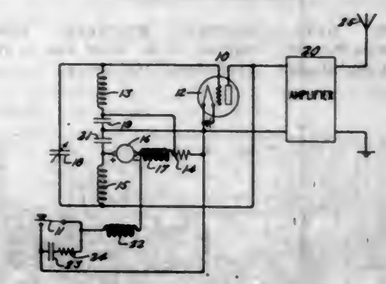
6. In a machine for condensing piston rings in accordance with a pre-determined law the combination of a condensing roller arranged to contact with the inside of the ring, a sliding pressure applying roller, a slide block in which the pressure applying roller is mounted, a rotary member, link mechanism between said member and the pressure applying roller, said link mechanism including a

lever, a fulcrum for said lever, the rotation of said rotary member applying pressure to said slide block through said link mechanism.

36. In a machine for condensing piston rings, the combination of a holder for the ring, a condensing roller arranged to contact with the inside of the ring, a pressure applying roller, a rotatable gear, an adjusting screw carried by said gear, an adjustable crank pin connected with said screw, a link having a slit at one end, a slide block mounted in said slot, said crank pin being mounted within said slide block, and a locking plate co-operating said slide block for locking said crank pin in its adjusted position.

65. In a machine for condensing piston rings, the combination of a holder for the ring, a condensing roller arranged to contact with the inside of the ring, a pressure applying roller for applying pressure to said holder, a crank for varying the pressure applied to said pressure applying roller, and means for relieving the pressure applied to the holder.

---

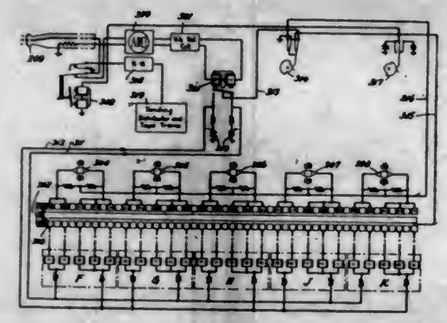


1,695,038. MAGNETIC ALLOY. OLIVER E. BUCKLEY, Maplewood, N. J., assignor, by mesne assignments, to Western Electric Company, Incorporated, a Corporation of New York. Filed Mar. 6, 1925. Serial No. 13,501. 12 Claims. (Cl. 178—45.)

1. A nickel iron alloy comprising nickel and iron, the nickel being between 80% and 83% of the total iron-nickel content, and having higher permeability than iron at magnetizing forces less than a few tenth of a c. g. s. unit.

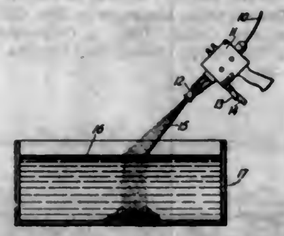
---

1,695,039. ELECTRIC WAVE SIGNALING SYSTEM. LEWIS M. CLEMENT, Mountain Lakes, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 1, 1925. Serial No. 53,784. 8 Claims. (Cl. 250—19.)



1. In combination, a space discharge tube, input and output circuits for said tube, an impedance included in both said circuits, an inductance in series with said impedance in one of said circuits and a path adapted to be connected in shunt to said impedance and inductance including another inductance.

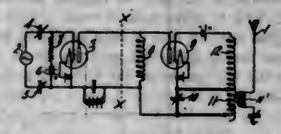
---



1,695,040. MULTIPLEX-TELEGRAPH SYSTEM. ALLISON A. CLOKEY, Rutherford, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed July 29, 1926. Serial No. 125,610. 22 Claims. (Cl. 178—50.)

1. A telegraph system for transmission of impulses in a plurality of channels, said impulses being originally prepared in accordance with a readable code and transmitted in accordance with a modified code, comprising a leak recorder for one of said channels having a single operating circuit and including a by-path for permitting the reception by said recorder of the modified impulses in opposite modes, whereby a record is produced in accordance with said readable code.

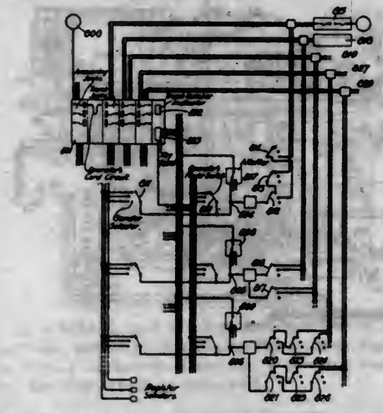
---



1,695,041. PRODUCTION OF MAGNETIC DUST CORES. GUSTAF W. ELMEN, Leonia, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. N. Y., a Corporation of New York. Filed Dec. 17, 1926. Serial No. 155,509. 11 Claims. (Cl. 175—27.)

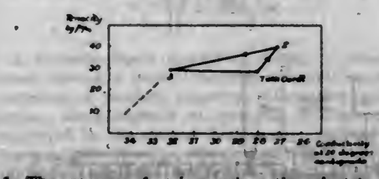
1. A magnetic structure comprising a mass of particles of magnetic material substantially all of which have a continuous curved surface, insulated and compressed to form a coherent structure.

---



1,695,042. HIGH-EFFICIENCY DISCHARGE-DEVICE SYSTEM. JUSTIN L. FEARING, Jamaica, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 15, 1923. Serial No. 657,484. 18 Claims. (Cl. 179—171.)

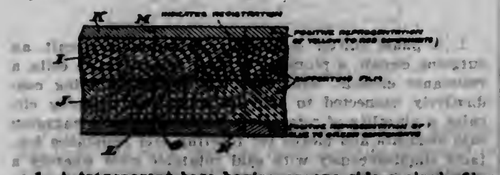
1. The method of rectifying periodically repeated impulses to produce oscillations by means of a rectifying device, which comprises applying current impulses to the rectifying device, causing the impulses to set up oscillations having a frequency integrally related to the impulse frequency and causing the oscillations to control the impedance of the rectifying device whereby its impedance is increased to a high value during the interval between successive impulses.



1,695,043. TELEPHONE-EXCHANGE SYSTEM. WILLIAM T. HAINES, Mountain Lakes, and ROBERT W. HARPER, East Orange, N. J.; said Haines assignor to American Telephone and Telegraph Company, a Corporation of New York, and said Harper assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 22, 1926. Serial No. 143,362. 10 Claims. (Cl. 179—27.)

8. In a telephone exchange system, a plurality of groups of trunks, operators' positions, one operator's device for each group of trunks in each of said positions, a group of switching devices common to said operators' devices, groups of trunk selecting switches, and means responsive to the actuation of any one of said operators' devices to select an idle switching device, to select a trunk selecting switch in a particular group and to select an idle trunk in said group.

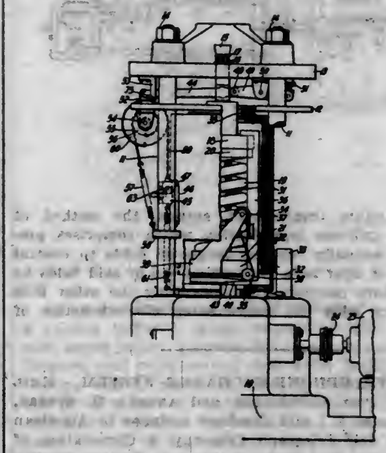
---



1,695,044. PROCESS FOR INCREASING THE ELECTRICAL CONDUCTIVITY AND THE FLEXIBILITY OF METALS OR ALLOYS. KARL HALLMANN, Munich, Germany. Filed Sept. 21, 1922, Serial No. 589,702, and in Germany Aug. 11, 1922. 2 Claims. (Cl. 148—11.)

1. The process for increasing the electrical conductivity and flexibility of aluminum alloys which consists in annealing aluminum alloys to recrystallisation temperatures, reducing their cross-section by treatment in the cold and heating them to temperatures between 160 and 200 degrees centigrade.

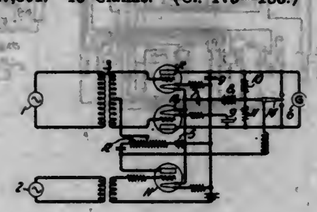
---



1,695,045. COLOR PHOTOGRAPHY AND THE LIKE. ARON HAMBURGER, London, England. Filed Mar. 5, 1923, Serial No. 623,020, and in Great Britain Mar 7, 1922. 31 Claims. (Cl. 95—2.)

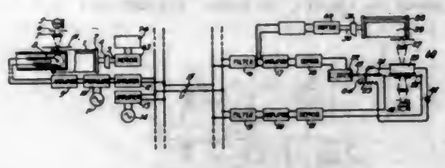
1. A transparent base having on one side a single film continuous tone positive image corresponding substantially to yellow and red sensations and on the other a single film continuous tone positive image corresponding substantially to green and blue-green sensations of the same object.

---



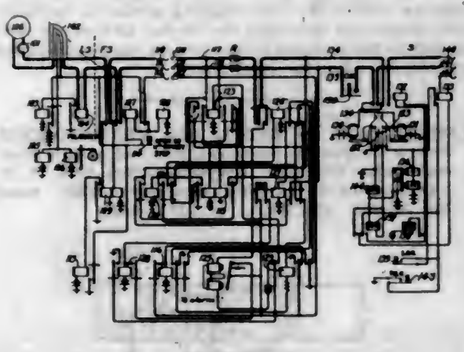
1,695,046. TESTING APPARATUS. CLAUDE L. HIPPENSTEEL, Elizabeth, N. J., assignor, by mesne assignments, to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 23, 1926. Serial No. 156,578. 5 Claims. (Cl. 265—2.)

1. A machine for indicating the penetrating effect of a conductor upon its surrounding insulation which comprises a pair of jaws for receiving the insulated conductor, means for slowly forcing one of said jaws toward the other to force the conductor into the insulation upon both sides thereof, means controlled by the movable jaw and means controlled by the conjoint movement of the movable jaw and by the force applying means for automatically graphically indicating the relation between the force applied to the insulated conductor and the penetration of the conductor into the insulation.



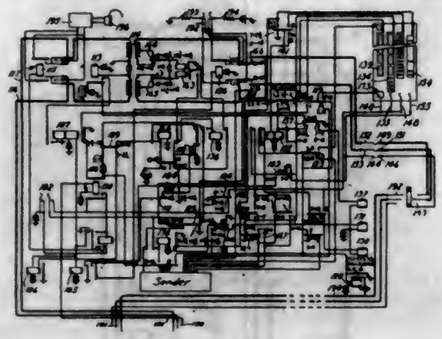
---

1,695,047. ART OF ELECTRICAL MEASUREMENTS. JOSEPH W. HORTON, Bloomfield, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 4, 1924. Serial No. 747,801. 45 Claims. (Cl. 175—183.)



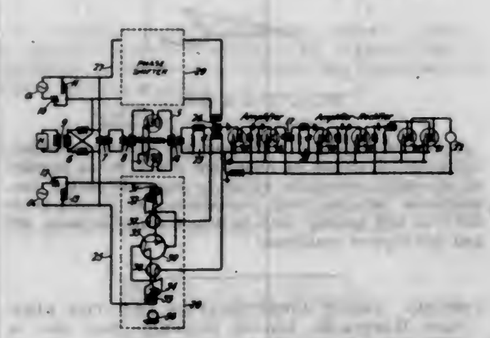
5. The method of magnifying minute potential variations using a rectifier whose impressed-potential-output-current characteristic curve over its conducting range progressively increases in slope with increasing impressed potentials which comprises boosting said minute variations by superposing thereon other variations of the same frequency, and rectifying and indicating said boosted minute variation.

1,695,048. PICTURE TRANSMISSION. HERBERT E. IVES, Montclair, N. J., assignor to Bell Telephone Laboratories, Incorporated, a Corporation of New York. Filed Dec. 24, 1925. Serial No. 77,466. 8 Claims. (Cl. 178—7.)



1. In a picture transmission system, the method of maintaining uniform reproduction which comprises producing two mutually reacting magnetic fields to control the passage of light rays, controlling one of said fields by received picture currents and controlling the other field in accordance with the transmission characteristics of the system.

1,695,049. TELEPHONE-EXCHANGE SYSTEM. EMIL JACOBSEN, Port Washington, and ARTHUR B. SPERRY, New York, N. Y.; said Jacobsen assignor to American Telephone and Telegraph Company, a Corporation of New York, and said Sperry assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 11, 1925. Serial No. 55,652. 7 Claims. (Cl. 179—9.)



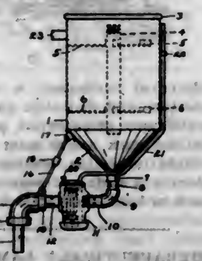
1. In a telephone exchange system comprising automatic switches employed for extending calls from one subscriber to another and call charging means automatically operable upon completion of such calls, intercepting operator position circuits to which certain calls are automatically extended, apparatus to disable the operating circuit for said call charging means, an intercepting operator's cord circuit, and means in said cord circuit automatically operable to operate said disabling apparatus.

1,695,050. PULSING SYSTEM. ERIC R. LUNDIUS, Richmond Hill, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 1, 1924. Serial No. 747,175. 8 Claims. (Cl. 179—175.)

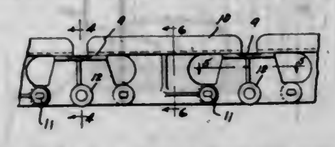
1. In a telephone exchange system, means for transmitting trains of impulses of various characteristics, said means comprising keys operable to vary the character of impulses in each train, relays progressively operable to establish circuit paths for the transmission of the individual impulses of each train and a step-by-step switch to control the progressive operation of said relays.

1,695,051. TRANSLATING CIRCUITS. WARREN A. MARRISON, East Orange, N. J., assignor, by mesne assignments, to Western Electric Company, Incorporated, a Corporation of New York. Filed May 6, 1925. Serial No. 28,309. 11 Claims. (Cl. 171—119.)

1. A phase shifter comprising an incoming circuit, an outgoing circuit, a plurality of fixed and rotatable coils, a resistance element, said coils and resistance being conductively connected to said incoming and outgoing circuits, a plurality of rotatable resistance contacts engaging said elements and means for rotating said resistance contacts simultaneously with said rotatable coils whereby a shift in phase can be obtained between the voltages in said incoming and outgoing circuits.



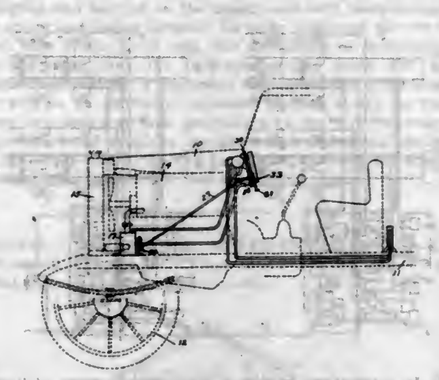
1,695,052. KNOCKDOWN FUSEE AND CARRYING CASE. WILLIAM C. MCMURRAY, Avalon, Pa. Filed Oct. 6, 1927. Serial No. 224,365. 3 Claims. (Cl. 246—188.)



1. A fusee formed of independent sections of combustible material, means for connecting the sections together so as to form a continuous fusee and a carrying case for holding the sections when separated.

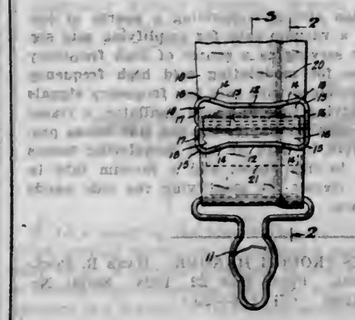
1,695,053. PORTABLE LIQUID-RECORDING FUNNEL. DANIEL G. MILLIGAN, Fort Wayne, Ind. Filed June 11, 1926. Serial No. 115,284. 1 Claim. (Cl. 226—29.)

A portable liquid measuring device comprising a container having a conical bottom, a handle secured to the container, a conduit mounted within the container and having screw threads at one end, a discharge conduit supported in the conical bottom and adapted to convey liquid supplied to the container through the first named conduit, a combined brace and handle connected to the container and to the discharge conduit, and recording mechanism interposed in the discharge conduit and operated by the liquid flowing through said conduit to record the quantity of said liquid.

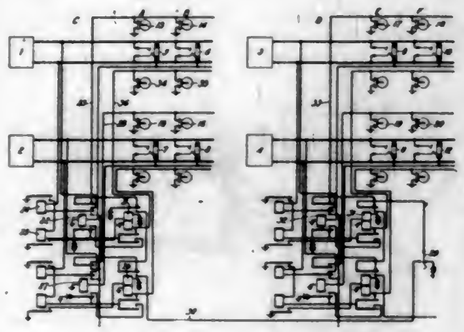


1,695,054. CONVEYER. HORACE H. MORGAN, Detroit, Mich., assignor to Palmer-Bee Company, Detroit, Mich., a Corporation of Michigan. Filed Nov. 22, 1926. Serial No. 149,991. 9 Claims. (Cl. 198—196.)

7. In a conveyer, a chain including conveyer supporting links and work engaging links pivotally connected to said first-mentioned links and supported thereby independently of the pivots.

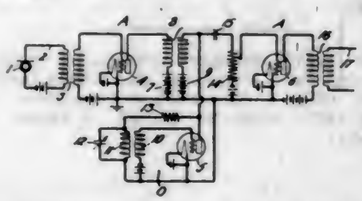


1,695,055. WATER-CIRCULATION-CONTROL MECHANISM FOR AUTOMOBILES. JOHN A. MORGAN, Los Angeles, Calif., assignor to The John A. Morgan Machinery Company, Los Angeles, Calif. Filed Jan. 29, 1923. Serial No. 615,639. 1 Claim. (Cl. 123—174.)



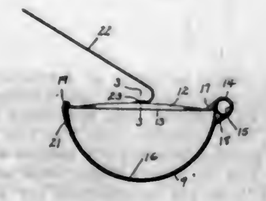
In an automobile, an engine including a water jacket a cooling radiator, means connecting said radiator and said water jacket, a power driven rotary pump interposed between said radiator and said water jacket in said connecting means, manually actuated means operable from the driver's seat for varying the action of the rotor of said pump whereby the water head delivered from said pump will be varied without changing the speed of said pump rotor.

1,695,056. SLIDE BUCKLE. CHARLES A. MOSGROVE, Waterbury, Conn., assignor to The Autoyre Company, Oakville, Conn., a Corporation of Connecticut. Filed Oct. 6, 1927. Serial No. 224,345. 5 Claims. (Cl. 24—200.)



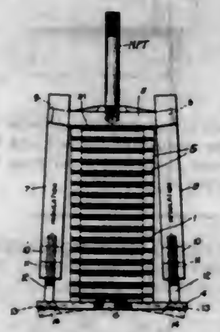
8. A slide buckle including an intermediate bar and side bars spaced laterally from the intermediate bar on the opposite sides thereof, said bars being connected by end bars at their opposite ends, the side bars having their central portions substantially parallel with the intermediate bar and at their opposite ends extending outwardly away from the intermediate bar to form open loops with the end bars and of greater width than the distance between the central portions of the bars.

1,695,057. TELEPHONE SYSTEM. PAUL B. MURPHY, Nyack, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed May 31, 1927. Serial No. 195,251. 10 Claims. (Cl. 179—41.)



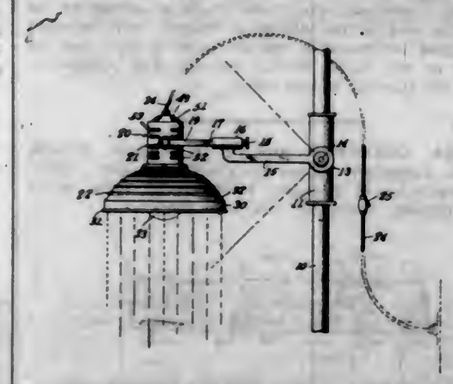
1. In a telephone system, a plurality of groups of lines normally functioning as individual units, each group having a signal normally actuated, and means for combining said groups to function as a single unit and restoring the signals in all but one of said groups.

1,695,058. HIGH-FREQUENCY SIGNALING. EUGENE PETERSON, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 15, 1923. Serial No. 680,810. 8 Claims. (Cl. 179—171.)



1. A transmission system comprising a source of low frequency signals, a vacuum tube for amplifying said signals, an oscillator serving as a source of high frequency oscillations, means for modulating said high frequency oscillations in accordance with said low frequency signals in both said amplifying tube and said oscillator, a transmission circuit, means for impressing the side bands produced by modulation in both of said modulating means upon said circuit in like phase, and a vacuum tube in said transmission circuit for amplifying the side bands impressed thereupon.

1,695,059. EAVES-TROUGH HANGER. HANS R. POULSEN, Lyme, Conn. Filed May 22, 1928. Serial No. 279,772. 2 Claims. (Cl. 108—29.)

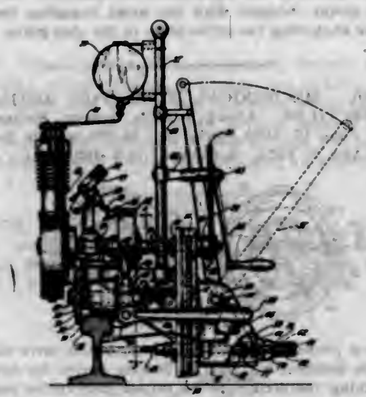


1. In an eavestrough hanger, the combination with a main hanger-member tapered from end to end and comprising a strap-portion and a bridge-portion, of a reinforce-member tapered from end to end, applied to the upper face of the bridge-portion of the said main hanger-member, than which it is wider, and having its opposite edges folded over the opposite edges thereof and upon the under-face thereof, and the said two members, as thus combined, being bent to form a loop at one end of the reinforce-member and at its opposite end a downwardly-turned hook slotted for the reception of the free end of the strap-portion of the main hanger-member.

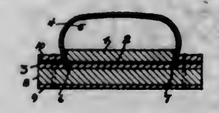
1,695,060. ELECTRICAL CONDENSER. WILLIAM H. PRIESS, Boston, Mass., assignor to Wireless Specialty Apparatus Company, Boston, Mass., a Corporation of New York. Filed Oct. 22, 1919, Serial No. 332,421. Renewed Sept. 26, 1925. 18 Claims. (Cl. 175—41.)

5. In an electrical condenser, a stack composed of sheets of conductors and dielectric and having its opposite ends at a difference of potential, pressure plates upon opposite ends of the stack one at least of said plates being springy, and rigid insulating tension means connecting said plates, whereby a spring pressure is exerted over the ends of the stack to hold said sheets together.

1,695,061. THERAPEUTICAL LAMP. FREDERIC W. ROBINSON and KENNETH V. KNAPP, Newark, N. J., assignors to Hanovia Chemical and Manufacturing Company, Newark, N. J., a Corporation of New Jersey. Filed May 12, 1927. Serial No. 190,668. 4 Claims. (Cl. 174—177.)

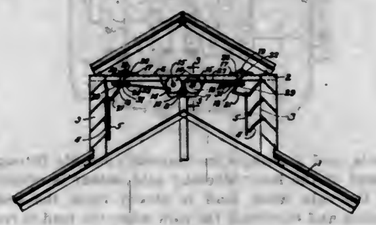


1. A therapeutic lamp reflector having a generally parabolic shape composed of a beaded cylindrical lower element,



a series of ten bands presenting faces disposed from the bottom to the top progressively at approximately the following angles: 45°—0′, 41°—42′, 38°—30′, 35°—3′, 31°—45′, 27°—59′, 23°—42′, 19°—41′, 14°—32′, 8°—21′, all of said angles being subtended from the axis of the reflector, and plain narrow cylindrical bands connecting between said angular bands, said cylindrical bands decreasing in width from the lowermost to the uppermost, and a cylindrically flanged opening at the top of the reflector, said elements being all of integral construction.

1,695,062. TRACK DRILL. ROBERT ROBTRON, Chicago, Ill., assignor to Crerar, Adams & Co., Chicago, Ill., a Corporation of Illinois. Filed Mar. 14, 1925. Serial No. 15,482. 6 Claims. (Cl. 77—8.)



1. In an apparatus for drilling tracks and the like, the combination of a main frame, a drill carried thereby, means for rotating said drill, a device for firmly holding said main frame and drill in operative position to the rail comprising a separate and independent carriage, said carriage and main frame having complemental adjustably connectable parts for permitting their relative vertical adjustment, said carriage having a plate adapted to lie on one side of the rail and having the lower portion thereof adapted to grip the side of said rail, said plate having laterally extending rods formed with bearing members, shafts passing through said bearing members and plate, rollers on said shafts, said rollers adapted to rest upon the top of said rail, a shaft carried by said bearing members and lying transversely to said first-mentioned shafts, complemental rail clamping members carried by said last-named shaft, and means for angularly moving said last-named shaft to cause said complemental rail clamping member to grip said rail.

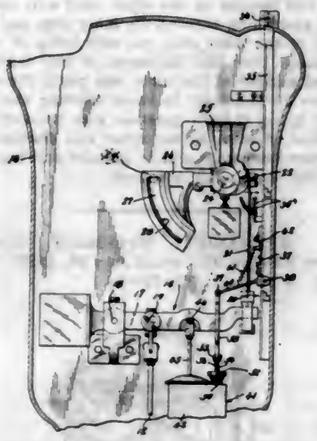
1,695,063. SHOE. THOMAS SAMANITI, Brooklyn, N. Y. Filed Nov. 26, 1927. Serial No. 236,001. 1 Claim. (Cl. 36—16.)

A stitch-down shoe including an outer and an intermediate sole, an inner sole secured thereto and constructed of relatively thick high grade leather to provide a substantially rigid marginal edge, an upper and a lining overlying the marginal edge of the inner sole and both deflected laterally therefrom in contact with and extending to the edge of the intermediate sole, means for securing the upper and lining to the intermediate sole, and a welt secured to the intermediate and outer soles and overlying and bearing on the upper, said welt compressing the upper and lining between its inner edge and the marginal edge of the inner sole, the welt being of materially less thickness than the thickness of the inner sole to utilize that portion of the inner sole above the surface of the welt as an abutment to resist bending strain on the upper and lining at their juncture with the welt, whereby to avoid loss of shape in the upper and disrupting strain on the upper fastenings and to prevent opening the seam between the upper and the welt.

1,695,064. MECHANICAL MOVEMENT. RAYMOND D. SCHNOOR, Chicago, Ill. Filed July 28, 1923. Serial No. 654,335. 5 Claims. (Cl. 74—14.)

1. A device of the character described including two reciprocable members, a revoluble operating member, and means whereby either of said reciprocable members may be positioned at either end of its stroke while the other reciprocable member is at either end of its stroke by angular adjustment of the operating member including two crank pins operated therefrom and connected with respective reciprocable members for controlling the stroking thereof and timed to act sequentially thereon.

1,695,065. WASHING MACHINE. SIMON E. SCHROEDER, Newton, Iowa, assignor, by mesne assignments, to Automatic Washer Company, Newton, Iowa, a Corporation of Delaware. Filed Aug. 21, 1926. Serial No. 130,624. 2 Claims. (Cl. 74—14.)



2. In a washing machine having an upwardly movable cover, driving mechanism comprising a rack disposed above said cover, a pitman arranged to reciprocate said rack, a downwardly extending hook on said rack having its forward end beveled, a transverse member on said pitman constructed and arranged to engage the beveled end of the hook to raise it, and a spring urging said rack downwardly to cause the hook to engage the transverse member.

1,695,066. COIN-TRIP MECHANISM FOR PERSONAL WEIGHING SCALES. LOUIS S. SHIVELY, St. Louis, Mo., assignor to The Weightograph Company, St. Louis, Mo., a Corporation of Missouri. Filed Sept. 10, 1925. Serial No. 55,591. 9 Claims. (Cl. 194—6.)

1. In a personal weighing scale, the combination of weighing mechanism including a lever, indicating mechanism including illuminated projecting means, a coin chute having

spaced electric terminals therein, in circuit with the illuminating means, said circuit being adapted to be closed by a coin inserted in said chute, a detent operable in said chute to retain and release the coin from a position between said

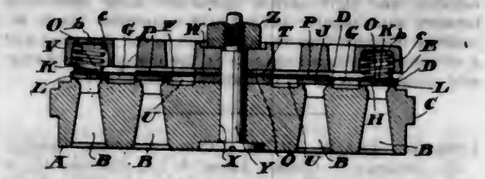
terminals, and a dashpot mechanism operable through the movement of the lever whereby said detent is operated to retain the coin when load is placed upon the weighing mechanism and to release the coin when the load is removed from said weighing mechanism.

---

1,695,067. METHOD OF MAKING FINGER RINGS. ABRAHAM SUDEROV, New York, N. Y. Filed Sept. 19, 1925. Serial No. 57,313. 2 Claims. (Cl. 29—160.6.)

1. The method of forming finger rings which includes cutting sheet material into units with a blanking die, pressing each of said units into semi-annular configuration with a forming die, then oppositely positioning two of said units with their ends abutting and while so positioned securing the adjacent ends of the units together to form an annulus.

---



1,695,068. METHOD OF PRODUCING ELEMENTAL SULPHUR. ALFRED PAUL THOMPSON, Jackson Heights, N. Y., assignor to General Chemical Company, New York, N. Y., a Corporation. Filed Dec. 16, 1926. Serial No. 155,349. 9 Claims. (Cl. 23—226.)

1. In the process of producing elemental sulphur by the reduction of sulphur dioxide with solid carbonaceous fuel, the step of simultaneously causing an endothermic reaction substantially free from hydrogen in any form whereby the temperature of the reduction process is controlled.

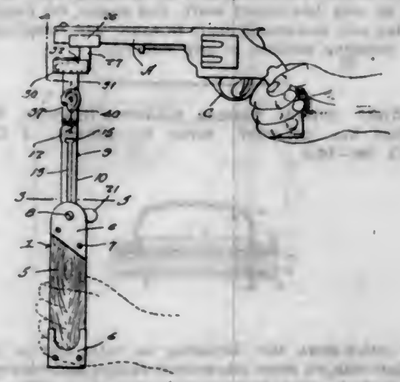
---

1,695,069. PLATE VALVE. GROVER G. TUTTLE, Phillipsburg, N. J., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Oct. 14, 1925. Serial No. 62,402. 2 Claims. (Cl. 251—119.)

1. A plate valve comprising a valve seat, a valve plate adapted to seat on said valve seat, a stop plate for limiting the opening of the valve plate, a guide plate having concentrically arranged annular solid portions, arms connecting said portions, said arms being flexible to permit relative longitudinal movement of the portions, a flange on the guide plate to engage an edge of the valve plate

for guiding said valve plate, springs between the stop plate and the guide plate actuating the outer annular portions for pressing the valve plate on the valve seat, and flexible means integral with the arms engaging the stop plate for anchoring the guide plate to the stop plate.

---



1,695,070. MECHANICAL FUSE FOR ARTILLERY PROJECTILES. ANDRÉ VARAUD, Geneva, Switzerland. Filed June 17, 1925, Serial No. 37,008, and in Switzerland Aug. 2, 1923. 5 Claims. (Cl. 102—36.)

1. In a projectile of the type described, a drive shaft, a revoluble member, a striker, a locking device for normally maintaining the striker in an initial inoperative position, means connecting the drive shaft and revoluble member whereby when the drive shaft is turned in one direction the revoluble member is turned to a set position and when the drive shaft turns in the opposite direction the revoluble member is turned thereby a predetermined portion of a revolution in the other direction to determine the moment of release of the striker, means for normally maintaining the locking member out of contact with the revoluble member until just before the release of the striker, and means for actuating the locking member causing the same to co-operate with the revoluble member for the release of the striker.

---

1,695,071. ATTACHMENT FOR REVOLVERS. ANTONIO MARIANO VILLALPANDO, Mexico City, Mexico. Filed Mar. 5, 1928, Serial No. 259,276, and in Mexico Mar. 18, 1927. 5 Claims. (Cl. 42—72.)

1. In an attachment for revolvers, the combination of a bracket secured on the barrel, a handle secured at one end

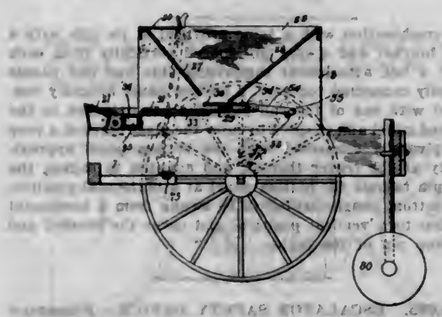
to the bracket for swinging movement beneath the barrel, cooperating means between the bracket and the handle for locking the handle in a rigid vertical position, and additional means carried by the handle for cooperation with the trigger guard to hold the handle in a folded position.

---

1,695,072. SEAT CUSHION. HARRY G. WEDLER, St. Louis, Mo., assignor to The Wedler-Shuford Co., St. Louis, Mo., a Corporation of Missouri. Filed May 29, 1926. Serial No. 112,565. 5 Claims. (Cl. 155—180.)

1. A transversely and longitudinally flexible cushion comprising coiled springs, a fibrous non-metallic textile case confining said springs and extending across the opposite ends of said springs, straw matting secured around said case opposite both ends of said springs, and an outer fibrous non-metallic textile case enclosing all of said parts.

---



1,695,073. GASKET. EDWARD J. WIRFS, Jr., Glendale, Mo., assignor to E. J. Wirfs Organization, Inc., St. Louis, Mo., a Corporation of Missouri. Filed Nov. 8, 1926. Serial No. 147,079. 3 Claims. (Cl. 20—69.)

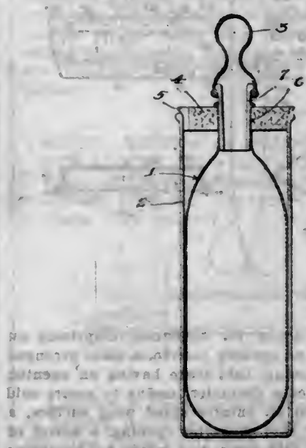
1. A gasket comprising, a roll, an envelope enclosing said roll and having its free edges extended to provide a tacking lap and an inside line of stitches passing through the envelope plies along said roll and adapted to confine the same in order to provide a tight but yielding packing, said plies being adhesively secured together beyond said line of stitches in order to stiffen the tacking lap.

---

1,695,074. PLANTER. BENJAMIN ZENDRON, Craig, Colo. Filed Oct. 8, 1927. Serial No. 224,848. 6 Claims. (Cl. 221—135.)

4. In a planter, the combination of a hopper, a seed-depositing mechanism at the rear and at one side of the hopper, means for feeding seed forwardly from the hopper, and conveyers arranged in advance and at the side of the hopper for transferring seed from said feeding means to the seed-depositing mechanism.

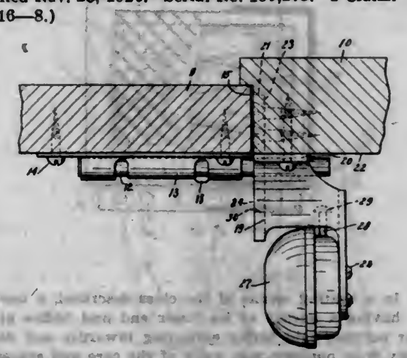
---



1,695,075. ROLLER FOR CONVEYERS. EARL W. ZIMMERMAN, Syracuse, N. Y. Filed July 15, 1926. Serial No. 122,653. 1 Claim. (Cl. 193—37.)

A conveyer comprising a series of rollers, each roller having an eccentric weight on one side of its axis.

---

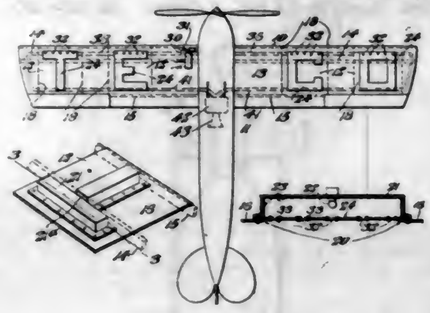


1,695,076. LIQUID CONTAINER, NURSING BOTTLE. LUDWIG ALVINE ZOHE, Syracuse, N. Y. Filed Oct. 13, 1925. Serial No. 62,239. 2 Claims. (Cl. 215—11.)

1. A container of the class described comprising an outer rigid receptacle, a flexible collapsible inner receptacle for receiving a liquid, each receptacle being complete in itself and the outer receptacle completely housing the inner receptacle, a detachable closure for the outer receptacle and the inner receptacle having an outlet at one end carried by said closure.

---

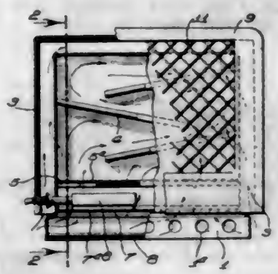
1,695,077. COMBINED DOOR FASTENER AND ALARM. ARNOLD ZUKOR and HANS IRMSCHER, New York, N. Y. Filed Nov. 23, 1926. Serial No. 150,275. 1 Claim. (Cl. 116—8.)



The combination with a door frame and a door hinged thereto, of a longitudinally shiftable latch bolt on said door, a keeper on said frame provided with a horizontal slot through which said bolt is adapted to be projected,

said bolt engaging in its projected position the inner edge of said slot when said door is in its closed position, said slot permitting of a limited opening of said door when said bolt is projected into said slot, a bell mounted upon said keeper, and releasing means for said bell including a shiftable plunger trip provided with a head, said head facing the inner face of said door frame and projecting beyond the outer edge of said slot whereby said bolt is adapted to contact with said head before it strikes against the outer edge of said slot.

---



1,695,078. AIRPLANE ADVERTISING DEVICE. LEO BARKER, Wayne, Pa., assignor to Starlighters, Inc., Philadelphia, Pa., a Corporation of Delaware. Filed Feb. 4, 1928. Serial No. 251,811. 8 Claims. (Cl. 40—127.)

1. An illuminated device for airplanes comprising an airplane wing having an opening therein, a plate arranged to fit within said opening, said plate having an opening therein in the shape of a character, means to secure said plate in place to form an uninterrupted wing surface, a transparent cover for said character opening, a source of light for illuminating said cover, and means for absorbing all light rays except those to be transmitted directly through said cover from said source of light.

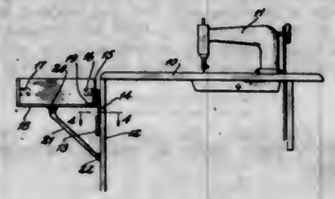
---

1,695,079. ROOM HEATER. GEORGE E. BARNHART, Los Angeles, Calif. Filed May 11, 1927. Serial No. 190,619. 8 Claims. (Cl. 126—90.)

2. In a heating means of the class described, a heating core having a burner at its lower end and baffles at its upper portion, said baffles extending inwardly and downwardly from opposite side walls of the core and spaced at their inner ends from the opposite wall, said baffles being channel shaped with the portions intermediate the edges lower than the edges whereby the hot gases from said burner are directed toward the side wall of the core.

1,695,080. PERMUTATION LOCK. HARRY A. BARRETT, Philadelphia, Pa., assignor to Barrett Lock Company, Inc., a Corporation of Delaware. Filed May 13, 1925, Serial No. 29,886. Renewed May 19, 1928. 3 Claims. (Cl. 70—112.)

1. In a lock of the character stated a casing having fixed therein radially disposed guides having opposed grooved faces, a plurality of tumbler rings rotatably fitted to said grooves, each ring having an inner projection and an outer notch, a knob, a rotatable post operative through said rings and fixed to said knob, for engaging with said projections, a shackle, and a pivotal dog one end of which is adapted to ride upon the peripheries of said rings and the opposite end of which is for engaging said shackle.



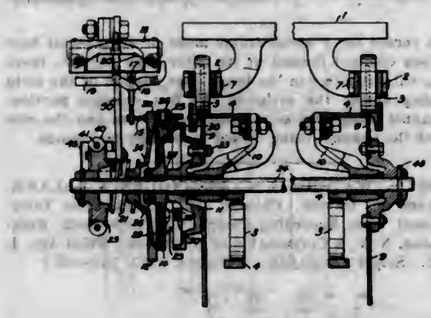
---

1,695,081. FERTILIZER. GEORGE BARSKY, New York, N. Y., and FREDERICK W. FREISE, Palmyra, N. J., assignors to American Cyanamid Company, New York, N. Y. Filed June 25, 1923. Serial No. 647,764. 19 Claims. (Cl. 71—6.)

2. A method of producing a fertilizer material, which comprises bringing the proteins of nitrogenous organic industrial waste into combination with free cyanamid in presence of sulphuric acid; substantially as described.

---

1,695,082. SEWING-TABLE ATTACHMENT. CHRISTIAN BITZER, New York, N. Y. Filed Feb. 3, 1926. Serial No. 85,690. 1 Claim. (Cl. 45—75.)

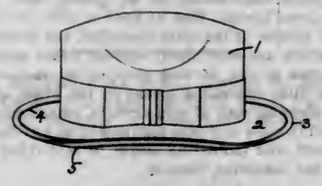


In combination with a table provided at its side with a pleat bracket and a stop pin spaced vertically from each other, a box attachment comprising side and end panels hingedly connected together, a bottom panel hingedly connected with one of the end panels, a bar attached to the said end panel and adapted to enter the pleat bracket, a prop arm pivotally connected with the bottom panel approximately at the center thereof, and adapted to engage the stop pin to hold the bottom panel at a horizontal position, said bottom panel adapted to be swung from a horizontal position to a vertical position, and cover the bracket and the stop pin of the table.

---

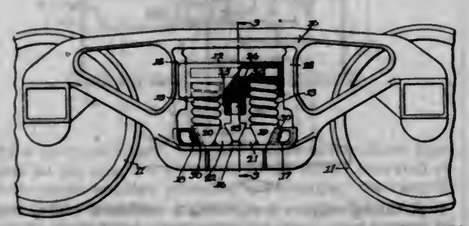
1,695,083. ESCALATOR SAFETY DEVICE. FREDERICK WILLIAM BLACKBURNE, London, England, assignor to Otis Elevator Company, New York, N. Y., a Corporation of New Jersey. Filed Nov. 30, 1926, Serial No. 151,701, and in Great Britain Sept. 25, 1926. 6 Claims. (Cl. 198—232.)

1. An escalator safety device, comprising a pair of revoluble discs driven by the respective escalator chains, said discs being mounted coaxially, a third disc mounted beside said pair of discs, means for displacing said third disc laterally in the event of rotation of said pair of discs relatively to one another, said means including an unequal-



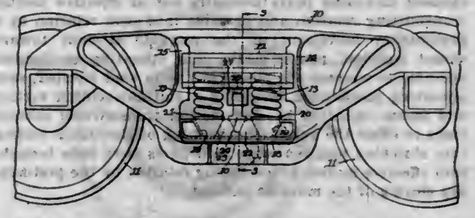
armed lever fulcrumed upon one and engaged by its shorter arm with the other of said pair of discs and having its longer arm adapted to bear against a side face of said third disc, and means for interrupting the drive upon resulting lateral displacement of said third disc.

---



1,695,084. HAT WELT AND PROCESS OF FORMING SAME. WILLIAM BUSOLD, West Orange, N. J., assignor to The Trimble Hat Company, Orange, N. J., a Corporation of New Jersey. Filed Aug. 10, 1927. Serial No. 211,906. 2 Claims. (Cl. 2—178.)

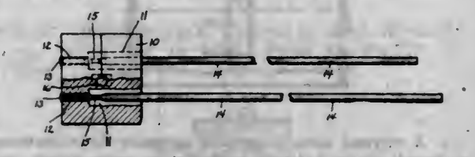
1. A felt hat having a brim, a welt around the edge of said brim, and a permanent groove in the side of the brim opposite the welt, the grooved portion of the brim being shrunk and having greater rigidity than the remaining portion of the brim, the welt side of the brim being smooth from the welt to the crown.



---

1,695,085. RAILWAY-CAR TRUCK. JAMES R. CARDWELL, Chicago, Ill. Filed Aug. 31, 1927. Serial No. 216,511. 17 Claims. (Cl. 105—197.)

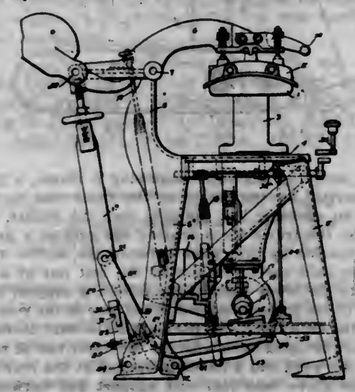
1. In a car truck, a side frame comprising a pair of columns and a tie member uniting the lower ends thereof, a bolster slidably engaging the columns, springs supporting the bolster, and a system of wedging elements interposed between the bolster and frame and carrying the springs.



1,695,086. RAILWAY-CAR TRUCK. JAMES R. CARDWELL, Chicago, Ill. Filed Aug. 31, 1927. Serial No. 216,512. 4 Claims. (Cl. 105—197.)

1. In a car truck, an end frame, a bolster, springs for supporting the bolster, a pair of wedge blocks having backwardly and upwardly inclined wedging faces carried by the frame, means connecting such blocks together to resist spreading stresses, double faced wedging elements engaging such faces and forming seats for the springs, a pair of triangular wedge blocks each engaging a face of the last named blocks, and a spreading wedge interposed between the triangular blocks and having a stem engageable by the bolster.

---

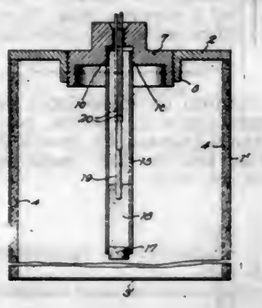


1,695,087. METHOD OF PRODUCING GONG STANDS FOR CLOCKS. ELOF L. CARLSON, Bristol, Conn., assignor to The E. Ingraham Co., Bristol, Conn., a Corporation. Filed Jan. 20, 1928. Serial No. 248,085. 1 Claim. (Cl. 29—177.)

A method of producing cast-metal gong-stands consisting in forming the clearance-chamber of the stand by coring the same concurrently with casting the stand and then subjecting the cored stand to a drilling operation for producing an anchoring-bore extending axially from the bottom of the clearance-chamber through the opposite wall of the stand to provide for the drive-fit insertion of the anchoring-tang of the said gong.

---

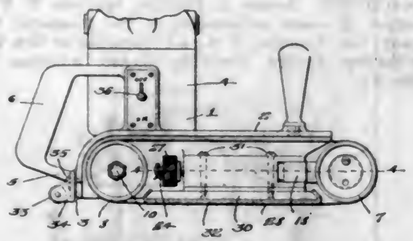
1,695,088. OPERATING MECHANISM FOR PRESSING MACHINES. ALBERT B. CLIASSON, Syracuse, N. Y., assignor, by mesne assignments, to The Prosperity Company, Inc., Syracuse, N. Y., a Corporation of New York. Filed Sept. 4, 1924. Serial No. 735,840. 8 Claims. (Cl. 68—9.)



1. In a pressing machine, the combination of coacting pressing elements, one movable toward and from the other,

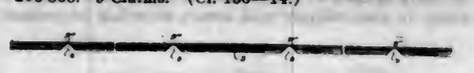
actuating mechanism for the movable element including an intermittently movable power member, motion transmitting connections between the power member and the movable element including parts normally out of effective motion transmitting relation and movable into such relation by a preliminary movement of the movable element toward closed position, power means and operating mechanism operable to connect the power means to said member, said operating mechanism including a shiftable clutch section and means operated by said motion transmitting connections to effect the automatic throwing of the clutch section into clutching position when said parts have been brought into effective motion transmitting relation by the preliminary closing of the movable element.

---



1,695,089. THERMAL MINE. JOHN H. DEPPELER, Weehawken, N. J., assignor to The Heat Research and Service Corporation, Wilmington, Del., a Corporation of Delaware. Filed Nov. 2, 1926. Serial No. 145,866. 3 Claims. (Cl. 102—7.)

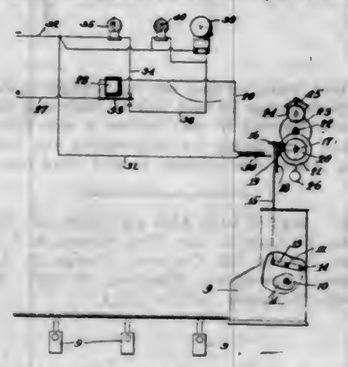
1. A thermal mine comprising a casing for containing a thermit charge having a body portion comparatively unaffected by the heat of the thermal reaction and a bottom which burns out and releases the charge when the reaction is complete.



---

1,695,090. ABRADING MACHINE. ARTHUR N. EMMONS, Nedrow, N. Y., assignor to The Porter-Cable Machine Company, Syracuse, N. Y., a Corporation of New York. Filed Dec. 30, 1926. Serial No. 158,062. 2 Claims. (Cl. 51—170.)

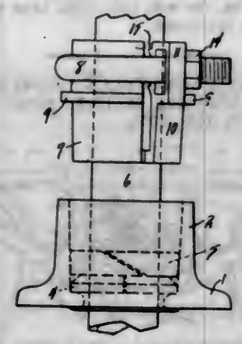
1. An abrading machine comprising a frame, a pair of rollers carried by the frame at the front and rear ends thereof, an abrading belt movable over the rollers, means carried by the frame for actuating the rollers, a pressure member carried by the frame between the rollers and arranged to hold the lower run of the belt out of a plane tangent to the lower sides of the rollers, a support for the rear end of the frame arranged in the rear of the rear roller to hold the roller and the portion of the belt thereon off the surface being finished whereby the lower run of the belt rests on the work and a handle arranged at the rear end of the frame above said rear end support and between the lateral sides of the frame, the front end of the frame being unsupported except by the intermediate run of the belt on the surface being finished.



1,695,091. VENTILATING SCREEN. HARRY H. EVERHARD, Canton, Ohio. Filed July 19, 1927. Serial No. 206 866. 9 Claims. (Cl. 156—14.)

8. A corner for a metal frame made of strip metal having a box channel formed at its outer edge portion, there being a cut-out miter in the inner edge portion of the strip extending across the strip to the box channel portion, the channel being bent at said mitered points and the side walls of the channel being folded inward at said bends.

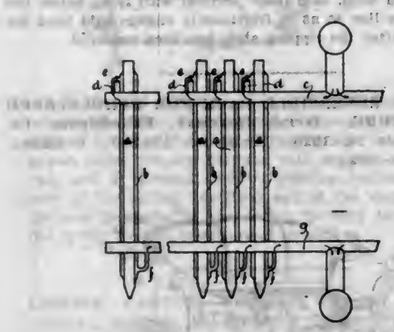
---



1,695,092. WATCHMAN'S DELINQUENCY ALARM. EDWARD F. GRIGER, Chicago, Ill., assignor to International Time Recording Company of New York, Binghamton, N. Y., a Corporation of New York. Filed Apr. 4, 1925. Serial No. 20,612. 7 Claims. (Cl. 161—23.)

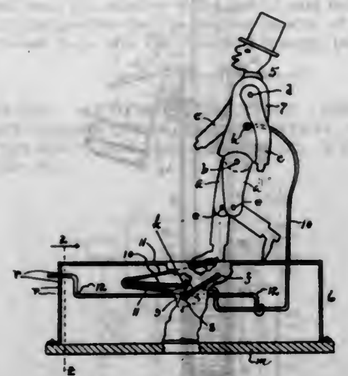
1. In a system of the class described, the combination of circuits which are continually excited under normal conditions, means in one of said circuits for indicating their condition, time controlled means in the other of said circuits for opening both of said circuits, means controlled by one of said circuits and said last named means for closing a third circuit, and indicating means in said third circuit to indicate the condition thereof.

---



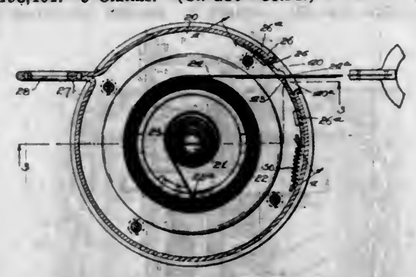
1,695,093. TUBING SUPPORT. ELLIS GREEN, Tulsa, Okla., assignor of one-half to L. A. Green, Tulsa, Okla. Filed June 24, 1926. Serial No. 118,329. 6 Claims. (Cl. 166—14.)

1. A tubing support comprising a combined tubing ring and stuffing box, a spreader supported in said ring and provided with a V-shaped upper side, a packing ring mounted on said spreader, slips mounted on a well tubing and provided with a peripheral rib adapted to rest on the upper edge of said stuffing box and said slips being adapted to engage said packing ring to force the same down on said spreader for sealing purposes, and means for binding said slips on said tubing.



1,695,094. APPARATUS FOR THE MANUFACTURE OF ARTIFICIAL SILK. NICOLAS BENOIT GRILLET, Neuilly, France, assignor to Société pour la Fabrication de la Soie "Rhodiaseta," Paris, France. Filed Sept. 24, 1926, Serial No. 137,627, and in France Oct. 1, 1925. 6 Claims. (Cl. 18—8.)

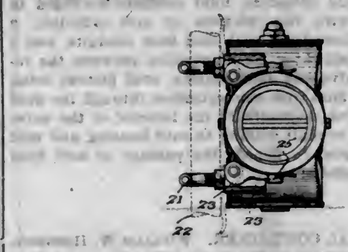
1. In the manufacture of artificial threads by "dry spinning", means for adjusting uniformly the temperature of the gaseous atmosphere in all the cells by means of temperature-controlling elements connected in parallel and identical for all the cells, means being provided for producing a fall of pressure, identical in each temperature-controlling element, by devices, interchangeable but not individually adjustable, identical for all temperature-controlling elements, causing a substantial loss of head thereat, the said temperature-controlling elements of individual cells being connected in parallel between main piping designed for a rate of flow of the temperature-controlling fluid greatly in excess of that required, so as to render the loss of head in said pipings negligible.



---

1,695,095. MECHANICAL TOY. GEORGE N. HALL, Los Angeles, Calif. Filed Apr. 29, 1925, Serial No. 26,798. Renewed Apr. 26, 1928. 1 Claim. (Cl. 46—40.)

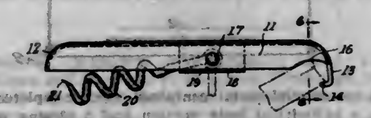
In a mechanical toy, a support, a revoluble shaft journalled on the support, a ratchet wheel rigidly mounted on the shaft, an angular operating-bar engaging the ratchet-wheel and extending upwardly through the support, resilient means for maintaining normal engagement of the operating-bar with the teeth of the ratchet-wheel, a display object movable with said bar, the teeth of the ratchet-wheel being of varying lengths for causing the operating-bar to move at varying distances at each rotation of the shaft, and a rock-lever engaging the operating-bar and adapted to be adjusted for disposing the operating-bar at selected distances radially of the ratchet-wheel.



1,695,096. VEHICLE TOWING DEVICE. JOHN W. HANSEN, Chicago, Ill. Filed May 23, 1927. Serial No 193,401. 9 Claims. (Cl. 280—33.14.)

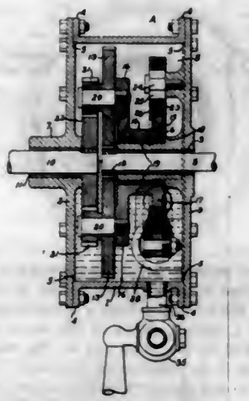
1. A vehicle towing device comprising in combination, a casing adapted to be attached to one of the vehicles; a stud fixed in the casing, a hollow spool mounted rotatably on the stud; a spring coiled in the spool cavity secured at its inner end to the stud and at the outer end to the spool, whereby it is adapted to be coiled by the rotation of the spool in one direction and to react for rotating the spool in the opposite direction; a flexible metal towing strap adapted to be coiled on the spool and having the inner end secured thereto for being so coiled by the rotation of the spool in said opposite direction, the outer end of the strap being extended out through the periphery of the casing, and means carried by said outer end for engaging the other vehicle.

---



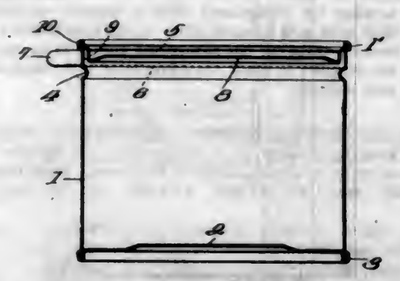
1,695,097. HOSE NOZZLE. MILTON H. HART, Hartford, Conn. Filed Aug. 10, 1923. Serial No. 656,727. 1 Claim. (Cl. 248—29.)

A hose nozzle comprising, in combination, a base member, similar lateral hooks rigidly mounted on opposite sides of the base member in spaced parallel relation and projecting in the same direction beyond another side of said base member for engagement with a support, supporting bars rigid with said opposite sides of the base member and cam levers pivoted on the supporting bars and engageable with the support to draw the hooks into firm engagement with said support.



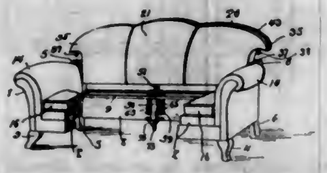
---

1,695,098. BOTTLE-OPENING IMPLEMENT. WILLIAM C. HIERING, Newark, N. J., assignor to J. E. Mergott Co., Newark, N. J., a Corporation of Delaware. Filed Dec. 30, 1926. Serial No. 157,894. 4 Claims. (Cl. 65—48.)



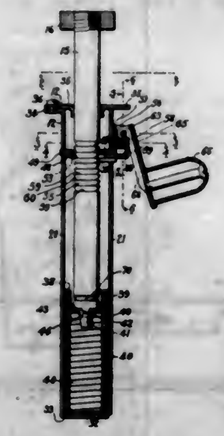
1. A foldable corkscrew comprising a channel shaped handle of U-shaped cross section having parallel sides and closed ends, a split tube intermediate the length of said handle, a wire corkscrew having a shank provided with a coiled eye at one end, a rivet passing through said handle and tube on which the eye is pivoted, and a longitudinal cam slot in said tube for holding the cork-screw rigidly when extended at a right angle thereto and to be accessible when folded lengthwise of said handle.

1,695,099. VARIABLE-SPEED DEVICE. EUGENE S. HIGHT, Peoria, Ill. Filed Jan. 2, 1925. Serial No. 188. 2 Claims. (Cl. 74—34.)



1. A variable speed device comprising a housing, a drive shaft, a driven shaft, planetary gearing whereby motion may be transmitted from said drive shaft to said driven shaft, a rotatable member associated with said planetary gearing, an eccentric associated with said rotatable member, a pivoted eccentric strap cooperable with said eccentric, and fluid-controlled means cooperable with said pivoted eccentric strap for retarding the operation thereof, said fluid-controlled means comprising a pair of oppositely disposed cylinders, pistons arranged for reciprocation within said cylinders, fluid conduits arranged in communication with the interiors of said cylinders, a three-way valve associated with said fluid conduits, and a fluid conduit establishing communication between the interior of said valve and said housing, said pistons being adapted to force fluid from said cylinders through the fluid conduits associated therewith to the interior of the valve and through the conduit leading to said housing and said valve being adapted to impede the passage of said fluid through said conduits.

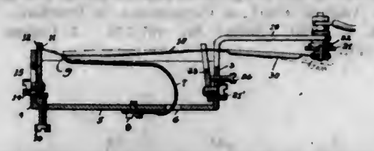
1,695,100. METAL CONTAINER. WILLIAM W. HODGSON, Chicago, Ill., assignor to Continental Can Company, Inc., New York, N. Y., a Corporation of New York. Filed June 17, 1925. Serial No. 37,750. 2 Claims. (Cl. 220—54.)



1. A commercial metal container when completed comprising a cylindrical body portion and a closing end secured thereto by a double seam, said body portion having an inwardly projecting semi-circular bead in the wall thereof, said bead being spaced from the upper end of the body portion and beginning at a point in the cylindrical wall and extending continuously on the arc of a circle inwardly, upwardly and outwardly and terminating in said cylindrical wall, said body having parallel score lines between the bead and the upper end thereof forming a ripping strip having a projecting tongue to aid in tearing the metal along the score lines, one of said score lines being disposed just below the double seam and the other just above the upper edge of said bead, said closing end having a depressed portion providing an inset vertical wall, the diameter of which is slightly greater than the inner diameter of said bead, said inset vertical wall lying below the upper score line so as to frictionally engage said bead for reclosure after the ripping strip has been removed.

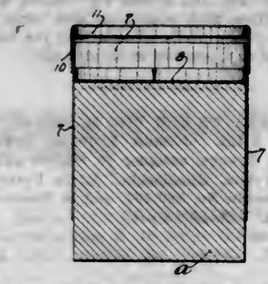
1,695,101. REVERSIBLE BACK FOR UPHOLSTERED FURNITURE. IRVING HOFFMAN, Philadelphia, Pa. Filed July 24, 1926. Serial No. 124,590. 6 Claims. (Cl. 155—183.)

1. A chair or sofa comprising a body forming a seat, posts rigidly secured to the body at the rear corners of the seat, a back positioned between said posts, a shaft upon said body positioned parallel with said posts upon which shaft said back is mounted, means permitting said back to be rotatably mounted relatively to said posts, means whereby said back is adapted to be raised or lowered relatively to the body, and fastening devices upon said posts and said back adapted to interlock when said back is depressed.

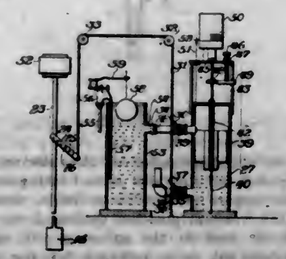


1,695,102. BEARING FOR REVERSIBLE FURNITURE BACKS. IRVING HOFFMAN, Philadelphia, Pa. Filed Dec. 20, 1926. Serial No. 155,829. 6 Claims. (Cl. 155—183.)

1. A bearing member for a reversible back of an article of furniture, comprising a casing adapted to be rigidly secured to the body of the furniture, a shaft slidably and rotatably mounted in said casing upon which said back is mounted, a follower plate slidably mounted in the casing, means associated with the shaft and the follower plate tending to engage the shaft when in a certain radial position, means for holding the follower plate against rotation in the casing and a spring for supporting said follower plate.

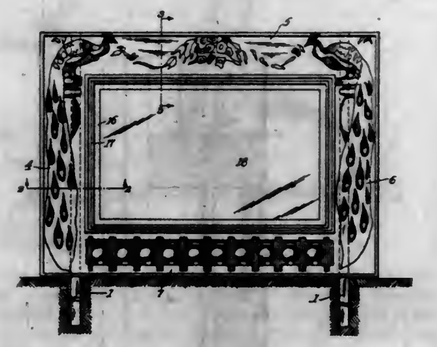


1,695,103. THERMOELECTRIC SWITCH. ARLEY U. HOOK, New Washington, Ohio. Filed May 16, 1927. Serial No. 191,854. 3 Claims. (Cl. 200—138.)



1. A thermal switch having a spring fixed at one end and free at the other, the free end carrying a contact, and a support between the ends of the spring, the spring being bowed under tension between said support and the fixed end, and a thermal element bearing against the bowed part of the spring, the fixed end of the spring being adjustable crosswise of the spring to vary the pressure of the spring against the thermal element.

1,695,104. CARTON. BURTON L. HUNTLEY, Minneapolis, Minn., assignor to Speedpak Dispenser Corporation, Minneapolis, Minn., a Corporation of Delaware. Filed Oct. 4, 1926. Serial No. 139,385. 2 Claims. (Cl. 229—7.)



1. A carton comprising a cylindrical body open at both ends, and cap-like covers detachably telescoped around and onto the ends of said cylindrical body, at least one of said covers comprising an annular rim portion telescoped onto the exterior of the end of said body and having a displaceable disc-like portion capable of being readily forced from said rim into and through said body.

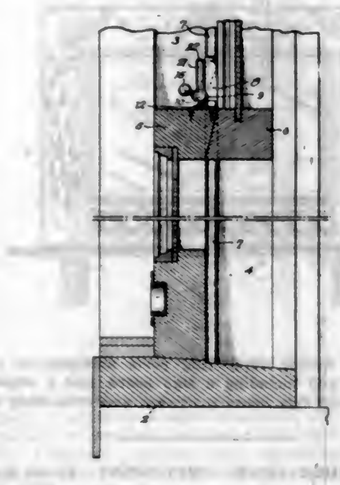
1,695,105. AUTOMATIC CONTROL MEANS FOR QUENCHING COKE. CHARLES HYMAN, Gary, Ind. Filed Jan. 7, 1924. Serial No. 684,872. 2 Claims. (Cl. 137—78.)

1. The combination with a water main having a master valve, of a pilot valve having an inlet connection with the main and outlet connections leading to opposite sides of the master valve, a solenoid connected to the pilot valve, a float chamber, supply and outlet valves for the float chamber, means actuated by the solenoid for alternately opening and closing the valves of the float chamber, a float in the float chamber, a switch for controlling the solenoid, and means actuated by the float for controlling the switch.

1,695,106. OUTDOOR ADVERTISING SIGN. GORDON S. JOHNSON, Wheaton, Ill., assignor to General Highways System, Incorporated, Chicago, Ill. Filed June 30, 1924. Serial No. 723,356. 5 Claims. (Cl. 40—125.)

1. A sign having supporting posts arranged at each side thereof and including a sign board, and a separate border for said sign board overlying and concealing said posts.

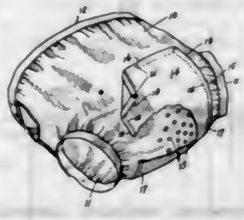
1,695,107. THERAPEUTIC IMPLEMENT. FRANZ KAHL, Berlin, Germany, assignor of six-tenths to Willi Landau, Berlin, Germany. Filed July 20, 1927, Serial No. 207,205, and in Germany Nov. 24, 1926. 6 Claims. (Cl. 174—177.)



1. A nasal treatment implement comprising a handle, two sockets pivoted to said handle in juxtaposition, a low voltage heating resistance applicator in each socket and means for connecting said sockets to a source of current.

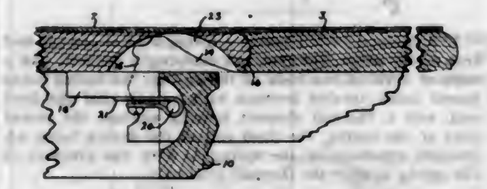
1,695,108. WINDOW FASTENER. LOUIS FREDERICK KLOOZ and MANNING F. HATCHER, Pittsburgh, Pa. Filed Nov. 10, 1926. Serial No. 147,429. 2 Claims. (Cl. 292—228.)

1. The combination with upper and lower sliding window sashes and a parting strip having a notch about midway of its length, of a bearing member mounted on the upper rail of the lower sash, a substantially L-shaped latching member having an arm pivotally mounted in the bearing member for movement about a horizontal axis, and having another arm arranged beyond one end of said bearing member and adapted to slide along the parting



strip, or to extend through the notch of the latter, to engage one wall of said notch for preventing the lower sash being raised, the extremity of said last mentioned arm being milled to wedgingly engage a surface of the upper

sash, and the portion of this surface engaged by the milled face being entirely concealed by the parting strip, with the exception of the portion visible through said notch, and a handle connected to the latching member.



---

1,695,109. WATERPROOF BABY PANTS. ROSE KOSLOFF, Jamaica, N. Y. Filed July 22, 1927. Serial No. 207,586. 3 Claims. (Cl. 128—288.)

1. A pair of waterproof baby pants comprising a body portion of non-absorbent waterproof material which includes spaced leg openings, the bottom between said openings being perforated; and an additional and unperforated bottom portion, also of non-absorbent waterproof material, underlying said first-mentioned bottom at only approximately the crotch portion of said pants to provide a pocket between said bottoms for the reception of absorbent material; said underlay having its opposite side edges securely attached to the body portion throughout an extent which retains said absorbent material firmly against all the perforations, and the end portion of said underlay being provided with means for detachably securing it to the body portion

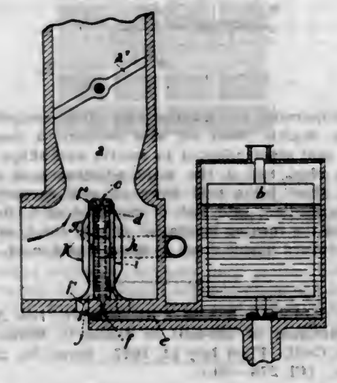
1,695,110. EXTENSION-LEAF CONSTRUCTION FOR PERMANENT-TOP TABLES. GEORGE W. KNICK, Los Angeles, Calif., assignor to Barker Bros., Incorporated, Los Angeles, Calif., a Corporation of Delaware. Filed Aug. 7, 1926. Serial No. 127,771. 5 Claims. (Cl. 45—118.)

3. In a table, a top having an apron thereon provided with a slot, an extension leaf for said top, a block fixed to said leaf and extending through said slot when said leaf is in position for use, and means for hinging said block in operative position with respect to said apron whereby said leaf may be swung under said top and the butt end of said block rotated to a position to fill said slot.

---

1,695,111. APPARATUS FOR THE MANUFACTURE OF ARTIFICIAL SILK. JOSEPH EDOUARD GUSTAVE LAHOUSSE, Lyon, France, assignor to Societe pour la Fabrication de la Soie "Rhodiaseta," Paris, France. Filed May 6, 1927, Serial No. 189,197, and in France May 20, 1926. 1 Claim. (Cl. 18—8.)

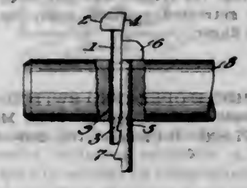
Apparatus for the spinning of cellulose derivatives, comprising a spinning cell provided with heating means, and a condensation apparatus for the solvents, comprising a tube placed in a vertical position connected to the upper and to the lower part of the spinning cell, and, at its lower end, connected to a receiver for the condensed liquid.



---

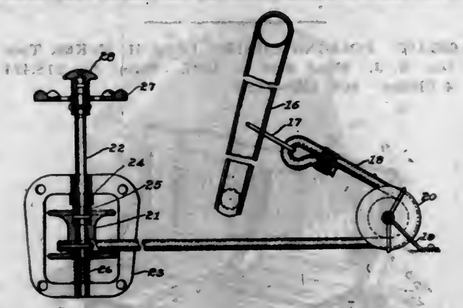
1,695,112. CARBURETOR. GEORGES LAMOUREUX, Puteaux, France. Filed Dec. 1, 1922, Serial No. 604,865, and in France Dec. 6, 1921. 5 Claims. (Cl. 261—121.)

1. A carburetor with automatic regulation, comprising a central tube wherein a liquid fuel level is maintained during normal operation, a calibrated orifice at one end there-



of communicating with the float chamber, air inlet holes provided in the central tube, a single orifice of substantially the same size as said first-named orifice formed at

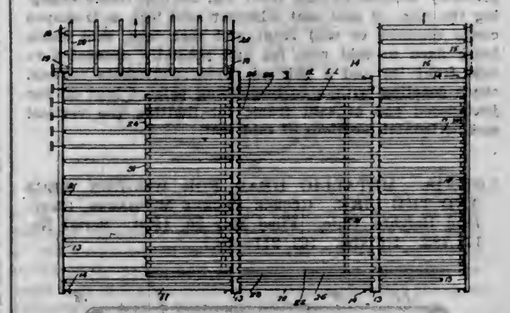
the other end of the central tube, and means for bringing the external air at atmospheric pressure to the air inlet holes of the central tube.



---

1,695,113. SELF-LOCKING COTTER PIN. EDMOND W. LANGTON and AARON O. DAWSON, Richmond, Va. Filed June 15, 1927. Serial No. 198,940. 2 Claims. (Cl. 74—8.)

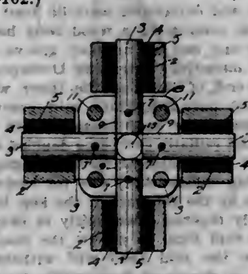
1. A self-locking cotter pin, for use with a part to be pinned having a hole, said pin composed of two complemental parts, one part having a shank terminating at one end in a head and having at its other and leading end a notch, and the other part having at one end a head and at its other and leading end an inclined projection extending toward the notch, the part having the inclined projection being inserted fully in the hole in the part to be pinned, and the part having the notch thereafter inserted in said hole with its notch facing the inclined projection on the other part and driven home, the notched part when so driven riding over the inclined projection and slipping back and underneath the inclined projection to effect an interlocking engagement of the two parts and spreading the leading ends of the two parts into fixed position in the hole.



1,695,114. AIRPLANE. CLIFFORD J. LEISY, Cleveland, Ohio, assignor to The Glenn L. Martin Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 29, 1927. Serial No. 222,739. 4 Claims. (Cl. 244—29.)

1. In an airplane, a control pedal, a resilient cord attached to said pedal, a winding drum to which the opposite end of said cord is attached, means for turning said drum and for latching it in adjusted position, and means for releasing said drum instantaneously.

---



1,695,115. CONVEYER. JAMES LOCKHART, Painesville, Ohio, assignor to The Coe Manufacturing Company, Painesville, Ohio, a Corporation of Ohio. Filed June 2, 1927. Serial No. 195,921. 14 Claims. (Cl. 198—20.)

1. In a transfer table, an article supporting frame, a transfer carriage adapted to successively advance articles upon said supporting frame, means for actuating said carriage, a main drive shaft, means for connecting said drive shaft to said carriage actuating means to move the carriage forward and backward, and means for automatically disconnecting the carriage actuating means from said drive shaft when said carriage has returned to its initial position.

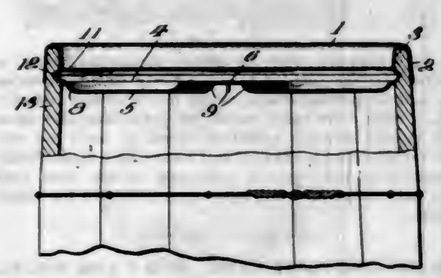
---

1,695,116. UNIVERSAL JOINT. HUGH C. LORD, Erie, Pa. Filed Mar. 13, 1926. Serial No. 94,433. 8 Claims. (Cl. 64—102.)

1. In a universal joint, the combination of a fork having bearing sleeves at its ends; pins extending through

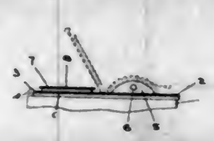
the sleeves toward the center of the fork; rubber inserts between the sleeves and pins, said inserts being locked with the sleeves and pins; a block having grooves engaging the pins; and means clamping the pins in the grooves.

---



1,695,117. FOLDING CHAIR. LOUIS H. MCKEE, Trenton, N. J. Filed Sept. 9, 1927. Serial No. 218,424. 4 Claims. (Cl. 155—142.)

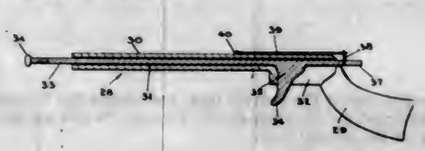
1. In a folding chair of the character stated, a front leg, a rear leg pivotally secured thereto, a seat member pivotally secured to said front leg, an end frame engaging the edge of said seat adjacent said legs, a U-shaped clevis common to said front and rear legs, said clevis being fixed to said rear leg and pivotally connected to said front leg and a pair of spaced abutments on said clevis coacting with a corresponding pair of lugs on the juxtaposed end of said frame for limiting the vertical and horizontal positions of said seat.



---

1,695,118. METALLIC HEAD FOR WOODEN KEGS AND THE LIKE. GEORGE EUGENE MITTINGER, Cleveland Heights, Ohio. Filed May 26, 1926. Serial No. 111,783. 1 Claim. (Cl. 217—76.)

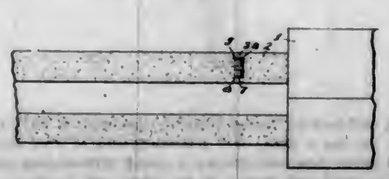
An attachable and detachable metallic head for wooden kegs and the like comprising a wood body having at its inner side near one end an annular groove, a metallic head having an outwardly extending U-shaped periphery embracing said end of the keg, the inner walls of the U-shape expanded outwardly into said groove and the horizontal portion of the head provided with a plurality of downwardly and radially extending doubled closely compressed ribs with their adjacent walls in engagement, the said walls forming substantially one for sustaining pressure from within by the contents of the keg, both ends of the ribs gradually tapered downwardly in easy curves in a line with the said head to permit the head to be depressed, whereby the said head will withstand inward pressure and can be depressed downwardly for the purpose of withdrawing the expanded portion from the groove formed in the said keg.



1,695,119. METHOD OF MAKING TILE CLAY PRODUCTS AND APPARATUS THEREFOR. HERBERT A. SHUGART, Santa Ana, Calif. Filed Oct. 24, 1927. Serial No. 228,264. 5 Claims. (Cl. 25—43.)

1. An apparatus for making roof tiles, comprising a support, a flexible sheet on said support, a removable frame on said sheet adapted to receive and shape a slab of plastic clay, and a tile mold adjacent said slab of clay, said sheet being held down on said support along a line intermediate said slab of clay and said tile mold, whereby on the turning movement of said sheet, said slab of clay is turned upside down to rest on said mold.

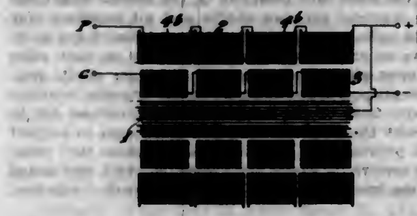
---



1,695,120. GAME. RAYMOND C. PARENT, Los Angeles, Calif., assignor of one-half to James C. Willard, Los Angeles, Calif. Filed July 11, 1927. Serial No. 204,805. 1 Claim. (Cl. 273—69.)

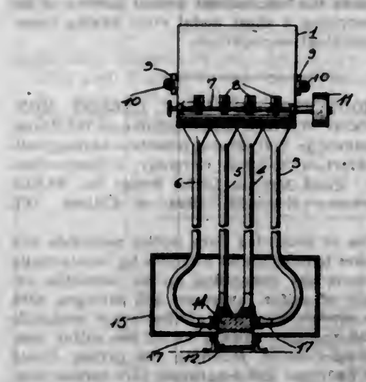
In a game, a striking implement comprising a gun-like structure having a barrel with a longitudinal bore, a stock connected thereto having a lateral slot entering the said bore, a rod slidable in the bore and extending therethrough forming a cue, a trigger rigidly connected to the rod and extending through the slot,, a spring connected to the barrel and to the rod, the slot forming a limiting movement in both directions for the trigger, thereby giving a limit to the projection of the rod and to the tension of the spring, the trigger and rod being adapted for retention in a retracted position solely by engagement with a person's finger.

---



1,695,121. VEHICLE-OPERATED SWITCH. ANDREW O. PETERSON, Santa Barbara, Calif. Filed Mar. 23, 1927. Serial No. 177,820. 6 Claims. (Cl. 200—85.)

1. A switch comprising in combination a container adapted to be embedded in the ground in the path of travel of a vehicle, a tubular casing within said container, a switch upon which said casing is supported, having reciprocal push-buttons for making and breaking an electrical circuit respectively, a pair of rods extending downwardly through said casing, contacting with said push-buttons, a pair of horizontal arms above said container contacting with said rods whereby a vehicle may selectively be pressed by virtue of its weight, said rods to operate said switch.

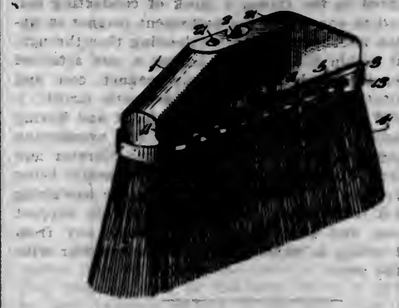


1,695,122. ELECTRICAL TRANSFORMER. CHARLES FRANCIS PHILLIPS, Blackheath, London, England. Filed Feb. 24, 1928, Serial No. 256,748, and in Great Britain Oct. 18, 1926. 1 Claim. (Cl. 175—356.)

In an electrical transformer for use in radio receiving or transmitting apparatus with its primary winding connected to the positive, and its secondary winding to the negative pole of the high tension battery, an electrolytic shield connected to said primary winding, said primary winding being wound in sections, each section being surrounded on its sides adjacent other sections and adjacent the secondary by a section of the said shield, said shield sections being each connected to a section of the primary.

---

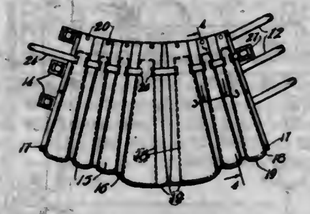
1,695,123. MACHINE FOR VENEERING BRICK. EMMETT V. POSTON, Springfield, Ill. Filed June 21, 1927. Serial No. 200,348. 8 Claims. (Cl. 25—1.)



1. A machine for texturing brick comprising a die for the formation of a plastic brick body, a conveyor for the support and movement of the plastic body, a hopper for the supply of granular texturing materials, a plurality of relatively high gravity conducting tubes adapted to conduct by gravity, said texturing materials from said hopper at right angles to said plastic body; said tubes terminating at the lower ends in a jet registering with the exposed faces of the brick body; said jets each provided with fluid nozzle for moistening said materials, whereby when controllably released from the hopper, said granular texturing materials will wall from relatively great heights, become moistened, and by the force of the fall, become substantially embedded into the exposed plastic brick faces for forming a veneer therefor.

---

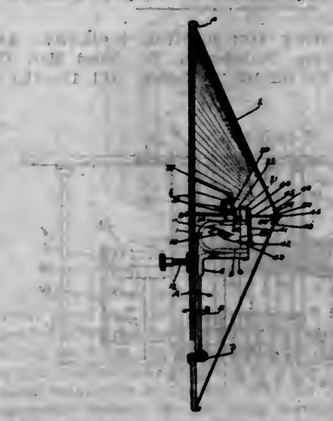
1,695,124. BRUSH. WILLIAM REESE, Philadelphia, Pa., assignor to Elder & Jenks, a Firm composed of Jonathan Jenks and Franklin R. Maxwell, Philadelphia, Pa. Filed Sept. 2, 1926. Serial No. 133,137. 2 Claims. (Cl. 15—192.)



1. In a device of the character stated, the combination of an integral socket plate having a longitudinal central channel therein, a plurality of rows of intermediate tuft receiving sockets extending longitudinally of said plate on either side of said channel, transverse end sockets of greater width and having walls of greater height than those of said intermediate sockets, tufts of bristles seated in all of said sockets and adhesively secured therein, and

a cement filling the interstices between the roots of said bristles, said longitudinal channel of said socket plate being adapted for the reception of fastening devices to secure said plate to a handle.

---

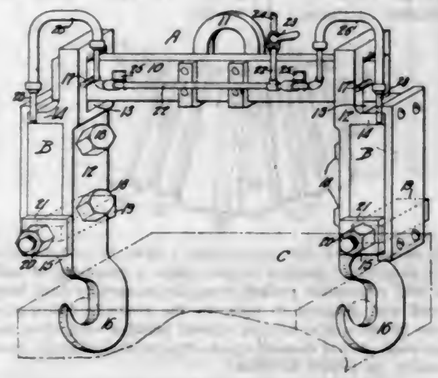


1,695,125. SWIMMING DEVICE. THEODOR RENSING, Kansas City, Mo. Filed Nov. 14, 1927. Serial No. 233,099. 1 Claim. (Cl. 9—21.)

A swimming device comprising a band or cuff adapted to be removably clasped to the ankle, a plurality of foldable and expansible pocket elements carried by said band or cuff and adapted to open in the rearward swimming stroke of the ankle, and an elastic member encircling the upper ends of said elements and acting to maintain the same normally in folded position.

---

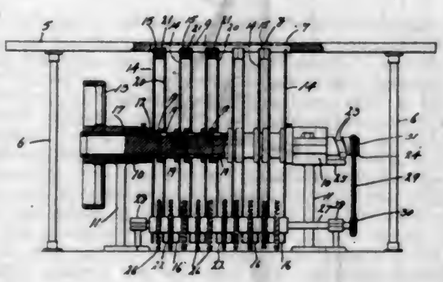
1,695,126. LOUD SPEAKER. JOHN E. SEDERHOLM, St. Paul, Minn., assignor to American Hoist & Derrick Company, St. Paul, Minn., a Partnership composed of F. J. Johnson and W. O. Washburn. Filed Feb. 23, 1928. Serial No. 256,341. 10 Claims. (Cl. 179—115.)



8. A support, a cone having its periphery engaged against the support, a frame having a resilient portion at-

tached to the support to permit a swinging motion of the frame, the point of attachment being laterally of the axis of the cone, means for swingingly adjusting the frame against its resilient action, a U-shaped permanent magnet secured to the frame, a block of conducting material secured to one leg of the permanent magnet in upright position and having a bore extending therethrough, a coil fitted within the bore and having a core attached to the other leg of the magnet, said magnet, core and block constituting a partially closed magnetic circuit, a relatively stiff vibrator attached to the block and having a portion opposed to the bore and core and overlapping the bore, and a stiff connection linking the vibrator and cone, the axes of the cone, core, coil and connector being substantially coaxial, and electrical means for energizing the coil, said frame being disposed between the support and the cone, and adjustment toward and away from the support acting to adjustably space the vibrator with respect to the core.

---



1,695,127. APPARATUS FOR VIBRATING OBJECTS. JOHN T. STONEY and KLEMENS PURWIN, Cleveland, Ohio, assignors to The Stoney Foundry Engineering and Equipment Co., Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 12, 1921. Serial No. 500,193. 8 Claims. (Cl. 259—1.)

1. An apparatus of the character described, comprising a hook mechanism having at least one leg to engage an object and an upper supporting structure, and means mounted upon said leg for creating vibrations therein.

---

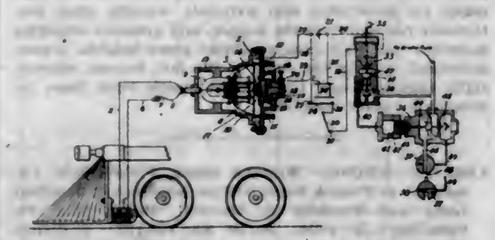
1,695,128. MACHINE FOR PICKING POULTRY. ANDREW O. VESTINE, Philadelphia, Pa. Filed Mar. 17, 1928. Serial No. 262,345. 6 Claims. (Cl. 17—11.)

2. In a machine for picking poultry, a hollow shaft having longitudinal slots, an inner shaft slidably mounted in the hollow shaft, members fixed on the hollow shaft in spaced relation, other members slidably mounted on the hollow shaft and located between the first mentioned ones, pins passing through the inner shaft and projecting through the slots into positions of the second mentioned members whereby the two shafts and all members may revolve in unison and each of said second mentioned members move to and from the other members on both sides thereof upon sliding movement of the inner shaft, gripping elements positioned at diametrically opposite locations on opposite faces of the members whereby one set are in contact with the other set are separated, means to support a fowl in proximity to gripping members where they close, means to revolve the shafts and associated parts, and means to slide the inner shaft to and fro during each revolution.

---

1,695,129. SPRING SUPPORT. FRANK M. VOGAN, Canton, Ohio, assignor of one-half to William H. Cavnah, Canton, Ohio. Filed June 26, 1924. Serial No. 722,504. 6 Claims. (Cl. 5—263.)

1. In combination with a bed having slats and a spring, a support for raising and compressing the longitudinal, central portion of the spring, said support resting upon the slats, engaging the longitudinal central portion of the spring and comprising a sheet metal strip having transverse and longitudinal corrugations.



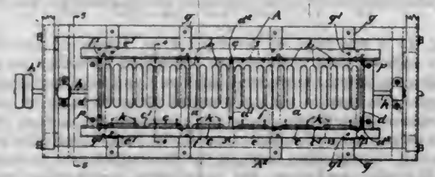
---

1,695,130. PRODUCTION OF PURE CARBON MONOXIDE. GUSTAV WIETZEL, Ludwigshafen-on-the-Rhine, Germany, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed Nov. 9, 1925. Serial No. 68,010, and in Germany Nov. 21, 1924. 4 Claims. (Cl. 23—204.)

4. The process of producing pure carbon monoxide and a mixture of pure hydrogen and nitrogen by catalytically treating an impure gas comprising carbon monoxide, organic compounds of sulfur, hydrogen and nitrogen with steam so as to convert a portion of the carbon monoxide to carbon dioxid and substantially all of the sulfur compounds to hydrogen sulfid, removing the carbon dioxid and sulfuretted hydrogen and separating pure carbon monoxide from a mixture of hydrogen and nitrogen.

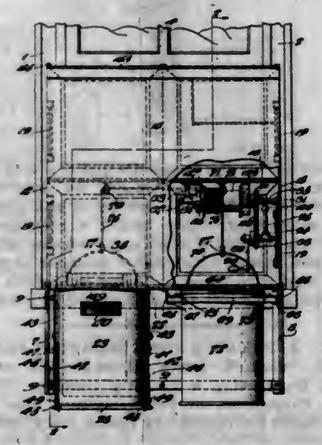
---

1,695,131. TRAFFIC-CONTROLLING SYSTEM. ARDA G. WILLIAMSON, Carnegie, Pa., assignor to Pittsburgh Train Control Company, Pittsburgh, Pa., a Corporation of Delaware. Filed Nov. 16, 1918, Serial No. 262,797. Renewed May 11, 1928. 46 Claims. (Cl. 246—63.)



2. A system of train control comprising: a train, traffic rails, a charged direct-current circuit on the train of a given value, a track circuit normally completed through and responsive to traffic conditions of the rails, an induced-current circuit and translating device on the train responsive to the track circuit, for normally lessening the value of the direct current and which upon a change in traffic conditions admits of an increase in value of said direct current, and a traffic governing means held in a normal position so long as the value of the direct current is below a predetermined point and which moves to another position when said value increases above said predetermined point, and means for causing said traffic governing means to move to said other position upon the rupture of said direct-current circuit.

---

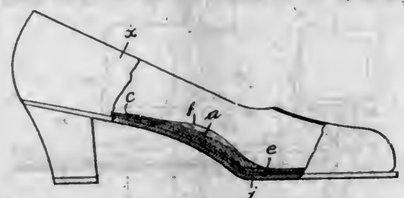


1,695,132. APPARATUS FOR THE MANUFACTURE OF ROOFING TILES. FREDERICK ALFRED WILSON, London, England. Filed July 27, 1926, Serial No. 125,191, and in Great Britain July 27, 1925. 17 Claims. (Cl. 25—43.)

1. In the manufacture of roofing tiles, a mold adapted to form a plurality of tiles at one operation, and means movable across the top of said mold for dividing up the molded tiling before removal from said mold.

---

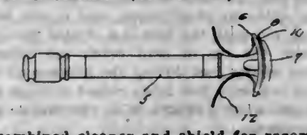
1,695,133. COMBINATION SANITARY REFRIGERATOR AND WASTE-DISPOSAL APPARATUS. ARTHUR H. ALLEN, Philadelphia, Pa. Filed Apr. 21, 1926. Serial No. 103,514. 10 Claims. (Cl. 220—1.)



1. A waste disposal cabinet, of the character stated, comprising an upper food storage compartment, a lower waste disposal compartment having an opening in the bottom thereof, a pendant waste receptacle detachably supported beneath said cabinet and having its upper end in alignment with and in proximity to said opening, and means to raise and lower said receptacle.

---

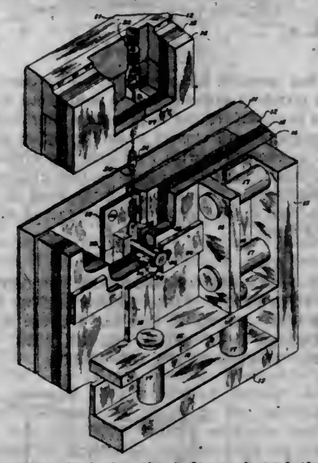
1,695,134. INSERTABLE PAD FOR SHOES. ALBERT F. BANCROFT, West Newton, Mass. Filed Jan. 5, 1928. Serial No. 244,625. 3 Claims. (Cl. 36—71.)



1. An insertable filler pad for a shoe having the adjacent portions of the shank and forepart thereof disposed in definite angular relation, said pad being of soft, flexible material and constructed to extend from the rear end portion of the shank part onto the rear end portion of the fore part of the shoe bottom and to extend laterally onto the portion of the upper adjacent the inner edge of the shank part, the shank engaging portion of the bottom surface of the pad being disposed obliquely to the bottom surface of the fore part engaging portion and meeting

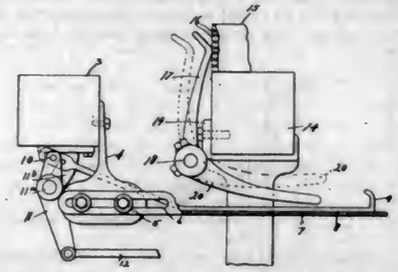
in a definite vortex line arranged to coincide with the vertex line of the angular space between the shank and fore part portions of the shoe when in position therein, and the top surface of the pad being transversely rounded and tapering to a thin edge at all points, for the purposes set forth.

---



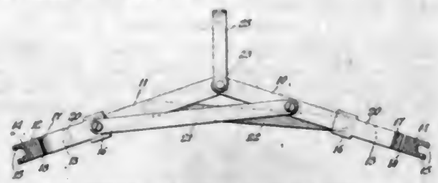
1,695,135. SAFETY-RAZOR CLEANER. WILLIAM BERCHIELLI, Albany, N. Y. Filed Apr. 28, 1928. Serial No. 273,583. 2 Claims. (Cl. 30—12.)

1. A combined cleaner and shield for razors comprising a sheet of substantially rigid material having one edge arranged for attachment to the razor and having openings for receiving the fingers of the blade guard whereby to wipe the fingers free of lather upon removal of the cleaner from the razor.



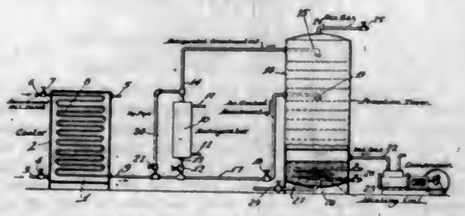
---

1,695,136. AUXILIARY LOCK. GEORGE H. BOCKIUS, Canton, Ohio, assignor to Diebold Safe & Lock Company, Canton, Ohio, a Corporation of Ohio. Filed Sept. 28, 1926. Serial No. 138,184. 4 Claims. (Cl. 109—3.)



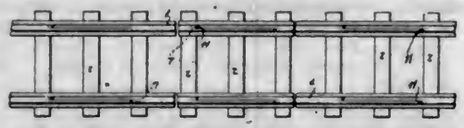
1. An auxiliary lock for the bolt work and the like of vault doors and the like, including a fusible chain suspended upon the door, a weight suspended by the chain, a bolt work for the door, and a pin mounted upon the weight and normally extending laterally therefrom in alinement with parts of the bolt work for permitting normal operation thereof, the pin being movable to dog off and prevent operation of the bolt work when the chain is fused or shattered.

1,695,137. LOOM FABRIC PROTECTOR. SAMSON BORGNIS, Philadelphia, Pa. Filed Nov. 16, 1926. Serial No. 148,661. 2 Claims. (Cl. 139—346.)



1. The combination with a loom including a breast beam, a lay, a shuttle box and a loom stop mechanism, of a hanger carried by the breast beam, a running stand adjustably mounted on the hanger, a reach rod connected with a portion of the stop mechanism and having its free end slidably mounted in the running stand, a toe at the outer end of the reach rod and having an inturned upper end, brackets secured to the lay, a loom protecting rod journalled in said brackets, a finger mounted on said rod and coacting with the shuttle box, and a foot secured to the protecting rod with the free end of said foot overlying the reach rod, the toe of said reach rod being in the path of travel of the foot during the absence of a shuttle in the shuttle box, said foot being raised through the medium of the finger when a shuttle is in the shuttle box so as to pass over the toe.

1,695,138. HOG GAMBREL. WILLIAM W. BRAINARD, New York, N. Y. Filed Dec. 12, 1923. Serial No. 680,093. 4 Claims. (Cl. 294—80.)



1. A hog gambrel comprising pivotally connected arms, gripping members associated with said arms, said gripping members being bifurcated to provide a plurality of fingers, means movable with respect to said gripping members and adapted to cooperate with said gripping elements for effecting a relative movement between said gripping members and elements, said means being in the form of links pivotally connected to said gripping elements and said pivotally connected arms.

1,695,139. PROCESS OF COMBINED ABSORPTION AND FRACTIONATION FOR RECOVERING GASOLINE FROM GAS. EDWIN R. COX and DEXTER A. CUSHMAN, Los Angeles, Calif. Filed Aug. 31, 1926. Serial No. 132,720. 11 Claims. (Cl. 183—114.5.)

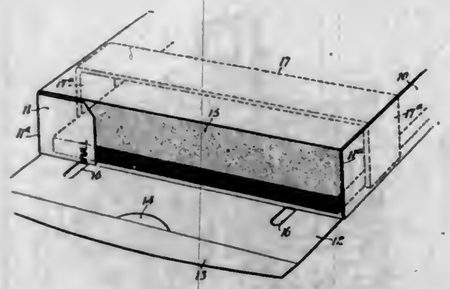
1. The process of combined absorption and fractionation for recovering gasoline from natural gas, comprising cooling an absorbent oil to substantially air temperature, refrigerating part of this oil to a considerably lower temperature, flowing the refrigerated oil downwardly through an absorption tower, flowing the air temperature oil downwardly through a lesser portion of the absorption tower and flowing compressed wet gas without precooling upwardly through the absorption tower.

1,695,140. RAIL JOINT. STEPHEN DÉRI and MICHAEL DEAK, Fairmont, W. Va., assignors of one-fourth to Roza Nohavicska, Fairmont, W. Va. Filed Feb. 8, 1928. Serial No. 252,844. 2 Claims. (Cl. 238—232.)

1. In a rail joint of the scarf type, a pair of meeting rail ends of twin construction assembled by either longitudinal or lateral movement, each rail end being cut away at one side upon a central vertical plane forming an end extension, interfitting connections between the ends of the rail extensions and adjacent rail ends, connecting belts for the rail ends passing through the overlapped web portions of the rail extensions, the interfitting connections comprising a lug on the end of the rail extension and a recess in the end of the rail head facing the cut away side, and screw bolts for anchoring the lugs in the recess.

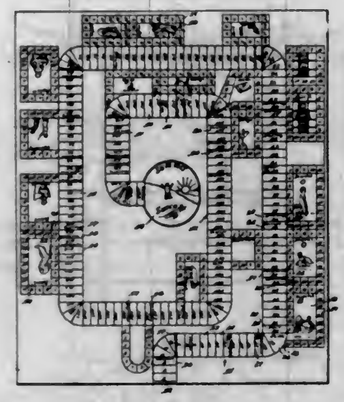
1,695,141. SHAVING BRUSH. RAFAEL D. DE VILLEGAS, Allston, Mass. Filed Apr. 15, 1927. Serial No. 184,019. 1 Claim. (Cl. 15—194.)

In a shaving brush, the combination of a tuft of bristles comprising bristles folded over and tied together at the folded portion, and a handle consisting of a single hollow member of yielding rubber having a neck portion provided with a restricted opening to receive said tuft of bristles, said neck being of such a diameter as to grip the tuft and hold it in place and being deformable to permit the removal of the tuft and replacement of a similar tuft.



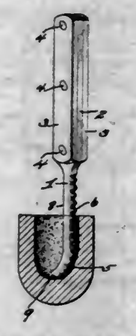
1,695,142. APPARATUS FOR RESHAPING ANNEALING BOXES. CARL V. DODGE, Bellevue, Pa., assignor to United Engineering & Foundry Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Aug. 13, 1925. Serial No. 50,009. 12 Claims. (Cl. 153—48.)

1. Apparatus for straightening annealing boxes, comprising relatively movable box engaging members adapted to engage opposite points of a box to be straightened, said members having box engaging surfaces of different effective dimensions, one of said members comprising a plurality of removable and replaceable sections adapted to vary the distance between said members, substantially as described.



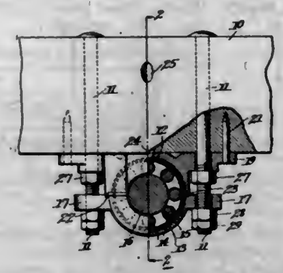
1,695,143. BOX. BENJAMIN L. DRAPEAU, Jersey City, N. J., assignor to Standard Abrasive Co., Jersey City, N. J., a Corporation of New Jersey. Filed June 9, 1927. Serial No. 197,683. 1 Claim. (Cl. 206—44.)

A cardboard box of the class described including an end closure flap having windows arranged in its lower edge, said flap adapted to be opened to permit withdrawal of sheet material through the end of the box, and detachable legend bearing side tabs folding inwardly under the end flap, said windows adapted to visually indicate the quantity of sheet material stacked in the box when the box is laid on its side subsequent to the detachment of the legend bearing tabs.



1,695,144. GAME. EARL EDWARDS, Santa Ana, Calif. Filed May 25, 1927. Serial No. 194,082. 4 Claims. (Cl. 273—134.)

1. A game having a path leading from a starting point to a goal, with a series of stations thereon, some of said stations having words thereon indicating good characteristics with a statement to advance a playing piece to certain other stations, and having a plurality of groups of two words, each group having words in antithesis one to the other, the said latter words being spaced apart a number of stations and indicating that a playing piece landing on stations having either of such pair of words the playing piece may either advance or go back in accordance with a good or a bad characteristic of the word.

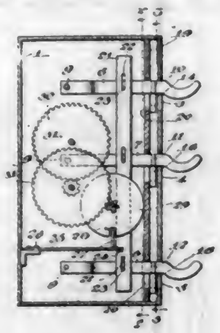


1,695,145. PIPE-BOWL KNIFE. FRED L. FRASER, Philadelphia, Pa. Filed July 20, 1927. Serial No. 207,238. 1 Claim. (Cl. 131—13.)

A pipe bowl cleaning knife having a handle and provided with a blade to engage with the inner surface of the bowl said blade being curved to conform to the bottom of the bowl, so that either edge of the blade may scrape against the bottom, one edge of the blade throughout the length of the edge and the curved extremity being toothed, the other edge of the blade being sharpened, the blade being of arcuate formation in cross-section,

whereby after the toothed edge has scraped against the inner surface of the bowl in moving the blade in one direction, the blade may rock with the convex surface of the bowl, so that the sharpened edge may scrape against the surface of the bowl, and thereby smooth said inner surface.

1,695,146. CASING FOR ANTIFRICTION BEARING. DANIEL F. GOOD, Waynesboro, Pa., assignor to Frick Company, Waynesboro, Pa., a Corporation. Filed Aug. 10, 1927. Serial No. 212,087. 1 Claim. (Cl. 308—207.)



The combination of a side rail, an upper bearing member beneath said side rail, a lower bearing member beneath said upper bearing member, said bearing members being formed with substantially semi-cylindrical recesses for enclosing a substantially cylindrical bearing, said recesses having a central lubricant channel, a passage for lubricant formed in said rail communicating with said lubricant channel, said bearing members being provided with ears at each side, the upper bearing member having perforated extensions at the outer edges of said ears, pins extending through said perforations into said side rail for holding the upper bearing member in proper position, the ears at the sides of said bearing members being provided with openings, bolts extending through said rail and through said openings fastening the bearing members to the side rail, said bearing members comprising castings molded to exact size, substantially as set forth.

1,695,147. VANADIUM COMPOUND. HANS HAHL and WALTER KROPP, Elberfeld, Germany, assignors to Winthrop Chemical Company, Inc., New York, N. Y. Filed July 10, 1925, Serial No. 42,831, and in Germany Sept. 17, 1924. 4 Claims. (Cl. 260—11.)

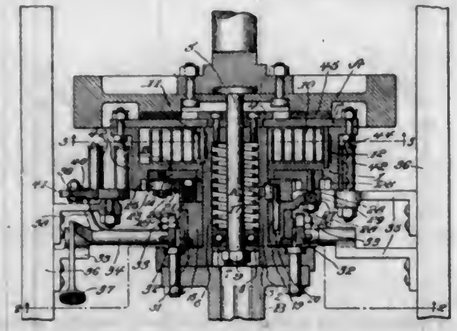
1. As an anti-syphilitic, a salt of an inorganic base with an organic tetravalent vanadyl carboxylate.

1,695,148. ELECTRIC SIGNAL-TRANSMITTING SWITCH. DEWEY L. HARRISON, Fort Smith, Ark. Filed Aug. 7, 1926. Serial No. 127,908. 5 Claims. (Cl. 200—36.)

1. In an electric signal transmitting switch, a circuit including a pair of spaced contacts, a switch lever movable to and from circuit closing position between and in engagement with said contacts, and means including a motor driven train of gearing and a control disk set in operation by movement of the lever to circuit closing position and effective to hold the lever thus for a predetermined period and then move the lever to circuit broken position.

---

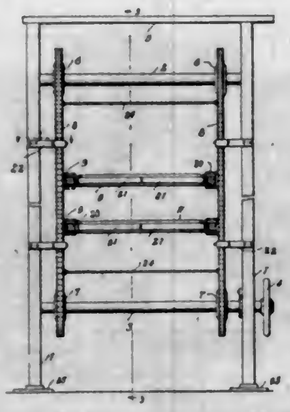
1,695,149. FENCE-WIRE SPACER AND HOLDER. ROY HOUSTON, Seattle, Wash. Filed June 11, 1926. Serial No. 115,409. 1 Claim. (Cl. 140—50.)



A fence wire spacing device comprising a rod, wire engaging elements adjustably spaced along the rod, each of said elements comprising a body having a rod receiving opening extending longitudinally therethrough, an offset hook extending from the top of the body at one side edge of the latter and spaced from the rod receiving opening and defining a wire receiving seat at the top of the body between the hook and the rod, and the bill of the hook extending downward and defining a second wire receiving seat within the hook, a downwardly and inwardly inclined side edge extending along the body from the second wire receiving seat, and a foot engaging member at the lower end of the rod.

---

1,695,150. CLUTCH. NELSON LE VAN, Battle Creek, Mich. Filed Oct. 11, 1926. Serial No. 140,971. 3 Claims. (Cl. 192—55.)



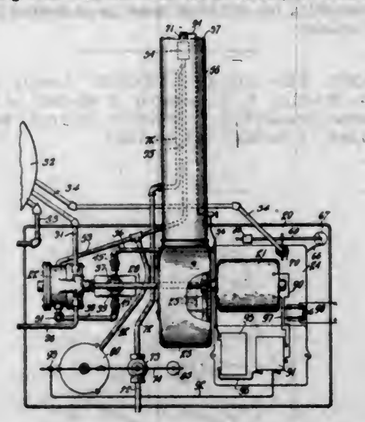
1. In combination with a drive member and a driven member, a flexible clutch between the two members comprising a spring drum, a hub on which the drum is rotatably mounted, means for causing the drum to move with the hub when the said hub is moved longitudinally, a coiled spring in the drum having one end connected with the drum and the other end with the hub, spring means for holding the hub and drum in a position where they will engage the drive member, means for connecting the hub to the driven member, means for shifting the parts out of engagement with the drive member, friction

means associated with the hub and engaging the drum, means for rendering said means inactive when the hub is shifted to release the parts from the drive member and means for locking the hub and drum together if the driven member should rotate faster than the drive member.

---

1,695,151. CLOTHES DRIER. JOHN MACFARLANE, Riverside, Calif. Filed Apr. 13, 1927. Serial No. 183,455. 5 Claims. (Cl. 211—121.)

3. A device of the class described comprising upper and lower shafts, sprocket wheels fixed to the respective shafts, sprocket chains trained around said wheels, plates connected with the chains, boxes supported by the plates and including side plates and rear plates, arcuate bars pivotally connected intermediate their ends to the side plates, arms having their ends fixed to the ends to the bars, springs connecting the back plates and arms, slats having their ends fixed to the first named plates, said arms being normally engaged with the slats.



---

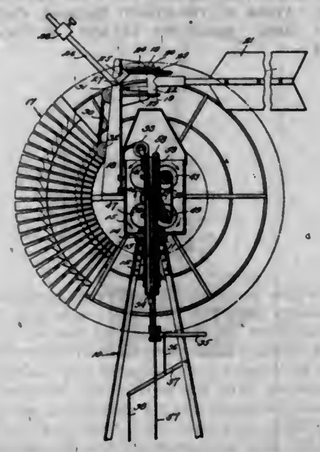
1,695,152. OIL BURNER. CHARLES A. MARTINDALE, Anderson, Ind., assignor to The Reliable Machine Company, Anderson, Ind., a Corporation of Indiana. Filed Apr. 24, 1926. Serial No. 104,485. 3 Claims. (Cl. 158—28.)

1. An oil burner comprising a fan, a motor at one side of the fan, a shaft carrying the rotor of the motor and

said fan, a geared pump at the opposite side of the fan comprising a gear on said shaft, and a second gear in mesh therewith, a shaft offset from the first the second gear being mounted on the offset shaft, a rotor also

on the offset shaft forming one element of an atomizing pump, a pump underneath the second-named shaft, a plunger for said pump, and a cam on said offset shaft acting directly on said plunger, substantially as set forth.

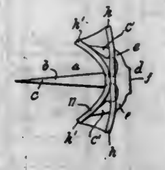
---



1,695,153. SANITARY-NAPKIN HOLDER. LETTIE Z. NELSON, St. Joseph, Mo. Filed July 21, 1927. Serial No. 207,418. 3 Claims. (Cl. 128—289.)

1. A sanitary napkin holder for holding a napkin when in use and provided with a pocket for carrying a spare napkin for emergency use.

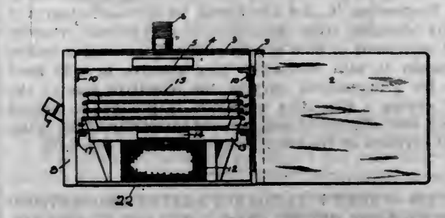
---



1,694,154. WINDMILL. FRANK R. OWENS, Beaver Crossing, Nebr. Filed Sept. 2, 1927. Serial No. 217,208. 1 Claim. (Cl. 74—14.)

In a pumping mechanism, a casing, a driven shaft journaled transversely through said casing, a vertically movable pump rod slidable centrally of said casing, a plurality of shafts journaled transversely of the casing, sprockets on certain of said shafts, chains trained about the corresponding sprockets, gear connections between the driven shaft and said other shafts, and means connecting the chains with the pump rod for operating the latter, comprising arm members connected with corresponding links of the chains, a cross head connected with said arm members, and a connecting rod pivoted upon the cross head and connected with the pump rod, vertically arranged guides within the casing, and a collar slidable along the guides and connected with said connecting rod.

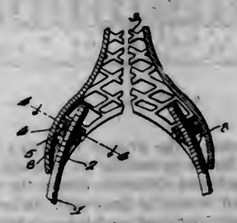
---



1,695,155. STAPLE. GEORGE A. PARKER, Brockton, Mass. Filed Feb. 2, 1927. Serial No. 165,330. 2 Claims. (Cl. 173—319.)

1. A staple having pointed tapering shanks of differing lengths and of arrow head form provided with contracted necks immediately adjacent to and connecting the same with the head of the staple.

---

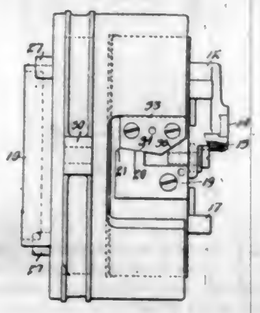


1,695,156. SEPARATOR. CHARLES ALONZO PILANT, New Orleans, La. Filed Feb. 11, 1928. Serial No. 253,713. 4 Claims. (Cl. 210—149.)

1. A separator comprising a casing, an inlet arranged on the casing, tracks formed in the casing, a baffle arranged on one of the tracks and slidable thereon, a retaining basket slidable on one of the tracks, baskets having foraminous surfaces adapted to nest in each other and in the first basket, cloth adapted to be interposed between the foraminous baskets and a door arranged on the casing.

---

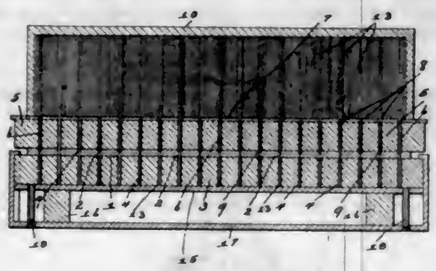
1,695,157. FINGER RING. HERMAN QUAST, Arlington, Minn. Filed June 10, 1927. Serial No. 197,904. 2 Claims. (Cl. 63—16.)



1. A ring of the character described comprising a shank disposed in ring formation and having threaded ends, a mounting formed with openings in its sides, ears arranged in pairs and disposed upon opposite sides of said mounting

adjacent said openings, a nut mounted between each pair of ears and being adapted to receive the threaded ends of said shank and said nuts being provided with recesses in their periphery to receive an implement passed through the side openings to rotate said nuts for adjusting the shank with respect to said mounting.

---

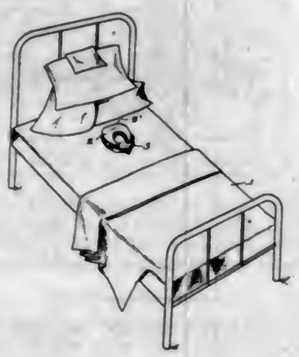


1,695,158. DIE HEAD FOR CUTTING TAPERED THREADS. HARRY T. SHEARER, Waynesboro, Pa., assignor to Landis Machine Company, Waynesboro, Pa., a Corporation of Pennsylvania. Filed May 5, 1925. Serial No. 28,195. 5 Claims. (Cl. 10—100.)

3. In a die head, a head body, chaser holders pivoted on the head body, tangential chasers on the chaser holders, an oscillatory ring mounted on the head body, said ring being pivotally connected to the chaser holders, an axially movable second ring about the head body, a collar on said second ring for moving it, and abutments on the oscillatory and axially movable rings having cam engagement whereby axial movement of said second ring will produce a rotary movement to said oscillatory ring relative to said head body for progressively varying the operative size of the head during a threading operation to produce a tapered thread, said abutments being spaced outwardly of the cylindrical surfaces of the rings; substantially as set forth.

---

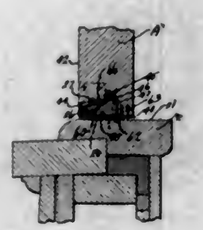
1,695,159. BRUSH-FILLING APPARATUS AND METHOD OF FILLING BRUSH PADS. WILLIAM T. SHERMAN, Troy, N. Y., assignor to Henry L. Hughes Co. Inc., Troy, N. Y., a Corporation of New York. Filed June 21, 1921. Serial No. 479,230. 15 Claims. (Cl. 300—21.)



1. In brush making, the process of fitting bristles into apertured brush backs consisting in passing the bristles into a gaging aperture disposed above the brush back, allowing the gaged bristle to drop with its lower end free of any substantial frictional resistance, and guiding the free lower end of the bristle into an aperture of said brush head.

15. A brush filling device comprising a perforated supporting member adapted to support a perforated brush member thereon with the perforations thereof aligned with the perforations of said supporting member, and a vertically movable stop-plate beneath said supporting member and adapted to be disposed at at least two different elevations for controlling the extent of insertion of bristles into said brush member.

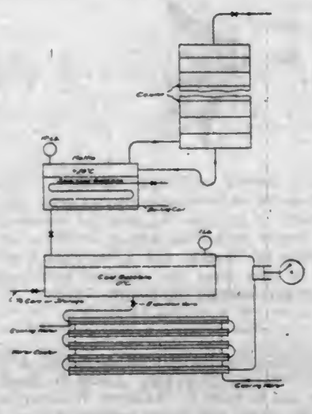
---



1,695,160. PAD AND BED VESSEL. AMELIA C. SHERRAN, Brooklyn, N. Y., assignor of one-half to Ruth E. Sherran, Brooklyn, N. Y. Filed Oct. 10, 1927. Serial No. 225,348. 5 Claims. (Cl. 4—113.)

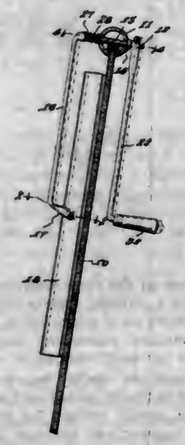
1. A combined pad and bedvessel, comprising a supporting pad structure formed with a recess in one side and a flat portion on the other side, the material of the pad adjacent said recess presenting substantially facing arms, and a pan structure formed with a body acting as a container, said body conforming in shape to said recess and formed with notches for receiving said arms, said pad being sufficiently flexible to permit said body to be inserted and removed without dislocating the pad.

---



1,695,161. WEATHER STRIPPING FOR WINDOWS AND DOORS. AYERS F. THOMPSON, Sunland, Calif. Filed June 21, 1926. Serial No. 117,552. 8 Claims. (Cl. 20—66.)

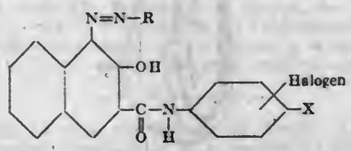
1. In a weather strip construction the combination of an attaching strip, a guard strip hinged to the attaching strip, and closure attaching means for lifting the guard strip.



1,695,162. MANUFACTURE OF NATURAL GASOLINE. HAROLD E. THOMPSON, Clendenin, W. Va., assignor to Carbide and Carbon Chemicals Corporation, a Corporation of New York. Filed Apr. 12, 1924. Serial No. 706,167. 2 Claims. (Cl. 196—11.)

1. In the manufacture of natural gasoline, the steps of forming a liquid mixture of hydrocarbons; producing therefrom a liquid gasoline and a vaporous portion bringing the vaporous portion to a temperature below the normal boiling point of the liquid gasoline; and cooling the liquid gasoline by means of the vaporous portion.

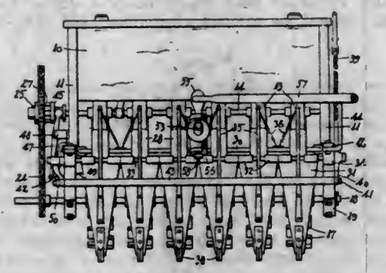
---



1,695,163. WINDSHIELD CLEANER. JOHN G. TRUESDELL and WILLIAM J. O'CONNELL, Colorado Springs, Colo. Filed July 11, 1927. Serial No. 204,963. 1 Claim. (Cl. 15—235.)

A windshield cleaner, comprising a carrier arranged upon one side of a windshield, a wiping element movable within the carrier and engaging the windshield, scraper elements secured to the carrier upon opposite sides of the wiping element and normally spaced from the windshield, a shaft mounted for rocking and axial movement in the frame of the windshield, an arm extending from one end of the shaft and having its outer end positively pivoted to the carrier and slidingly connected with the wiping element, an operating handle secured to the other end of the shaft and means to force the shaft in a direction to space the scraper elements from the windshield.

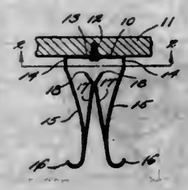
1,695,164. AZO DYE. HERMANN WAGNER, Hochst-on-the-Main, Germany, assignor, by mesne assignments, to Grasselli Dyestuff Corporation, New York, N. Y., a Corporation of Delaware. Filed Feb. 12, 1923, Serial No. 618,710, and in Germany Feb. 24, 1922. 12 Claims. (Cl. 260—95.)



1. As new products, the azo dyes of the general formula:

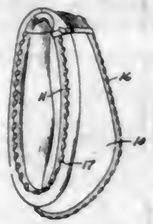
wherein X represents an alkyl- or alkyloxy-group, and wherein R represents an aryl residue which may be further substituted.

---



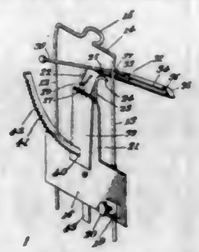
1,695,165. SEED PLANTER AND PACKER. HENRY ADOLPH WILBERG, Valley City, N. Dak. Filed June 25, 1926. Serial No. 118,524. 1 Claim. (Cl. 111—59.)

In a planter, a frame, a transverse rock shaft carried by the frame, transversely spaced chutes mounted loosely on said shaft for swinging movement and extending downwardly and rearwardly to engage the ground, means for delivering seeds to said chutes, individual spring means for said chutes to swing them downwardly, a transverse stop rod carried by said shaft and extending across said chutes in front of same to limit the downward movement of the chutes, and means for turning said shaft to adjust said rod.



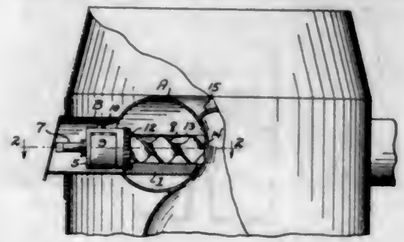
---

1,695,166. HOLDER. HARRY T. WILSON, Easton, Pa. Filed Aug. 22, 1927. Serial No. 214,746. 2 Claims. (Cl. 24—259.)



1. In a device of the character described, a base having means associated therewith for attaching the same to a wall or the like, arms extending at substantially right angles to said base and converging throughout a portion thereof toward each other, said arms having fingers struck from the surface thereof and extending between the arms toward each other, the ends of said fingers being bent away from each other.

1,695,167. HORSE COLLAR. JOE M. ANGEL, Pauls Valley, Okla. Filed Oct. 7, 1927. Serial No. 224,689. 2 Claims. (Cl. 54—19.)

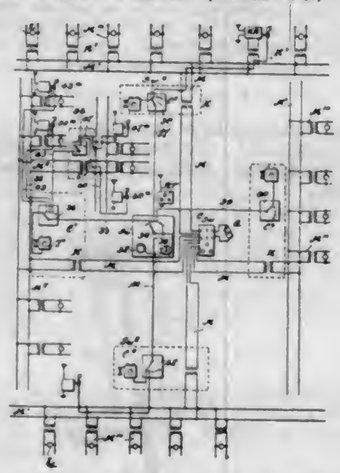


1. In a horse collar, a cover for the body and rim, said cover comprising an inner section and an outer section secured together at the outer edges of the rim and body of the collar, and providing continuous inner and outer sections, said sections being slit, and a lace passed through said slits for lacing the sections together along the hame seat of the collar.

1,695,168. MOUTH GAG AND TONGUE HOLDER. BENJAMIN FRANKLIN BELL, Sr., Tyler, Tex. Filed Aug. 16, 1927. Serial No. 213,328. 3 Claims. (Cl. 128—15.)

1. An instrument of the kind described comprising a frame having a jaw holding means, a plate adjustably carried by said frame, a standard on said plate having jaw engaging means, a tongue depressing lever carried by said standard, a curved rack bar fitted through said standard and having a notched portion, a pivoted locking bar on the plate for engaging in the notch of said rack bar, and a looped member having a terminal engaging with said rack bar on the opposite side of the standard.

1,695,169. FURNACE CLEANER. ALBERT BREST, Newcastle, Pa. Filed Apr. 11, 1928. Serial No. 269,280. 4 Claims. (Cl. 126—102.)

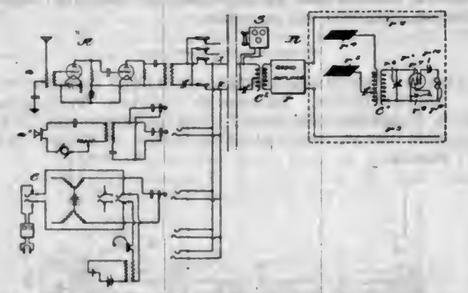


1. A device for cleaning a radiator of a furnace comprising a ring-shaped plate placed in the annular chamber of the radiator and rotatably supported therein, a supporting member removably held in the clean-out opening of the furnace, a spiral rotatably supported by said member and extending over the plate and adapted to remove the material from the plate means for rotating the spiral and the plate and a deflector member supported by the supporting member and contacting with a portion of the spiral.

1,695,170. RESPIRATOR. CHARLES LAURENCE BURDICK, London, England. Filed Mar. 5, 1926, Serial No. 92,626, and in Great Britain Aug. 19, 1925. 1 Claim. (Cl. 128—146.)

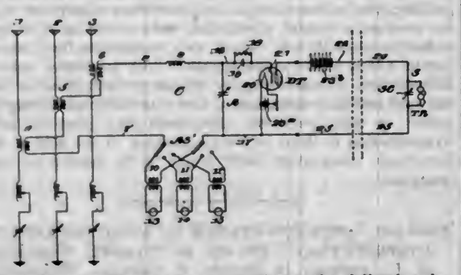
A respirator having separated chambers to surround the nose and mouth of the wearer respectively, inlet means permitting entry of air into the chamber surrounding the nose, outlet means permitting exit of air from the chamber surrounding the mouth, and a non-return valve permitting air to pass from the chamber surrounding the nose into that surrounding the mouth.

1,695,171. COMBINED RADIO TELEPHONE AND POWER-DISTRIBUTING SYSTEM. JAMES B. HOGE, Cleveland, Ohio, and EDWARD F. CLEMENT, Washington, D. C., assignors, by direct and mesne assignments, to Edward F. Colladay, Washington, D. C. Filed Sept. 8, 1922. Serial No. 586,842. 5 Claims. (Cl. 179—2.5.)

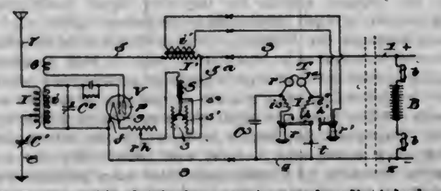


1. In a system of the class described, a power distributing station and a current supply circuit extending therefrom in a network to a plurality of consumer stations, a broadcasting station associated therewith, a radio telephone receiver at each consumer station having a detector circuit and an energizing circuit, and means for connecting said detector circuit and said energizing circuit to said current supply circuit for simultaneously supplying energizing current and message bearing current therefrom to said radio telephone, together with separate supervision circuits extending from said power distributing station and means at said station to control the same selectively to establish a supervisory relation with the radio telephone receiver at a consumer station.

1,695,172. RADIO RECEIVING INSTRUMENT. EDWARD E. CLEMENT, Washington, D. C., assignor to Edward F. Colladay, Washington, D. C. Filed Feb. 9, 1924. Serial No. 691,823. 2 Claims. (Cl. 179—2.5.)

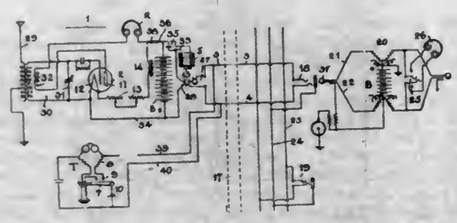


1. In a radio broadcasting exchange system, a central office and a subscriber's station with means at the central office for transmitting modulated waves of superaudio frequency, means external to the subscriber's station to receive and absorb said modulated waves and conduct them into said station, means in said subscriber's station inductively coupled to said external receiving and absorbing



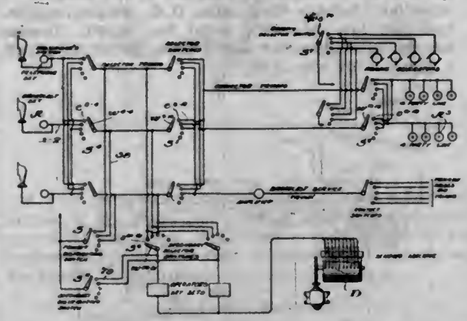
means, for receiving and amplifying said waves, output terminals for said amplifying means so arranged within said station as to constitute a pair of radiators, and a mechanically detached self-contained wave responsive device with input terminals adapted to receive and absorb the amplified waves from said radiators.

1,695,173. RADIO BROADCAST SELECTING AND DISTRIBUTING SYSTEM. EDWARD E. CLEMENT, Washington, D. C., assignor to Edward F. Colladay, Washington, D. C. Filed Feb. 29, 1924. Serial No. 695,991. 4 Claims. (Cl. 250—6.)



1. A broadcasting system comprising the following instrumentalities: subscribers' stations and a central station containing receiving apparatus with a tunable input circuit for selection of radio transmitting stations, means for supplying heterodyning oscillations to said circuit, a wire line extending to a subscriber's station, and a detector at the central station having its grid circuit connected to said tuned input circuit, and its plate circuit extended directly to said line, together with suitable receiving means at the subscriber's station responsive to current undulations in said plate circuit.

1,695,174. RADIO RECEIVING INSTRUMENT FOR SYSTEMS OF BROADCAST DISTRIBUTION. EDWARD E. CLEMENT, Washington, D. C., assignor to Edward F. Colladay, Washington, D. C. Filed June 18, 1924. Serial No. 720,870. 7 Claims. (Cl. 179—2.)

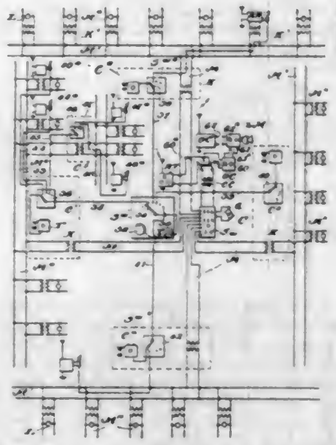


1. In a combined telephone system and radio telephone system, a pair of line wires, a central office source of current supply for said line wires, a subscriber's telephone connected to said line wires, a subscriber's radio telephone also connected to said line wires, means for supplying current from said central source to either or both of said instruments over the line wires, and automatic means for regulating the amount of current supplied to one instrument when the other is in use, said regulating means being directly responsive to changes in current flow due to change in relative resistance in the two instrument circuits and acting thereupon to produce a compensating change in the resistance of the radio telephone circuit.

1,695,175. RADIO RECEIVING STATION. HARRY F. LÖWENSTEIN, Washington, D. C., assignor to Edward F. Colladay, Washington, D. C. Filed June 25, 1924. Serial No. 722,361. 2 Claims. (Cl. 179—2.)

1. In a combined radio receiving and telephone system, a pair of line wires, a central office source of current supply for said line wires, a subscriber's telephone of relatively low resistance connected to said line wires, a subscriber's radio receiving set of relatively high resistance also connected to said line wires, means for supplying current from said central source to either or both of said instruments over the line wires, a local booster storage battery connected across the line wires between said instruments and a current valve connected in one of said lines wires between the telephone and the radio receiving set in a manner to prevent discharge of current from said storage battery to said telephone while permitting the flow of current from said telephone to both the storage battery and the radio receiving set.

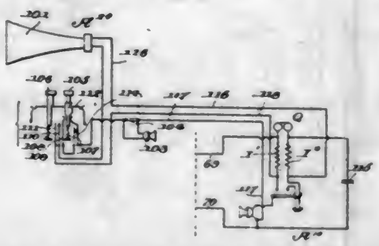
1,695,176. TRAFFIC-CONTROL SYSTEM FOR RADIO BROADCAST DISTRIBUTION. EDWARD E. CLEMENT, Washington, D. C., assignor to Edward F. Colladay, Washington, D. C. Filed Apr. 10, 1925. Serial No. 22,172. 11 Claims. (Cl. 179—2.)



1. In a system of broadcast distribution, a central station, subscribers' stations and wire lines interconnecting them, a source of electrically transmitted broadcast signaling currents at the central station, a plurality of one-way amplifying units for said signaling currents, mechanically actuated switching links at the central station, circuit connections from said switching links to said amplifiers, said subscribers' lines and said source, respec-

tively, there being one amplifier unit per line only, and means to close said circuits when a switching operation is complete, so that the corresponding unit is automatically brought into operative condition, in such relation to its line as to amplify in the direction of said line when calling, only.

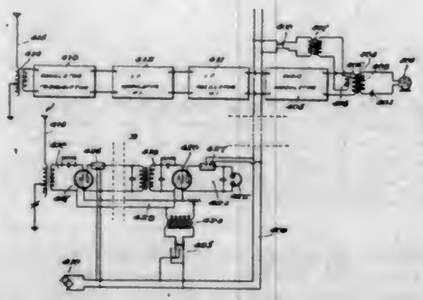
---



1,695,177. RADIO SERVICE METERING SYSTEM. EDWARD E. CLEMENT, Washington, D. C., assignor to Edward F. Colladay, Washington, D. C. Original application filed Feb. 9, 1924, Serial No. 691,825. Divided and this application filed Aug. 1, 1925. Serial No. 47,548. 6 Claims. (Cl. 179—11.)

1. In a system of the class described, a power distributing station, and a current supply circuit extending therefrom a broadcasting station associated therewith, a subscriber's radiophone having a detector, two input circuits therefor and a local meter circuit, and means associated with said radiophone for connecting said radiophone circuits to said supply circuit for simultaneously supplying current therefrom to the meter and passing modulated waves from the supply circuit to one of said detector input circuits.

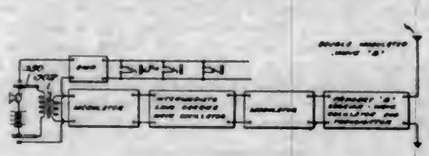
---



1,695,178. SELECTIVE KEY FOR RADIO SYSTEMS. EDWARD E. CLEMENT, Washington, D. C., assignor to Edward F. Colladay, Washington, D. C. Original application filed Feb. 20, 1925, Serial No. 10,533. Divided and this application filed Aug. 1, 1925. Serial No. 47,549. 3 Claims. (Cl. 179—176.)

1. A key set comprising a set of two normally open pairs of contacts, a normally closed pair of contacts in series with said normally open contacts, unitary actuating means for all said contacts arranged upon partial movement to close said normally open contacts but upon further movement to open said normally closed contacts, tension means arranged to normally hold the actuating means in a normal position to permit said contacts to assume normal position, locking means operable upon an operating movement of the actuating means to lock the same against return movement from the partial movement position to normal, but permitting movement between the partial position and full movement position, and means for releasing said locking means.

---

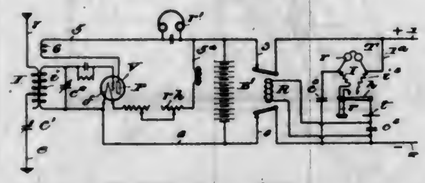


1,695,179. SECRECY SYSTEM OF RADIO BROADCAST DISTRIBUTION. EDWARD E. CLEMENT, Washington, D. C., assignor to Edward F. Colladay, Washington, D. C. Filed Oct. 30, 1925. Serial No. 65,860. 5 Claims. (Cl. 250—6.)

1. The method of secret signaling which comprises controlling the action of signal transmitting apparatus so as to produce a signal modulated wave carrying also as a masking modulation one of two complementary components which when added together will produce a zero or silent wave, broadcasting the signal modulated wave with its said masking modulation, and separately supplying the other or complementary component by point to point transmission to those receiving stations, in the field of said broadcast component, with which it is desired to communicate.

---

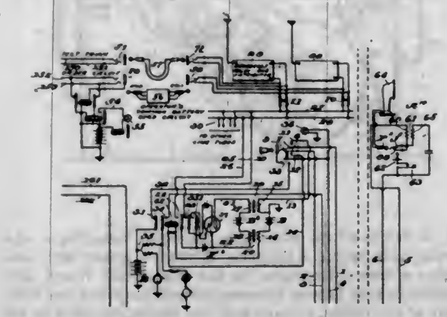
1,695,180. SECRECY SYSTEM OF RADIO BROADCAST DISTRIBUTION. EDWARD E. CLEMENT, Washington, D. C., assignor to Edward F. Colladay, Washington, D. C. Original application filed May 21, 1925, Serial No. 31,928. Divided and this application filed Oct. 30, 1925. Serial No. 65,861. 3 Claims. (Cl. 250—15.)



1. A broadcasting system comprising a primary station, a plurality of intermediate relay distributing stations, and a plurality of local receiving stations related to each relay station and all in permanent tune therewith, means at the primary station for imposing signal modulations on a wave of fixed intermediate frequency, means also at said stations for imposing said modulated intermediate frequency wave as a modulation upon a high frequency radio carrier wave of fixed frequency permanently alloted to the succeeding relay station or stations, means at said relay station to receive said double modulated waves from the primary station, means to detect off the intermediate frequency waves and to relay and redistribute the same in its own area by double modulation on a primary wave of the standard wave length to which its receiving stations are tuned, means at the local receiving stations for

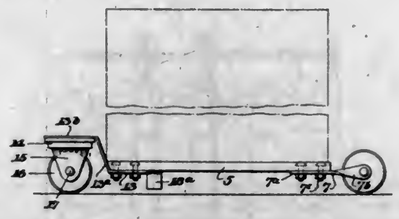
selecting said programs by first demodulating the high frequency carrier wave received, in order to strip off the intermediate frequency wave or waves and thereafter selectively detecting the signals modulated on an intermediate frequency wave, the said intermediate frequency with its signal modulations being maintained the same from its original modulation at the primary station through the relay station or stations, to and through the subscriber's selectors.

---



1,695,181. RADIO RECEIVING INSTRUMENT FOR SYSTEMS OF BROADCAST DISTRIBUTION. EDWARD E. CLEMENT, Washington, D. C., assignor to Edward F. Colladay, Washington, D. C. Filed Nov. 25, 1925. Serial No. 71,454. 5 Claims. (Cl. 179—2.)

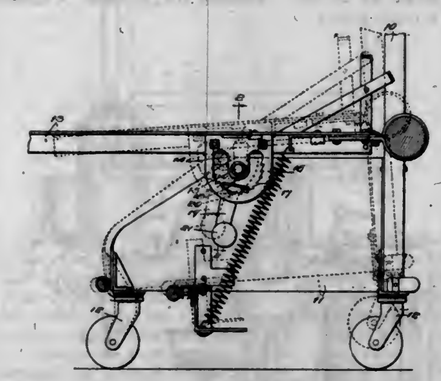
1. In a combined telephone system and radio telephone system, a pair of line wires, a central office source of current supply for said line wires, a subscriber's telephone of relatively low resistance connected across said line wires, a subscriber's radio telephone of relatively high resistance also connected across said line wires, means for supplying current from said central source at a fixed voltage to either or both of said instruments over the line wires and a booster source of current arranged to supply extra energy to the radio instrument to compensate for the drop in voltage when the telephone instrument is put in use simultaneously therewith.



---

1,695,182. TRUNKING SYSTEM FOR RADIO DISTRIBUTION. EDWARD E. CLEMENT, Washington, D. C., assignor to Edward F. Colladay, Washington, D. C. Filed Mar. 15, 1926. Serial No. 94,850. 6 Claims. (Cl. 179—2.5.)

1. In a system of radio broadcast distribution, a plurality of subscribers' stations divided into a plurality of groups, a district broadcast station having broadcast receiving apparatus and wired broadcast distributing means common to said groups, a central station for each group having receiving means for receiving the broadcast from said comon district station, amplifying means arranged to connect the receiving means of a central station with said distributing means, and amplifying means arranged to connect each subscriber's station with the receiving means at the central station of its group.

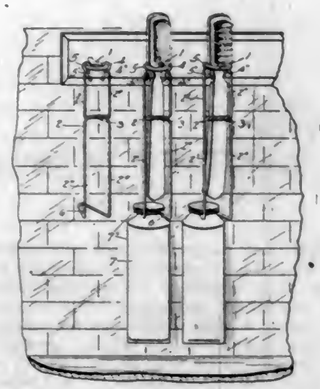


1,695,183. PORTABLE ASH-CAN TRUCK. MICHAEL J. DOWNEY, Springfield, Mass. Filed Apr. 13, 1926. Serial No. 101,823. 1 Claim. (Cl. 280—61.)

A portable truck for handling ash cans consisting of a frame having a pair of bracket arms extending rearwardly thereof, the frame consisting of a U-shaped metal channel providing side flanges, the bracket arms being secured to said side flanges, an axle mounted on the bracket arms, a pair of wheels mounted on the axle, an upwardly and forwardly extending bracket arm on the forward end of the frame, a caster bracket swiveled to the last named bracket arm, a caster wheel mounted on the caster bracket, and a cross arm secured to the frame rearwardly of the caster to limit the degree of tilting of the frame and its load, the cross arm having pendant lugs.

---

1,695,184. SAFETY LOCK. ROSS J. ELLSWORTH, Woodstock, Ill., assignor to Holmes Disappearing Bed Company, Woodstock, Ill., a Corporation of Illinois. Filed Dec. 4, 1926. Serial No. 152,588. 5 Claims. (Cl. 5—167.)

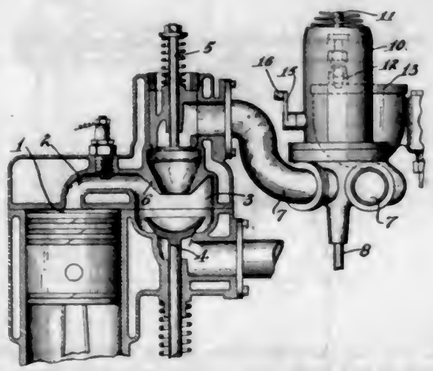


5. In a bed, the combination with a frame, of bed rails pivoted to said frame, and normally inoperative means for preventing said frame from tilting on to said rails, the said means comprising a gravity actuated pawl and ratchet mechanism on said frame and one of said rails.

---

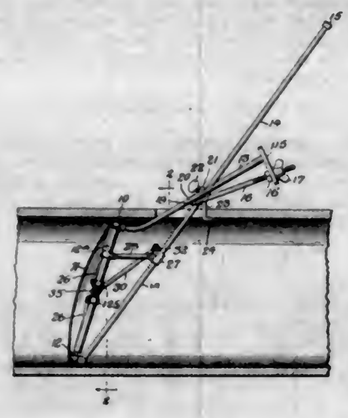
1,695,185. HOLDER FOR DENTIFRICE CONTAINER TUBES. GEORGE TAYLOR GALE, Toronto, Ontario, Canada. Filed Apr. 21, 1927. Serial No. 185,551. 1 Claim. (Cl. 248—20.)

The combination with a supporting structure and an eyed member extending therefrom, of a pair of parallel depending wire members having their upper ends turned inward to form a split eye, the extremity of the wire forming a



finger spaced from its adjacent parallel member to form an entrance slot to the eye and at their lower end into a right angularly turned V-shaped portion adapted to bear against

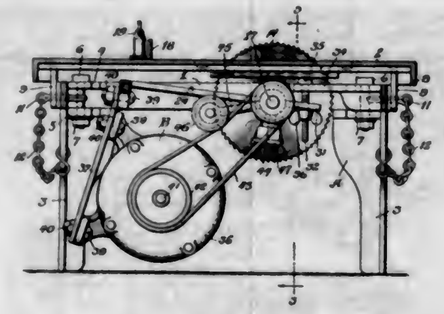
the surface of the supporting structure, and means extending between the depending wires for holding such wires together in spaced relation.



---

1,695,186. COMBUSTION ENGINE. JOHN GOOD, Garden City, N. Y., assignor to Good Inventions Co., New York, N. Y., a Corporation of New York. Filed Feb. 28, 1918, Serial No. 219,579. Renewed Oct. 2, 1926. 6 Claims. (Cl. 123—191.)

1. The combination of an engine cylinder, a chamber connected thereto, the outlet from the chamber leading to the engine cylinder being above the bottom of the chamber, means for delivering a charge mixture of liquid fuel and air to said chamber, an inlet valve controlling the delivery of the mixture to the chamber and an exhaust valve in the bottom of the chamber, the said inlet valve and the body of the exhaust valve being so related that the said mixture is directed toward the face of the body of the exhaust valve and liquid fuel is deposited thereon.



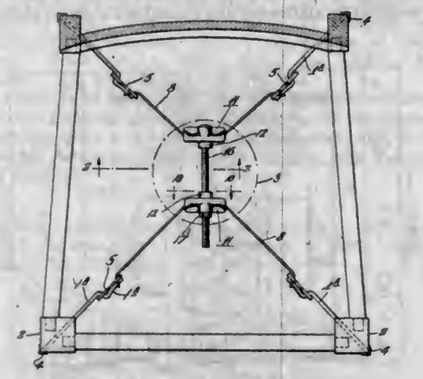
1,695,187. GAS-MAIN STOPPER. PATRICK GOODMAN, Brooklyn, N. Y. Filed Oct. 5, 1927. Serial No. 224,235. 6 Claims. (Cl. 137—76.)

1. A gas main stopper including an expansible frame having means thereon to effect a stoppage of the gas main, handle bars on said frame at an angle to the plane of the frame, expansion means for said frame operable by a longitudinal movement of one handle bar, and a brace connection between the other handle bar and said frame at approximately diametrically opposite points on the frame.

---

1,695,188. PORTABLE BENCH SAW. FAY M. HENKEL, New Rochelle, N. Y. Filed Apr. 28, 1927. Serial No. 187,308. 2 Claims. (Cl. 143—35.)

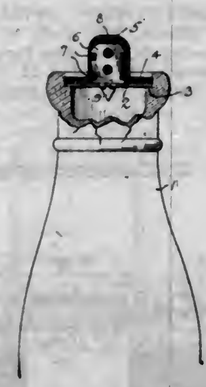
1. A device of the character described, including a supporting unit having a platform thereon, a power unit comprising a frame, trunnions on the end of said frame, said supporting unit having recesses therein receiving the trunnions of the frame, a bearing on the frame, an arbor in the bearing adapted to receive a saw or other tool, spring bars secured to the frame, a motor fixed to the spring bars, a pulley on the arbor, a pulley on the motor shaft, and an endless belt connecting said pulleys.



---

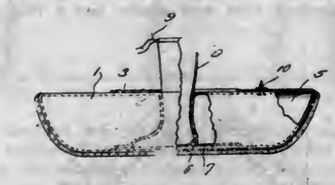
1,695,189. FURNITURE BRACING. LUCIUS R. CLARK and ALFRED MURRAY YEOMANS, Chicago, Ill.; said Yeomans assignor to said Clark. Filed May 12, 1927. Serial No. 190,900. 8 Claims. (Cl. 155—197.)

1. Means for bracing an article of furniture comprising two endless wire members each having as its major portion



two vertically spaced V-shaped main portions presenting superposed apices, the superposed apices of one wire member being directed toward the superposed apices of the other member; four anchoring means each secured to the article of furniture adjacent to one corner of the latter and each connecting the article of furniture with the ends of two superposed arms of one wire member; each of the aforesaid wire members having the ends of its superposed loops

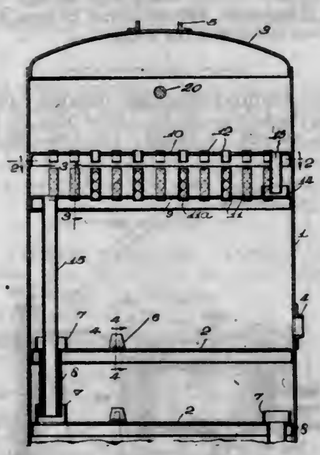
connected by bights respectively connected to one of the said pairs of anchoring members; and connecting means interposed between the pairs of superposed apices of the two wire members, the said connecting means comprising two strain equalizers and a bolt connecting the two equalizers, each equalizer having a substantially flat face portion at right angles to the axis of the said bolt and engaging the superposed apices of one wire member.



---

1,695,190. MILK-BOTTLE CLOSURE. DANIEL H. KANE, Dayton, Ohio. Filed June 28, 1928. Serial No. 288,916. 3 Claims. (Cl. 215—51.)

1. In a vessel closure, a closure disc engageable with the mouth of a vessel, a vertically disposed handle tab projecting therefrom, a flat metallic insert embedded in said handle tab portion having marginal notches and perforated for anchorage engagement therein, and a dependent barbed spur carried by said insert and projecting centrally from the under side of the disc, substantially as specified.

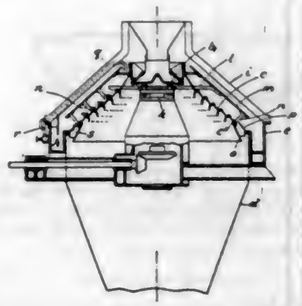


1,695,191. WATER SKATE. JOHN W. KEENE, Westport, Conn. Filed May 15, 1928. Serial No. 278,001. 2 Claims. (Cl. 9—21.)

2. In a water skate comprising an elongated inflatable body, a covering for said body, said inflatable body being provided with a foot receiving pocket, and a stiffening element interposed between the covering and the said body beneath said foot receiving pocket.

---

1,695,192. VAPOR EXTRACTOR. MEINHARD HENRY KOTZENUE, Tulsa, Okla. Filed May 28, 1927. Serial No. 194,964. 1 Claim. (Cl. 261—114.)

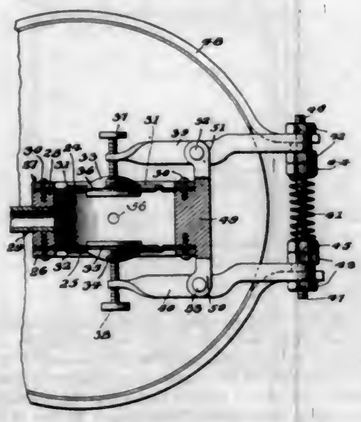


A tower for the absorption of fluids comprising a shell having gas and liquid entrance and discharge passages, spaced trays in the shell, bubbling units carried by certain of the trays, a pair of the trays being closely associated with each other, one of the pair of trays having passages therethrough, pipes rising from the passages, means in the pipes for causing the whirling movement of gases passing therethrough, the other of the pair of trays having passages with pipe connections mounted in the passages and having one end spaced from adjacent pipes in the other tray, the portion of the shell between the spaced ends of the pipes constituting a dead space where the gas passing through the whirling means loses some of its velocity.

---

1,695,193. APPARATUS FOR SEPARATING SOLIDS FROM LIQUIDS. REGINALD FRANK KRALL, London, England, assignor to Woodall-Duckham (1920) Limited, London, England, a British Company. Filed Apr. 24, 1926, Serial No. 104,460, and in Great Britain Aug. 28, 1925. 6 Claims. (Cl. 210—63.)

1. A drying apparatus comprising a substantially conical screen having its axis substantially vertical and its larger end extending downwardly and adapted to be rotated about its axis, means for projecting particles of

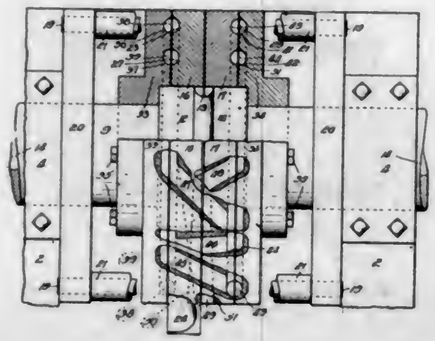


material to be dried against the inner surface of the screen, means for feeding material to the said projecting means, a hopper positioned below said screen to receive dried material leaving the lower end of the screen, a ring depending from said screen, and a ring coaxial

with and of the same diameter as said first-named ring and upstanding from the hopper with its upper edge in close proximity to the lower edge of the first-named ring and cooperating with the latter to form a clearance between the screen and the hopper.

---

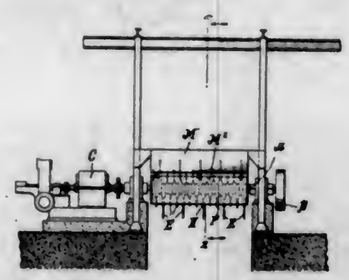
1,695,194. LIQUID-PRESSURE BRAKE. JOHN LANSINGER, Clarks Summit, Pa. Filed May 11, 1927. Serial No. 190,615. 3 Claims. (Cl. 188—152.)



2. A liquid pressure brake, comprising a plurality of diaphragms spaced apart, a main body portion, clamping members detachably connected to the main body portion, the diaphragms being firmly held therebetween, lever arms extending from the main body portion, head members firmly held in the diaphragms, adjusting elements attached to the head members for bringing tension on the lever arms, the lever arms being pivotally mounted mounted on the body portion.

---

1,695,195. BALL-FORMING MACHINE. MERRITT W. MAGANN, St. Louis, Mo., assignor to St. Louis Steel Ball Corporation, St. Louis, Mo., a Corporation of Missouri. Filed Aug. 31, 1925. Serial No. 53,556. 12 Claims. (Cl. 80—21.)



11. In a solid ball forming machine structure, a base, a pair of standards for said base, bearings at the upper ends of said standards, a drive shaft, a hollow water cooled driven shaft, gearing connecting said shafts, a peripheral grooved flange for said driven shaft, a pair of stationary die plates through which the driven shaft passes, means to prevent lateral displacement of the stationary die plates, said stationary die plates having slightly dished inner faces to permit metallic slips gathered therebetween to be discharged from therebetween, a pair of rotatable die plates fixed to the flange of said shaft for rotation therewith, an inner and an outer facial groove concentrically arranged in the inner faces of each pair of cooperating stationary and rotatable die plates to form a

pair of concentric orbital raceways for each pair of cooperating stationary and rotatable die plates, internal passages in the stationary die plates for connecting the raceways of one pair of cooperating stationary and rotatable die plates with the raceways of the other pair of cooperating stationary and rotatable die plates, a feed groove leading to one of the other raceways between one pair of cooperating stationary and rotatable die plates, a discharge passage formed between the two stationary die plates and a passage in one of the stationary die plates connecting the inner raceway thereof with the discharge passage which discharge passage cooperates with the peripheral groove of the driven shaft.

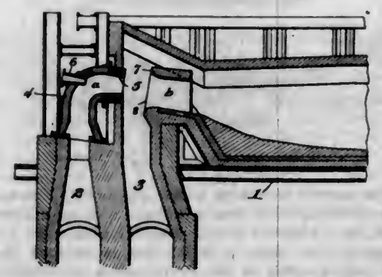
---

1,695,196. CANE-CUTTING ATTACHMENT FOR MILLS. IRA MERLIS, New York, N. Y., assignor to Kelvin Engineering Co., Inc., New York, N. Y., a Corporation of Delaware. Filed Mar. 22, 1928. Serial No. 263,838. 10 Claims. (Cl. 146—110.)

2. A rotary cutter attachment for sugar cane mills comprising a shaft, a series of knives mounted radially on said shaft in staggered relation, with means, comprising elastic means, for holding said knives on said shaft, to permit a yielding twisting movement to the shank of each knife blade, thereby protecting said knife against breaking under glancing blows, when in use.

1,695,197. EMULSIFIABLE OIL. DAVID R. MERRILL, Berkeley, Calif., assignor to Union Oil Company of California, Los Angeles, Calif., a Corporation of California. Filed June 14, 1923. Serial No. 645,357. 9 Claims. (Cl. 87—9.)

1. An emulsifiable oil comprising a napthenic soap, mineral oil, and a substantially anhydrous aliphatic alcohol.

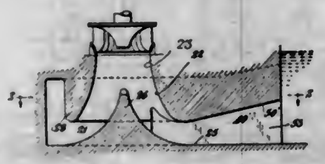


---

1,695,198. PROCESS FOR CLARIFYING, DECOLORIZING, AND NEUTRALIZING OILS. DAVID R. MERRILL, Berkeley, Calif., assignor to Union Oil Company of California, Los Angeles, Calif., a Corporation of California. Filed Feb. 1, 1926. Serial No. 85,382. 39 Claims. (Cl. 196—147.)

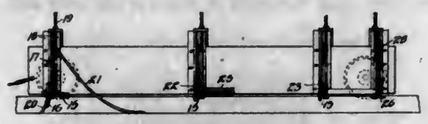
4. A process of decolorizing and neutralizing oleaginous substances including petroleum lubricating oils comprising mixing clay with acid, treating oil therewith, and in a a separate treatment treating the oil with clay and an alkali solution.

---



1,695,199. REGENERATIVE FURNACE. WILLIAM MILLWARD, Pittsburgh, Pa. Filed July 5, 1923. Serial No. 649,501. 3 Claims. (Cl. 263—15.)

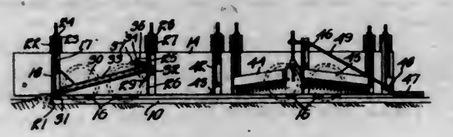
3. Means for effecting sharp combustion in furnaces of the regenerative type, comprising the combination of a gas uptake, an unobstructed air uptake, a gooseneck terminal for the gas uptake and stopping short of the air uptake and constituting a primary mixing chamber, means for supplying it with air under pressure, a secondary mixing chamber centered relatively to the first and to said means, and a system of control.



---

1,695,200. HYDRAULIC DRAFT TUBE. LEWIS FERRY MOODY, Philadelphia, Pa. Original application filed Nov. 28, 1922, Serial No. 603,769. Divided and this application filed Mar. 26, 1926, Serial No. 97,534. Renewed May 14, 1928. 20 Claims. (Cl. 253—117.)

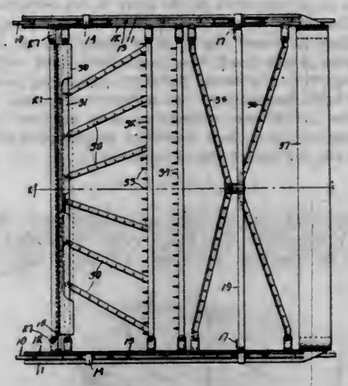
1. A turbine having a draft tube formed of an outer circular spreading wall and a central cone projecting into the space surrounded by said wall, said spreading wall at the outlet of said tube being cut away to form a spiral collector passage, and said spreading wall being continued in one direction to form an inclined wall of a second passage which receives the downstream flow directly from said tube, and a partition for separating said spiral and downstream passages.



1,695,201. ASPHALT SPREADER. ALFRED TURENNE NEWELL, Birmingham, Ala. Filed Mar. 14, 1927. Serial No. 175,338. 7 Claims. (Cl. 94—46.)

1. A machine for use in roadbuilding comprising a scraper adapted to scrape off the surface of the roadway, an apron for receiving material to be deposited on the roadway said apron forming a drag for smoothing the surface operated upon by the scraper, and means for striking off and leveling the material deposited from the apron, substantially as set forth.

---

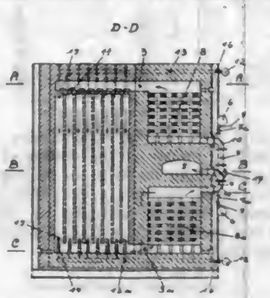


1,695,202. ASPHALT SPREADER. ALFRED T. NEWELL, Birmingham, Ala. Filed May 26, 1928. Serial No. 280,932. 6 Claims. (Cl. 94—44.)

1. A road building machine comprising an adjustable scraper for preparing the roadway for the reception of surfacing material, a cross member supported in spaced relation to said scraper, a plurality of rods having their ends supported by said scraper and cross member, and pipes loosely mounted on said rods, substantially as set forth.

---

1,695,203. ASPHALT SPREADER. ALFRED T. NEWELL, Birmingham, Ala. Filed July 28, 1927. Serial No. 209,121. 6 Claims. (Cl. 94—44.)

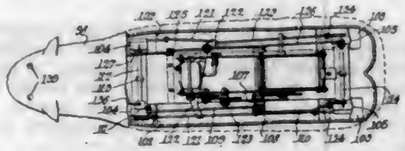


1. An asphalt spreading machine comprising a scraper for preparing the roadbed for the reception of road surfacing material, diagonal rakes disposed behind said scraper, and means for ironing out the material after it is operated upon by said rakes, substantially as set forth.

---

1,695,204. VERTICAL-CHAMBER COKE OVEN. CARL OTTO, Essen-Ruhr, Germany. Filed Nov. 2, 1926, Serial No. 145,793, and in Germany Oct. 14, 1925. 7 Claims. (Cl. 202—9.)

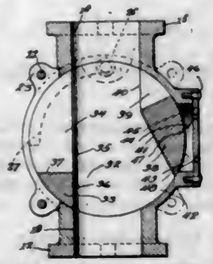
1. A vertical chamber coke oven having a vertical coke chamber with broad and narrow sides and heating walls



therefor, provided with heating flues, said heating walls extending along the broad sides of said chamber, regenerators located at one narrow side of the chamber, said regenerators being connected to said heating flues and be-

ing arranged in two superimposed rows, having a horizontal wall common to the rows of the regenerators, and a waste heat flue arranged in said wall and means for connecting said waste heat flue with either of the rows of regenerators.

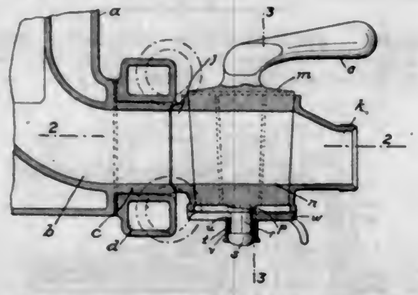
---



1,695,205. ANIMATED TOY. HERBERT EDWARD PRICE, Seattle, Wash. Filed Sept. 6, 1927. Serial No. 217,779. 2 Claims. (Cl. 46—40.)

1. In an animated toy the combination with a body, and means for propelling the body, said means including pivoted leg members and a clock mechanism for operating the leg members, of an upstanding lever, a rod connection between said lever and one of the leg members, a laterally movable head connected to the body, a rod connecting said upstanding lever to one side of the head, for swinging the head laterally when the lever is actuated, eye balls exposed within the head, ear levers fulcrumed within and extending from the head, inwardly extending arms upon the eye balls, connecting rods between said arms and the respective ear levers, connecting rods between said ear levers and the body, and coverings on the projecting portions of the ear levers simulating ears.

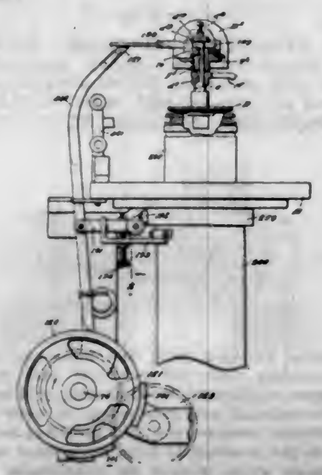
---



1,695,206. AIR VALVE AND FUEL CUT-OFF. WILLIAM HENRY PRITCHETT, San Diego, Calif. Filed May 4, 1927. Serial No. 188,803. 2 Claims. (Cl. 251—109.)

1. An air valve and fuel cut-off comprising a casing having fuel inlet and outlet openings and a lateral air port, a rotary valve mounted in said casing and having a substantially diametric through passage with a segment at one side composed of a relatively small blank portion and a relatively large open portion extending from the through passage to the periphery of the valve, said valve body having at the other side of said passage a smaller segmental portion composed in part of a blank segment part having its chord line diagonal to the chord line of the first-mentioned segment and angular to the axis of the through passage, said last-named segment also having a slotted portion with its chord line extending substantially parallel with the chord line of the first segment, said valve body having a space between said blank portion and the through passage, said blank segment part being adapted in one position of the valve to completely mask the lateral air port and in another position to completely mask the fuel inlet opening.

---

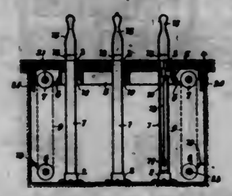


1,695,207. MILK PASTEURIZER. WILLIAM SANGSTER, Peterborough, Ontario, Canada, assignor to The De Laval Separator Company, New York, N. Y., a Corporation of New Jersey. Filed Nov. 3, 1927. Serial No. 230,914. 5 Claims. (Cl. 137—21.)

1. The combination with a milk pasteurizing vessel and a pipe extending therefrom and forming a milk discharge passage, of a separate heater removably attached to and surrounding the pipe, a valve casing secured to the heater, and a valve in the valve casing controlling the outflow of milk from the outlet end of the pipe through the valve casing.

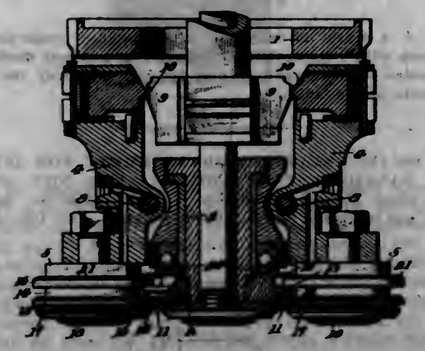
---

1,695,208. DIAL-HARMONIZING DEVICE FOR CIRCULAR-KNITTING MACHINES. PETER SCHARHAG, Milwaukee, Wis., assignor to Scott & Williams, Incorporated, New York, N. Y., a Corporation of Massachusetts. Filed Feb. 24, 1927. Serial No. 170,503. 9 Claims. (Cl. 66—27.)



9. A circular knitting machine having rotating pattern means, a needle cylinder, a cylinder raising tube, a dial and a thrust rod actuated by said rotating pattern means to raise and lower said dial in combination with an operating lever pivoted on a stationary portion of the machine adapted to raise and lower said thrust rod, cam means operated in unison with said pattern drum adapted to actuate said operating lever and bracket means on said cylinder raising tube adapted to move said operating lever an adjustable amount with relation to the movement of said cylinder raising tube.

---

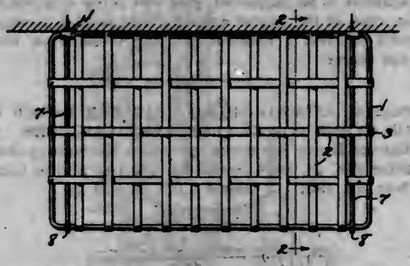


1,695,209. APPARATUS FOR SETTING UP SKITTLE PINS. HERMANN SCHWARZ, Hamburg, Germany. Filed Dec. 20, 1927, Serial No. 241,390, and in Germany Sept. 23, 1926. 1 Claim. (Cl. 273—44.)

An apparatus for setting up the pins in skittle alleys comprising in combination a plurality of vertical tubes the upper ends of which support the pins, each of said tubes passing through upwardly flared openings in a platform and being provided with vertical longitudinal slots in their walls, a vertically adjustable frame beneath said platform, flexible pulling members secured to the lower ends of said pins and provided with balls at their lower ends, a pair of endless driving chains on which said frame is suspended, arms secured to said frame and provided with guiding bores for said pulling members and means for driving said chains to cause said arms to contact with said balls and thereby stretch said pulling members and to raise said platform to secure said pins in the vertical position.

---

1,695,210. SEAMING HEAD FOR CAN-CLOSING MACHINES. MATHEW M. SEDWICK, Chicago, Ill., assignor to Continental Can Company, Inc., New York, N. Y., a Corporation of New York. Filed June 27, 1927. Serial No. 201,842. 6 Claims. (Cl. 113—24.)



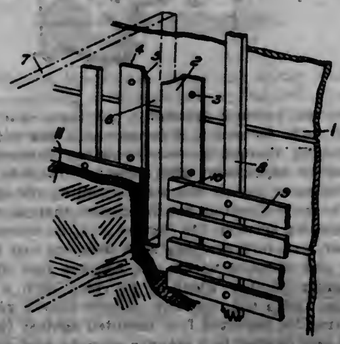
1. A seaming head for closing machines including a chuck for engaging a can end and holding the same on the can body, a body portion, said chuck and body portion having a relative rotation, seaming levers carried by said body portion, a seaming roll mounted to rotate freely on each seaming lever, and yielding means associated with said chuck and adapted to engage the seaming rolls at the outer edge portion thereof for causing said seaming rolls to rotate on their respective levers.

---

1,695,211. RACK. OSCAR G. SHILANDER, Dearborn, Mich. Filed Jan. 16, 1926. Serial No. 81,818. 1 Claim. (Cl. 211—93.)

A supporting rack of the class described comprising a rectangular-shaped frame formed of round stock, spaced straps extending transversely and longitudinally across the frame with their ends fastened to the frame, the longitudinally extending straps passing under alternate transversely arranged straps and over the other transversely arranged straps, eye forming clips connected with the rear bar of the frame for hingedly connecting the frame with a support and a pair of braces each having an eye at one end receiving a part of the front bar of the frame and its other end bent at an angle and flattened for attachment to a support.

---

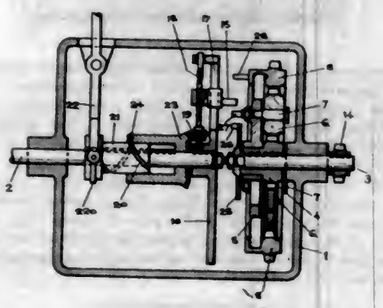


1,695,212. BOTTLE STERILIZING AND CLEANSING APPARATUS. THEOBALD FRIEDRICH SEITZ, Kreuznach, Germany, assignor to The Corporation of Seitz-Werke G. m. b. H., Kreuznach, Germany. Filed Mar. 23, 1927, Serial No. 177,767, and in Germany Mar. 15, 1926. 5 Claims. (Cl. 141—7.)

1. In a bottle sterilizing and cleansing apparatus, a rotatable fluid container, sockets thereon, each socket forming a fluid-tight chamber around the neck of a bottle for the passage of fluid from the container into the bottle and around the exterior of the neck thereof, a valve between the container and each socket, and means for engaging the bottom of each bottle to hold it in its socket.

---

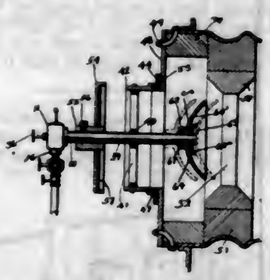
1,695,213. BRACKET. WILLIAM CUMMING SKINNER, Vancouver, British Columbia, Canada. Filed Apr. 11, 1927, Serial No. 182,939, and in Canada May 13, 1926. 1 Claim. (Cl. 304—32.)



The combination with a scaffold bearer or the like, of a bracket adapted for attachment to a wall surface, said

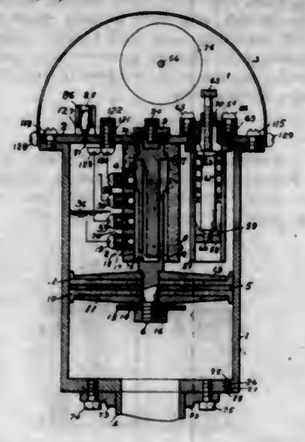
bracket being formed of inherently springy sheet material and having medial portions curved away from the wall surface to define a vertical slot into which the end of a bearer is adapted to be supported, said slot being of a width less than that of the bearer whereby, said medial portions are caused to exert a resilient gripping pressure on the side of the bearer.

---



1,695,214. CHANGE-SPEED GEAR FOR MOTOR CARS OR OTHER POWER-PROPELLED VEHICLES. NIELS EDVARD EINAR SÖRENSEN, Safvenas, Gottenborg, Sweden. Filed Feb. 24, 1928, Serial No. 256,700, and in Germany Sept. 16, 1927. 5 Claims. (Cl. 74—34.)

1. In a change speed gear, a driving shaft, two gear wheels, a countershaft operable by each of said gear wheels by separate transmitting means having different ratios of gearing, said gear wheels forming two coaxial gear wheels in a planetary gearing, planetary pinions cooperating simultaneously with both the first mentioned gear wheels, and selective means to make operative at will either of the said transmitting means or to simultaneously make operative both of said transmitting means thereby imparting three different speeds from the driving shaft to the counter shaft.



---

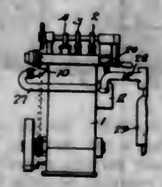
1,695,215. LIQUID-FUEL BURNER. EARLE I. STAPLES, New York, N. Y. Filed Apr. 23, 1923. Serial No. 634,191. 1 Claim. (Cl. 158—1.5.)

In an oil burning apparatus, an open ended member adapted to be secured to a furnace in a line with the fire box opening thereof, a concavo-convex damper movably mounted for adjustment with respect to one side of the fire box opening, a second damper controlling the open ended member and adjustable with relation thereto to form a draft opening between the furnace and the second damper, a burner structure carrying both dampers and having its burner end disposed within the concave face of the concavo-convex damper which is provided with a series of openings, and a substantially concavo-convex guard member having its convexed face mounted against the concave face of said damper in a manner whereby said guard member is disposed in the path of air from the series of openings.

1,695,216. MARINE GOVERNOR FOR SEAGOING SHIPS. GEORGE JOHNSON THIOLAND, Haddonfield, N. J. Filed Jan. 25, 1927. Serial No. 163,412. 11 Claims (Cl. 137—159.)

1. In an anticipating emergency marine governor, a main cylinder, a piston operable therein, a cylinder pump in the main cylinder above the piston, a third cylinder within the main cylinder above the piston, a piston rod operable in the third cylinder and connected to the piston, vacuum means for controlling said piston rod and its piston and electric circuits having electro-mechanical connections with the pump, whereby the making and breaking of the electric circuits may constitute means operatively associated with the vacuum means to maintain a constant vacuum in the main cylinder.

---

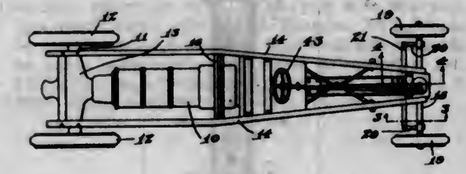


1,695,217. SEPTIC TANK. JOHN P. THURELL, Fort Myers, Fla. Filed Mar. 23, 1927. Serial No. 177,781. 10 Claims. (Cl. 210—6.)

1. A septic device of the class specified, comprising a tank with a removable bottom and top, and rear discharge means with an open bottom for carrying away the contents of the tank.

---

1,695,218. STARTING ARRANGEMENT FOR INTERNAL-COMBUSTION ENGINES. PAUL VIET, Billancourt, France. Filed Feb. 6, 1926, Serial No. 86,641, and in France Sept. 3, 1925. 3 Claims. (Cl. 123—179.)



2. A starting device for internal combustion engines comprising an auxiliary internal combustion engine, said engine being provided with fuel intake and exhaust valves, a carburetor in communication with said intake valve, a conduit connecting said auxiliary engine with the engine to be started, a third valve in said conduit, means for regulating the opening of said third valve to permit escape of a portion of the carburetted air in said auxiliary engine to said passage, and a second carburetor interposed in said passage for further carburetting the mixture supplied to the engine to be started.

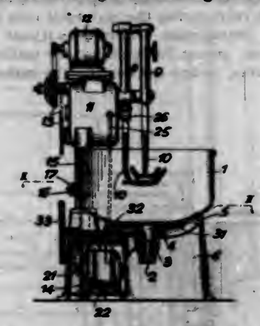
---

1,695,219. STEERING DEVICE. ROY J. WINSOR, Bucyrus, Ohio. Filed Dec. 26, 1925. Serial No. 77,849. 2 Claims. (Cl. 280—96.)

1. An improved steering device for automotive vehicles comprising a front axle, a horizontal pivotal mounting therefor, steering wheels at either end thereof, a connecting bar extending between such steering wheels and a drag link pivotally connected at one end to the connecting bar in alignment with the horizontal axis of the front axle, and pivotally mounted at its other end in vertical alinement with and directly above the horizontal axis of the front axle.

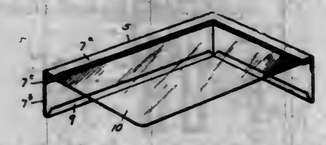
---

1,695,220. LOOSE-LEAF BINDER. WALTER F. WOLF, New York, N. Y. Filed Mar. 3, 1928. Serial No. 258,932. 5 Claims. (Cl. 129—13.)



1. In combination with a plurality of stacked loose-leaves, a binder post section extending partially through the thickness of said plurality of loose-leaves from one side of the same, a screw threaded to said post section, and a sleve extending through the opposite side of said plurality of loose leaves and provided with internal screw threads for threading engagement with said screw, the threaded connection between said sleeve and screw being of a tighter fit than the threaded connection between said screw and post section.

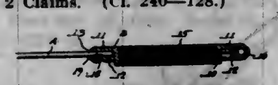
---



1,695,221. DOUGH KNEADING AND MIXING MACHINE. FRIEDRICH ASCHBACH, Aarau, Switzerland. Filed Jan. 12, 1928, Serial No. 246,272, and in Switzerland Dec. 14, 1927. 6 Claims. (Cl. 259—32.)

1. In a dough mixing and kneading machine, in combination, a machine frame, a kneading trough tiltably mounted in said machine frame, a mixing and kneading device with kneaders cooperating with said kneading trough, means for raising said mixing and kneading device, and an interconnection between said means and the trough to cause a tilting movement of the latter by the raising movement.

---

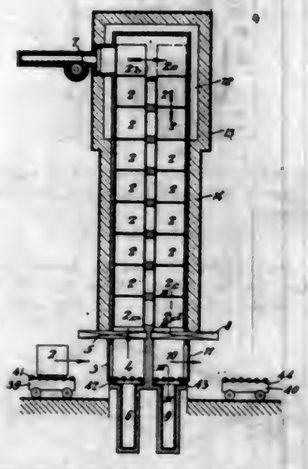


1,695,222. BOX COVER. EDWARD ARNOLD and HENRY TEMPLETON, Yakima, Wash. Filed Apr. 25, 1927. Serial No. 186,451. 3 Claims. (Cl. 220—82.)

1. The combination with a box having an open top side, of a cover therefor, comprising four horizontally disposed members, each of said members consisting of a transparent pane and an L-shaped frame member, said transparent pane being supported wholly from its outer side and end portions by being gripped by its companion L-shaped frame member, the inner sides and edges of said transparent pane being wholly free to lie in snug and close fitting relation to the other transparent panes, at such portions thereof as overlap, two of said L-shaped frame members having their lower edges bent to form channeled portions adapted to slidably receive the companion L-shaped members, said frame members being of such width as to extend down over and embrace the sides of the box to a considerable extent, to thereby insure the retention of the cover upon the box.

---

1,695,223. LAMP-SHADE-FRAME HOLDER. KORNEL C. BERGER, New York, N. Y. Filed Aug. 6, 1927. Serial No. 211,231. 2 Claims. (Cl. 240—128.)

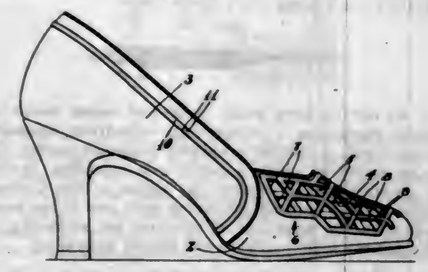


1. An electric lamp shade frame and socket connecting element comprising a substantially cylindrical internally-threaded hub, a radially projecting U-shaped portion having an apertured bight, a radial arm extending through the apertured bight between the leaves of the U-shaped portion and an instruck projection from one of the leaves recessed in the inner end of the arm for anchoring the same against radial outward and lateral movement.

---

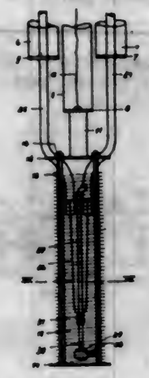
1,695,224. HEAT-TREATING FURNACE. ADALBERT BESTA, Duisburg, Germany. Filed Mar. 26, 1926, Serial No. 97,715, and in Germany Feb. 28, 1925. 7 Claims. (Cl. 263—6.)

1. Apparatus for the heating and subsequent cooling of materials, and means particularly for the annealing of



metals, comprising chambers filled with a gas that behaves neutrally with respect to the materials, an upwardly directed delivery device located only at the lower part of the apparatus for introducing the materials into the apparatus in a loosely superposed condition without employing a chain conveyor, means for guiding the materials upwards in the apparatus, means for heating the materials on their

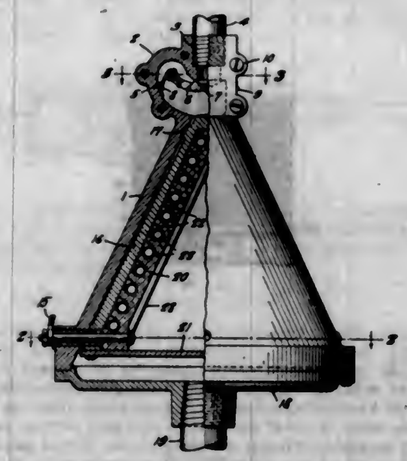
upward path through the apparatus, a pushing device fitted into the wall of the apparatus for moving the materials sideways at the highest part of the apparatus and then downwards, means for guiding the materials downwards through the apparatus from the highest point, means for cooling the materials during their downward travel, and a discharging device located only in the lower part of the apparatus.



---

1,695,225. BOOT OR SHOE AND METHOD OF MANUFACTURING SAME. FRANK M. BOHR, Boston, Mass. Filed Nov. 26, 1927. Serial No. 235,994. 17 Claims. (Cl. 41—10.)

1. In a shoe of the kind described, upper materials having an openwork design therein, and a layer having an openwork design therein superimposed on said upper materials over said first openwork design.



1,695,226. ELECTRIC DISCHARGE TUBE. CORNELIS BOL, Eindhoven, Netherlands, assignor to N. V. Philips' Gloeilampenfabrieken, Eindhoven, Netherlands. Filed May 31, 1924, Serial No. 717,006, and in the Netherlands June 2, 1923. 3 Claims. (Cl. 250—27.5.)

1. An electric discharge tube comprising a re-entrant glass tube sealed to the wall of the discharge tube, a metal disc or cap-shaped member sealed to and hermetically closing the re-entrant glass tube, a standard attached to said member, a table carried by said standard, a plurality of supports secured to said table, and a wire serving as a grid electrode attached to said supports.

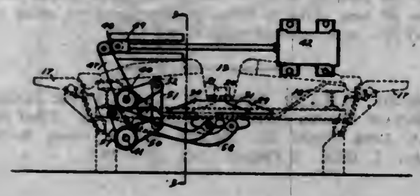
---

1,695,227. ELECTRIC WATER HEATER. ERNEST E. BOLINGER, Emmett, Idaho. Filed Mar. 21, 1928. Serial No. 263,369. 2 Claims. (Cl. 219—39.)

1. A liquid heater comprising a conical casing having an offset part at its upper small end forming a chamber, an inlet pipe connected with the chamber, a member closing the lower end of the casing and forming a discharge chamber, a discharge pipe connected with the latter chamber, a second conical casing fitting within the first and having projections thereon for slightly spacing it from the first chamber to form a conical passage between the casings, the upper small end of the passage being in communication with the inlet chamber and the lower end of the passage being in communication with the discharge chamber, a conical member formed of non-conducting material fitting in the

inner casing and having a spiral groove in its outer surface, a heating coil in said groove, a pair of posts passing through the two casings and the grooved member, means for connecting the ends of the coil to the inner ends of said posts, a circuit connected with the outer ends of said coils, a switch in said circuit, a shaft arranged in the inlet chamber, an arm on the shaft having a head, spring means for causing the head to normally lie in a position for closing the inlet to the inlet chamber and said arm being moved to open position by the liquid flowing into the chamber and means connected with the shaft for opening and closing the switch by the movement of the arm on the shaft.

---

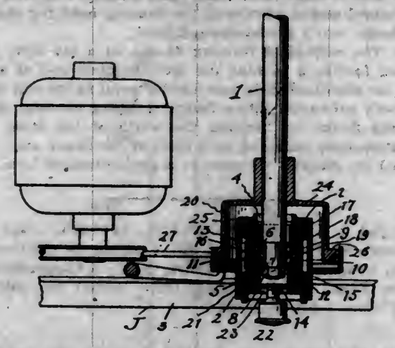


1,695,228. PROCESS AND APPARATUS FOR DISPERSING IRRITANTS. DONALD B. BRADNER, Philadelphia, Pa., and NICHOLAS E. OGLESBY, Edgewood, Md., assignors, by mesne assignments, to Federal Laboratories, Inc., Pittsburgh, Pa., a Corporation of Delaware. Filed Feb. 7, 1925. Serial No. 7,594. 2 Claims. (Cl. 102—12.)

1. A cartridge for fire-arms containing a primer, a propellent powder, and an immediately dispersable gas-generating chemical, said chemical arranged to be projected and immediately dispersed by the released energy of the propellent powder upon the firing of the cartridge.

---

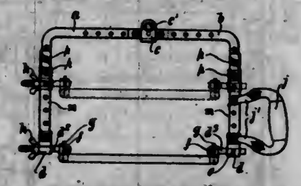
1,695,229. FUEL-PUSHER MECHANISM FOR STOKERS. OLLISON CRAIG, Worcester, Mass., assignor to Riley Stoker Corporation, Worcester, Mass., a Corporation of Massachusetts. Filed Apr. 17, 1924. Serial No. 707,258. 4 Claims. (Cl. 110—47.)



2. A stoker comprising walls defining a main retort and branch retorts communicating therewith, a pusher member movable lengthwise of the main retort, pushers beneath said member and movable laterally into the branch retorts and means to move the pushers in adjacent branch retorts simultaneously in opposite directions.

---

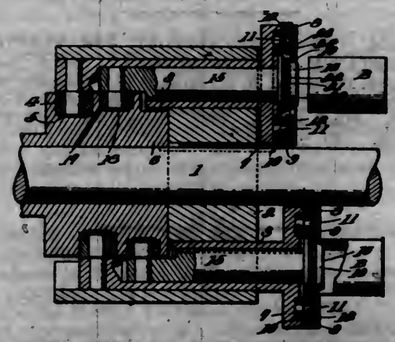
1,695,230. SUPPORT AND BEARING FOR GYRATING SHAFTS. ARTHUR R. CURTIS, Cleveland, Ohio. Filed Apr. 23, 1923. Serial No. 633,973. 7 Claims. (Cl. 308—145.)



3. A support and bearing for a gyrating shaft comprising a fixed outer casing having an opening in the top thereof to receive the shaft, a bearing for the lower end portion of the shaft within said casing, an inner casing enclosing said bearing, said inner casing having an enlarged portion fitting over the bearing, a sleeve at the top surrounding the shaft and a closed lower end portion of reduced diameter, buffer collars of elastic material surrounding said sleeve and reduced lower end of the inner casing and fitting be-

tween the enlarged portion of the inner casing and the top and bottom walls of the outer casing, and means for supplying lubricant to the interior of the inner casing.

---

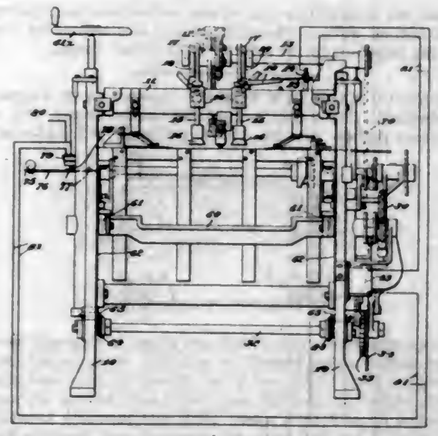


1,695,231. HACK-SAW FRAME. ALFRED EGAN, London, England. Filed May 8, 1925, Serial No. 28,911, and in Great Britain June 23, 1924. 1 Claim. (Cl. 145—34.)

In combination with a hack saw frame having arm members, socket pieces secured to said arm members and each having a socket bore and a key projecting into said bore, bolts extending through said bores and having keyways engaged by said keys, a saw blade and members to which the ends of the saw blade are attached, said members having bores through which said bolts extend so that said members may be turned to arrange the blade in adjusted position with respect to the frame, said bolts and said members having radially related bores extending diametrically therethrough and pins for insertion in said bores to secure said members on said bolts in adjusted position.

---

1,695,232. METHOD OF FLANGING CAN BODIES AND FLANGING HEAD FOR CARRYING OUT THE SAME. HENRY A. FINK, Syracuse, N. Y., assignor to Continental Can Company, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 26, 1925. Serial No. 18,428. 10 Claims. (Cl. 153—25.)



1. A flanging head for can bodies including a flange turning die having means for engaging the outer face of the

flange when it is formed, means for limiting the width of the flange formed on the can body, means for engaging the inner face of the formed flange, and means for moving said last-named means relative to the flanging head for shaping the flange into a predetermined form.

10. The method of forming flanges on a can body comprising forcing a turning die into the open end of a can body for simultaneously turning the metal at the end of the can body outwardly into a flange, engaging the edge of the forming flange for limiting the width of the same, and simultaneously engaging both faces of the flange after it is formed for shaping the same to a predetermined form.

---

1,695,233. AUTOMATIC STACK-LIFTING DEVICE. HENRY A. FINK, Chicago, Ill., assignor to Continental Can Company, Inc., New York, N. Y., a Corporation of New York. Filed Jan. 14, 1928. Serial No. 246,842. 5 Claims. (Cl. 271—62.)

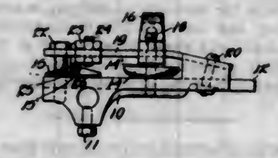
1. In a feeder apparatus for the individual sheets of a stack, a stack-raising mechanism and a source of power for the same, lifting means to engage and lift the top sheet of the stack and adapted to move upward and downward relative to the stack and being limited in the downward movement by the top of the stack, and a stack-raising control device including a circuit breaker which is normally open, means to close the circuit breaker during the time the lifting means is below a predetermined position, a circuit including said circuit breaker, and means controlled by said circuit when closed to connect said source of power to said mechanism to produce a raising of the stack.

---

1,695,234. INSULATING SUPPORT FOR ELECTRIC RESISTANCE HEATING ELEMENT. LOUIS JAMES FULLER, Bloomfield, N. J., assignor to Duparquet, Huot & Moneuse Co., New York, N. Y., a Corporation of New York. Filed Apr. 8, 1927. Serial No. 182,017. 4 Claims. (Cl. 201—63.)

1. In an insulating support for electric heating elements, channel-shaped apertured frame elements including marginal flanges, insulator members arranged in the frame members and each having a boss on its inner face fitting through the frame apertures, the said insulator members each having an outer face of a reduced width presenting inwardly diverging side edges against which the flanges are bent inwardly to embrace and retain the insulator members in place.

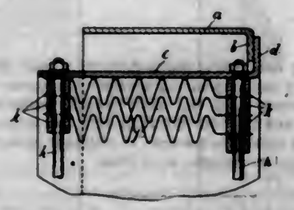
---



1,695,235. PIVOT HINGE. ALVIN C. GODDARD, Richmond Hill, N. Y. Filed Aug. 9, 1927. Serial No. 211,652. 12 Claims. (Cl. 16—140.)

1. A hinge device comprising in combination, a pair of frame plates in frictional engagement with each other, a pivot forming a bearing to permit one to turn with respect to the other, a floating friction plate member and means coacting therewith to increase the pressure between said frame plates.

---



1,695,236. SLUB CATCHER. DAVID GRAVEL, Chattanooga, Tenn., assignor to The Standard-Coosa-Thatcher Company, Chattanooga, Tenn., a Corporation of Tennessee. Filed Apr. 23, 1928. Serial No. 272,325. 15 Claims. (Cl. 28—64.)

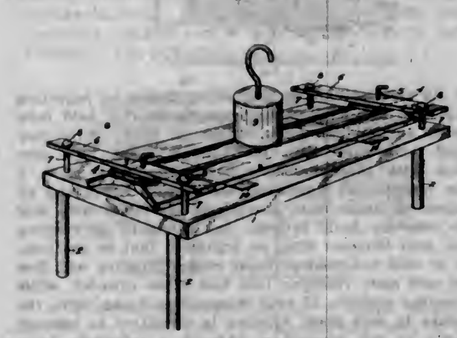
1. A slub catcher comprising a support, means for guiding the yarn over a face of the support and a plate adjacent said face swingable on a pivot transverse to the line of movement of said yarns, said plate having parts extending in opposite directions from said pivot over the running yarn for tilting the plate on the occurrence of long slubs or other imperfections, to catch and break the yarn, substantially as set forth.

---

1,695,237. FILTER FOR AIR AND OTHER GASES. EDWARD LIONEL JOSEPH, London, England. Filed Nov. 18, 1924, Serial No. 750,524, and in Great Britain Mar. 7, 1924. 2 Claims. (Cl. 183—70.)

1. A filter for air and other gases, comprising an outer frame, an inner frame removably mounted in the outer frame and open at its front and rear faces to admit passage of air through the frame and closed at its opposite sides, and a plurality of plates arranged horizontally in superposed relation in the inner frame and extending between the front and rear faces thereof to divide the air into independent horizontal strata, said plates having relatively deep and sharp transverse crimps extending from side to side in the inner frame, said plates being spaced apart with the sharp angle portions of one plate overlapping the sharp angle portions of an adjacent plate to provide narrow passages between the inclined portions of adjacent plates and wide and deep pockets between the angle portions of adjacent plates, said narrow passages between the inclined portions of the plates being of less cross sectional area than that of the wide and deep pockets between the crimps of adjacent plates, the deep pocket in the angle of each crimp providing a zone of quietude between adjacent narrow passages in which dust particles may be entrapped.

---

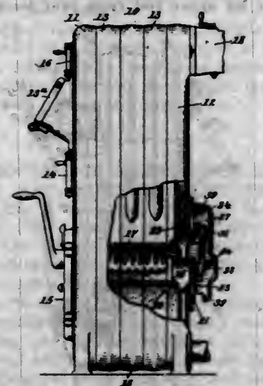


1,695,238. TOOTH CLEANER. GODEL KALENOFF, Brooklyn, N. Y. Filed Feb. 18, 1928. Serial No. 255,348. 1 Claim. (Cl. 132—84.)

A tooth cleaner, comprising, a single integral member, spaced groove cord-receiving posts on the member, a toothbrush having a groove therein to receive the device, a perforated tongue on the device, and a pivot pin secured in the toothbrush handle and projected through the tongue.

---

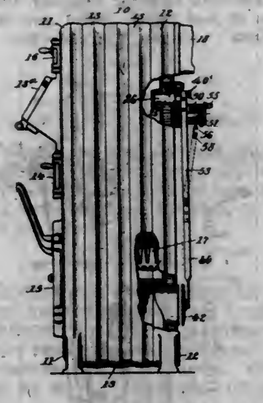
1,695,239. METHOD OF PREVENTING WARPAGE OF CASTINGS IN COOLING. ALLEN B. NORTON, Cleveland, Ohio, assignor to Aluminum Company of America, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Aug. 4, 1926. Serial No. 126,979. 2 Claims. (Cl. 148—11.)



1. The method of treating aluminum alloy castings, which comprises taking the hot castings directly from the molds, placing them upon a surface of the desired configuration, clamping them to said surface, and allowing them to cool while so clamped.

---

1,695,240. AUTOMATIC DRAFT REGULATOR FOR BOILERS. ANDRÉ M. MERTZANOFF, New York, N. Y., assignor to American Radiator Company, New York, N. Y., a Corporation of New Jersey. Filed Feb. 27, 1923, Serial No. 621,518. Renewed Nov. 9, 1928. 8 Claims. (Cl. 236—32.)

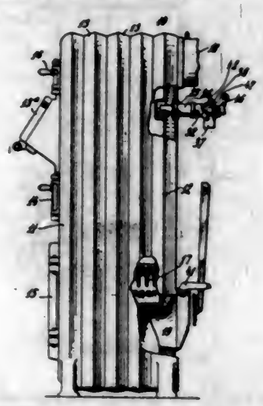


2. The combination of a boiler having a main air inlet with a lever pivotally supported adjacent to its upper end, a closure for said air inlet carried by the free end of said lever, means responsive to changes in condition within the boiler for automatically controlling the operation of said closure, a pivoted support, a member mounted upon said pivoted support adapted to move said closure to an adjusted position when said support is actuated, and

means for holding said member in position to limit the movement of said closure in the reverse direction substantially as specified.

---

1,695,241. AUTOMATIC DRAFT REGULATOR FOR BOILERS. LEWIS W. EGGLESTON, Buffalo, N. Y., assignor to American Radiator Company, Chicago, Ill., a Corporation of New Jersey. Filed Feb. 27, 1923. Serial No. 621,683. 15 Claims. (Cl. 236—32.)

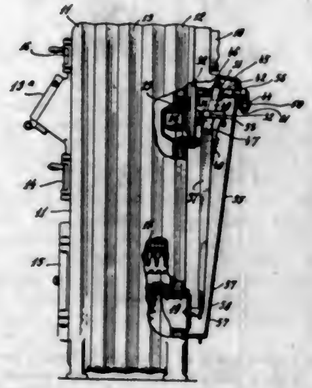


13. The combination of a boiler having a main air supply inlet, with a closure for said inlet, means responsive to temperation within the boiler for actuating said closure to control the passage of air through said inlet, and adjustable means operatively associated with said closure for varying the position of such closure in accordance with and predetermined temperature at which said closure is actuated by said responsive means; said adjustable means being operable to control said closure independently of the automatic control thereof, substantially as specified.

---

1,695,242. AUTOMATIC DRAFT REGULATOR FOR BOILERS. LEWIS W. EGGLESTON, Buffalo, N. Y., assignor to American Radiator Company, Chicago, Ill., a Corporation of New Jersey. Filed Nov. 30, 1925. Serial No. 72,682. 2 Claims. (Cl. 236—32.)

1. The combination of a boiler having a main air supply inlet, with a closure for said inlet, means responsive

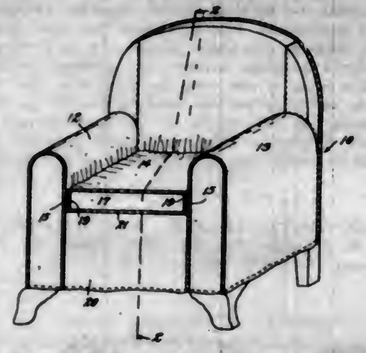


to conditions within the boiler disposed above said inlet and having a plunger projecting outwardly therefrom, a sleeve surrounding said responsive means and secured to said boiler, a bracket on said sleeve, a lever pivotally suspended at its upper end from said bracket, and con-

nected to said closure at its lower end, and an adjustable member carried by said lever at the upper end thereof and adapted to engage said plunger for predetermining the temperature at which said closure is actuated by said responsive means, substantially as specified.

---

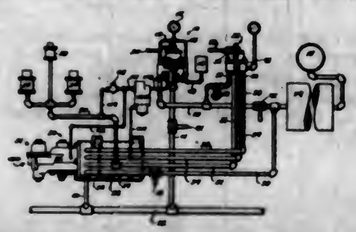
1,695,243. AUTOMATIC DRAFT REGULATOR FOR BOILERS. LEWIS W. EGGLESTON, Buffalo, N. Y., assignor to American Radiator Company, Chicago, Ill., a Corporation of New Jersey. Filed Nov. 30, 1925. Serial No. 72,083. 8 Claims. (Cl. 236—20.)



7. The combination of a boiler having a main air supply inlet, with a reciprocating member, a supporting arm pivoted intermediate its ends and at its upper end to said reciprocating member, a lever pivotally suspended at its upper end from the lower end of said arm, a closure for said inlet connected to the free end of said lever, means responsive to conditions within the boiler and associated with said lever for actuating the same, and means for actuating said reciprocating member, substantially as specified.

---

1,695,244. SLIP COVER. ARTHUR COHEN, Dorchester, Mass. Filed Apr. 26, 1928. Serial No. 273,018. 2 Claims. (Cl. 155—182.)



1. A unitary slip cover for a seat provided with a separable seat cushion, the said cover having portions for covering and conforming to the shape of the top of the seat cushion and back and arms of the seat, and portions for tucking down and along the sides of the cushion and

between the rear of the cushion and the back of the seat to substantially the bottom edges of the cushion, and a portion for covering the front of said seat cushion having stitches following the front edges of the cushion.

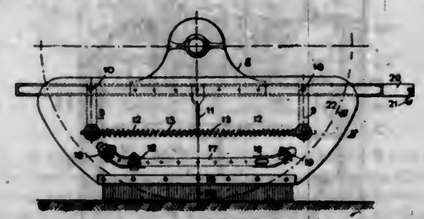
---

1,695,245. AIR-BRAKE SYSTEM. FRANK H. DUKESMITH, Meadville, Pa., assignor, by mesne assignments, to Frederick C. Borst and Floyd R. Stewart. Filed May 2, 1927. Serial No. 188,333. 22 Claims. (Cl. 303—8.)

2. An air brake system comprising means for supplying compressed air, a main reservoir for storing said compressed air, an engineer's automatic brake valve connected with said main reservoir, a brake pipe connected with said engineer's automatic brake valve, a brake cylinder, an automatic distributing valve, and an independent brake valve operatively associated with said main reservoir, brake cylinder, and automatic distributing valve, said elements being so organized that in one position of said independent brake valve, pressure will flow from said main reservoir into said brake cylinder, while in another position of said independent brake valve the pressure in said brake cylinder is permitted to exhaust directly to the atmosphere through a relatively large passage provided in said independent brake valve while the pressure in said automatic distributing valve is being exhausted directly to the atmosphere through a smaller passage provided in said independent brake valve.

---

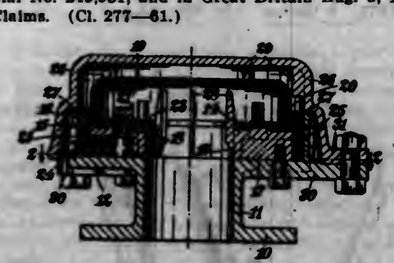
1,695,246. FENDER FOR SWEEPERS. JOHN R. GAMMETER, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Jan. 28, 1925. Serial No. 5,257. 4 Claims. (Cl. 15—155.)



2. The combination with a sweeper having a generally rectangular floor-contacting nozzle, of a resilient fender

therefor shaped before application to the nozzle to embrace the exposed faces only of the nozzle, the ends of said fender being provided with knobs, and its corners with diagonal webs, the rear face of the nozzle having openings in which said knobs are anchored and its corners provided with channels in which said webs are seated.

---



1,695,247. MUDGUARD FOR MOTOR VEHICLES. HENRI DÉDISSE, Boulogne-sur-Seine, France. Filed Nov. 10, 1926, Serial No. 147,500, and in France June 8, 1926. 4 Claims. (Cl. 280—157.)

1. A mud-guard for automobile and other vehicles characterized by a screen consisting of a rigid portion maintaining at its lower end a flexible member, and pivotally mounted on the end of rigid oscillating arms 9 which are pivoted at the other ends to a rigid support 5 adapted to bear upon the corresponding vehicle axle, the lower ends of the pivoted arms being connected together by a rod 12 which is guided in a slot formed in an intermediate rigid vertical arm 11 upon which are caused to bear the springs 13 which abut at the other ends upon the respective extremities of the oscillating arms 9 which tend to maintain the mud-guard constantly in the normal position and will bring it into this position should it depart therefrom.

---

1,695,248. PRESSURE-RELIEVING VALVE. THOMAS ALBERT CROMPTON, Ilford, England. Filed Jan. 27, 1925, Serial No. 249,951, and in Great Britain Aug. 3, 1927. 4 Claims. (Cl. 277—61.)

1. A double-acting relief-valve for a closed chamber, comprising in combination a pressure-relieving valve of the type specified and provided with a felt ring on which the bell-shaped valve seats itself, an annular inverted channel-shaped valve inside the bell-shaped valve, the outer lower edge whereof also seats itself on the felt ring aforesaid, a second felt ring concentrically disposed within and in the same plane as the first felt ring and constituting the seating for the inner lower edge of the annular valve, and a passage between the felt rings to place the lower side of the annular ring in communication with the atmosphere.

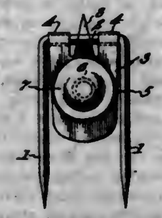
---

1,695,249. PROCESS OF MAKING ISOPROPYL ALCOHOL. GEORGE O. CURME, Jr., and ERNEST W. REID, Pittsburgh, Pa., assignors, by mesne assignments, to Carbide and Carbon Chemicals Corporation, New York, N. Y., a Corporation of New York. Filed July 19, 1919. Serial No. 312,070. 2 Claims. (Cl. 260—156.)

1. In a process of making isopropyl alcohol, the step which consists in hydrolyzing di-isopropyl sulfate, while maintaining the same in emulsification with water.

1,695,250. MANUFACTURE OF GLYCOLS. GEORGE O. CURME, Jr., Charleston, W. Va., assignor to Carbide and Carbon Chemicals Corporation, a Corporation of New York. Filed Jan. 7, 1926. Serial No. 79,895. 4 Claims. (Cl. 260—156.5.)

1. Process which comprises reacting with a caustic alkali on a quantity of chlorhydrin dissolved in water until the chlorin is substantially completely decomposed, and restricting the rate of reaction so that the major portion of the chlorhydrin is converted into glycol.

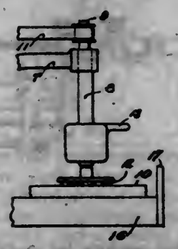


---

1,695,251. PROCESS FOR DECOLORIZING KEROSENE, GASOLINE, AND SIMILAR LIGHT PETROLEUM DISTILLATES. VLADIMIR ANATOLE KALICHEVSKY, Willowbrook, Calif., assignor to Union Oil Company of California, Los Angeles, Calif., a Corporation of California. Filed Sept. 19, 1927. Serial No. 220,637. 13 Claims. (Cl. 196—147.)

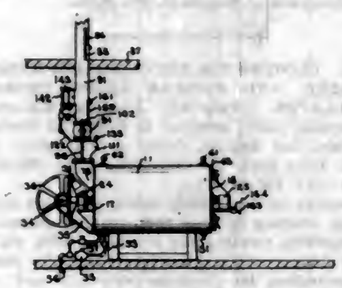
7. A process for decolorizing lighter petroleum distillates containing coloring matters not readily adsorbable by clay, comprising treating the distillates with alkali sufficient to convert said matters into adsorbable forms and then commingling the distillate with acid and clay for adsorption of said adsorbable forms.

---



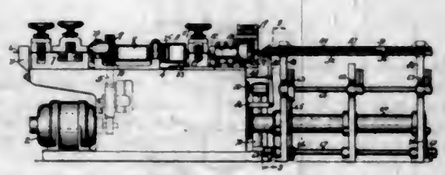
1,695,252. PIN-ATTACHED BUTTON. GEORGE A. KING, Waterbury, Conn., assignor to Scovill Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed Mar. 5, 1928. Serial No. 259,215. 2 Claims. (Cl. 24—103.)

1. A double-pointed pin, having a head, a plate hingedly mounted on said head, a button fixed to said plate and moving with it as it swings on said pin head, and a single stabbing prong projecting from the plate in a direction opposite to the pin points.



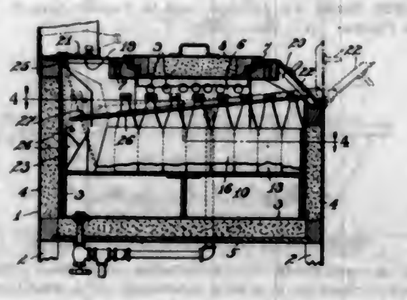
---

1,695,253. PROCESS FOR FINISHING THE SURFACES OF BONDED ASBESTOS AND THE LIKE AND RESULTING PRODUCT. JOHN C. MACILDOWIE, Nashua, N. H., assignor to Asbestos Wood & Shingle Co., Nashua, N. H., a Corporation of New Hampshire. Filed Mar. 24, 1925. Serial No. 17,951. 11 Claims. (Cl. 25—154.)



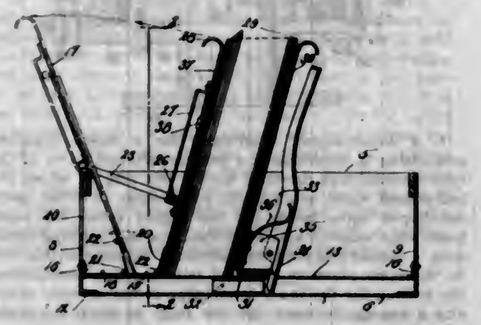
6. A method of finishing the surface of cement-bonded asbestos material, which comprises filling and packing the interstices between the particles at or near said surface with very finely comminuted particles, identical in composition with the cement-bonded asbestos surface, and polishing the close grained surface thus produced.

1,695,254. RENDERING APPARATUS. ROBERT MCTAVISH, Cincinnati, Ohio, assignor to The Cincinnati Butchers' Supply Company, Cincinnati, Ohio, a Corporation of Ohio. Original application filed Mar. 18, 1924, Serial No. 700,140. Divided and this application filed Dec. 31, 1925. Serial No. 78,651. 2 Claims. (Cl. 87—13.)



1. In a rendering apparatus of the character described, the combination of a cooking vessel comprising a cooking compartment, stirrers in said cooking compartment, an escape stack for the free escape of steam from said cooking compartment, said escape stack connecting with said cooking compartment, a valve in said escape stack to shut off said escape of steam, a by-pass passage whose respective ends connect respectively with said cooking compartment and with said stack and by-passing said valve, a valve in said by-pass passage, said by-pass passage and said last-named valve being of materially less capacity than said stack and said first-named valve, an automatic relief valve having connection with said by-pass passage between the end of said by-pass passage connecting with said cooking compartment and said second-named valve, said automatic relief valve arranged to open by excess pressure in said cooking compartment, and said automatic relief valve comprising means for adjusting the pressures at which it opens, and an enclosure for said automatic relief valve, the interior of said enclosure communicating with the interior of said stack.

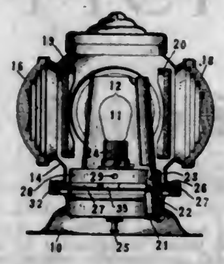
1,695,255. WIREWORKING MACHINE. GEORGE F. MATTESON, Rockyhill, Conn., assignor to The F. B. Shuster Company, New Haven, Conn., a Corporation of Connecticut. Filed Dec. 10, 1926. Serial No. 153,856. 35 Claims. (Cl. 140—140.)



1. A straightening machine for movable lengths of material and including a material straightening device, a pinion for rotating said device, and a sharpening device having a gear in mesh with said pinion, said sharpening device being located in proximity to the mouth of said straightening device and having means for sharpening the end of a length of stock.

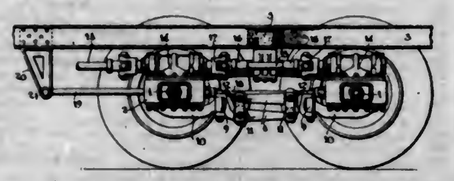
1,695,256. BOTTLE REFRIGERATOR. CALVIN N. MILLER, Muncie, Ind., assignor to Glascock Brothers Mfg. Company, Muncie, Ind., a Corporation of Indiana. Filed Oct. 1, 1925. Serial No. 59,786. 6 Claims. (Cl. 312—36.)

1. A bottle refrigerator including a bottle channel irregular in cross section at that portion through which the body of a bottle passes to permit the passage therethrough only of a bottle having a configuration in the body portion thereof to coincide with the irregular shape of said channel and means for propelling bottles through said channels.



1,695,257. HINGED COMPRESSOR. ENOCH OHNSTRAND, Kenmore, N. Y. Filed Nov. 20, 1926. Serial No. 149,777. 9 Claims. (Cl. 129—16.)

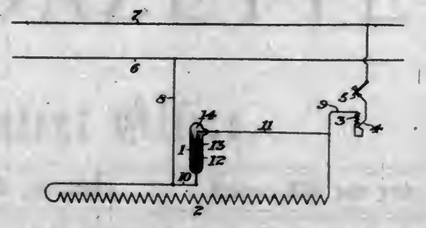
7. A tray for holding a group of cards or the like, comprising an abutment, a compressor for clamping the cards together, means hingedly connected to the tray and the compressor at spaced points adapted to permit movement of said compressor bodily away from said cards and relative to said tray, and means for retaining said compressor in card compressing position.



1,695,258. TRAIN SIGNAL LAMP. FURMAN D. SPEAR, New York, N. Y., assignor to Armspear Manufacturing Company, New York, N. Y., a Corporation of New York. Filed June 25, 1927. Serial No. 201,395. 8 Claims. (Cl. 240—24.)

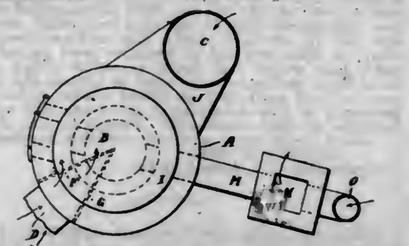
1. A train signal lamp comprising a support, a rotatable body carried thereby and having lenses of four different colors, stationary blinders for two sides and independently movable glasses inside the lamp body of colors corresponding to two of said lenses.

1,695,259. RUNNING GEAR FOR MOTOR VEHICLES. ELLIS W. TEMPLIN, Philadelphia, Pa., assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Original application filed Oct. 19, 1921, Serial No. 508,844. Divided and this application filed Nov. 10, 1925. Serial No. 68,164. 5 Claims. (Cl. 180—22.)



1. A motor vehicle comprising a chassis, a plurality of driving axles disposed in parallel relationship, housings for said axles, resilient supporting means connecting said housings with said chassis, torque neutralizing interconnections between said housings permitting limited relative movement of each housing end independently of the remaining housing ends and adapted to cause the torque developed in each housing to oppose the torque developed in the other housing, and couplings comprising radius rods connecting said housings with said chassis without restricting the limited relative movements of said housing ends.

1,695,260. SWITCH MOUNTING. WARREN R. WALKER, New Dorp, N. Y., assignor to Cooper Hewitt Electric Company, Hoboken, N. J., a Corporation of New Jersey. Filed Oct. 1, 1924. Serial No. 741,081. 3 Claims. (Cl. 200—152.)



1. A switch unit comprising a mercury switch having a vitreous envelope and electrodes sealed therethrough, a bar of insulating material coextensive longitudinally with said envelope, screw studs in the ends of said bar, straps mounted to the ends of said envelopes, electrically connected to the leads thereof and mounted to said screws to hold said envelope to said bar, nuts and washers on said screws for holding said straps and for connecting line leads thereto.

1,695,261. THERMOSTATIC ELECTRIC SWITCH. WILFORD J. WINNINGHOFF, East Orange, N. J., assignor to Cooper Hewitt Electric Company, Hoboken, N. J., a Corporation of New Jersey. Filed Nov. 10, 1923. Serial No. 673,900. 5 Claims. (Cl. 219—20.)

1. In an electric heater circuit, in combination, an electric resistance heater, a temperature closed switch in shunt with said heater, and a circuit breaker in a lead to such heater and switch actuated by the flow of abnormal current therethrough.

1,695,262. METHOD OF CIRCULATING AIR PAST THE HEATING SURFACES OF WARM-AIR FURNACES FOR HEATING BUILDINGS WHICH PROVIDES FRESH AIR AND VENTILATION. FREDERICK H. WOOD, Chicago, Ill., assignor to Lettie B. Wood, Chicago, Ill. Filed Feb. 5, 1923. Serial No. 616,913. 9 Claims. (Cl. 126—105.)

1. A method of circulating air through a furnace which consists in maintaining a current of fresh exterior air separate from the current of recirculating air from the rooms of the building while the current of fresh exterior air is being heated.

1,695,263. FLEXIBLE TUBULAR CONDUIT. RAYNALDO P. JACQUES, Woonsocket, R. I., assignor to Adams Industries, Inc., New York, N. Y., a Corporation of New York. Filed June 7, 1927. Serial No. 197,129. 3 Claims. (Cl. 137—75.)

1. A flexible tubular conduit comprising a plurality of duplicate one-piece sections or units, each including a relatively large cylindrical end portion, having a relatively large bore and a contracted end zone constituting the mouth of the bore, and a smaller end portion having a ball-shaped terminal, a reduced neck, and a relatively small bore, the terminal of each section being confined in the larger bore of the next section by the contracted end zone, which constitutes a socket member and is formed to permit limited conduit-flexing movements of said sections.

Patents Nos. 1,695,264 to 1,696,177.

THE

# OFFICIAL GAZETTE

OF THE

# United States Patent Office.

Vol. 377—No. 3. TUESDAY, DECEMBER 18, 1928. Price—$10 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscription, $10.00 per annum; including annual indexes, $11.50; single numbers, 25 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

## Changes in Classification.

Order No. 3,087, November 21, 1928, directs:

In *class 81, Tools* (Division 29), establish the following subclass and definition, the patents contained in this subclass having been taken from class 81, subclass 9.5, Wire strippers:

Wire strippers
9.51 Bench tools.

9.51. WIRE STRIPPERS, BENCH TOOLS. Devices under subclass 9.5 which have a fixed base.

In *class 128, Surgery* (Division 43), establish the following subclass and definition, the patents contained in this subclass having been taken from class 36, Boots, Shoes, and Leggings, subclass 71, Pads and foot supporters, and from other subclasses in class 128:

Bandaging
Bandages
Arm and leg
166.5 Arch.

166.5. BANDAGING, BANDAGES, ARM AND LEG, ARCH. Arch-supporting bandages and arch supports provided with bandage structure for holding them in place on the foot.

Note.—All arch supports forming part of a shoe and those adapted to be worn within the shoe not provided with bandage structure are found in class 36, Boots, Shoes, and Leggings, subclass 71, Pads and foot supporters.

## Interference Notices.

U. S. Patent Office, *Washington, Nov. 21, 1928.*

*Chas. Anderson, his assigns or legal representatives, take notice:*

An interference having been declared by this Office between the application of Limoneira Company, Santa Paula, Calif., for registration of a trade-mark and trade-mark registered December 11, 1923, No. 177,148, to Chas. Anderson, Wasco, Calif., and a notice of such declaration sent by registered mail to said Chas. Anderson at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Chas. Anderson, his assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the Official Gazette for three consecutive weeks.

WM. A. KINNAN,
*First Assistant Commissioner.*

U. S. Patent Office, *Washington, Dec. 6, 1928.*

*Standard Portland Cement Company, its assigns or legal representatives, take notice:*

An interference having been declared by this Office between the application of Missouri Portland Cement Company, of 1010 Pine Street, St. Louis, Mo., for registration of trade-mark and trade-mark registered October 20, 1914, No. 100,442, to Standard Portland Cement Company, of Charleston, S. C., and a notice of such declaration sent by registered mail to said Standard Portland Cement Company at the said address having been returned by the post office as undeliverable, and it being alleged that the Standard Portland Cement Company has been dissolved, notice is hereby given that unless said Standard Portland Cement Company, its assigns, or legal representatives shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the Official Gazette for three consecutive weeks.

WM. A. KINNAN,
*First Assistant Commissioner.*

## Notice of Cancellation.

U. S. Patent Office, *Washington, Dec. 1, 1928.*

*Apex Steel Corporation, its assigns or legal representatives, take notice:*

A cancellation proceeding having been instituted by this Office upon the application of The Apex Electrical Manufacturing Company, of Cleveland, Ohio, to effect the cancellation of the trade-mark registration of Apex Steel Corporation, of 50 Church Street, New York, N. Y., No. 126,985, dated October 21, 1919, and the notice of such proceeding sent by registered mail to the said Apex Steel Corporation at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Apex Steel Corporation, its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the Official Gazette for three consecutive weeks.

WM. A. KINNAN,
*First Assistant Commissioner.*

## Condition of Applications under Examination at Close of Business December 7, 1928.

| Room No. | (Total number of applications awaiting action, excluding Trade-Mark Division, 100,430; Trade-Mark Division, 2,020: Oldest new case, Feb. 1, 1928; oldest amended, Feb. 1, 1928. The dates given are 1928.) DIVISIONS, EXAMINERS, AND SUBJECTS OF INVENTIONS. | Oldest new application and oldest action by applicant awaiting office action. New. | Amended. | No. of applications awaiting action. |
|---|---|---|---|---|
| 112 | 1. LOEFFLER, F. A., Closure Operators; Fences; Gates; Tillage; Scattering Unloaders; Handling and Hoist Line Implements. | Mar. 17 | Apr. 2 | 1,523 |
| 126 | 2. HADEN, C. F., Bee Culture; Dairy; Preserving; Presses; Tobacco | Mar. 28 | Mar. 31 | 1,623 |

# DECISIONS IN PATENT AND TRADE-MARK CASES.

## Commissioner's Decisions.

### BAKER v. THE TRUMBULL ELECTRIC MANUFACTURING COMPANY.

*Decided August 13, 1928.*

TRADE-MARKS—SIMILARITY—"SANACHINA" AND "SAMSONCHINA" NOT DECEPTIVELY SIMILAR.

The notation "Sanachina" as used upon bathtub fixtures *Held* not deceptively similar to the term "Samsonchina" as applied to the same class of goods.

APPEAL from Examiner of Interferences.

Opposition No. 7,155 to registration of trade-mark of The Trumbull Electric Manufacturing Company, for hardware and plumbing supplies. Application filed December 5, 1925, Serial No. 224,308, published March 23, 1926.

*Messrs. Kenyon & Kenyon* for Baker.

*Mr. Robert Starr Allyn* for The Trumbull Electric Manufacturing Company.

KINNAN, *First Assistant Commissioner:*

This case comes on for review on appeal of the opposer, Stephen D. Baker, of the decision of the Examiner of Trade-Mark Interferences dismissing the opposition and adjudging the applicant, The Trumbull Electric Manufacturing Company, entitled to the registration for which it has applied.

The applicant seeks registration of the notation "Sanachina," used upon bathtub fixtures of the character recited in detail in the application. The opposer alleges adoption and use from a date long prior to that claimed by the applicant company of the trade-mark "Samsonchina," used upon the same class of goods, and refers to ownership of Trade-Mark No. 159,271, issued September 26, 1922.

Neither party has taken testimony, but briefs have been filed. The applicant includes in its brief reference to a number of registrations prior to that granted the opposer which disclose the use of a notation "San" or "Sani" as a prefix for various trade-mark notations used in connection with goods other than those upon which the parties to the case at bar use their respective trade-marks. These prior notices of registration are not pleaded in the answer. While this Office may take judicial notice of the fact of registration of these marks, yet the Office has no information as to whether any of them are still in use or whether all of them have been abandoned.

As was stated by the Examiner, the common portion of the two marks, "China," is merely descriptive of the goods, and neither party has any exclusive rights in connection with such word. The two prefixes, since both marks are written as a single notation, have different meanings or significance and have different letters which are different in number. While there is a slight similarity when the two notations are looked at in their entirety, yet it is believed this similarity is due more to the presence of the common descriptive word than to the similarity of the prefixes. As suggested by the applicant company, "Sana" suggests sanitary, while "Samson" suggests strength. It is believed there is no probability of confusion by purchasers who exercise any care at all if the two marks appear upon the same goods in the same market.

The decision of the Examiner of Trade-Mark Interferences dismissing the opposition and adjudging the applicant company entitled to the registration for which it has applied is affirmed.

---

### EX PARTE CROSLEY, JR.

*Decided July 15, 1927.*

PATENTABILITY—INVENTION—SUBSTITUTION OF A SWIVELING WHEEL IN A BABY WALKER NOT.

The substitution of the swiveling wheel of the D. patent for the nonswiveling wheel of the C. patent for a baby walker *Held* not inventive, since the D. patent suggests that the wheel arrangement stabilizes the vehicle and prevents it from tipping and on such substitution only the expected results, as intimated in the D. patent, follow.

[This application has resulted in Patent No. 1,661,411.]

Appeal from Examiners in Chief.

*Mr. Clarence Perdew* and *Messrs. Allen & Allen* for the applicant.

MOORE, *Assistant Commissioner:*

This is an appeal from the decision of the Examiners in Chief affirming the decision of the Examiner finally rejecting claims 5 and 6, of which the following serves as an example:

6. A baby walker comprising a rear structure having wheels laterally spaced thereon to prevent tipping and of non-swiveling type, a front structure having swiveling casters interspaced to prevent tipping, means connecting the front and rear structures and serving to hold said structures rigidly with each other so that neither structure will rotate with relation to the other, said means so constructed as to permit a baby to stand vertically between the front and rear structures, and means surrounding the baby to a level above the waist, and united with the elements hereinbefore noted, and arranged to prevent the baby from reaching a position vertically over a line passing through the said front casters.

The references are: Carroll, 1,492,202, April 29, 1924; Archibald, 1,334,583, March 23, 1920; Doolittle, 539,041, May 14, 1895; Darrach, 130,283, August 6, 1872; Leonard, 1,527,419, February 24, 1925.

The invention relates to a baby walker in the form of a seat having rear and front supporting wheels with a guard ring mounted above the seat to support the baby thereon and prevent his falling therefrom. The rear wheels are nonswiveling, while the front wheels are casters of the usual swivel type.

A baby walker of this general type but with nonswiveling wheels at the front is shown by patent to Carroll in Figure 6. The use of swiveling wheels at the front of vehicles of this type to allow the vehicle to be moved in any desired direction is old in the prior art, being shown by any one of the patents to Leonard, Darrach, or Doolittle et al.

Appellant contends that the baby walker provided with swiveling caster wheels in front not only allows the baby to push the vehicle in all directions with his feet, but produces the new and unobvious func-

tion of rendering the vehicle safe for a baby by preventing it from tipping over. While a slight change in structure which would produce a safe vehicle for small children may under certain cases be patentable, as indicated in the copy of the decision filed subsequently to the hearing, nevertheless the patent to Darrach points out that the construction there shown, using nonswiveling rear wheels and swiveling front wheels, not only allows motion of the vehicle in a desired direction, but also that the wheel arrangement prevents the apparatus from swaying (p. 1, lines 34 to 38). That is, the Darrach patent contains the suggestion that the wheel arrangement shown stabilizes the vehicle and prevents it from tipping over. There is accordingly no invention in using the Darrach wheel arrangement on the Carroll device, because on substituting such wheel arrangement only the expected results as intimated by Darrach follow.

The reference to the commercial success of the device has been noted. While it may be permissible to use evidence of commercial success to resolve a question of doubt as to patentability in the inventor's favor, when such doubt does not exist the question of commercial success has no bearing on the question of patentability.

The decision of the Examiners in Chief is affirmed.

## Court of Appeals of the District of Columbia.

GERSTENDORFER BROS. *v.* UNITED SUPPLY COMPANY.

*No. 2,939. Decided May 7, 1928.*

TRADE-MARKS—LIKELIHOOD OF CONFUSION.

Where one party used the word "Sapolin" as a trade-mark for paints, enamels, etc., and the other used the word "Samoline" and that word and a picture of a boy in a dress suit designated as "Little Sammy Samoline" as trade-marks for a cleaning material for wood and metal, *Held* that, in view of the dissimilarity of the marks and the dissimilarity of the goods, there was no likelihood of confusion.

APPEAL from the Commissioner of Patents. Affirmed.

*Mr. Louis Alexander* for Gerstendorfer Bros.

*Mr. Fred Gerlach* for United Supply Company.

Before MARTIN, Chief Justice, and ROSS and VAN ORSDEL, Associate Justices.

VAN ORSDEL, *J.:*

Appellant, Gerstendorfer Bros., appeals from the decision of the Commissioner of Patents dismissing their petition for the cancellation of two registered trade-marks owned by appellee company. One mark, registered in 1913, consists of the word "Samoline;" and the other mark, registered in 1925, consists of a figure of a boy of the "Jackie Coogan" type attired in a dress suit and designated as "Little-Sammy Samoline," associated with the word "Samoline." These marks are used as trade-marks for a cleaning material for wood, metal, and other objects.

Appellant petitioner's mark consists of the word "Sapolin," and is used as a trade-mark for paints, enamels, varnishes, lacquers, wood stains, and furniture polish.

The petition is grounded upon the similarity of the marks and their use upon goods of the same descriptive properties to an extent that would be likely to cause confusion in trade.

It was held by the tribunals below that the goods are not of the same descriptive properties; and that, therefore, there can be no likelihood of confusion. If the marks were exactly similar this contention might have more force, but when we consider the dissimilarity of the marks and the dissimilarity of the use to which the goods are appropriated, we are of opinion that the likelihood of confusion is quite remote.

Considering the doubt thus raised in connection with the fact that the trade-mark "Samoline" has been appropriated and used on the goods produced by appellee company for more than 15 years, and that no objection was interposed by the petitioner company, we agree with the holding of the Commissioner that—

> under these circumstances this Office would not be justified in disturbing in any way at this time the registrant's rights respecting its trade-marks. If the petitioners ever had any right to oppose the right of the registrant to register its marks, such right of the petitioners has been lost by laches. *France Milling Co. v. Washburn-Crosby Co.*, 7 Fed. (2nd) 304; *White Rock Co. v. Akron Co.*, 299 Fed. 775; *Rectanus Co. v. United Drug Co.*, 226 Fed. 554.

The decision of the Commissioner is affirmed.

## Court of Appeals of the District of Columbia.

UNITED STATES, EX REL. MISHAWAKA RUBBER AND WOOLEN MANUFACTURING COMPANY, *v.* ROBERTSON, COMMISSIONER OF PATENTS.

*No. 4,722. Decided November 5, 1928.*

1. MANDAMUS—RULE 114—DISCRETION OF THE COMMISSIONER.

"The purpose of this rule [114], obviously, is to expedite proceedings in the Patent Office by eliminating parties whose applications are clearly lacking in merit; but the application of the rule in a given case, if orderly procedure in the Patent Office is to be observed, is primarily for the determination of the Commissioner of Patents. If he errs and ultimately awards priority to the wrong party, the aggrieved party has his remedy by way of appeal."

2. SAME.

The writ of mandamus can not be made to perform the function of an appeal or writ of error.

*Mr. E. W. Shepard* for the appellant.

*Mr. T. A. Hostetler* for the Commissioner of Patents.

Before MARTIN, Chief Justice, and ROBB and VAN ORSDEL, Associate Justices.

ROBB, *J.:*

Appeal from a judgment in the Supreme Court of the District dismissing appellant's petition for a writ of mandamus to compel appellee, the Commissioner of Patents, to notify one of the parties to a three-party interference proceeding, whose application was filed prior to the application of appellant but subsequent to the application of the senior party, that judgment on the record would be rendered against him unless he should show cause why such action should not be taken.

The parties to the interference proceeding are Blair, whose application was filed December 22, 1924 (which has been assigned to appellant); Sundback, whose application was filed August 22, 1924; and Prentice, whose application was filed April 28, 1924.

In his preliminary statement, Sundback alleged a date of conception prior to the filing date of Prentice, but his dates of description and disclosure were subsequent to such filing date. Prentice evidently was content to permit the case to go to proof, since he filed no motion to invoke the provisions of Patent Office rule No. 114, which reads in part as follows:

> If the junior party to an interference, or if any party thereto other than the senior party, fail to file a statement, or if his statement fail to overcome the prima facie case made by the respective dates of application, such party shall be notified by the Examiner of Interferences that judgment upon the record will be rendered against him at the expiration of thirty days, unless cause be shown why such action should not be taken.

Appellant, although the junior party to the interference, filed such a motion as against Sundback. The Commissioner denied it, and mandamus proceedings were instituted in the court below.

[1, 2] Under rule 114, if the statement of the junior party to an interference fails to overcome the prima facie case made by the respective dates of application, it becomes the duty of the Examiner of Interferences to notify him to show cause within 30 days why judgment on the record should not be rendered against him. The purpose of this rule, obviously, it to expedite proceedings in the Patent Office by eliminating parties whose applications are clearly lacking in merit; but the application of the rule in a given case, if orderly procedure in the Patent Office is to be observed, is primarily for the determination of the Commissioner of Patents. If he errs and ultimately awards priority to the wrong party, the aggrieved party has his remedy by way of appeal. The writ of mandamus can not be made to perform the function of an appeal or a writ of error. *United States, ex rel. Dwiggins, v. Ewing*, 43 App. D. C. 204, 214 O. G. 1025; *Briggs v. Commissioner of Patents*, 48 App. D. C. 175, 257 O. G. 648.

Moreover, on the record, as observed by the Commissioner of Patents—

> it is not perceived in what way Blair is prejudiced by not issuing an order to show cause against Sundback and rendering judgment against him, even if Blair's contention is right. Blair can not prevail unless he establishes priority over Prentice, the senior party, and it is not seen why he should be permitted to attempt at this time to have the party Sundback eliminated from the interference.

See *Prindle v. Brown*, 24 App. D. C. 114, 118, 112 O. G. 957; *Marx v. Brown*, 57 App. D. C. 177, 18 F. (2d) 827, 365 O. G. 235.

Judgment is affirmed, with costs.

Affirmed.

## Adjudicated Patents.

(C. C. A. Mo.) Pederson patent, No. 1,418,162, for fabric-measuring chart and roller therefor, claim 1 *Held* invalid. *Grand Rapids Showcase Co.* v. *Measuregraph Co.*, 28 F (2d) 497.

(C. C. A. Mo.) Hosch patent, No. 1,434,998, for cloth-measuring and price-computing machine, claim 2 *Held* valid, but not infringed. *Id.*

(C. C. A. Mo.) Pederson patent, No. 1,463,589, for process of adjusting measuring machines, claims 1 and 4 *Held* invalid. *Id.*

(C. C. A. Mo.) Hosch design patent, No. 48,248, for design for cloth-measuring and price-computing machine, *Held* valid, but not infringed. *Id.*

## Adverse Decisions in Interference.

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,617,159, C. Knowles, Hob-grinding machine, decided November 10, 1928, claims 12 to 15, inclusive.

Pat. 1,637,998, J. N. Heltzel, Curb and gutter form, decided November 6, 1928, claims 26 to 28, inclusive.

Final decisions in interference have been rendered against the following trade-marks:

T. M. 178,112, Varnish, John C. Dolph Company, Newark, N. J. Registered January 8, 1924. Decided November 20, 1928.

T. M. 238,374, Utensil handle, Racine Iron and Wire Works, Racine, Wis. Registered February 7, 1928. Decided November 8, 1928.

CORRECTION.

T. M. 222,631, Liquid motor fuel, The Denver Powerine Company (The Powerine Company substituted), Denver, Colo. The decision of October 19, 1928, was in favor of the registrant. (Correcting notice appearing in 376, O. G. 777.)

# TRADE-MARKS

OFFICIAL GAZETTE, DECEMBER 18, 1928.

[VOL. 377. No. 3.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 1 of said act, a fee of ten dollars must accompany each notice of opposition.

## CLASS 1.

### Raw or Partly-Prepared Materials.

Ser. No. 249,101. THE SAWYER TANNING COMPANY, Napa, Calif. Filed May 16, 1927.

Applicant disclaims the words "Napa, California, U. S. A.," and "Leathers" apart from the mark as shown.

For Shoe Upper Leather, Glove Leather, and Coat Leather.

Claims use since Mar. 1, 1927.

Ser. No. 272,865. HERMANN CONRADS, San Marcos, Tex. Filed Sept. 24, 1928.

The words "The Quality Cotton" and "Pedigreed Cottonseed" are disclaimed apart from the other features of the mark shown on the drawing.

For Cottonseed.

Claims use since Dec. 1, 1923.

Ser. No. 273,783. LOUIS R. SERBINSKY, doing business as Cinelin Company, Indianapolis, Ind. Filed Oct. 13, 1928.

**Cinelin**

For Cellulose-Acetate Plastics and Pyroxylin Plastics.

Claims use since Jan. 14, 1926.

## CLASS 2.

### Receptacles.

Ser. No. 264,271. AWON TINWARE MFG. CORP., Brooklyn, N. Y. Filed Apr. 4, 1928.

For Garbage Cans.

Claims use since July 27, 1927.

Ser. No. 273,199. MERRIMAC CHEMICAL COMPANY, Boston, Mass. Filed Oct. 1, 1928.

The crosshatching forming the letter "M" represents a lighter shade of color than the solid printing matter.

For Paper Plates.

Claims use since Aug. 31, 1928.

Ser. No. 273,931. OWENS MANUFACTURING CO., Hoboken, N. J. Filed Oct. 17, 1928.

SECTION-ET

For Boxes, Such as Boxes with a Plurality of Compartments.
Claims use since June 22, 1928.

## CLASS 3.

**Baggage, Animal Equipments, Portfolios, and Pocketbooks.**

Ser. No. 273,141. HARTMANN TRUNK COMPANY, Racine, Wis. Filed Sept. 29, 1928.

DEBONAIR

For Wardrobe Cases, Suitcases, Luggage Hatboxes, and Hand Carrying Cases.
Claims use since Sept. 19, 1928.

## CLASS 4.

**Abrasive, Detergent, and Polishing Materials.**

Ser. No. 268,001. SHIELDS & WYLE, INC., Jersey City, N. J. Filed June 13, 1928.

The words "Hand Soap" are disclaimed apart from the mark shown.
For Hand Soap.
Claims use since June 5, 1928.

Ser. No. 272,356. SHIELDS & WYLE, INC., Jersey City, N. J. Filed Sept. 13, 1928.

The lining on the drawing is for the purpose of shading. The word "Cleanser" is disclaimed apart from the mark shown.
For Cleanser for General Household Cleaning.
Claims use since June 5, 1928.

Ser. No. 273,639. ROHM & HAAS COMPANY, Philadelphia, Pa. Filed Oct. 11, 1928.

LUSTRONE

For Finishes in the Nature of Waterproof Lacquers for Use on Leathers and Artificial Leathers.
Claims use since June 23, 1928.

Ser. No. 273,655. FRED M. HAYDEN, doing business as Hayden Products Company, Peoria, Ill. Filed Oct. 11, 1928.

ADVANCED

For General Household Cleaning Preparation with Water-Softening Properties.
Claims use since Sept. 10, 1928.

Ser. No. 273,997. RELIABLE TILE CLEANING SERVICE, New York, N. Y. Filed Oct. 19, 1928.

TILE-ITE

For Tile Cleaner with Incidental Bleaching Properties.
Claims use since Mar. 15, 1928.

Ser. No. 274,160. CLIFFORD J. LARKIN, doing business as Larkin Specialty Co., Everett, Mass. Filed Oct. 23, 1928.

YE-LO

For Metal Polish.
Claims use since Sept. 16, 1927.

Ser. No. 274,555. D'ORSAY, PERFUMERIES CORPORATION, New York, N. Y. Filed Oct. 30, 1928.

toujours fidèle

For Soaps.
Claims use since 1915.

Ser. No. 274,577. SOAP DISTRIBUTING COMPANY, INC., Pittsburgh, Pa. Filed Oct. 30, 1928.

Sodico

For Soap.
Claims use since Oct. 10, 1927.

Ser. No. 274,698. BETTERCLEANING EQUIPMENT & SERVICE INCORPORATED, Akron, Ohio. Filed Nov. 2, 1928.

Certiclean

For Dry-Cleaning Fluid for Textiles, Furs, Leather, Glassware, Enameled and Porcelain Surfaces, and Other Articles and Surfaces.
Claims use since about Oct. 24, 1928.

Ser. No. 274,787. THE MIDLAND CHEMICAL LABORATORIES, INC., Dubuque, Iowa. Filed Nov. 3, 1928.

FLUSHOLEUM

For a Preparation of Acids and Other Ingredients for the Removal of Rust and Stains of Marble and Other Hard and Smooth Surfaces.
Claims use since about Aug. 20, 1927.

Ser. No. 274,802. SLITE-O-HAND MANUFACTURING COMPANY, Detroit, Mich. Filed Nov. 8, 1928.

Slite-O-Hand

For Soap.
Claims use since Aug. 15, 1928.

## CLASS 5.

**Adhesives.**

Ser. No. 271,924. DIAMALT-AKTIEN-GESELLSCHAFT, Munich, Germany. Filed Sept. 5, 1928.

Diagum

For Starch Paste, Glue, and Vegetable Glue.
Claims use since Apr. 22, 1910.

## CLASS 6.

**Chemicals, Medicines, and Pharmaceutical Preparations.**

Ser. No. 217,750. THE ARMAND COMPANY, Des Moines, Iowa. Filed July 28, 1925.

The figure is fanciful.
For Face Powder, Talcum Powder, Cold-Cream Powder, Compact Powder, Rouge, Cold-Cream Rouge, Cold Cream, Vanishing Cream, Lip-Stick Rouge, Hair Wash, Tooth Paste, Shampoo Preparation, Perfume, and Astringent.
Claims use since February, 1925.

Ser. No. 217,751. THE ARMAND COMPANY, Des Moines, Iowa. Filed July 23, 1925.

The drawing is lined to show the colors lavender, blue, yellow, and pink. The figure is fanciful.

For Face Powder, Talcum Powder, Cold-Cream Powder, Compact Powder, Rouge, Cold-Cream Rouge, Cold Cream, Vanishing Cream, Lip-Stick Rouge, Hair Wash, Tooth Paste, Shampoo Preparations, Perfume, and Astringent.

Claims use since February, 1925.

---

Ser. No. 261,379. HOWARD O. OTTEN, doing business as Puratone Products Company, St. Joseph, Mo. Filed Feb. 8, 1928.

Puratone

The lining on the drawing indicates the color red.

For Stomachic Tonic and System Cleanser.

Claims use since Mar. 10, 1927.

---

Ser. No. 261,475. THE ARMAND COMPANY, Des Moines, Iowa. Filed Feb. 10, 1928.

Beau "K"

For Perfume.

Claims use since Nov. 1, 1927.

Ser. No. 262,004. VINCE LABORATORIES, Yonkers, N. Y. Filed Feb. 20, 1928.

POWDERED VINCE SODIUM PERBORATE AROMATIZED

No claim is made to the words "Powdered Sodium Perborate Aromatized" apart from the mark shown.

For Mouth Wash.

Claims use since Jan. 2, 1927.

---

Ser. No. 265,801. OEHME & BAIER, Leipzig, Germany. Filed May 2, 1928.

For Colors for Confectionery.

Claims use since Jan. 1, 1894.

---

Ser. No. 266,410. AGRICULTURAL CHEMICAL WORKS, INC., Los Angeles, Calif. Filed May 15, 1928.

END-O-PEST

For Mealike Substance Used in Destroying Garden and Lawn Insects.

Claims use since Apr. 23, 1928.

Ser. No. 266,768. ZENA IRMA TRINKA, doing business as Z. I. Trinka Co., Lidgerwood, N. Dak. Filed May 21, 1928.

AMERICAN

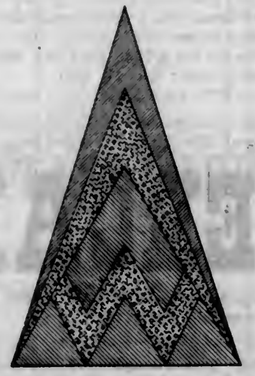
The geographical name or term "American" is disclaimed apart from the mark as shown. The portrait forming a feature of the mark is fanciful.

For Salves: Whose Specific Medicinal Use is for Open and Running Leg Sores, Old Wounds, Carbuncles, Boils, and Bruises.

Claims use since Feb. 20, 1928.

---

Ser. No. 268,736. LEVI O. KITTLE, doing business as Wavex Sales Company, Los Angeles, Calif. Filed June 27, 1928.



WAVEX

For Finger-Waving Preparations.

Claims use since May 12, 1928.

---

Ser. No. 268,737. LEVI O. KITTLE, doing business as Wavex Sales Company, Los Angeles, Calif. Filed June 27, 1928.

The trade-mark as shown in the drawing embodies several different areas in three separate colors—viz, purple, orange, and green. As shown in the drawing the inverted V-shaped marginal portion is in purple, and the inner V-shaped portion adjacent thereto, together with the W-shaped portion, is in orange, and the remaining portions are in green.

For Finger-Waving Preparations.

Claims use since May 12, 1928.

Ser. No. 269,086. CAVENDISH CHEMICAL CORP., New York, N. Y. Filed July 5, 1928.

LIPOLYSIN

For Preparation for Treatment of Obesity.

Claims use since about February, 1924.

---

Ser. No. 270,094. PINE TREE PRODUCTS COMPANY, Newport, N. H. Filed July 24, 1928.

Billy B. Van's PINE TREE

The name "Billy B. Van's" is a facsimile of the signature of the registrant.

For Ointment Used in the Treatment of Eczema, Pimples, Eruptions, Chapped Skin, Cuts, Burns, Chafing, Bruises, Sunburn, Piles, Chilblains, Bites and Stings of Insects, Dandruff, Itch, Poison Ivy, and as an Aid in the Treatment of Inflammation and Congestion—Namely, Croup, Asthma, Bronchitis, Pneumonia, Catarrh, Head Colds, Sore Throat, Neuralgia, Whooping Cough, Chest Colds, and Rheumatism.

Claims use since Mar. 15, 1925.

---

Ser. No. 270,461. PHILIPPE NAPOLEON BOUDREAULT, Montreal, Quebec, Canada. Filed Aug. 2, 1928.

PÉTROLE ROGIER

The word "Pétrole" is disclaimed. The signature is that of R. R. Rogier.

For Hair Tonic.

Claims use since July 1, 1927.

---

Ser. No. 270,700. THE R. T. FRENCH COMPANY, Rochester, N. Y. Filed Aug. 7, 1928.

For Herbs, Juniper Berries, Chamomile Flowers, Flaxseed Meal, Senna, Alum, Copperas, Rosin, Saltpetre, Tur-

pentine, Saffron, Camphor, Syrup of Rhubarb, and Mineral Oil, All of the Foregoing Being Used as Medicines; Ammonia, Laundry Blue, Boric Acid, Hydrogen Peroxide, Cough Syrup, Aromatic Spirits of Ammonia, Arnica, Camphorated Oil, Camphorated Mustard Oil, Castor Oil, Castor Oil (Aromatic), Iodine, Sweet Spirits of Nitre, Cold Cream, Vanishing Cream, Bay Rum, Glycerine, Witch-Hazel, Rose Water and Glycerine, Sour Salts, Food Colors, and Insecticides.

---

Ser. No. 270,724. GEORGE A. ROSTETTER, doing business as The Rostetter Laboratories, Canton, Kans. Filed Aug. 7, 1928.

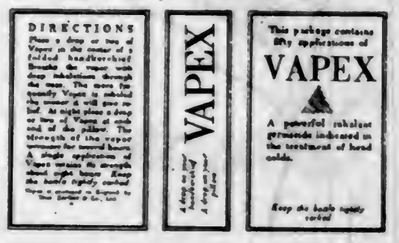
**MINERO-VI-TONE**

For Medicinal Preparation in the Form of a Powder Used as a Body Builder and Tonic to Assist in Overcoming Rickets, Leg Weakness, Paralysis, Scurvy and Similar Diseases, and for Physical Deterioration, to Aid Digestion and Assimilation, Increase Growth, Weight, Vigor, Vitality, and Fertility, to Stimulate the Secretory Glands and the System in General, of Poultry and Livestock.

Claims use since October, 1927.

---

Ser. No. 271,068. GABAL SALES CORPORATION, New York, N. Y. Filed Aug. 15, 1928.



For Medicinal Bitters.

Claims use since January, 1928.

---

Ser. No. 271,091. THOMAS KERFOOT & CO., LIMITED, Bardsley, England. Filed Aug. 15, 1928.

The drawing is lined to indicate the color green, which is claimed as a feature of the mark. Exclusive use of all the wording with the exception of the word "Vapex" is disclaimed apart from the mark shown on the drawing. No claim is made to the representation of a label per se.

For Inhalant.

Claims use since August, 1927.

---

Ser. No. 271,396. THE LIPSO COMPANY, Minneapolis, Minn. Filed Aug. 22, 1928.

For Ointment or Salve Particularly Intended for the Treatment of Chapped and Sore Lips.

Claims use since July 5, 1928.

---

Ser. No. 271,871. JOSEPH AMSTER, doing business as Squill Manufacturing Co., New York, N. Y. Filed Sept. 4, 1928.

Applicant disclaims the representation of a rat except in the association shown.

For Exterminator for Killing Rats and Mice.

Claims use since about Dec. 15, 1927.

---

Ser. No. 271,918. CLIFFORD H. CALKINS, doing business as Tercal Company, Elmira, N. Y. Filed Sept. 5, 1928.

**TERCAL**

For Antifreeze Mixture Used in Automobile Radiators.

Claims use since November, 1922.

---

Ser. No. 271,954. DEAN A. ARNOLD, Lansing, Mich. Filed Sept. 6, 1928.

**HOMEX**

For Tonic Laxative.

Claims use since Feb. 2, 1927.

Ser. No. 272,148. DOROTHY GRAY, Bloomfield, N. J. Filed Sept. 10, 1928.

*Aureate*

For Toilet Preparations, as Follows: Face Powder, Powder Compacts, Rouge Compacts, Powder and Rouge Compacts, Powder Refills and Rouge Refills for Such Compacts, and Rouge.

Claims use since 1915.

---

Ser. No. 272,153. GEHE & Co., A. G., Dresden, Germany. Filed Sept. 10, 1928.

**Transannon**

For Composition of Calcium and Magnesium in Form of Ions, in Addition with Ol. Salviæ, Ichthyol, and Extr. Aloes, for Use During Pregnancy.

Claims use since 1920.

---

Ser. No. 272,154. GEHE & Co., A.-G., Dresden, Germany. Filed Sept. 10, 1928.

**Clavipurin**

For Preparation of Ergot of Rye Containing the Natural Alkaloid Complex for Treating Postoperative Hemorrhages, Functional Uterine Hemorrhages, Grave's Disease, Urinary Incontinency, Migraine, and Like Diseases.

Claims use since 1922.

---

Ser. No. 272,282. STERN BROTHERS, New York, N. Y. Filed Sept. 11, 1928.

**PAMELA**

For Filled Vanity Cases Containing Compressed Rouge and Face Powder.

Claims use since Jan. 9, 1928.

---

Ser. No. 272,284. THEO. A. KOCHS COMPANY, Chicago, Ill. Filed Sept. 12, 1928.

**PEARL OLIVE**

No claim is made to the word "Olive" except in connection with the word "Pearl."

For Liquid Shampoo.

Claims use since about 1913.

---

Ser. No. 272,323. FANNIE L. CAROLINA, Georgetown, S. C. Filed Sept. 13, 1928.

**FAN-O-LIN**

For Preparation for Treating Dandruff, Pressing Oil, and a Preparation for Promoting the Growth of the Hair.

Claims use since June 15, 1928.

---

Ser. No. 272,458. ANDERSON-PRICHARD OIL CORPORATION, Oklahoma City, Okla. Filed Sept. 15, 1928.

**DIP-SOL**

For Rubber Solvent.

Claims use since March, 1927.

---

Ser. No. 272,454. ANDERSON-PRICHARD OIL CORPORATION, Oklahoma City, Okla. Filed Sept. 15, 1928.

**RUB-SOL**

For Rubber Solvent.

Claims use since March, 1927.

---

Ser. No. 272,784. THEODORE J. VOGELGESANG, Salamanca, N. Y. Filed Sept. 21, 1928.

For Liniment to be Used Externally by Rubbing it on the Part Affected, or in the Form of a Poultice for Relief of Muscular Pains.

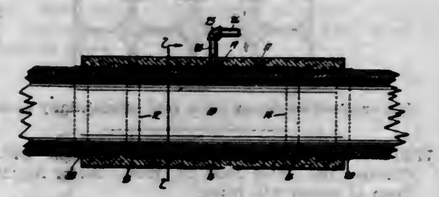
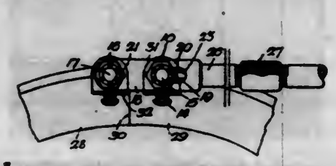
# REISSUES



## DECEMBER 18, 1928.

17,165. OIL GUN. CHARLES S. BURTON, Oak Park, Ill., assignor, by mesne assignments, to Alemite Manufacturing Corporation, Chicago, Ill., a Corporation of Delaware. Filed May 2, 1928. Serial No. 274,604. Original No. 1,582,960, dated May 4, 1926, Serial No. 619,571, filed Jan. 4, 1923. 3 Claims. (Cl. 221—47.4.)

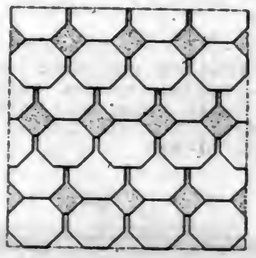


1. A lubricant injector comprising a lubricant-holding barrel having a head at one end and at its discharge end a reduced portion of relatively small cross-section, a plunger extending axially through the barrel emerging through the head thereof for manual operation and at the inner end adapted to be thrust into the reduced portion fitting the same pistonwise for ejecting the lubricant, a discharge nozzle at the end of the reduced portion and an inwardly seating check valve in said nozzle adapted to open under the discharge pressure; the plunger having an axial bore and a port opening therefrom into the barrel back of the reduced terminal portion thereof when the plunger is at in-thrust position, and a valve in the axial bore seating in a direction opposite to the in-thrust lubricant-discharging movement of the plunger.

17,166. PROCESS FOR REPAIRING PIPES. THOMAS DE LA MARE, Salt Lake City, Utah. Filed May 21, 1928. Serial No. 279,581. Original No. 1,587,701, dated June 8, 1926, Serial No. 719,444, filed June 11, 1924. 5 Claims. (Cl. 137—99.)

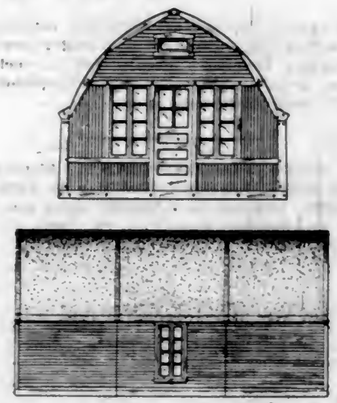
1. The process for repairing containers confining liquid while in service, comprising forming a blister over the part to be repaired, forming a plastic body to enclose said blister, and draining said blister during the period of time required for said plastic body to set.

17,167. RIM-CONTRACTING DEVICE. WALTER HENRY WELCH, Bristol, England. Filed May 26, 1925. Serial No. 33,061. Original No. 1,533,073, dated Apr. 7, 1925, Serial No. 646,633, filed June 20, 1923. 5 Claims. (Cl. 157—1.)



1. In a rim tool, the combination of a pair of gripping devices adapted to be secured on one edge of a rim and to extend away laterally therefrom, a pin extending laterally from each of said gripping devices, a link having rotative engagement with one of said pins and having a slot for the reception of the other of said pins, a compressing spring normally maintaining said pin at that end of the slot nearest the other of said pins, and means for swinging said link angularly about said pins.

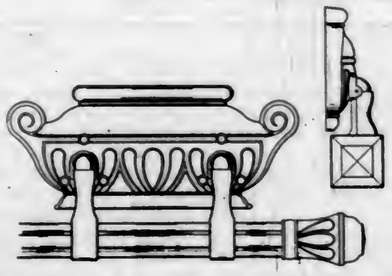
# DESIGNS



## DECEMBER 18, 1928.

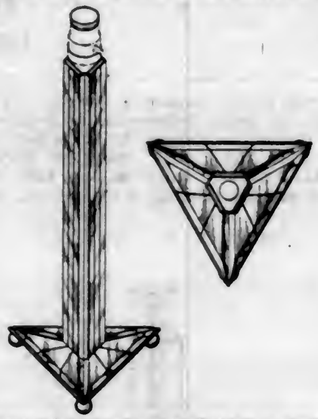
77,213. ROOF. HERBERT ABRAHAM, New York, N. Y., assignor to The Ruberoid Company, a Corporation of New Jersey. Filed Oct. 1, 1921. Serial No. 504,775. Term of patent 14 years.

The ornamental design for a roof substantially as shown.



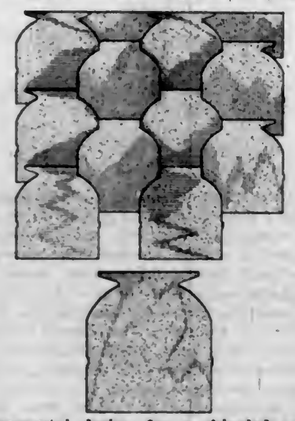
77,214. PORTABLE COTTAGE. THEODOR AHLBORN, Chicago, Ill. Filed June 28, 1926. Serial No. 18,199. Term of patent 3½ years.

The ornamental design for a portable cottage, as shown.



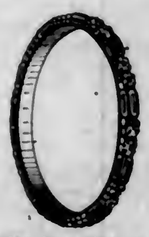
77,215. [WITHDRAWN.]

77,216. BURIAL-CASKET HANDLE. CHARLES BLESCH, Newport, Ky., assignor to The Crane & Breed Manufacturing Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Oct. 10, 1928. Serial No. 28,424. Term of patent 14 years.



The ornamental design for a burial casket handle, substantially as shown and described.

77,217. CANDLESTICK OR SIMILAR ARTICLE. MARGUERITE A. BUCHWALTER, New York, N. Y. Filed Oct. 15, 1928. Serial No. 28,487. Term of patent 7 years.

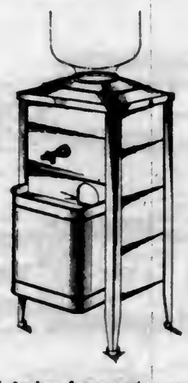


The ornamental design for a candlestick or similar article substantially as shown.

77,218. SHINGLED ROOF. ARTHUR J. CARON, Oak Park, Ill., assignor to Sears, Roebuck and Co., Chicago, Ill., a Corporation of New York. Filed Oct. 21, 1927. Serial No. 23,838. Term of patent 14 years.

The ornamental design for a shingled roof, substantially as shown and described.

77,219. RING. EMANUEL CINER, New York, N. Y. Filed Oct. 25, 1928. Serial No. 28,635. Term of patent 3½ years.

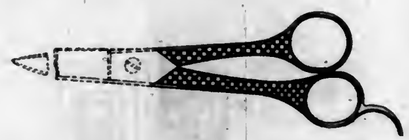


The ornamental design for a ring, as shown.

77,220. WATER COOLER. HENRY G. CORDLEY, New York, N. Y. Filed Mar. 20, 1928. Serial No. 25,927. Term of patent 14 years.

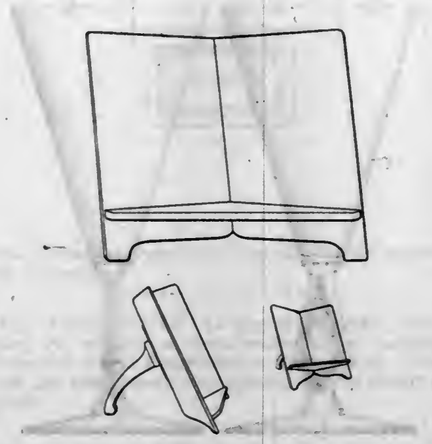
The ornamental design for a water cooler, as shown.

77,221. FACE PLATE. JOSEPH CURIN, Chicago, Ill. Filed Feb. 16, 1928. Serial No. 25,458. Term of patent 3½ years.



The ornamental design for a face plate, as shown.

77,222. BELT BUCKLE. ROBERT F. EICHNER, Rochester, N. Y., assignor to Hickok Manufacturing Company, Inc., Rochester, N. Y., a Corporation of New York. Filed Sept. 12, 1928. Serial No. 28,121. Term of patent 7 years.

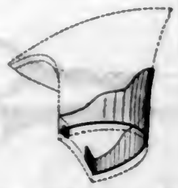


The ornamental design for a belt buckle, as shown.

77,223. PAIR OF SCISSORS. AUGUST F. ERN, Scarsdale, N. Y., assignor to K. C. Seelbach Company, New York, N. Y., a Corporation of New York. Filed June 15, 1927. Serial No. 22,435. Term of patent 7 years.

The ornamental design for a pair of scissors, as shown and described.

77,224. BOOKREST. BROR ERIC DAHLGREN, Chicago, Ill. Filed Feb. 13, 1928. Serial No. 25,426. Term of patent 14 years.

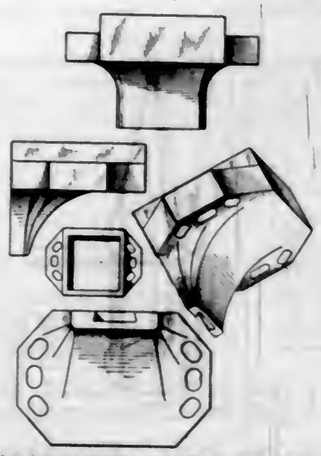


The ornamental design for a bookrest as shown.

77,225. FLOWERPOT HOLDER. EMIL DANZ, New York, N. Y. Filed Oct. 19, 1927. Serial No. 23,799. Term of patent 3½ years.

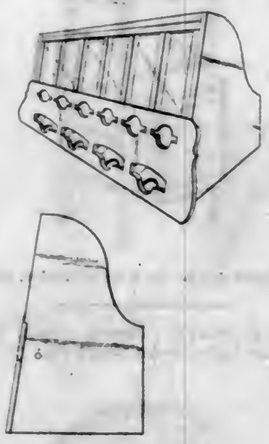
The ornamental design for a flower pot holder as shown.

77,226. RING FOR A SHOE HEEL OR SIMILAR ARTICLE. VINCENT DE PASCAL, Marseille, France. Filed Jan. 11, 1928. Serial No. 24,807. Term of patent 7 years.



The ornamental design for a ring for a shoe heel or similar article, as shown.

77,227. GOBLET. GEORGE DOUGHERTY, Morgantown, W. Va., assignor to Economy Glass Company, Morgantown, W. Va., a Corporation of West Virginia. Filed Oct. 1, 1928. Serial No. 28,335. Term of patent 7 years.



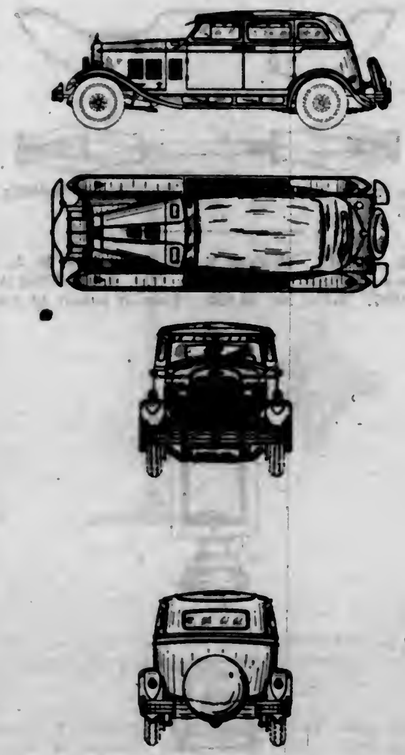
The ornamental design for a goblet, as shown.

77,228. BATHROOM FIXTURE. PAUL G. DUBYEA, Trenton, N. J., assignor to Woodward-Wanger Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Oct. 11, 1928. Serial No. 28,462. Term of patent 14 years.

The ornamental design for a bath-room fixture, substantially as shown.

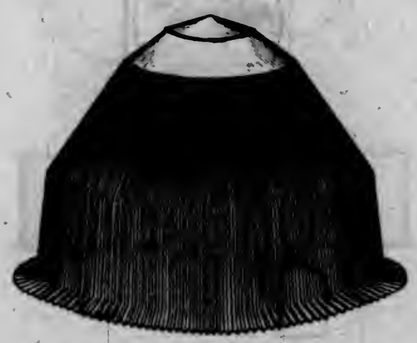
77,229. COMBINED DISPLAY AND VENDING CABINET. ROBERT G. FISHEL, Chicago, Ill. Filed July 5, 1927. Serial No. 22,660. Term of patent 8½ years.

The ornamental design for a combined display and vending cabinet as shown.

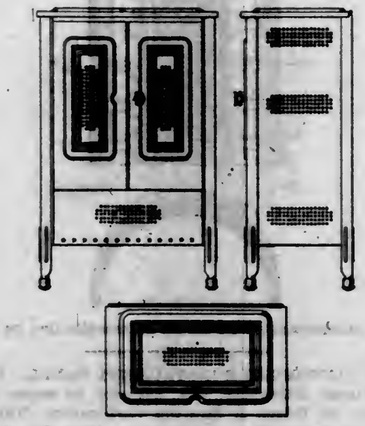


77,230. PIN WHEEL. JOHN S. FRIDOLPH, New York, N. Y., assignor to The De-Lite-Us Spring Clasp Corporation, New York, N. Y., a Corporation of New York. Filed Aug. 11, 1928. Serial No. 27,790. Term of patent 3½ years.

The ornamental design for a pin wheel, as shown.

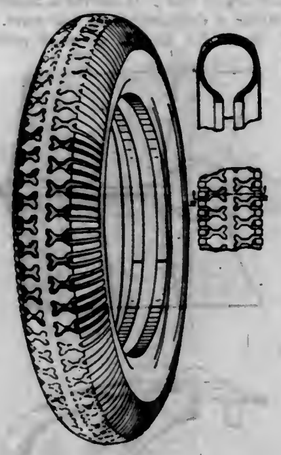


77,231. COMBINATION AUTOMOBILE BODY, HOOD, AND FENDERS. EDWARD W. GOODWIN, Detroit, Mich. Filed Oct. 29, 1927. Serial No. 23,922. Term of patent 7 years.



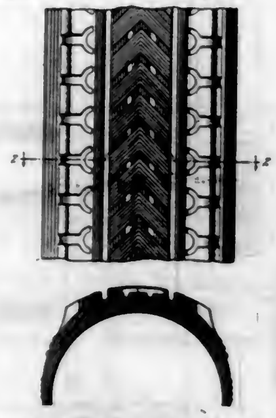
The ornamental design for a combination automobile body, hood, and fenders, as shown.

77,232. PLANT COVER. FRIEDRICH GRAFFENBERGER, Milwaukee, Wis., assignor to Milwaukee Lace Paper Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Sept. 10, 1928. Serial No. 28,102. Term of patent 14 years.



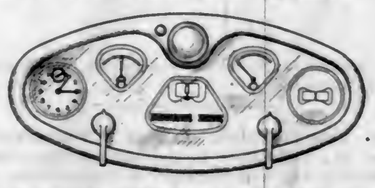
The ornamental design for a plant cover, as shown.

77,233. VEGETABLE CABINET. MAX HALPERT, New York, N. Y. Filed Aug. 9, 1928. Serial No. 27,754. Term of patent 14 years.



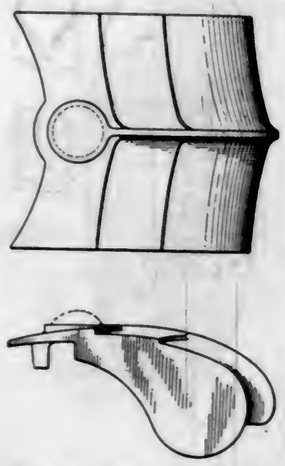
The ornamental design for a vegetable cabinet substantially as shown.

77,234. VEHICLE TIRE. LA PORT W. HERBNER, Greensburg, Pa., assignor to Pennsylvania Rubber Company, Jeannette, Pa., a Corporation of Pennsylvania. Filed Apr. 25, 1928. Serial No. 26,448. Term of patent 14 years.



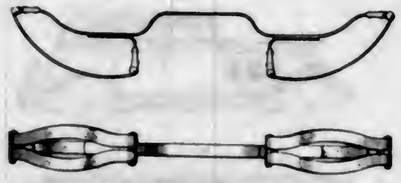
The ornamental design for a vehicle tire, as shown.

77,235. AUTOMOBILE TIRE. HARRY C. HOWER, Chicago, Ill. Filed June 11, 1928. Serial No. 27,082. Term of patent 14 years.



The ornamental design for an automobile tire, as shown.

77,236. AUTOMOBILE INSTRUMENT PANEL. EDWARD N. JACOBI, Milwaukee, Wis., assignor, by mesne assignments, to Briggs & Stratton Corporation, Milwaukee, Wis., a Corporation of Delaware. Filed Jan. 5, 1923. Serial No. 4,816. Term of patent 3½ years.



The ornamental design for an automobile instrument panel, as shown.

77,237. MASK PLATE FOR VEHICLE BUMPERS. HERBERT S. JANDUS and NORMAN VAN HUSEN, Detroit, Mich., assignors to The C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed June 17, 1927. Serial No. 22,482. Term of patent 14 years.

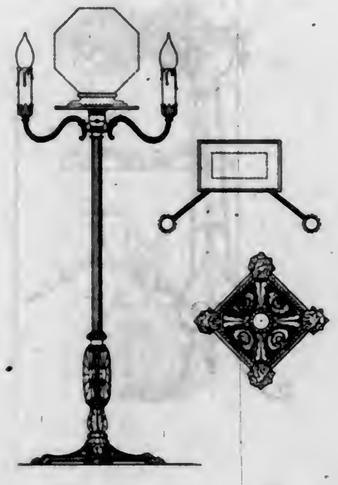
The ornamental design for a mask plate for vehicle bumpers, substantially as shown and described.

77,238. BUMPER. HERBERT S. JANDUS and CHARLES E. RASMUSSEN, Detroit, Mich., assignors to The C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed July 28, 1927. Serial No. 22,910. Term of patent 14 years.

The ornamental design for a bumper substantially as shown.

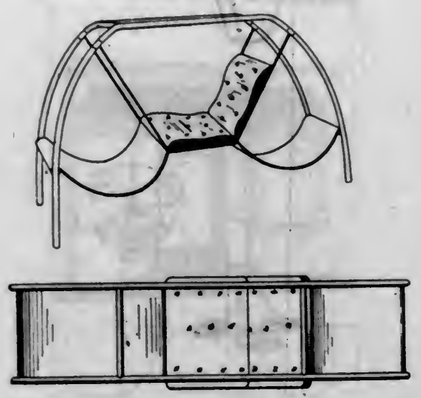
77,239. NICHE. EDMUND KAIM, Jersey City, N. J., assignor to Jacob Koenig, Jersey City, N. J. Filed Aug. 8, 1927. Serial No. 23,025. Term of patent 14 years.

The ornamental design for a niche as shown.



77,240. VEHICLE RADIATOR COVER. MICHALE KISHAW, Detroit, Mich. Filed Aug. 29, 1928. Serial No. 27,983. Term of patent 14 years.

The ornamental design for a vehicle radiator cover, as shown.



77,241. COMBINATION LIGHTING FIXTURE AND SUPPORT FOR LOUD-SPEAKER UNITS. BENJAMIN F. KLEIN, Cleveland, Ohio. Filed Sept. 29, 1928. Serial No. 28,823. Term of patent 14 years.

The ornamental design for a combination lighting fixture and support for loud speaker units, as shown.

77,242. COMBINED HAMMOCK SEAT AND FRAME. PAUL A. KNAPPE, Santa Rosa, Calif. Filed Apr. 16, 1928. Serial No. 26,328. Term of patent 3½ years.

The ornamental design for a combined hammock seat and frame substantially as shown.

77,243. SACHET DEVICE. CLAYTON W. KNAPP, Cleveland, Ohio. Filed June 11, 1928. Serial No. 27,080. Term of patent 3½ years.

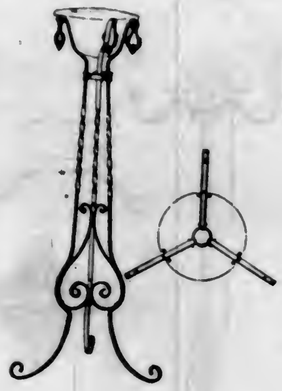
The ornamental design for a sachet device as shown.

77,244. SACHET DEVICE. CLAYTON W. KNAPP, Cleveland, Ohio. Filed June 11, 1928. Serial No. 27,081. Term of patent 3½ years.

The ornamental design for a sachet device as shown.

77,245. LAMP STANDARD. JOSEPH LIEBERMAN, Bayonne, N. J. Filed Sept. 13, 1928. Serial No. 28,129. Term of patent 14 years.

The ornamental design for a lamp standard substantially as shown.



---

77,246. MASK. HUGO LOEWENBACH, Milwaukee, Wis. Filed Mar. 22, 1928. Serial No. 25,950. Term of patent 14 years.

The ornamental design for a mask, as shown, and described.

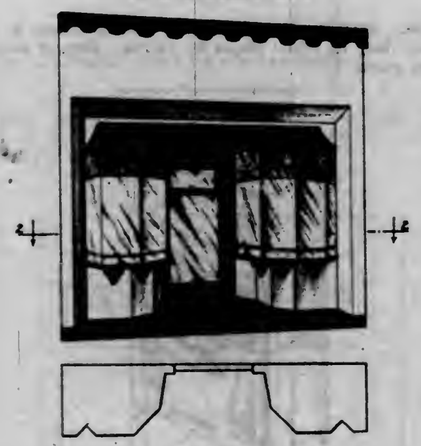
77,247. FERN STAND. ISIDORE MARSHAK, Brooklyn, N. Y., assignor to Alexander Amitin, Brooklyn, N. Y. Filed Feb. 1, 1928. Serial No. 25,124. Term of patent 3½ years.

The ornamental design for a fern stand, substantially as shown.

---

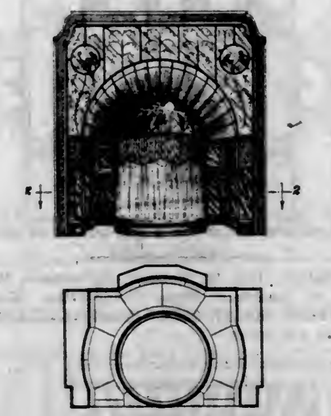
77,248. FERN STAND. ISIDORE MARSHAK, Brooklyn, N. Y., assignor to Alexander Amjtin, Brooklyn, N. Y. Filed Feb. 4, 1928. Serial No. 25,195. Term of patent 3½ years.

The ornamental design for a fern stand, substantially as shown.



77,249. BROOCH OR SIMILAR ARTICLE. BERNAT MECHLOVITS, New York, N. Y. Filed Oct. 25, 1928. Serial No. 28,638. Term of patent 3½ years.

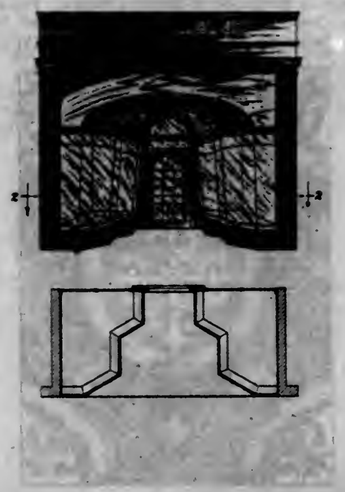
The ornamental design for a brooch or similar article, as shown.



---

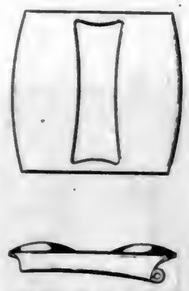
77,250. STORE FRONT. WARD MELVILLE, Brooklyn, N. Y., assignor to Melville Shoe Corporation, a Corporation of New York. Filed Mar. 18, 1925. Serial No. 12,755. Term of patent 14 years.

The ornamental design for a store front, as shown.



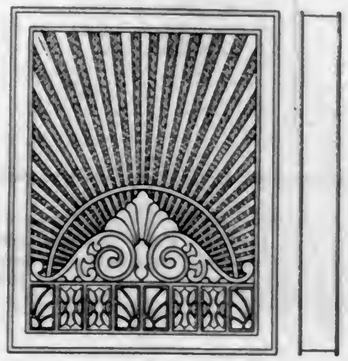
77,251. STORE FRONT. WARD MELVILLE, Old Field, N. Y., assignor to Melville Shoe Corporation, a Corporation of New York. Filed June 19, 1928. Serial No. 27,199. Term of patent 14 years.

The ornamental design for a store front, as shown.



---

77,252. STORE FRONT. WARD MELVILLE, Old Field, and RICHARD H. SMYTHE, Brooklyn, N. Y., assignors to Melville Shoe Corporation, a Corporation of New York. Filed June 19, 1928. Serial No. 27,201. Term of patent 14 years.



The ornamental design for a store front, as shown.

77,253. BELT BUCKLE. EDWIN S. MIX, Rochester, N. Y., assignor to Hickok Manufacturing Company, Inc., Rochester, N. Y., a Corporation of New York. Filed Apr. 19, 1928. Serial No. 26,391. Term of patent 7 years.

The ornamental design for a belt buckle, as shown.

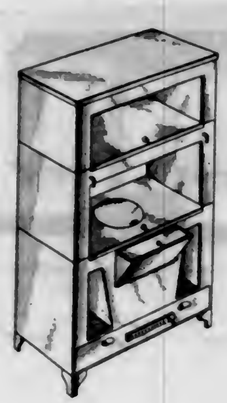
77,254. SIGN. DON W. NORTON, Kalamazoo, Mich., assignor to American Signs Corporation, Kalamazoo, Mich. Filed Aug. 17, 1928. Serial No. 27,866. Term of patent 3½ years.

The ornamental design for a sign, as shown.

77,255. CARPET. ALFRED OAKLEY, Philadelphia, Pa., assignor to Hardwick & Magee Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Sept. 29, 1928. Serial No. 28,327. Term of patent 3½ years.

The ornamental design for a carpet, substantially as shown.

77,256. AUTOMOBILE TRAFFIC LAMP. GIUSEPPE PALMIERI, Providence, R. I. Filed Sept. 4, 1928. Serial No. 28,035. Term of patent 3½ years.



The ornamental design for an automobile traffic lamp, as shown.

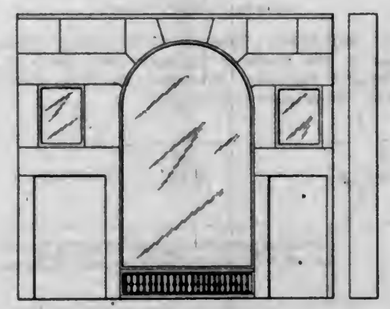
77,257. OPTICAL MOUNTING. EMANUEL PAPPERT, New York, N. Y. Filed Sept. 6, 1928. Serial No. 28,061. Term of patent 7 years.

The ornamental design for an optical mounting, as shown.

77,258. STOVE. ERASTUS W. ROGERS, Durham, N. C. Filed May 18, 1926. Serial No. 17,764. Term of patent 3½ years.

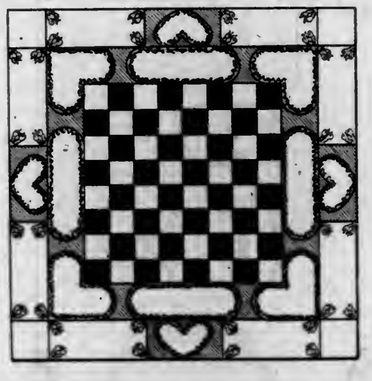
The ornamental design for a stove as shown.

77,259. COMBINATION PITCHER AND DRINKING GLASS. WALTER C. ROSS, New York, N. Y. Filed Feb. 27, 1928. Serial No. 25,609. Term of patent 7 years.



The ornamental design for a combination pitcher and drinking glass, as shown.

77,260. BOX. FRANK J. SCHLEICHER, St. Louis, Mo. Filed Oct. 18, 1928. Serial No. 28,533. Term of patent 14 years.

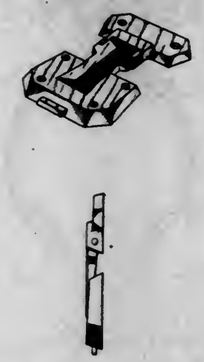


The ornamental design for a box as shown.

77,261. STORE FRONT. BERNARD F. SCHULTE, New York, N. Y. Filed Aug. 26, 1926. Serial No. 18,878. Term of patent 3½ years.

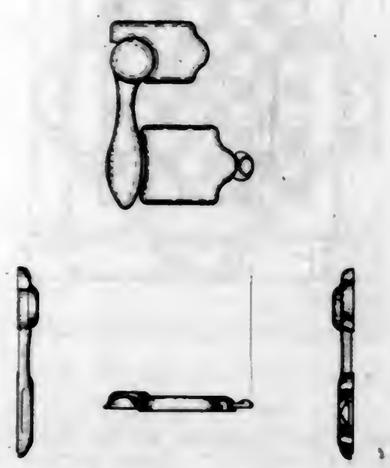
The ornamental design for a store front as shown.

77,262. TABLE TOP. HARRY T. SMITH, Miami, Fla. Filed Feb. 7, 1928. Serial No. 25,249. Term of patent 7 years.



The ornamental design for a table top as shown.

77,263. LOUD-SPEAKER DIAPHRAGM. LESLIE STEVENS, Glen Ridge, N. J., assignor to Stevens Manufacturing Corporation, New York, N. Y., a Corporation of Delaware. Filed Feb. 16, 1927. Serial No. 20,784. Term of patent 7 years.

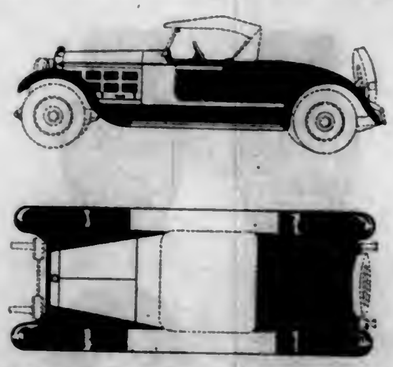


The ornamental design for a loud speaker diaphragm, as shown.

77,264. HASP LOCK. ELMER B. STONE, New Britain, Conn., assignor to The American Hardware Corporation, New Britain, Conn., a Corporation of Connecticut. Filed June 18, 1928. Serial No. 27,185. Term of patent 14 years.

The ornamental design for a hasp lock, as shown.

77,265. SUITCASE LOCK. ELMER B. STONE, New Britain, Conn., assignor to The American Hardware Corporation, New Britain, Conn., a Corporation of Connecticut. Filed Aug. 27, 1928. Serial No. 27,968. Term of patent 14 years.



The ornamental design for a suitcase lock, as shown.

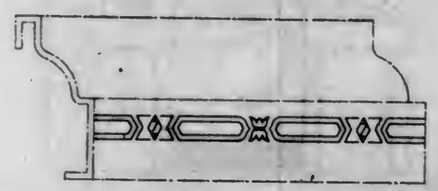
77,266. DOOR KNOCKER. WILLIAM WAVERLY TAYLOR, Jr., Washington, D. C., assignor to Waverly Taylor, Inc., Washington, D. C., a Corporation of Maryland. Filed Oct. 17, 1928. Serial No. 28,521. Term of patent 14 years.

The ornamental design for a door knocker, as shown.

77,267. MOTOR-CAR BODY. WEBSTER TILTON, St. Louis County, Mo., assignor to Gardner Motor Company, Inc., St. Louis, Mo., a Corporation of New York. Filed July 7, 1927. Serial No. 22,690. Term of patent 3½ years.

The ornamental design for a motor car body, as shown and described.

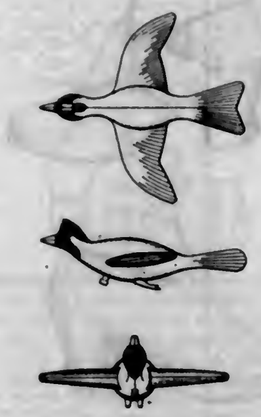
77,268. MOLDING. EDWARD TONEY, Niles, Mich., assignor to The Kawneer Company, Niles, Mich., a Corporation of Michigan. Filed Mar. 19, 1928. Serial No. 25,921. Term of patent 14 years.



The ornamental design for a molding substantially as shown.

77,269. MOLDING. EDWARD TONEY, Niles, Mich., assignor to The Kawneer Company, Niles, Mich., a Corporation of Michigan. Filed Mar. 19, 1928. Serial No. 25,922. Term of patent 14 years.

The ornamental design for a molding substantially as shown.

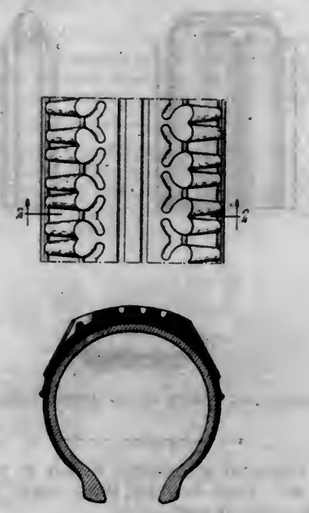


77,270. MOLDING. EDWARD TONEY, Niles, Mich., assignor to The Kawneer Company, Niles, Mich., a Corporation of Michigan. Filed Mar. 23, 1928. Serial No. 25,975. Term of patent 14 years.

The ornamental design for a molding substantially as shown.

77,271. TOY BALLOON. JESSIE CARR TYNDALL, St. Louis, Mo. Filed Sept. 6, 1927. Serial No. 23,308. Term of patent 7 years.

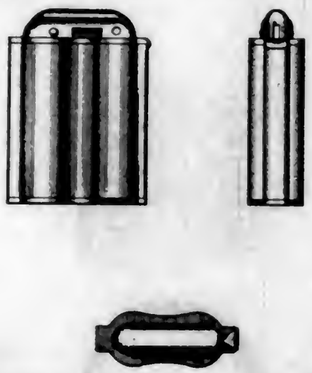
The ornamental design for a toy balloon, as shown.



77,272. STREET-LIGHTING POST. WESTERN UNDERWOOD, Los Angeles, Calif. Filed Oct. 4, 1928. Serial No. 28,365. Term of patent 7 years.

The ornamental design for a street lighting post, as shown.

77,273. TIRE. HENRY L. VENN, River Forest, Ill., assignor to Century Rubber Works, Cicero, Ill., a Corporation of Illinois. Filed Oct. 1, 1928. Serial No. 28,345. Term of patent 7 years.

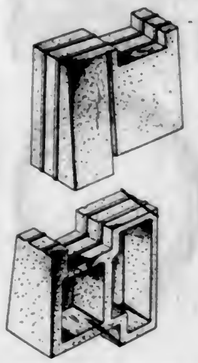


The ornamental design for a tire substantially as shown.

77,274. TIRE. HENRY L. VENN, River Forest, Ill., assignor to Century Rubber Works, Cicero, Ill., a Corporation of Illinois. Filed Oct. 3, 1928. Serial No. 28,358. Term of patent 7 years.

The ornamental design for a tire substantially as shown.

77,275. LIGHTER. WALFRED WALLENTHIN, Attleboro, Mass., assignor to The Associated Attleboro Manufacturers, Inc., Attleboro, Mass., a Corporation of Massachusetts. Filed Apr. 5, 1928. Serial No. 26,132. Term of patent 7 years.

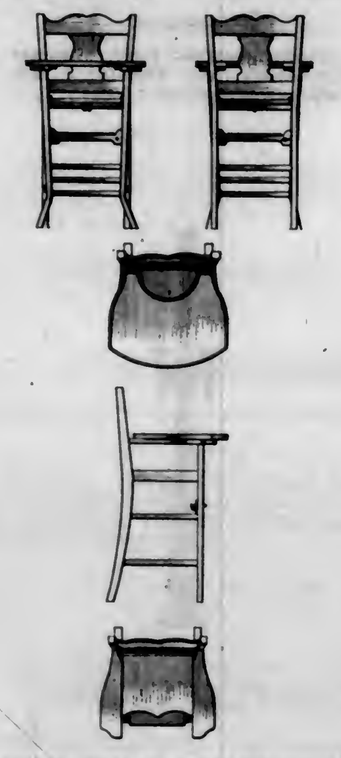


The ornamental design for a lighter substantially as shown.

77,276. VENDING MACHINE. GEORGE R. WEBBER, Augusta, Me. Filed June 14, 1928. Serial No. 27,126. Term of patent 14 years.

The ornamental design for a casing for a vending machine, as shown.

77,277. CONCRETE SHINGLE BLOCK FOR BUILDING WALLS. DURAINE E. WELCH, Upper Sandusky, Ohio. Filed Mar. 5, 1928. Serial No. 25,672. Term of patent 3½ years.

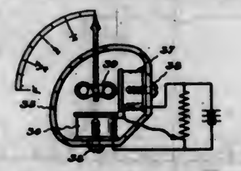


The ornamental design for a concrete shingle block for building walls, as shown.

77,278. OVERSHOE. HERMAN WESTLING, Watertown, Mass., assignor to Cambridge Rubber Company, Cambridge, Mass., a Corporation of Massachusetts. Filed Nov. 26, 1926. Serial No. 19,846. Term of patent 3½ years.

The ornamental design for an overshoe, as shown.

77,279. CHILD'S HIGH CHAIR. PHILLIP A. SHAVER, Puente, Calif. Filed July 25, 1927. Serial No. 22,876. Term of patent 7 years.

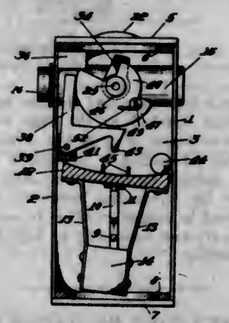


The ornamental design for a child's high chair, as shown.

# PATENTS

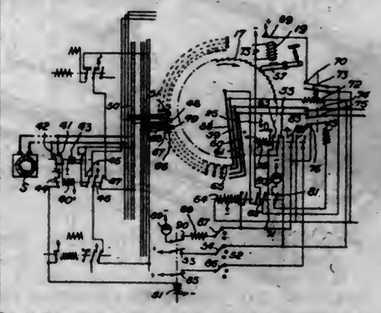
## GRANTED DECEMBER 18, 1928.

1,695,264. ELECTRICAL INDICATING INSTRUMENT. CLARK M. ADAMS, Ottawa Hills, Ohio, assignor to The W. G. Nagel Electric Company, Toledo, Ohio, a Corporation of Ohio. Filed Oct. 18, 1926. Serial No. 141,337. 4 Claims. (Cl. 171—95.)



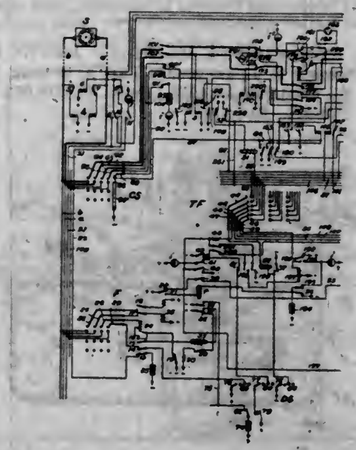
2. An indicating instrument comprising an endless field piece, a pair of magnetizing coils extending inwardly from the field piece and having their axes arranged at an angle relative to each other, and an armature of magnetizable material pivotally mounted within the field of influence of each of said coils and said field piece whereby said armature is moved to a multiplicity of indicating positions in accordance with the relative energization of said windings.

1,695,265. DRAW-TABLE-HEATING UNIT. WALTER O. AMSLER, Toledo, Ohio, assignor to The Libbey-Owens Sheet Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed Oct. 9, 1924. Serial No. 742,508. 10 Claims. (Cl. 49—17.)



4. In combination with a sheet glass drawing apparatus draw-table, of means to create a flame to heat the draw table, a slab arranged in the path of the flame to deflect the same, and means to adjust the slab to control the angularity of deflection of the flame with respect to the draw-table.

1,695,266. KEYLESS LOCK. HARRY GUY ANDERSON, New York, N. Y. Filed Jan. 8, 1926, Serial No. 80,010. Renewed Apr. 25, 1928. 6 Claims. (Cl. 292—169.)

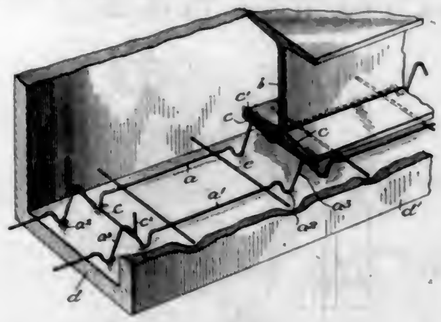


1. In a keyless lock, a casing, a bolt slidably arranged in said casing, bolt actuating mechanism carried by said casing, a lever fulcrumed to said casing and serving in one position to block operation of said bolt actuating mechanism, and delicately poised mechanism associated with said lever and normally disposed in horizontal position sensitive to vibration caused by exterior commotion whereby said lever is rendered operative or inoperative.

1,695,267. AUTOMATIC TELEPHONE SYSTEM. FRITZ ALDENDORFF, Berlin-Wilmersdorf, Germany; Charlotte Aldendorff heiress of said Fritz Aldendorff, deceased. Filed Jan. 12, 1925, Serial No. 1,889, and in Germany Jan. 14, 1924. 24 Claims. (Cl. 179—27.5.)

1. In a selector switch, a brush, bank contacts, a self-contained power device for driving said brush to any desired bank contact and then to a normal position, a brush-arresting member that moves with said brush, an electromagnet whose armature stops the brush on its deenergizing, and a circuit through said bank contacts for the electromagnet which is opened when the brush reaches a desired bank contact.

1,695,268. AUTOMATIC TELEPHONE SYSTEM. FRITZ ALDENDORFF, Berlin-Wilmersdorf, Germany, assignor of one-fourth to Paul Kolisch, New York, N. Y.; Charlotte Aldendorff sole heir of said Fritz Aldendorff, deceased. Original application filed Feb. 14, 1922, Serial No. 536,504, now Patent No. 1,641,145, dated Sept. 6, 1927, and in Great Britain May 17, 1921. Divided and this application filed Apr. 7, 1926. Serial No. 100,291. 16 Claims. (Cl. 179—18.)



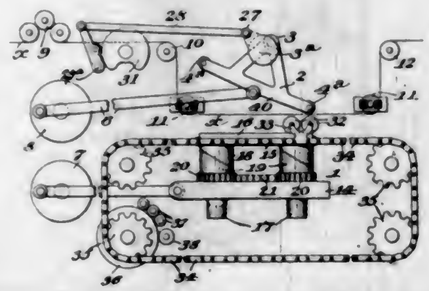
1. In a telephone system; lines; impulse transmitters associated with said lines; a conversational switch with

fixed contacts connected to said lines, movable contacts, and operating means for operating said movable contacts; an impulse receiving designating switch adapted to be set by a said impulse transmitter; starting means for starting said operating means immediately impulses commence being sent into the impulse receiving switch from a said impulse transmitter; and means for controlling the operation of said movable contacts in accordance with the setting of the impulse receiving designating switch.

---

1,695,269. CONCRETE REENFORCEMENT. FRANCIS M. BARTON, Chicago, Ill. Filed Sept. 6, 1927. Serial No. 217,571. 4 Claims. (Cl. 72—109.)

1. In reenforcement for concrete, the combination of a plurality of wires adapted to extend longitudinally under a beam and having portions thereof bent downwardly to space the bottom of a form from the beam, cross-wires fixed to the longitudinal wires so as to be spaced away from the beam and to reenforce the concrete under the beam, and means for securing the reenforcement to the beam.

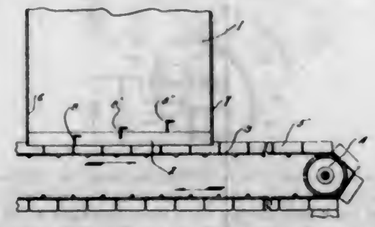


---

1,695,270. METHOD OF OBTAINING TITANIC OXIDE. LOUIS E. BARTON and CHARLES J. KINZIE, Niagara Falls, N. Y., assignors to Titanium Pigment Company, Inc., New York, N. Y., a Corporation of Maine. Filed Feb. 16, 1925. Serial No. 9,415. 8 Claims. (Cl. 23—202.)

3. In obtaining titanic oxide from titaniferous ores, the step which consists in mixing and heating said ores together with sulphuric acid and an alkali metal sulphate to formation of water soluble salts, but without fusion.

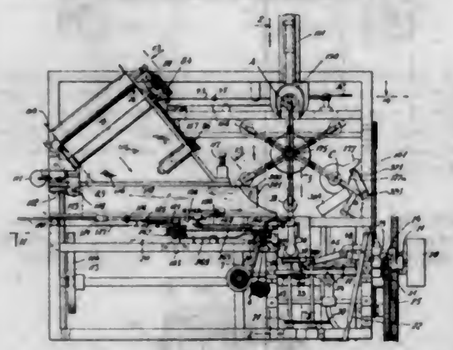
---



1,695,271. WEB-PRINTING MACHINE. JOHN D. CAPLINGER, Newark, N. J., assignor to Carl A. Kellogg, New York, N. Y. Filed Feb. 11, 1918. Serial No. 216,675. 50 Claims. (Cl. 101—212.)

1. In a web printing machine, a bed, means for reciprocating said bed endwise, means for continuously feeding a web over said bed, in combination with a pivoted platen having a curved impression surface, said platen being pivoted below the center of curvature of said impression surface, and means functioning to separate the bed and platen at intervals to permit the free movement of the web.

---



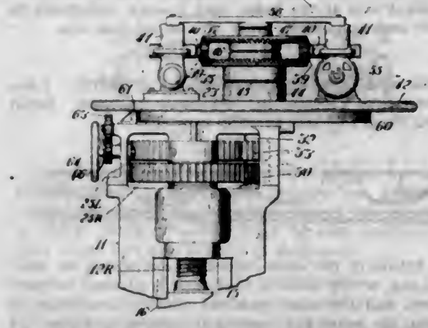
1,695,272. BIN-GATE ARRANGEMENT. CHARLES H. CHRISTIAN and CARL F. WALKER, Cleveland, Ohio. Filed Dec. 2, 1926. Serial No. 152,216. 2 Claims. (Cl. 198—57.)

1. In a combined bin and conveyor for use in handling granular material, a travelling conveyor substantially imperforate for carrying and conveying the material delivered upon it, a bin above one stretch of said conveyor and having a mouth for delivering materials to said conveyor, said bin forming with said conveyor a side delivery opening for the material where said conveyor passes from said mouth, and vertically fixed narrow baffle strips in the mouth of the bin for insuring delivery of the material from all parts of the bin to prevent caking or clogging.

---

1,695,273. MACHINE FOR MAKING HAT LININGS. MAX COHN, Brooklyn, N. Y., assignor to Cee-Bee Machine Corporation, a Corporation of New York. Filed Feb. 4, 1926. Serial No. 85,832. 38 Claims. (Cl. 112—2.)

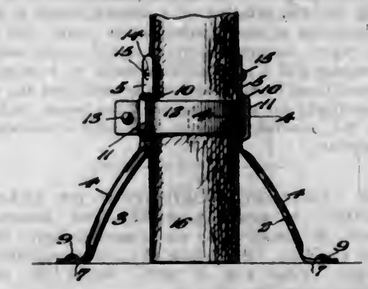
1. A machine for making hat linings which consist of a tip and a band stitched to the edge of the tip, comprising the combination of a power driven sewing machine, means for advancing a succession of tips to the needle of the sewing machine one after another, and separate means for advancing bands to the needle and positioning a band in proper relation to each tip, whereby the edges of the tip and band may be united by the sewing machine by stitching.



---

1,695,274. SCREW-DOWN MECHANISM FOR ROLLING MILLS. WILLIAM C. CORYELL, Youngstown, Ohio. Filed Aug. 13, 1925. Serial No. 49,983. 4 Claims. (Cl. 80—56.)

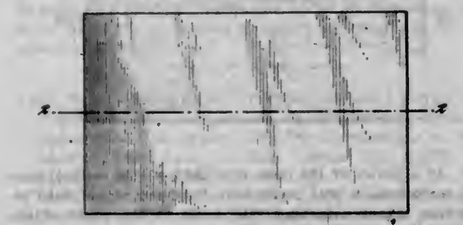
1. A screw-down mechanism for rolling mills, comprising holding-down screws, two opposed bevel gear wheels,



an intermediate bevel gear wheel meshing with said opposed wheels, means for rotating said intermediate wheel to drive said opposed wheels, means for moving said three wheels as a unit, a shaft to which one of said opposed gear wheels is secured, a sleeve rotatable on said shaft,

the other of said opposed gear wheels being secured to said sleeve, and independent gear trains between said screws and shaft and sleeve respectively whereby different adjustments of said screws are obtained in response to unitary and differential movements of said gear wheels.

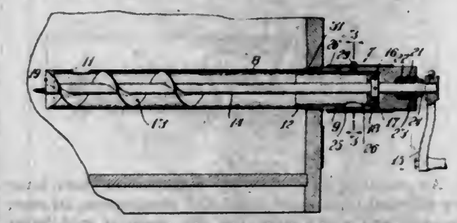
---



1,695,275. TREE HOLDER. ANTHONY E. DAVIS, Philadelphia, Pa. Filed Nov. 19, 1924. Serial No. 750,726. 1 Claim. (Cl. 248—38.)

A tree holder, comprising legs each being formed of sheet metal with a tree contacting portion and downwardly and outwardly inclined leg portions and with the tree contacting portion having guide bands deflected therefrom, a flexible clamping member passing between said guide bands and the tree contacting portions, fastening devices adapted to pass through the legs and engage the tree, and securing means for said clamping member.

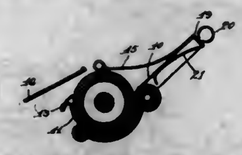
---



1,695,276. SURFACING ELEMENT AND PROCESS OF MANUFACTURING THE SAME. HENRY C. FLOHR, New York, and LEON ORNSTEIN, Brooklyn, N. Y. Filed Feb. 6, 1926. Serial No. 86,475. 4 Claims. (Cl. 91—68.)

4. The process of manufacturing a surfacing element consisting in applying to the surface of an asbestos board base, a penetrating and adhesive solution consisting of nitro-cellulose, gum and a vegetable oil, permitting the same to dry, and then applying a filling solution composed of an amorphous substance incorporated with a bodied vegetable oil and nitro-cellulose, permitting the same to dry, then applying a finishing solution comprising a pigment incorporated with nitro-cellulose, gum and a vegetable oil.

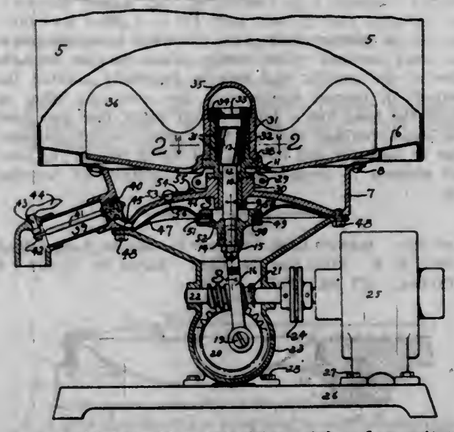
---



1,695,277. CONVEYER. BENJAMIN FRANKLIN FORSYTH, Chicago, Ill. Filed June 19, 1925. Serial No. 38,279. 9 Claims. (Cl. 225—42.)

1. In a conveyer discharging device for insertion in barrels and like containers, a bit for boring through the wall of the barrel, a screw conveyer in continuation of said bit, and means for supporting said screw conveyer in said barrel.

---

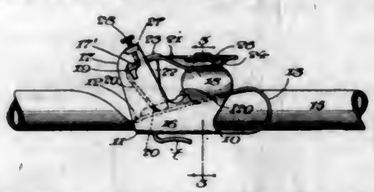


1,695,278. CARD HOLDER. MAX GARBELL, Chicago, Ill., assignor to Victor Adding Machine Company, Chicago, Ill., a Corporation of Illinois. Filed July 11, 1927. Serial No. 204,826. 5 Claims. (Cl. 197—136.)

1. A card holder adapted to be quickly attached to and detached from a typewriter comprising an integrally formed member of springy material adapted for detachable securing to the paper table of a typewriter and having arms extending forwardly of said table and into proximity to a platen and having a portion extending rearwardly from said arms and adapted to clamp over the rear of said table.

---

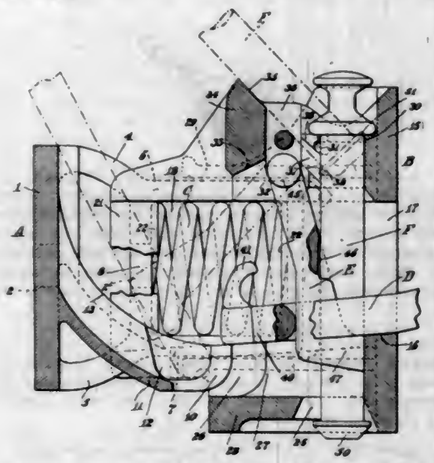
1,695,279. WASHING MACHINE. FRANK G. GIES, Detroit, Mich., assignor of one-half to Leonard Lesszynski, Detroit, Mich. Filed Oct. 15, 1927. Serial No. 226,274. 14 Claims. (Cl. 259—101.)



1. A washing machine comprising a tub and an agitator therein, a driver positioned outside the tub, driving means

connecting said driver and agitator, and a flexible member connected at one edge to a portion of the tub assembly and at another edge to a portion of the driving means and acting to seal the tub against leakage around the driving means.

---



1,695,280. TUBE COMPRESSOR. HERMAN GOLLOMB, Brooklyn, N. Y. Filed Aug. 21, 1926. Serial No. 130,568. 8 Claims. (Cl. 251—5.)

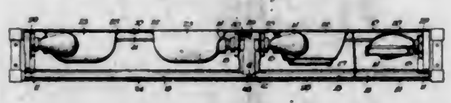
8. An angular lever for tube compressors, said lever being stamped from sheet metal and compressing an operating arm and a cam arm, the side edges of said latter arm having upwardly bent reinforcing flanges which bear at their inner ends against the operating arm at the juncture of the arms.

---

1,695,281. CAR COUPLER. LOUIS D. GREGG, Hackensack, N. J., assignor to The Gregg Company, Limited, New York, N. Y., a Corporation of New York. Filed Apr. 30, 1926. Serial No. 105,653. 25 Claims. (Cl. 213—49.)

1. A car coupler of the type described comprising base and head sections telescopically joined on the opposite sides of the coupler and springs yieldingly holding the sections in normal relationship one upon the other in which the head has a solid central buffer face and head and base provided between the springs a link chamber open at its outer end through the buffer face of the head and adapted to receive therein an independent coupling link.

---



1,695,282. BANJO RIM. ALBERT D. GROVER, Long Island City, N. Y. Filed Nov. 25, 1925. Serial No. 71,487. 3 Claims. (Cl. 84—269.)

1. In a banjo, a rim and resonator formed from a single blank and comprising an integral base rim, intermediate annular flange, and head supporting rim having a concave back portion forming a resonator, a neck for said base rim, and connecting means for the rim and neck comprising a bar wedged in an opening in said neck and having a threaded bore disposed parallel with the longitudinal axis of the banjo, and a screw adjustable in said bore and against the inner face of the base rim.

---

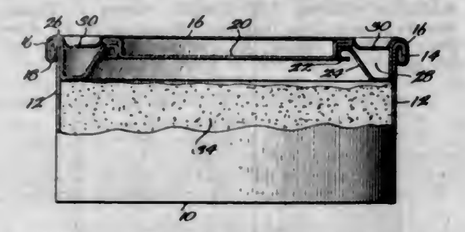
1,695,283. BANK-SCREEN-LIGHTING DEVICE. PAUL M. HOTCHKIN, Chicago, Ill. Filed Oct. 16, 1925. Serial No. 62,701. 15 Claims. (Cl. 240—6.)

1. A fixture of the class described, comprising an elongated casing, wiring boxes in the casing, a wireway between the boxes, and retaining members slidably positioned in grooves in the boxes and bearing transversely against the wireway near the ends thereof for holding the same in alignment with openings in the boxes.

---

1,695,284. COLOR PHOTOGRAPH OR FILM AND METHOD OF PRODUCING SAME. FREDERIC E. IVES, Philadelphia, Pa., assignor to Carl W. Fenninger, Philadelphia, Pa. Filed Oct. 20, 1926. Serial No. 143,023. 18 Claims. (Cl. 95—2.)

1. In photographic color print making, the process of preparing for the printing of a second image a colloid layer containing a photographic silver image and silver bromide, which comprises converting the silver image to silver bromide and a pigment blue image by treatment in a bath containing in combination a bromide and the necessary ingredients for producing the blue image, and then treating the resultant product in a bath containing an alkali sulphate.



---

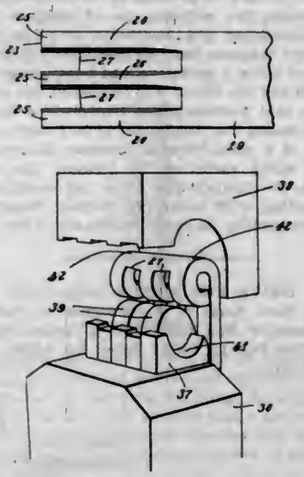
1,695,285. CATALYTIC OXIDATION OF SULPHUR DIOXIDE. ALPHONS O. JAEGER and JOHANN A. BERTSCH, St. Louis, Mo.; said Jaeger assignor to The Selden Company, Pittsburgh, Pa., a Corporation of Delaware. Filed Feb. 6, 1926. Serial No. 86,653. 12 Claims. (Cl. 23—175.)

1. The process of catalytically oxidizing sulphur dioxide which comprises passing gases containing sulphur dioxide, oxygen and at least one catalyst poison other than arsenic alone at elevated temperatures over catalytically active zeolites which are free from platinum.

---

1,695,286. CAN. ALBERT C. JOHNSON, Chicago, Ill. Filed Feb. 1, 1927. Serial No. 165,222. 5 Claims. (Cl. 220—27.)

1. In a device of the class described, a side walled, open top receptacle, a seal cover over the open top of said receptacle, means attaching said cover to the edges of the side walls of said receptacle, a temporary service cover inside the receptacle adjacent the seal cover, and secured at its edge at the upper edge of the receptacle, said cover being so shaped that a can opening instrument may traverse and cut the seal cover without injury to the service cover.

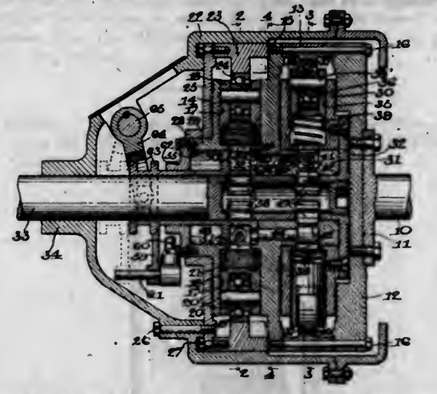


1,695,287. VANITY CASE. NATHAN KASDAN, New York, and DANIEL POLLACK, Brooklyn, N. Y., assignors to Majestic Metal Specialties, Inc., New York, N. Y., a Corporation of New York. Filed Dec. 8, 1925. Serial No. 73,974. 4 Claims. (Cl. 132—83.)

1. A vanity case having in combination an apertured plate, a flange at the edge of the aperture, and a friction snap catch extending from the edge of the aperture, and a dished compact holder fitted in said aperture against said flange and held therein by said snap.

---

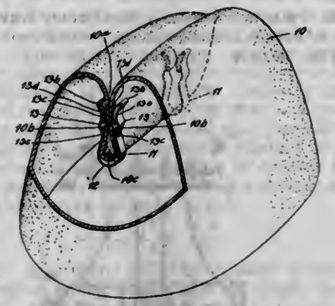
1,695,288. METHOD OF MANUFACTURING COVERED-JOINT HINGES. WILLIAM C. KENYON, Rockford, Ill., assignor to The Atwood Vacuum Machine Company, a Copartnership consisting of Seth B. Atwood and James T. Atwood, Rockford, Ill. Filed Nov. 12, 1926. Serial No. 148,022. 7 Claims. (Cl. 29—11.)



3. The method of manufacturing a covered joint hinge member from a flat metal blank, consisting in milling two parallel grooves in one side only of the blank, said grooving extending longitudinally from one end to an intermediate point, slotting through the bottom of said grooves from said end to a point intermediate the ends of the grooves, thereby forming a shoulder at the open end of each groove, said shoulders being inclined from the center outwardly away from the end face above mentioned, bending or curling the grooved and slotted portions to form a covered joint knuckle, and crowning the covering portion of the knuckle by a stamping operation which by displacement of metal brings said inclined shoulders substantially into coplanar relation.

---

1,695,289. HYDRAULIC TRANSMISSION. ROYAL LEE, Milwaukee, Wis., assignor to Lee Engineering Research Corporation, Milwaukee, Wis., a Corporation of Wisconsin. Filed July 13, 1925. Serial No. 43,280. 13 Claims. (Cl. 60—53.)



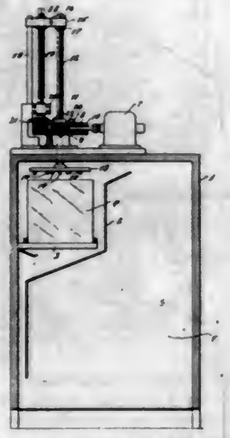
12. In a hydraulic transmission, the combination of a pair of relatively rotatable cylinder barrels one rotatably mounted on the other and each having a plurality of radially disposed cylinder bores therein, fluid-displacing pistons movable in said bores, means for driving one of said cylinder barrels, stationary cam means surrounding said driving cylinder barrel and having an operative connection with the pistons therein; a second cam means surrounding the other of said cylinder barrels and secured to

rotate with said driving cylinder barrels, a driven member secured to said other cylinder barrel, and angularly displaceable valve means for controlling the passage of said fluid between said barrels.

---

1,695,290. SHAPE-RETAINING DEVICE FOR HATS. SAUL LEFF, New York, N. Y. Filed Dec. 3, 1924. Serial No. 753,543. 1 Claim. (Cl. 2—185.)

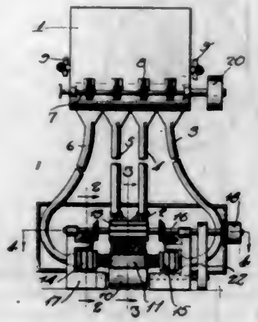
A hat shape retaining device of the character described comprising a single strip of resilient material formed with a loop portion mid-way its ends and two similar oppositely disposed members each terminated by an outwardly flared portion, said flared portion being inturned to extend between said members to form a double spring coacting gripping means, the portions of said members adjacent said loop being bent inwardly toward each other to form a supplemental retention means substantially as described and for the purposes specified.



---

1,695,291. JOINT FOR GOLF CLUBS. FRIEDERICH MÜLLER, Elizabeth, N. J. Filed June 21, 1927. Serial No. 200,318. 17 Claims. (Cl. 273—80.)

5. A golf club having a head and a shaft joined thereto by an electro-deposited sleeve.



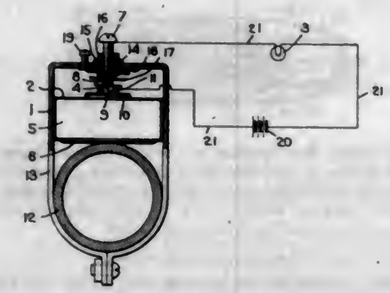
1,695,292. METHOD OF REFRIGERATION AND APPARATUS THEREFOR. CASSIUS C. PALMER, New York, N. Y. Filed Aug. 23, 1927. Serial No. 214,825. 6 Claims. (Cl. 62—92.)

1. The process which consists in shaving off portions of a cake of $CO_2$, depositing the shavings on a metal sheet and exposing the opposite side of the sheet to a chamber to be cooled.

---

1,695,293. MACHINE FOR VENEERING BRICK. EMMETT V. POSTON, Springfield, Ill. Filed June 21, 1927. Serial No. 200,349. 2 Claims. (Cl. 25—1.)

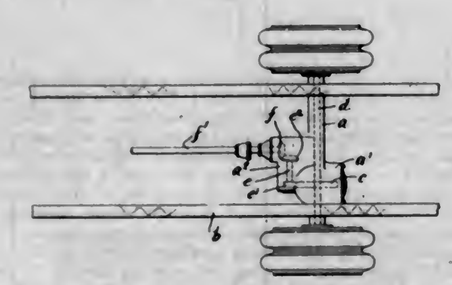
1. A machine for substantially projecting and embedding granular veneer materials approximately at right angles into the exposed faces of a plastic clay body by means of mechanical rotating paddle blasting or centrifugal projecting of the materials, and means for moistening the materials.



---

1,695,294. AUTOMOBILE BUMPER. JOHN M. REIFSNIDER, Adrian, Mich., assignor to American Chain Company, Inc., a Corporation of New York. Filed June 21, 1927. Serial No. 200,310. 5 Claims. (Cl. 293—55.)

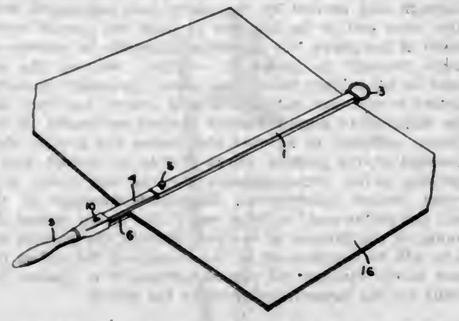
1. In an automobile bumper, an impact member comprising a plurality of vertically aligned, transversely extending bars having loop ends thereon, a rear bar being forwardly bent to engage said impact member at its midsection and a pair of curved plates adapted to be secured to the ends of said impact members and said rear bar in vertical alignment.



1,695,295. TEMPERATURE INDICATOR. EDWARD A. ROLLINS, Roxbury, Mass. Filed July 11, 1923. Serial No. 650,880. 2 Claims. (Cl. 177—351.)

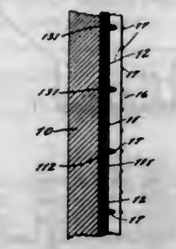
1. A temperature indicator comprising a movable member arranged to vary its position as the temperature varies, a circuit having two contacts, one of which is carried by said movable member, and the other of which is stationarily mounted, said contacts being so relatively situated that at temperatures below a predetermined temperature they will be separated and the circuit will be opened, but at temperatures above said predetermined temperature they will be closed thus closing the circuit, one of said contacts being in the nature of a solid variable pressure rheostat, the resistance of which varies as the pressure thereon varies, whereby as the temperature rises the contacts will be pressed together with a varying pressure thereby to produce a corresponding change of resistance in the circuit.

---



1,695,296. DRIVE FOR MOTOR VEHICLES. AZOR D. ROBBINS, New York, N. Y., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Feb. 11, 1925. Serial No. 8,329. 2 Claims. (Cl. 180—57.)

1. In a drive for a motor vehicle having a central longitudinal aisle section and wherein the elements thereof are constructed to provide maximum clearance between the frame and axle, the combination of a drive shaft disposed in the median plane of the vehicle and extending rearwardly to the final drive thereof, live axle sections, differential gearing for the live axle sections at one side of the longitudinal median plane of the vehicle and out of the aisle section, a shaft section below the horizontal plane including the axis of the live axle sections and parallel thereto, and gearing connecting the shaft section with the drive shaft and differential gearing.

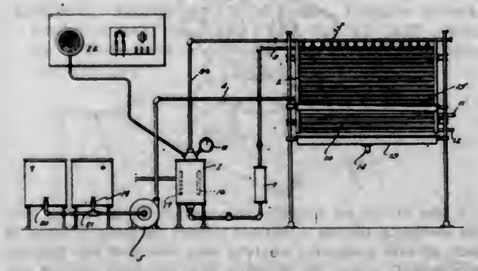


1,695,297. PERIODICAL HOLDER. KARL SCHACHTER, Dorchester, Mass. Filed Jan. 16, 1928. Serial No. 247,237. 10 Claims. (Cl. 129—36.)

1. A periodical holder comprising a pair of normally parallel clamping members each formed in telescoping sections, means pivotally connecting adjacent sections of said clamping members at one end, and means releasably connecting the opposite free ends of said clamping members.

---

1,695,298. CASING. CHARLES H. SEIFERT, Barberton, Ohio, assignor to The Babcock & Wilcox Company, Bayonne, N. J., a Corporation of New Jersey. Filed Apr. 13, 1927. Serial No. 183,434. 11 Claims. (Cl. 72—16.)

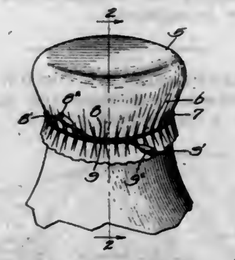


1. A casing comprising a plurality of rectangular panel plates, channel members located on opposite sides of said panel plates and overlapping the joints therebetween, channel members on each side of said plates extending in different directions and means for securing said channel members together and clamping them against opposite sides of said panel plates.

---

1,695,299. [WITHDRAWN.]

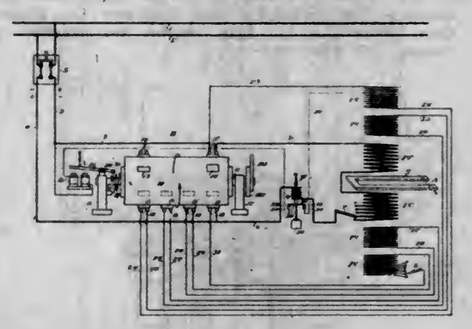
---



1,695,300. METHOD OF PASTEURIZING MILK. JOHN O. TEMPLETON, Detroit, Mich., assignor to Electropure Corporation, Detroit, Mich., a Corporation of Delaware. Filed Mar. 13, 1925. Serial No. 15,399. 6 Claims. (Cl. 99—15.)

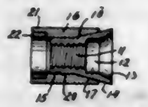
1. In a method of treating milk in which the milk is to be passed between electrodes of an electric circuit to heat the same to a predetermined degree, the step consisting in passing a fluid between the said electrodes having an electrical conductivity approximately equal to that of the milk, for such period of time that the fluid rises to the predetermined temperature to which the milk is to be raised as it passes from the electrode, and then introducing the milk into the system.

---



1,695,301. BOTTLE CLOSURE. OLOF N. TEVANDER, Chicago, Ill. Filed Mar. 28, 1928. Serial No. 265,270. 6 Claims. (Cl. 215—96.)

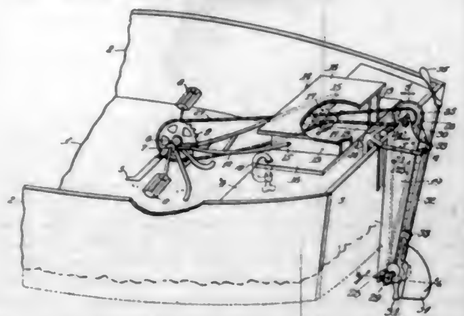
6. A bottle whose neck is externally enlarged at the mouth of the bottle; in combination with a skirted cap placed over the mouth of the bottle and about the bottle neck; and a split ring of wire having a coating of tin or the like substantially throughout its length and tightly contracted about the skirt of the cap and bottle neck and having mutually lapping portions extending circumferentially of the ring and terminating in an end that is free of the cap skirt, the tin or the like upon parts of said mutually lapping portions being fluxed together to hold the ring contracted, said coating of tin or the like being enlarged at said end of the wire to form a knob by which the wire may be grasped to loosen the ring.



---

1,695,302. ELECTRIC HEATER. FRANK W. THOMPSON, West Haven, Conn. Filed Apr. 12, 1922. Serial No. 551,864. 40 Claims. (Cl. 219—11.)

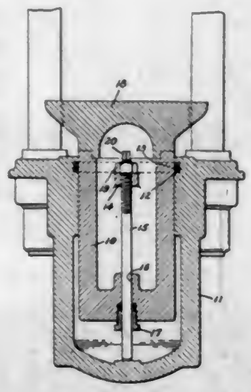
1. An electrode for electric heaters comprising a block of conducting material of higher resistivity than that of an article to be heated and having a face shaped to contact with such article, and a strip of material of lower resistivity than that of the block, said strip overlying and contacting with one side of said block but cut away from the face whereby it is out of contact with the article to be heated.



1,695,303. ANCHOR. CHARLES C. TOMKINSON, Plainfield, N. J., assignor to John Edward Ogden, Mountainville, N. Y. Filed Feb. 11, 1926. Serial No. 87,550. 14 Claims. (Cl. 72—105.)

7. An anchor comprising an expanding member, a ductile sleeve mounted thereon and extending beyond one end thereof, and a ring within the extended portion of the sleeve for preventing the intrusion of the metal thereof when the sleeve is expanded.

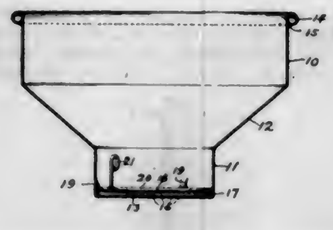
---



1,695,304. BOAT-PROPELLING DEVICE. CHARLES P. TURNER, Mishawaka, Ind. Filed Aug. 23, 1926. Serial No. 130,815. 8 Claims. (Cl. 115—25.)

1. In a foot operable boat propelling device, the combination with a seat, of a pedal assembly in front of said seat and having a supporting stand to rest on the bottom of the boat forward to said seat, a brace connecting the stand to and maintaining it spaced from said seat, said brace having a fork end at said seat and engaging over pins carried by the seat for releasably connecting the brace thereto, and a propelling mechanism to the rear of said seat and connected with the pedal assembly for operation thereby.

---



1,695,305. RAM. CHARLES B. UPTON, Piqua, Ohio, assignor to The French Oil Mill Machinery Co., Piqua, Ohio. Filed Oct. 20, 1926. Serial No. 142,955. 3 Claims. (Cl. 138—10.)

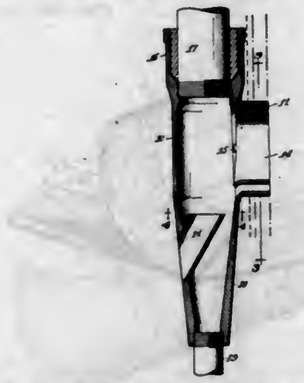
1. A ram comprising an open-ended cylinder, a piston reciprocating in and closing the open end of the cylinder, the cylinder having an internal peripheral groove closely adjacent its open end, packing means in said groove acting against the piston to seal the cylinder, a limit rod threaded through and carried by the piston and engageable with the inner end of the cylinder to limit the inward movement of the piston, the rod being adjustable to various extents through the piston by rotation, whereby the rod may be set to limit the normal piston movement inwardly before it uncovers and exposes said groove, and may also be adjusted to permit further inward movement of the piston sufficient to uncover and expose the groove when renewal of the packing means therein is desired, and a packing device acting between the rod and piston at a point located between the threaded connection of the rod and piston and the inner end of the piston beyond the range of the threads of the rod, whereby the packing device will be uninfluenced by the threads of the rod as the rod moves through the piston sufficiently to change the limit for the inward movement of the piston.

---

1,695,306. MILK STRAINER. LAWRENCE F. WIEMER, Burlington, Wis. Filed Jan. 12, 1925. Serial No. 1,896. 2 Claims. (Cl. 210—155.)

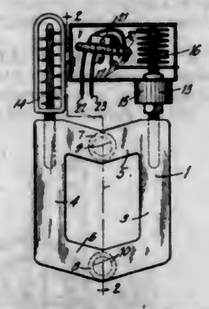
2. A milk strainer the body of which is constituted of a tubular member reduced at its lower end and provided with an integral perforated bottom and inward projections in the wall of the reduced end constructed as a unit, a perforated straining disc notched at its periphery to permit the disc to pass over the said projections, and a spring loop engaging under such projections to cause the disc to press a straining cloth against the bottom.

---



1,695,307. CHRISTMAS-TREE ORNAMENT. EDWIN BIRD WILSON, Forest Hills, N. Y., assignor to Design Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed July 29, 1927. Serial No. 209,282. 6 Claims. (Cl. 240—10.)

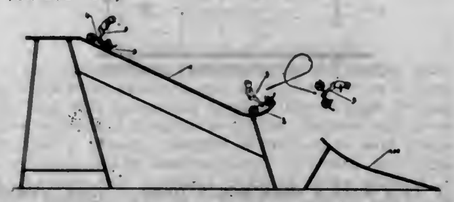
4. An article of manufacture comprising a pair of profile elements having a cut-out center portion, notches in each of said elements, whereby said elements are mutally interlocked, means for securing said elements against relative angular displacement and notches in the inner edge of said cut-out portion for holding a lamp socket.



1,695,308. GAS VENT FOR GAS STOVES. FRANK E. WILT, Zanesville, Ohio. Filed Mar. 17, 1927. Serial No. 176,132. 2 Claims. (Cl. 126—307.)

1. An appliance of the class set forth, consisting of a tubular body having a lateral nipple at a point between its ends adapted for setting in the wall of a building to receive the gas-discharge pipe and also provided with an interiorly tapering depending leg or branch adapted at its lower end to be connected to a depending discharge-pipe whose interior diameter is at least equal to the diameter of the lower, tapered end of said leg to thus avoid forming an interior shoulder.

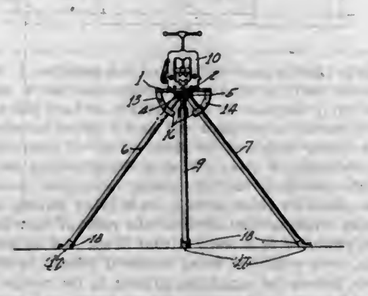
---



1,695,309. AUTOMATIC TEMPERATURE REGULATOR. JOHN H. P. WOOD, Albany, N. Y. Filed Nov. 19, 1927. Serial No. 234,441. 5 Claims. (Cl. 236—32.)

2. A thermostat support comprising a hollow, metal ring having openings in oppositely disposed portions thereof providing an entrance and an exit for water circulated through said ring, and having spaced openings adjacent said water entrance adapted to receive a thermostat and a calibrating thermometer therefor.

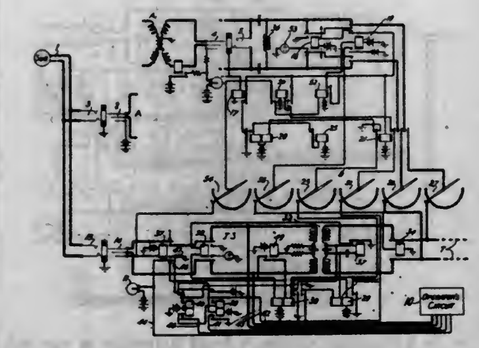
---



1,695,310. SOMERSAULTING TOY. PHILIPP WÜSTENDÖRFER, Furth, Germany. Filed Oct. 11, 1927. Serial No. 225,465, and in Germany May 4, 1927. 2 Claims. (Cl. 104—54.)

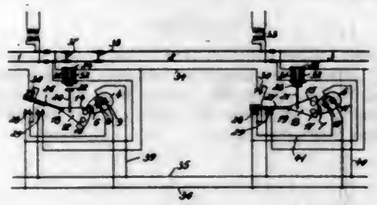
1. In a toy of the character set forth, in combination, an inclined, interrupted runway, comprising a main section and a runout section, a toy figure adapted to slide down said runway, including a trigger-controlled power device, and a releaser member on said main runway section for cooperation with said power device for sudden release thereof for causing the said toy figure to execute a complete backward somersault during its passage from the main section of the runway to the run-out section.

---



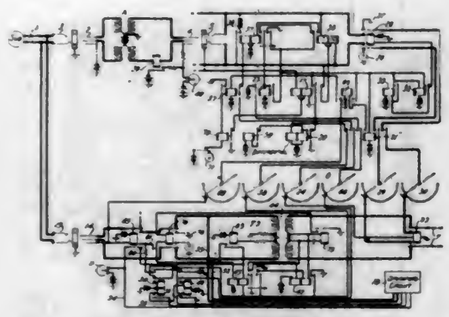
1,695,311. PIPE-VISE STAND. LEE C. YOUNG, St. Louis, Mo., assignor, by mesne assignments, to Western Wire Products Company, St. Louis, Mo., a Corporation of Missouri. Filed Sept. 23, 1925. Serial No. 58,098. 4 Claims. (Cl. 81—41.)

2. In a stand for pipe-vises and the like, a head in the form of a flat plate, a plurality of supporting-legs pivotally attached at an end to and upon the under face of the head for swingable movement, the points of attachment of the legs to the head being spaced inwardly from the margin of the head, and bracket arms depending from the margin of the head for engagement by the legs for reinforcingly bracing the head.



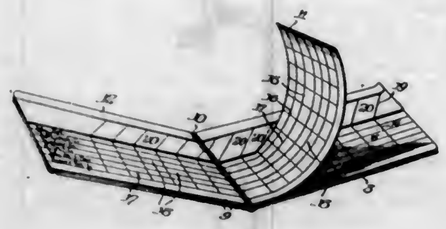
---

1,695,312. TELEPHONE SYSTEM. HENRY H. ABBOTT, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Apr. 20, 1927. Serial No. 185,242. 7 Claims. (Cl. 179—27.)



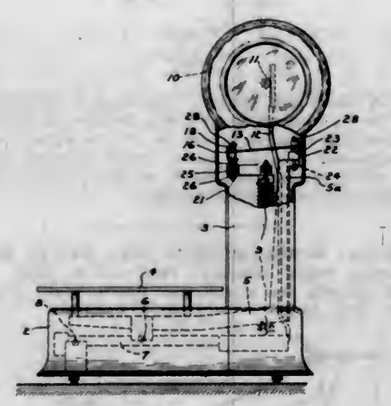
6. In a telephone system, a trunk accessible at one end from a first position and terminating at the same end at a second position and at the other end at a third position, means for establishing a telephonic connection from the first position to the third position over said trunk, and means for establishing a telephonic connection from the third position to the second position over said trunk and for disabling said first mentioned telephonic connection.

1,695,313. AUTOMATIC BLOCK SIGNAL SYSTEM. HERMANN ARNDT, Berlin, Germany, assignor to Siemens & Halske Aktiengesellschaft, Siemensstadt, near Berlin, Germany, a Corporation of Germany. Filed Mar. 1, 1927, Serial No. 171,772, and in Germany Feb. 22, 1926. 5 Claims. (Cl. 246—39.)



1. In a block signal system, in combination a railroad track electrically divided into independent block sections, a signal lamp disposed at the entrance of each block and a spectacle device carrying a red and a green roundel, and being movably disposed to place either of said roundels before the lamp, a relay for each block having an armature for operating the pertaining spectacle device, to clear or block its track section, said relay having a main energizing winding connected to the rails of that block to be short circuited by a train in that block, and an auxiliary winding, both windings being required jointly to energize the relay, means for supplying current to the relays, signal lamps and to the rail section of each block, and means for connecting the auxiliary winding of the relay of the block signal about to be cleared in series with the signal lamp of the next block entered by the train when the red roundel of that next block appears before its lamp, to complete the energization of said relay, so that even when the first-named block is cleared by the train, the signal clearance of that first block is initiated by and rendered dependent from the correct blocking signal position of the newly occupied block.

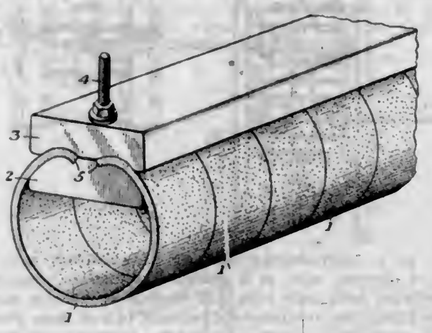
1,695,314. TELEPHONE SYSTEM. HENRY M. BASCOM, Brooklyn, and HENRY H. ABBOTT, New York, N. Y., assignors to American Telephone and Telegraph Company, a Corporation of New York. Filed Apr. 20, 1927. Serial No. 185,241. 9 Claims. (Cl. 179—27.)



8. In a telephone system, a trunk accessible at one end from a first position and terminating at the same end at a second position and at the other end at a third position, means for establishing a telephonic connection from the first to the second position and from the first to the third position, a subscriber's line, means for connecting said subscriber's line to said trunk at the second position and preventing telephonic connection to the second position over the trunk, and means for reestablishing telephonic connection to the second position over said trunk from the third position only.

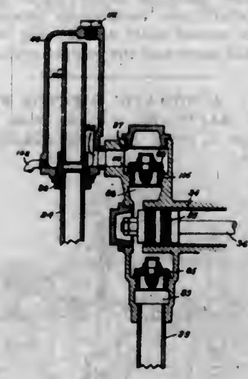
1,695,315. BOOKLET. MAX A. BERNS, Chicago, Ill. Filed June 26, 1926. Serial No. 118,695. 1 Claim. (Cl. 281—15.)

A book comprising a plurality of pages, each page being perforated in a longitudinal direction whereby the said page is divided into upper and lower sections, the said lower section having horizontal and vertical lines thereon whereby rows of spaces are formed in each direction on said page, and the upper section having lines thereon separating the said section in spaces adapted to receive headings, the said rows of vertical spaces in the lower section being in register with said spaces formed in said upper section, the said sheets being bound centrally thereof whereby when said sections are separated and turned the said headings are in register with the rows of spaces on adjacent pages, the said sheets being adapted to remain permanently in place in the said book.

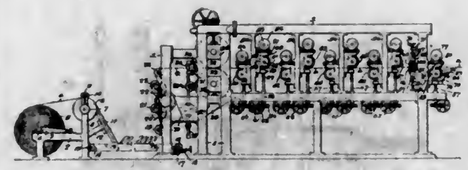


1,695,316. CHECK LINK FOR SCALES. ROBERT J. BURKE, Pittsburgh, Pa., assignor to Lincoln Scale Corporation, Pittsburgh, Pa., a Corporation of Delaware. Filed June 8, 1927. Serial No. 197,399. 6 Claims. (Cl. 265—61.)

1. In a scale, a check arm, a frame, a block pivotally mounted on the frame, and a check link rockable on the block.

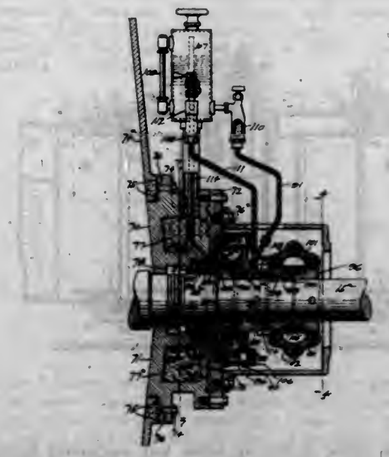


1,695,317. CORK FACING FOR ROLLS. HERMAN F. BUSCH, Millvale, Pa., assignor to Armstrong Cork Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Jan. 31, 1927. Serial No. 165,002. 7 Claims. (Cl. 19—143.)



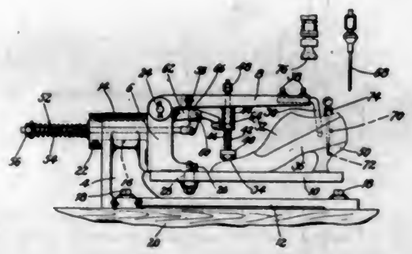
1. A preformed strip of compressed artificial cork for covering a roll, having its ends curled so that its end edges will lie snugly against the face of the roll to be covered.

1,695,318. PUMPING APPARATUS. GEORGE A. BUVINGER and CLARENCE WARNER, Dayton, Ohio, assignors to Delco-Light Company, Dayton, Ohio, a Corporation of Delaware. Original application filed Nov. 18, 1921, Serial No. 516,159. Divided and this application filed Mar. 2, 1923. Serial No. 622,462. 4 Claims. (Cl. 103—203.)



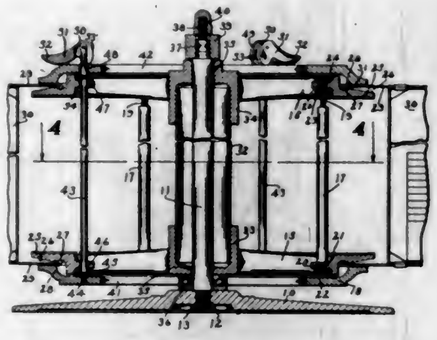
1. In combination, a pump including a pumping chamber, a discharge chamber, and a wall between said chambers, said wall having an opening therethrough for providing permanent intercommunication between the chambers, and a priming chamber located above said pumping chamber and in communication therewith, said priming chamber and discharge chamber being adapted to contain sufficient quantity of liquid for priming said pumping chamber.

1,695,319. COATING MACHINE. LYNN B. CASE, New Brunswick, N. J., assignor to John Waldron Corporation, New Brunswick, N. J., a Corporation of New Jersey. Filed Feb. 10, 1926. Serial No. 87,392. 13 Claims. (Cl. 91—23.)



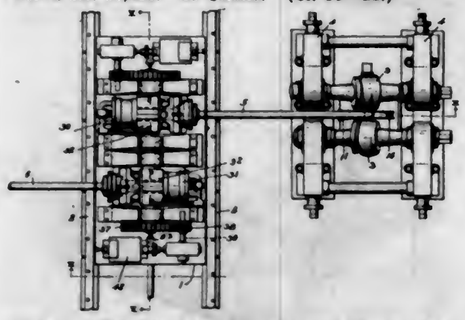
1. In a machine for coating web material, the combination of a coating head comprising a spray nozzle for applying a coating preparation to the surface of the material; means for distributing the coating reparation evenly over the surface of the material comprising a pair of cooperating rolls between which the material passes; and means for applying a finish to the coated surface of the material, comprising a series of smooth face rolls adapted to be rotated in engagement with the surface of the material, some of said rolls being rotated in a manner to produce relative movement between the faces of these rolls and the surface of the material.

1,695,320. STUFFING BOX OR SEALING MEANS FOR COMPRESSORS AND THE LIKE. WILLIS H. CARRIER, Essex Fells, N. J., assignor to Carrier Engineering Corporation, Newark, N. J. Original application filed Apr. 5, 1921, Serial No. 458,679. Divided and this application filed Jan. 9, 1926. Serial No. 80,384. 10 Claims. (Cl. 286—9.)



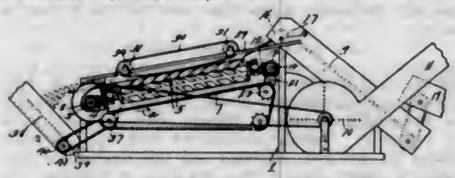
1. The combination with a fluid compressor having a rotary shaft extending through an opening in the compressor casing, of a valve and valve seat which surround said shaft and cooperate when the valve is seated to form a closure for said shaft opening, mechanism for holding said valve and valve seat out of contact when the compressor is running, and an impeller which rotates with said shaft and maintains a circulation of sealing liquid between said valve and valve seat and forms a liquid seal for said shaft opening when the compressor is running.

1,695,321. WORK-HOLDING DEVICE. CHARLES E. CONNER, Auburn, Me., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed May 29, 1924. Serial No. 716,672. 11 Claims. (Cl. 12—125.)



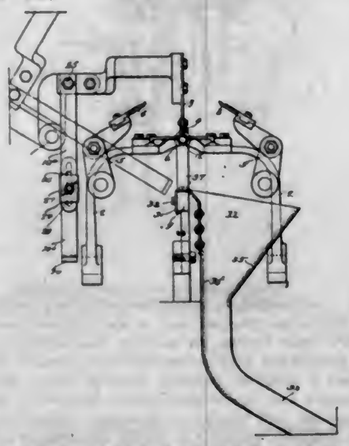
1. In a device of the class described, a stationary support, a member carried by the support for holding a shoe in position for the assembling of a heel therewith, a second member for holding the heel in place upon the shoe, said members being movable in unison to reposition the assembled shoe and heel for the performance of a subsequent operation thereon, and yielding means for urging one of said members toward the other to clamp the heel to the shoe.

1,695,322. INDEX OR FILE. WILLIAM H. DAY, East Haven, Conn., assignor, by mesne assignments, to Remington Rand Inc., New York, N. Y., a Corporation of Delaware. Filed July 27, 1925. Serial No. 46,337. 16 Claims. (Cl. 40—72.)



5. In an index or file, an index leaf supporting frame comprising an upper supporting member, a lower supporting member, said members being connected together and cooperating to engage a pair of arm-like extensions of an index leaf or the like to support the same, a locking member spaced from and parallel with each of said supporting members, and means connecting said locking members together, said means comprising a rod secured to one of said locking members and loosely passing through the other of said locking members, said rod being controlled by a cam member whereby said locking members are caused to move toward and away from the supporting members respectively adjacent thereto as and for the purpose described.

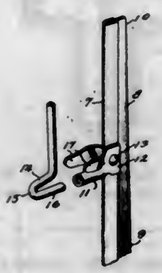
1,695,323. PIERCING MILL. SAMUEL E. DIESCHER, Pittsburgh, Pa., assignor to S. Diescher & Sons, Pittsburgh, Pa., a Partnership consisting of Samuel E. Diescher and August P. Diescher. Filed Feb. 18, 1926. Serial No. 89,111. 18 Claims. (Cl. 80—13.)



1. In a billet-piercing mill, the combination with a set of piercing rolls, of a plurality of mandrel supports associated with said rolls and each independently movable alternately in opposite directions to and from piercing and stripping positions whereby piercing and stripping operations may be simultaneously conducted.

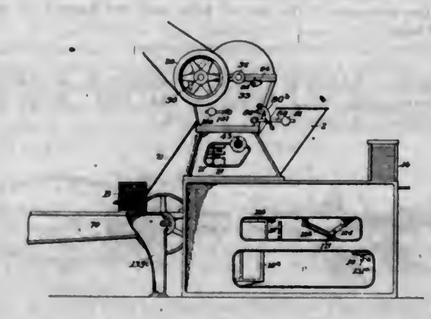
1,695,324. CORN HUSKER. PHILIP F. DUERR, South Bend, Nebr. Filed Feb. 17, 1926. Serial No. 88,825. 2 Claims. (Cl. 130—5.)

1. A husking machine comprising a frame, a plurality of inclined husking rollers carried by said frame, a transversely disposed drive shaft, gear connections between adjacent rollers, gear connections between alternate rollers and the drive shaft, an endless apron above the rollers, a second shaft, gear connections between one of the rollers and the second shaft and driving connections between the second shaft and the endless apron.

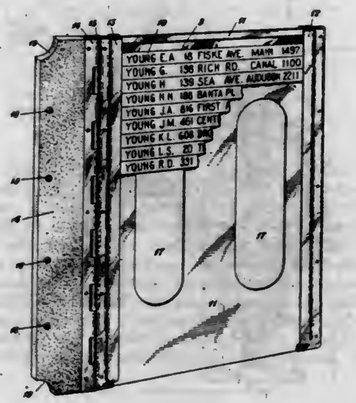


1,695,325. AUTOMATIC EJECTOR FOR BOTTLE-LABELING MACHINES. JOHN EDER, Philadelphia, Pa. Filed Oct. 1, 1927. Serial No. 223,360. 14 Claims. (Cl. 216—54.)

1. In combination with a bottle labeling machine having a bottle supporting anvil, means for placing a label on the bottle, means for wiping the label around the bottle and means for holding the label during the wiping operation; means, operable by the label holding means, for ejecting the bottle from the anvil.

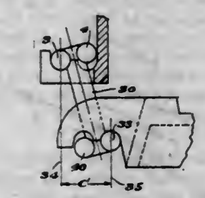


1,695,326. WINDSHIELD CLEANER. FREDERICK G. FOLBERTH and WILLIAM M. FOLBERTH, Cleveland, Ohio, assignors to Trico Products Corporation, Buffalo, N. Y., a Corporation of New York. Filed Mar. 29, 1924. Serial No. 702,872. 4 Claims. (Cl. 15—253.)



1. A windshield cleaner comprising a cleaner arm having a U-shaped extension vertical to said arm, a cleaner element, a holder for said cleaner element mounted near one end thereof and comprising a sleeve for receiving one leg of said U-shaped extension and projecting between the legs of the latter, and spaced limit stops extending from the holder and coacting with the other leg of said extension for limiting the swing movement of the cleaning element.

1,695,327. MOLDING MACHINE. DAVID C. GOLDSTON, Cambridge Springs, Pa., assignor to Blystone Manufacturing Company, Cambridge Springs, Pa., a Corporation of Pennsylvania. Filed Feb. 7, 1924. Serial No. 691,213. 45 Claims. (Cl. 25—84.)

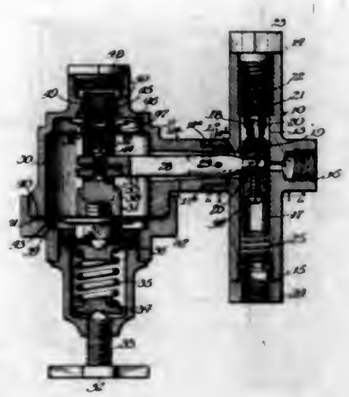


1. A molding machine including a source of material to be molded, a mold chamber, a movable feed box adapted to transfer material from the source to the mold chamber and having a movable closure, means for relatively moving the feed box and mold chamber to bring the feed box into cooperative position with relation to the mold chamber, and means for opening the closure to permit transfer of the material from the feed box to the mold chamber, substantially as described.

1,695,328. ADJUSTABLE REFERENCE BOOK. WALTER A. GORDON, Garden City, and JAMES J. MURPHY and PASCAL PERRONE, Brooklyn, N. Y., assignors to American Telephone and Telegraph Company, a Corporation of New York. Filed May 11, 1926. Serial No. 108,378. 3 Claims. (Cl. 129—34.)

3. A leaf for a visible index having channels at each edge thereof, data strips removably mounted in said channels, and a flexible member hinged to one edge of said leaf, said flexible member being adapted to be attached in a holder for a plurality of similar leaves so that the leaves may be readily accessible when it is desired to consult the information inscribed on said data strips.

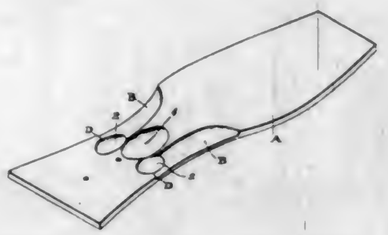
1,695,329. CAR-COUPLER POSITIONING DEVICE. LESLIE B. GRAHAM, East Chicago, Ind., assignor to Union Metal Products Company, Chicago, Ill., a Corporation of Delaware. Filed July 6, 1926. Serial No. 120,674. 10 Claims. (Cl. 213—21.)



1. In a railway car, the combination of a car part having two pairs of parallel spaced apart journal bearings, a coupler carrier swingingly suspended from said car part by a pair of links, said links having spaced apart parallel trunnions at their upper ends engaging said journal bearings when the device is in normal position, one trunnion of each link moving out of engagement with its bearing when the carrier moves laterally.

1,695,330. FLUID-PRESSURE REGULATOR. PATRICK M. GRANT, Chicago, Ill., assignor of one-half to James G. Gilbert. Filed Feb. 19, 1926. Serial No. 89,313. 5 Claims. (Cl. 50—26.)

1. A liquid pressure regulator comprising a housing having a pressure chamber formed therein, a tubular por-

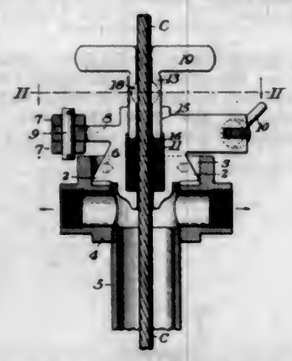


tion detachably connected intermediate its ends to said housing, an elongated valve member mounted in and slidable longitudinally with respect to said tubular portion, valve actuating means mounted in said chamber, and

a lever pivotally mounted intermediate its ends in said housing and co-operable with said actuating means and said valve in a manner to control the movement of the valve at all times according to the movement of said actuating means.

---

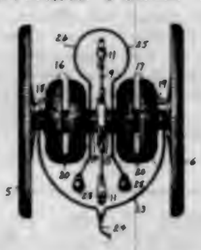
1,695,331. MANUFACTURE OF SHOES. JOHN B. HADAWAY, Swampscott. Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Mar. 22, 1924. Serial No. 701,221. 8 Claims. (Cl. 36—22.)



1. A shoe construction comprising an innersole, an upper attached to the innersole, and an outsole, the outsole being recessed locally adjacent to the breast line to relieve pressure between the outsole and parts of the innersole and upper and to prevent distortion of the outsole at the forward portion of the heel seat.

---

1,695,332. OIL SAVER FOR OIL WELLS AND PACKING SCREWS THEREFOR. JOSEPH W. HEETER, Butler, Pa. Filed Aug. 15, 1924. Serial No. 732,184. 1 Claim. (Cl. 286—16.)



A clamping screw, comprising a pair of separable sections one of which is provided with a substantially circular boss having an opening therethrough for the reception of a cable, the other section having a substantially circular recess therein for reception of the boss whereby the two

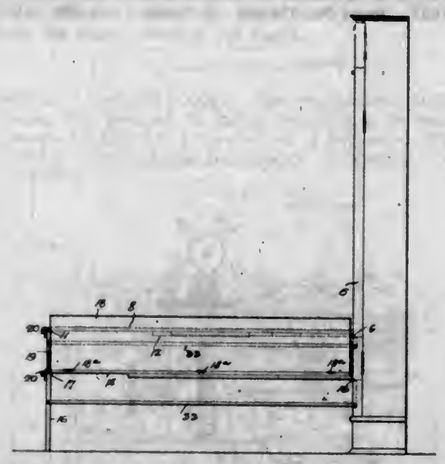
sections may be fitted together about a cable, the boss and recess being adapted to permit relative rotation thereof into alignment.

---

1,695,333. WHEELED TOY. WYMAN N. HILL, East Hampton, Conn., assignor to The N. N. Hill Brass Co., East Hampton, Conn., a Corporation. Filed May 9, 1928. Serial No. 276,388. 3 Claims. (Cl. 46—45.)

1. A wheeled toy, comprising a pair of wheels mounted upon an axle, a bar connected with said axle so as to turn therewith a figure on each end of the said bar, and an open hoop having leg portions loosely mounted on the axle on opposite sides of the bar connection and arranged for the passage of the bar or bars and the figures on the said bar.

---



1,695,334. VACUUM TORCH. WATBURN E. JOHNSTON, Minneapolis, Minn. Filed Jan. 14, 1924. Serial No. 686,032. 9 Claims. (Cl. 158—76.)

1. A vacuum torch having an oil passage and a passage for compressed air therein, a discharge member having a recess in its rear end communicating with the oil passage, said torch having an annular recess therein in the rear of said discharge member, a plurality of circumferentially spaced passages of comparatively small diameter communicating with said annular recess, each of said latter passages having an enlarged portion at their onter ends, and a passage of comparatively small diameter extending from the recess in said discharge member to the enlarged portion of each of said latter passages substantially at the rear end of said enlarged portion.

1,695,335. COMBINATION CABINET. FREDERICK B. KAUFMAN, Philadelphia, Pa. Filed Dec. 30, 1925. Serial No. 78,451. 5 Claims. (Cl. 45—51.)

2. The combination with a supporting structure, of a substructure hinged on horizontal hinges to the support and adapted to occupy a vertical position against the face of the supporting structure and in a substantially horizontal position projecting outwardly therefrom, a leg member adapted to support the outer end of said sub-structure when in the horizontal position, and a rod pivotally connected to the said leg member and to the supporting structure whereby the leg member is automatically moved from the dependent position which it occupies when the substructure is elevated to a substantially vertical position supporting the outer end of said sub-structure in the horizontal position and vice versa.

---

1,695,336. MICROMETER. GEORGE N. KOHLHAAS, Elmira, N. Y. Filed Mar. 4, 1927. Serial No. 172,898. 11 Claims. (Cl. 33—178.)

1. In combination in a micrometer gage, a tubular body portion having a head with radial guide grooves thereon, a washer having corresponding guide grooves opposing said first mentioned grooves, pins guided in said grooves, means for pressing the washer against the pins, said means comprising a combination lock nut and micrometer thimble, and means for forcing the pins outwardly.

---

1,695,337. CARBURIZER. FREDERICK C. LANGENBERG, Watertown, Mass., assignor to E. F. Houghton and Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 22, 1927. Serial No. 177,469. 13 Claims. (Cl. 148—30.)

1. A carburizing material having therein an organic oxygen-containing salt of a carburizing oxide and a salt of a carburizing oxide having nitrogen and oxygen in the acid radical.

---

1,695,338. CARBURIZER. FREDERICK C. LANGENBERG, Watertown, Mass., assignor to E. F. Houghton and Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 22, 1927. Serial No. 177,470. 8 Claims. (Cl. 148—30.)

1. A carburizing composition comprising carbonaceous material, energizing material and an organic salt of a metal (other than the alkali or alkaline earth metals).

1,695,339. NAIL-HOLDING ATTACHMENT FOR HAMMERS. ANDREW LOCHHEAD, Oakland, Calif. Filed Mar. 7, 1927. Serial No. 173,389. 3 Claims. (Cl. 145—31.)

3. In means of the character described, a plate having its midpart pivotally secured to one side of the handle of a hammer adjacent the head of the latter, whereby said plate may be rotated 360 degrees in a plane substantially parallel with said handle, opposed ends of said plate spring-pressing against said head and said handle when said plate is disposed in substantially longitudinal parallelism with said handle, one end of said plate adapted for operatively engaging and holding a nail against said head, and the opposite end thereof adapted to engage means on said handle for normally holding said plate against rotation.

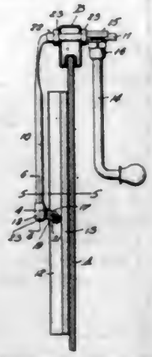
---

1,695,340. HOSE AND TUBE CLAMP. WILBUR G. MILLER, Los Angeles, Calif. Filed Jan. 17, 1927. Serial No. 161,575. 1 Claim. (Cl. 24—19.)

The clamp set forth comprising a U-shape yoke having a central bridge and an orifice through the bridge, and having legs extending parallel to each other from the ends of said bridge and terminating in crotches; and to disposed said collar entirely within said yoke when the nut is adjusted in one direction; a collar movable edgewise between the legs and adapted to fit upon a nipple-supported compressible tube; a threaded stem fixed to the edge of the collar and extending through the orifice; and a nut on the stem outside said yoke adapted to act upon the yoke to move the stem and collar relative to the crotches, and to compress the tube onto the nipple and between said nipple and the crotches.

---

1,695,341. METHOD OF OBTAINING TITANIUM OXIDE. REGINALD HILL MONK, Montreal, Quebec, Canada. Filed July 7, 1926. Serial No. 121,058. 8 Claims. (Cl. 23—202.)

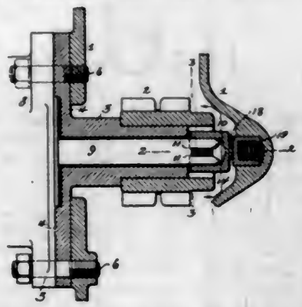


1. The method of converting refractory compounds of titanium after the elimination of impurities and a large portion of the iron content into water soluble sulphates, comprising mixing the comminuted compound with an alkali-metal sulphate and an acid solvent, heating the mixture at a temperature from 120° to 300° C., until a solid cake is formed, cooling and crushing the cake.

---

1,695,342. WINDSHIELD WIPER. JOHN R. OISHEI, Buffalo, N. Y., assignor to Trico Products Corporation, Buffalo, N. Y. Filed Mar. 8, 1924. Serial No. 697,883. 1 Claim. (Cl. 15—255.)

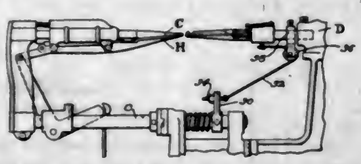
In a windshield wiper, a one-piece combined shaft and wiper carrying arm formed from a length of rod bent intermediate its ends to a substantially right angular form, said wiper carrying arm being flattened transversely immediately adjoining the shaft to define and provide an integral



resilient portion, said resilient portion being bowed longitudinally to normally dispose the free end portion of the arm at an acute angle to the shaft, and a wiper element secured to the outer end of the arm, said resilient portion providing spring pressure yieldably urging said wiper ele-

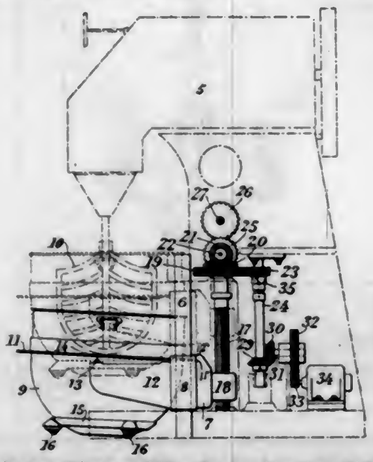
ment against the windshield glass when said shaft is mounted thereon, said shaft being provided with an enlargement immediately adjacent said resilient portion for abutting against its windshield mounting to thereby gage and definitely determine the resilient pressure to be exerted on said wiper element.

---



1,695,343. COUPLING. HAROLD S. PIERCE, Indianapolis, Ind., assignor to Link-Belt Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 12, 1926. Serial No. 141,166. 4 Claims. (Cl. 64—100.)

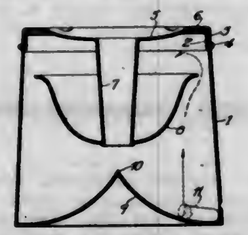
1. The combination of a tubular bearing; a shaft rotatably mounted thereon and having a slotted end; a wheel mounted on the bearing and having a slotted extension projecting beyond the end of the bearing; two coupling plates extending into the slots; and a spring plate mounted between the two coupling plates.



---

1,695,344. MACHINE FOR TURNING SHOES. WALTER PROULX, Norridgewock, Me., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Nov. 12, 1925, Serial No. 68,585. Renewed Mar. 5, 1928. 12 Claims. (Cl. 12—57.)

1. For use in turning shoes, a tapering forepart form constructed and arranged to expand to increase its angle of taper, and means constantly tending to expand the form.



1,695,345. MIXING MACHINE. OTTO ROLAND READ, York, Pa., assignor to Read Machinery Co., Inc., York, Pa., a Corporation of Pennsylvania. Filed June 3, 1927. Serial No. 196,354. 2 Claims. (Cl. 259—107.)

1. In a mixing machine, the combination with a saddle having a projecting shoulder, of a bowl having an annular flange therearound, said bowl being adapted to be tilted while on a floor surface, so that a portion of said flange extends under said shoulder of the saddle, and means for raising said saddle, permitting said bowl to move from said tilted position to a second position wherein it is supported on said saddle.
